GIUNTA REGIONALE

SEDUTA DEL *30/06/2026*

PROCESSO VERBALE

Oggetto:

D.G.R.C. n. 423 del 26/06/2025. Riordino ed efficientamento della rete laboratoristica in Regione Campania. Legge 26/2026. Determinazioni

1)	Presidente	Roberto	FICO	Presidente
2)	Vicepresidente	Mario	CASILLO	
3)	Assessore	Fulvio	BONAVITACOLA	
4)	Assessore	Vincenzo	CUOMO	
5)	Assessore	Onofrio Giustino Angelo	CUTAIA	
6)	Assessore	Vincenzo	MARAIO	
7)	Assessore	Andrea	MORNIROLI	
8)	Assessore	Claudia	PECORARO	
9)	Assessore	Angelica	SAGGESE	
10)	Assessore	Maria Carmela	SERLUCA	
11)	Assessore	Fiorella	ZABATTA	
	Segretario	Mauro	FERRARA	

Alla stregua dell'istruttoria compiuta dalla Direzione Generale e delle risultanze e degli atti tutti richiamati nelle premesse che seguono, costituenti istruttoria a tutti gli effetti di legge, nonché dell'espressa dichiarazione di regolarità della stessa resa dal Direttore a mezzo di sottoscrizione della presente

PREMESSO che

a. la legge finanziaria per l'anno 2007 (L.n.296/2006), all'art. 1, comma 796, lettera o), ha sancito l'obbligo per le Regioni di adottare un "*piano di riorganizzazione della rete delle strutture pubbliche e private accreditate eroganti prestazioni specialistiche e di diagnostica di laboratorio, al fine dell'adeguamento degli standard organizzativi e di personale coerente con i processi di incremento dell'efficienza resi possibili dal ricorso a metodiche automatizzate*";
b. la legge 133/2008 ha integrato il D.lgs. n.502/92 e, all'articolo 8-quater, comma 3, lettera b) ha introdotto, tra i criteri generali per l'accesso all'accreditamento istituzionale, "*il criterio della soglia minima di efficienza che, compatibilmente con le risorse regionali disponibili, deve esser conseguita da parte delle singole strutture sanitarie*";
c. l'Accordo della Conferenza permanente per i rapporti tra lo Stato, le Regioni e le Province autonome di Trento e Bolzano del 23 marzo 2011, al fine di garantire una migliore razionalizzazione dell'attività di diagnostica di laboratorio, ha approvato il documento "*Criteri per la riorganizzazione delle reti di offerta di diagnostica di laboratorio*", che fissa a 200.000 esami di laboratorio/anno la soglia minima di efficienza, e stabilisce che essa rappresenta la soglia minima di attività al di sotto della quale non si può riconoscere al laboratorio l'idoneità al riconoscimento di produttore accreditato e a contratto;
d. con il D.C.A. n. 109/2013 la Regione Campania ha avviato la riorganizzazione della rete laboratoristica privata e configurando nuovi modelli di integrazione/collaborazione improntati sulla centralizzazione, in un'unica entità operativa, delle risorse umane, tecnologiche e strutturali, necessarie allo svolgimento della fase analitica del processo di erogazione della prestazione;
e. tale processo ha portato progressivamente alla nascita di aggregazioni, alla riduzione complessiva dei laboratori e al considerevole incremento delle strutture (laboratori singoli e aggregazioni) che raggiungono la soglia di efficienza dei 200.000 esami di laboratorio effettuati in un anno;
f. con la Deliberazione di Giunta regionale n. 127 del 20/03/2025, è stato approvato il "*Documento Tecnico di Uscita dal Piano di Rientro*", con cui sono state recepite in modo integrale e definitivo tutte le richieste e tutte le prescrizioni avanzate dai ministeri affiancanti, secondo quanto indicato nei pareri "*CAMPANIA-DGPROGS-14/01/2025-0000002-P*" e "*CAMPANIA-DGPROGS03/03/2025-0000009-P"* ai fini dell'uscita dal Piano di Rientro; tra i punti del predetto Documento Tecnico, all'interno della Rete Ospedaliera e Territoriale, vi è anche la tematica della Rete Laboratoristica;
g. con deliberazione di Giunta regionale n. 423/2025, sono state recepite in modo integrale e definitivo le prescrizioni formulate dai Ministeri affiancanti approvando sia il documento contenente le *"LINEE DI INDIRIZZO PER LA RIORGANIZZAZIONE DELLA RETE DEI LABORATORI PRIVATI ACCREDITATI DELLA REGIONE CAMPANIA*" (Allegato sub A) sia quello relativo alla "*RIORGANIZZAZIONE DELLA RETE DEI LABORATORI PUBBLICI DELLA REGIONE CAMPANIA*";

RILEVATO che

a. l'art. 29 del D.L. 73 del 23 maggio 2021, convertito con modifiche dalla Legge n. 106 del 23 luglio 2021, ha stabilito che, "a*l fine di adeguare gli standard organizzativi e di personale ai processi di incremento dell'efficienza resi possibili dal ricorso a metodiche automatizzate, le Regioni e le Province Autonome di Trento e Bolzano favoriscono il completamento dei processi di riorganizzazione della rete delle strutture pubbliche e private accreditate eroganti prestazioni specialistiche e di diagnostica di laboratorio*";
b. il menzionato D.L 73/2021 ha stabilito, inoltre, che per gli anni 2021 e 2022 le Regioni e le Province Autonome di Trento e Bolzano potessero riconoscere alle strutture che si adeguano progressivamente ai predetti standard un contributo da stabilirsi con provvedimento della Regione o della Provincia Autonoma, nei limiti di un importo specifico, ripartito con Decreto Ministeriale del 30 dicembre 2021;
c. per l'attuazione della menzionata disposizione è stato assegnato alle regioni uno stanziamento complessivo pari a 69 milioni di euro (di cui 46 milioni di euro per il 2021 ed a 23 milioni per il 2022),

al cui riparto ha provveduto il decreto interministeriale Salute – MEF del 30 dicembre 2021, a seguito d'intesa in sede di Conferenza Stato-Regioni;

PRESO ATTO, dall'istruttoria dei competenti uffici regionali, che

a. il decreto-legge 31 dicembre 2025, n. 200, convertito in legge 27 febbraio 2026, n. 26, ha modificato l'articolo 29, comma 1, secondo periodo, del decreto-legge 25 maggio 2021, n. 73, convertito, con modificazioni, dalla legge 23 luglio 2021, n. 106, in materia di completamento dei processi di riorganizzazione della rete delle strutture pubbliche e private accreditate eroganti prestazioni specialistiche e di diagnostica di laboratorio, sostituendo le parole *"31 dicembre 2025"* con le parole *"31 dicembre 2026*", per cui il relativo testo risulta il seguente:
   1. *Al fine di adeguare gli standard organizzativi e di personale ai processi di incremento dell'efficienza resi possibili dal ricorso a metodiche automatizzate, le regioni e le province autonome di Trento e di Bolzano favoriscono il completamento dei processi di riorganizzazione della rete delle strutture pubbliche e private accreditate eroganti prestazioni specialistiche e di diagnostica di laboratorio, attivati mediante l'approvazione dei piani previsti dall'articolo 1, comma 796, lettera o), della legge 27 dicembre 2006, n. 296, e inseriscono tra le strutture qualificate gli istituti di ricerca con comprovata esperienza in materia di sequenziamento di nuova generazione (NGS).*
   2. *Per gli anni 2021 e 2022, le regioni e le province autonome di Trento e di Bolzano possono riconoscere alle strutture che si adeguano progressivamente ai predetti standard non oltre il ((31 dicembre 2026)), al fine di garantire la soglia minima di efficienza di 200.000 esami di laboratorio e di prestazioni specialistiche o di 5.000 campioni analizzati con tecnologia NGS, un contributo da stabilirsi con provvedimento della regione o della provincia autonoma, nei limiti dell'importo di cui al comma 2.*
   3. *Ai fini dell'attuazione di cui al comma 1, alle regioni e alle province autonome di Trento e di Bolzano è assegnato, a valere sulle risorse di cui all'articolo 1, commi 34 e 34-bis, della legge 23 novembre 1996, n. 662, l'importo di 46 milioni di euro per l'anno 2021 e di 23 milioni di euro per l'anno 2022, al cui riparto si provvede con decreto del Ministro della salute, di concerto con il Ministro dell'economia e delle finanze, previa intesa in sede di Conferenza permanente per i rapporti tra lo Stato, le regioni e le province autonome di Trento e di Bolzano;*
b. l'intervento del Legislatore nazionale ha quindi rinviato al 31 dicembre 2026 il termine - in precedenza fissato al 31 dicembre 2025 - entro cui le regioni e le province autonome di Trento e di Bolzano possono riconoscere un contributo per gli anni 2021 e 2022 alle strutture sanitarie pubbliche o private accreditate eroganti prestazioni specialistiche e di diagnostica di laboratorio, che si adeguano progressivamente agli standard organizzativi e di personale ai processi di incremento dell'efficienza resi possibili dal ricorso a metodiche automatizzate, al fine di garantire la soglia minima di efficienza di 200.000 esami di laboratorio e di prestazioni specialistiche o di 5.000 campioni analizzati con tecnologia NGS (sequenziamento di nuova generazione);
c. al fine di proseguire con le attività di monitoraggio sullo stato di avanzamento del processo di efficientamento delle reti laboratoristiche del SSN, con nota prot. 0010967 del 26.06.2026, il Ministero della Salute - nel richiedere relazione esplicativa che dia evidenza dello stato di avanzamento al 31/12/2025 delle azioni previste nel cronoprogramma regionale ed un prospetto analitico contenente i dati di produzione dei laboratori e tecnologia NGS al 31/12/2025 delle strutture pubbliche e private accreditate – ha rappresentato che la legge n. 26/2026 esteso al 31/12/2026 il termine per il completamento del processo ex articolo 29 del decreto-legge n. 73/2021 e s.m.i., per cui "le Regioni/Strutture commissariali che intendano avvalersi della suddetta proroga, dovranno trasmettere, in aggiunta, il cronoprogramma delle attività rimodulato alla data del 31/12/2026, nonché il prospetto sintetico (allegato 1) compilato fino alla data del 31/12/2026", da far prevenire entro il 31 luglio 2026;
d. il rinvio al 31 dicembre 2026 per il completamento del processo di riorganizzazione della rete di diagnostica e specialistica consente alle Regioni di evitare possibili interruzioni nell'erogazione delle prestazioni e garantire in tal modo la continuità dell'assistenza;

Ritenuto

a. di dover prendere atto che, ai sensi della legge n. 26/2026, il termine per il completamento del processo di riorganizzazione della rete delle strutture pubbliche e private accreditate eroganti

prestazioni specialistiche e di diagnostica di laboratorio ex articolo 29 del decreto-legge n. 73/2021 e s.m.i., risulta esteso al 31/12/2026;

b. di dover integrare la D.G.R.C. n. 423/2025, rinviando il termine di adeguamento del processo di riorganizzazione della rete dei laboratori del Servizio sanitario in Regione Campania, al 31.12.2026;
c. di demandare alla Direzione Tutela della Salute e Coordinamento del SSR l'istruttoria e le consequenziali determinazioni finalizzate all'attribuzione degli incentivi assegnati a sostegno dei processi di ammodernamento ed efficientamento già operati o che comunque saranno realizzati entro l'anno 2026, come da nota del Ministero della Salute prot.0010967 del 26.06.2026;

PROPONE e la Giunta, in conformità a voti unanimi,

DELIBERA

Per i motivi espressi in narrativa che qui si intendono integralmente riportati e confermati

1. **di prendere atto** che, ai sensi della legge n. 26/2026, il termine per il completamento del processo di riorganizzazione della rete delle strutture pubbliche e private accreditate eroganti prestazioni specialistiche e di diagnostica di laboratorio ex articolo 29 del decreto-legge n. 73/2021 e s.m.i., risulta esteso al 31/12/2026;
2. **di integrare** la D.G.R.C. n. 423/2025, rinviando il termine di adeguamento del processo di riorganizzazione della rete dei laboratori del Servizio sanitario in Regione Campania al 31.12.2026;
3. **di demandare** alla Direzione Tutela della Salute e Coordinamento del SSR l'istruttoria e le consequenziali determinazioni finalizzate all'attribuzione degli incentivi assegnati a sostegno dei processi di ammodernamento ed efficientamento già operati o che comunque saranno realizzati entro l'anno 2026, come da nota del Ministero della Salute prot.0010967 del 26.06.2026;
4. **di inviare** la presente delibera al Gabinetto del Presidente della Giunta Regionale della Campania, alla Direzione Generale Tutela della Salute e Coordinamento del Sistema Sanitario Regionale e alla sezione trasparenza del sito istituzionale della Regione ed al BURC per la pubblicazione.

	Segretario	Mauro	FERRARA	

Alla stregua dell'istruttoria compiuta dalla Direzione Generale e delle risultanze e degli atti tutti richiamati nelle premesse che seguono, costituenti istruttoria a tutti gli effetti di legge, nonché dell'espressa dichiarazione di regolarità della stessa resa dal Direttore a mezzo di sottoscrizione della presente

PREMESSO che:

a. il Regolamento (UE) n. 536/2014 del Parlamento europeo e del Consiglio del 16 aprile 2014 disciplina le sperimentazioni cliniche di medicinali per uso umano, prevedendo procedure armonizzate per la presentazione, la valutazione e l'autorizzazione degli studi clinici;
b. la legge 11 gennaio 2018, n. 3, ha previsto il riordino della disciplina in materia di sperimentazione clinica dei medicinali per uso umano e dei Comitati etici;
c. il decreto legislativo 14 maggio 2019, n. 52, ha dettato disposizioni per il riassetto e la riforma della normativa in materia di sperimentazione clinica dei medicinali per uso umano;
d. il decreto del Ministro della Salute 26 gennaio 2023 ha individuato quaranta Comitati Etici Territoriali sul territorio nazionale, prevedendone n. 3 per la Regione Campania;
e. il decreto del Ministro della Salute 30 gennaio 2023 ha definito i criteri per la composizione e il funzionamento dei Comitati Etici Territoriali;
f. con Deliberazione di Giunta Regionale n. 224 del 27.04.2023 è stata disposta la riorganizzazione dei Comitati Etici Territoriali della Regione Campania, con l'individuazione delle relative sedi e delle strutture afferenti, come di seguito indicato:

f.1 Comitato Etico Campania 1: con sede e Segreteria Tecnico Scientifica presso l'IRCCS Pascale, comprendente: *"Comitato Etico IRCCS Pascale – A.O.R.N. Santobono-Pausilipon*" competente per le attività di sperimentazione e ricerca dell'IRCCS Pascale, dell'A.O.R.N. Santobono-Pausilipon, dell'IRCCS SDN e dell'IRCCS Maugeri e *"Comitato Etico Campania Centro"* competente per le attività di sperimentazione e ricerca biomedica dell' A.S.L. Napoli 1 Centro, dell'A.S.L. Napoli 2 Nord e dei Presidi Ospedalieri e Case di cura del territorio di loro competenza;

f.2 Comitato Etico Campania 2: con sede e Segreteria Tecnico Scientifica presso l'AOU Vanvitelli, comprendente: "*Comitato Etico Campania Sud*" competente per le attività di sperimentazione e ricerca biomedica dell'A.O.U. "San Giovanni di Dio e Ruggi di Aragona" con l'Università di Salerno, dell' A.S.L. Napoli 3 Sud, dell'A.S.L. di Salerno e dei Presidi Ospedalieri e Case di cura del territorio di loro competenza e "*Comitato Etico Università Vanvitelli - A.O.R.N. dei Colli*" competente per le attività di sperimentazione e ricerca biomedica dell'A.O.U. Vanvitelli con l'Università Vanvitelli e dell'A.O.R.N. dei Colli;

f.3 Comitato Etico Campania 3: con sede e Segreteria Tecnico Scientifica presso l'AORN Cardarelli, comprendente: "*Comitato Etico Università Federico II – A.O.R.N. Cardarelli*" competente per le attività di sperimentazione e ricerca biomedica dell'A.O.U. "FEDERICO II con l'Università Federico II e dell'A.O.R.N. Cardarelli e "Comitato Etico Campania Nord" competente per le attività di sperimentazione e ricerca biomedica dell'A.O.R.N. Moscati di Avellino, dell'A.O.R.N. Rummo di Benevento, dell'A.O.R.N. Sant'Anna e San Sebastiano di Caserta e delle AA. SS. LL. di Avellino, Benevento e Caserta e dei Presidi Ospedalieri e Case di cura del territorio di loro competenza;

g. con decreto del Presidente della Giunta regionale n. 65 del 16.06.2023 sono stati nominati i componenti dei Comitati Etici Territoriali della Regione Campania;
h. con Decreto Dirigenziale n. 2 del 29.09.2023 è stato istituito l'Osservatorio Regionale sulla Sperimentazione Clinica, in attuazione della D.G.R. n. 224 del 27.04.2023;

PRESO ATTO, dall'istruttoria dei competenti uffici regionali, che:

a. ai sensi dell'articolo 3, comma 7, del decreto del Ministro della Salute 30 gennaio 2023, i componenti dei Comitati Etici Territoriali restano in carica tre anni e le Regioni adottano idonee misure per assicurarne la continuità di funzionamento alla scadenza dei mandati;
b. il mandato dei componenti nominati con decreto del Presidente della Giunta regionale n. 65 del 16.06.2023 è giunto a scadenza;
c. occorre assicurare, senza soluzione di continuità, il regolare svolgimento delle attività di valutazione di competenza dei Comitati Etici Territoriali;

d. risulta, pertanto, necessario prorogare, in via transitoria, il mandato degli attuali componenti per la durata di non oltre sei mesi, nelle more della complessiva revisione dell'assetto regionale dei Comitati Etici Territoriali, da avviare attraverso una nuova manifestazione di interesse per l'individuazione dei componenti ed una rimodulazione delle afferenze delle Aziende sanitarie e degli ulteriori enti interessati a ciascun Comitato Etico Territoriale;

PRESO ATTO, altresì, dall'istruttoria dei competenti uffici regionali, che:

a. l'articolo 4, comma 2, del decreto del Ministro della Salute 12 maggio 2006 prevede che il Comitato etico si avvalga di una Segreteria tecnico-scientifica qualificata e dotata delle necessarie infrastrutture;
b. il funzionamento dei Comitati Etici Territoriali richiede il rafforzamento e l'uniforme organizzazione delle rispettive Segreterie tecnico-scientifiche, quali strutture di supporto amministrativo, gestionale e metodologico;
c. risulta necessario assicurare un raccordo operativo stabile tra la Direzione Generale Tutela della Salute e Coordinamento del Sistema Sanitario Regionale, i Comitati Etici Territoriali, le relative Segreterie tecnico-scientifiche e le strutture sanitarie afferenti;
d. a tal fine, risulta opportuno istituire, presso la Direzione Generale Tutela della Salute e Coordinamento del Sistema Sanitario Regionale, un Centro di riferimento regionale per il supporto e il coordinamento della ricerca clinica e trasferimento tecnologico, distinto dall'Osservatorio Regionale sulla Sperimentazione Clinica, finalizzato a supportare le Segreterie tecnico-scientifiche, a favorire l'uniformità delle procedure e dei flussi informativi, ad assicurare il raccordo tra le strutture coinvolte nella ricerca clinica ed a coordinare funzionalmente la piattaforma informatica regionale;
e. risulta, altresì, necessario dotare il sistema regionale di una piattaforma informatica unica e integrata per la gestione degli studi da parte delle Segreterie tecnico-scientifiche, la tracciabilità dei procedimenti e il monitoraggio regionale delle attività;
f. con nota prot. n. 0326004 del 01.04.2026, la Direzione Generale Tutela della Salute e Coordinamento del Sistema Sanitario Regionale ha avviato l'istruttoria relativa alla ricostituzione dei Comitati Etici Territoriali, all'esito della quale sono state acquisite agli atti le dichiarazioni di disponibilità, di insussistenza di cause ostative, incompatibilità e conflitto di interesse, nonché la verifica della permanenza dei requisiti di professionalità e competenza richiesti dalla normativa vigente;
g. con nota prot. n. 0423221/2026 del 07.05.2026, l'Università degli Studi di Napoli "Parthenope" ha richiesto alla Direzione Generale Tutela della Salute e Coordinamento del Sistema Sanitario Regionale l'integrazione dell'Ateneo nell'ambito dei Comitati Etici Territoriali operanti nella Regione Campania. Tale richiesta, all'esito dell'istruttoria degli uffici regionali, risulta accoglibile;

VISTI:

a. il Regolamento (UE) n. 536/2014;
b. la legge 11 gennaio 2018, n. 3;
c. il decreto legislativo 14 maggio 2019, n. 52;
d. il decreto del Ministro della Salute 15 luglio 1997;
e. il decreto del Ministro della Salute 12 maggio 2006;
f. il decreto del Ministro della Salute 8 febbraio 2013;
g. i decreti del Ministro della Salute del 26, 27 e 30 gennaio 2023;
h. la Deliberazione di Giunta Regionale n. 224 del 27.04.2023;
i. il Decreto Dirigenziale n. 247 del 10.05.2023;
j. il decreto del Presidente della Giunta regionale n. 65 del 16.06.2023;
k. il Decreto Dirigenziale n. 2 del 29.09.2023;

RITENUTO di dover:

a. prorogare, quale misura transitoria volta ad assicurare la continuità di funzionamento dei Comitati Etici Territoriali in attuazione dell'articolo 3, comma 7, del decreto del Ministro della Salute 30 gennaio 2023, il mandato dei componenti nominati con decreto del Presidente della Giunta regionale n. 65 del 16.06.2023, per la durata di non oltre sei mesi a decorrere dalla data di

pubblicazione del presente atto e comunque sino alla ricostituzione dei menzionati Comitati Etici Territoriali;

b. approvare, nelle more della ricostituzione dei Comitati Etici Territoriali e della rimodulazione delle relative afferenze, l'integrazione dell'Università degli Studi di Napoli "Parthenope" nell'ambito del Comitato Etico Territoriale Campania 2;
c. istituire, presso la Direzione Generale Tutela della Salute e Coordinamento del Sistema Sanitario Regionale, il Centro di riferimento regionale per il supporto e il coordinamento della ricerca clinica e trasferimento tecnologico, quale struttura organizzativa regionale distinta dall'Osservatorio Regionale sulla Sperimentazione Clinica, la cui partecipazione sarà a titolo gratuito con funzioni di raccordo operativo tra la medesima Direzione Generale, i Comitati Etici Territoriali, le Segreterie tecnico-scientifiche e le strutture sanitarie afferenti, di supporto alle Segreterie tecnico-scientifiche, di uniformazione delle procedure e dei flussi informativi, di coordinamento delle attività di ricerca clinica e di supporto ai processi di trasferimento tecnologico, nonché di coordinamento funzionale della piattaforma informatica regionale per la sperimentazione clinica, ferme restando le funzioni attribuite al menzionato Osservatorio Regionale;
d. formulare indirizzo alla Direzione Generale Tutela della Salute e Coordinamento del Sistema Sanitario Regionale, al fine di affidare a So.Re.Sa. S.p.A., in conformità alla normativa vigente in materia, lo sviluppo e l'implementazione di una piattaforma informatica regionale unica e integrata per la gestione degli studi da parte delle Segreterie tecnico-scientifiche, la tracciabilità dei procedimenti e il monitoraggio regionale delle attività;
e. demandare alla Direzione Generale Tutela della Salute e Coordinamento del Sistema Sanitario Regionale gli adempimenti finalizzati:

e.1 all'avvio della manifestazione di interesse per l'individuazione dei componenti dei Comitati Etici Territoriali e del procedimento di rimodulazione delle afferenze delle Aziende Sanitarie Locali, delle Aziende Ospedaliere, delle Aziende Ospedaliero-Universitarie, degli Istituti di Ricovero e Cura a Carattere Scientifico e degli ulteriori enti interessati a ciascun Comitato;
e.2 alla riorganizzazione delle Segreterie tecnico-scientifiche dei Comitati Etici Territoriali, al fine di assicurarne l'uniformità operativa e un adeguato supporto amministrativo, gestionale e metodologico;
e.3 alla definizione delle modalità organizzative e di funzionamento del Centro di riferimento regionale per il supporto e il coordinamento della ricerca clinica e trasferimento tecnologico;

PROPONE e la Giunta, in conformità, a voto unanime

DELIBERA

per i motivi espressi in narrativa che qui si intendono integralmente riportati e confermati:

1. di **PROROGARE**, quale misura transitoria volta ad assicurare la continuità di funzionamento dei Comitati Etici Territoriali in attuazione dell'articolo 3, comma 7, del decreto del Ministro della Salute 30 gennaio 2023, il mandato dei componenti nominati con decreto del Presidente della Giunta regionale n. 65 del 16.06.2023, per la durata di non oltre sei mesi a decorrere dalla data di pubblicazione del presente atto e comunque sino alla ricostituzione dei menzionati Comitati Etici Territoriali;
2. di **APPROVARE**, nelle more della ricostituzione dei Comitati Etici Territoriali e della rimodulazione delle relative afferenze, l'integrazione dell'Università degli Studi di Napoli "Parthenope" nell'ambito del Comitato Etico Territoriale Campania 2;
3. di **ISTITUIRE**, presso la Direzione Generale Tutela della Salute e Coordinamento del Sistema Sanitario Regionale, il Centro di riferimento regionale per il supporto e il coordinamento della ricerca clinica e trasferimento tecnologico, quale struttura organizzativa regionale distinta dall'Osservatorio Regionale sulla Sperimentazione Clinica, la cui partecipazione sarà a titolo gratuito con funzioni di raccordo operativo tra la medesima Direzione Generale, i Comitati Etici Territoriali, le Segreterie tecnico-scientifiche e le strutture sanitarie afferenti, di supporto alle Segreterie tecnico-scientifiche, di uniformazione delle procedure e dei flussi informativi, di coordinamento delle attività di ricerca clinica e di supporto ai processi di trasferimento tecnologico, nonché di coordinamento funzionale della piattaforma informatica regionale per la sperimentazione clinica, ferme restando le funzioni attribuite al menzionato Osservatorio Regionale;
4. di **FORMULARE INDIRIZZO** alla Direzione Generale Tutela della Salute e Coordinamento del Sistema Sanitario Regionale, al fine di affidare a So.Re.Sa. S.p.A., in conformità alla normativa

vigente in materia, lo sviluppo e l'implementazione di una piattaforma informatica regionale unica e integrata per la gestione degli studi da parte delle Segreterie tecnico-scientifiche, la tracciabilità dei procedimenti e il monitoraggio regionale delle attività;

5. di **DEMANDARE** alla Direzione Generale Tutela della Salute e Coordinamento del Sistema Sanitario Regionale gli adempimenti finalizzati:

5.1 all'avvio della manifestazione di interesse per l'individuazione dei componenti dei Comitati Etici Territoriali e del procedimento di rimodulazione delle afferenze delle Aziende Sanitarie Locali, delle Aziende Ospedaliere, delle Aziende Ospedaliero-Universitarie, degli Istituti di Ricovero e Cura a Carattere Scientifico e degli ulteriori enti interessati a ciascun Comitato;

5.2 alla riorganizzazione delle Segreterie tecnico-scientifiche dei Comitati Etici Territoriali, al fine di assicurarne l'uniformità operativa e un adeguato supporto amministrativo, gestionale e metodologico;

5.3 alla definizione delle modalità organizzative e di funzionamento del Centro di riferimento regionale per il supporto e il coordinamento della ricerca clinica e trasferimento tecnologico;

6. di **TRASMETTERE** il presente provvedimento al Gabinetto del Presidente della Giunta Regionale della Campania, alla Direzione Generale Tutela della Salute e Coordinamento del Sistema Sanitario regionale, all'Ufficio speciale per l'amministrazione digitale della Regione Campania, anche per la notifica ai soggetti interessati e alle Aziende Sanitarie ed al BURC per la pubblicazione, nonché alla sezione "Amministrazione Trasparente– Casa di Vetro" per l'assolvimento degli obblighi di trasparenza.

Alla stregua dell'istruttoria compiuta dalla Direzione Generale e delle risultanze e degli atti tutti richiamati nelle premesse che seguono, costituenti istruttoria a tutti gli effetti di legge, nonché dell'espressa dichiarazione di regolarità della stessa resa dal Direttore a mezzo di sottoscrizione della presente

PREMESSO che

a. la Legge Regionale 7 maggio 1996, n. 11 "Modifiche ed integrazioni alla Legge Regionale 28 febbraio 1987, n. 13, concernente la delega in materia di economia, bonifica montana e difesa del suolo" e s.m.i., all'art. 5, prevede quale documento generale di programmazione forestale regionale il Piano forestale regionale (P.F.G.), definendolo come quadro di riferimento delle politiche regionali in materia forestale e delegando al Settore per le Foreste Demaniali, oggi Direzione Generale Politiche Agricole Alimentari e Forestali, la sua elaborazione, ai sensi dell'art. 7 c. 2;
b. il Regolamento regionale 28 settembre 2017 n. 3 "Regolamento di tutela e gestione sostenibile del patrimonio forestale regionale", all'art. 5, nell'identificare il "Piano Forestale Generale" nel "Piano forestale regionale" di cui agli artt. 5 e 7 c. 2 della L.R. n. 11/1996, al:
   b.1 comma 1, ne indica i contenuti;
   b.2 comma 2, ribadisce che esso è: redatto dalla Struttura regionale centrale, oggi Direzione Generale per le politiche agricole alimentari e forestali; è approvato dalla Giunta Regionale; ha durata decennale;
c. con Delibera di Giunta Regionale n. 44 del 28.01.2010 è stato preso atto del parere favorevole espresso dalla VIII Commissione Consiliare permanente del Consiglio Regionale della Campania relativamente all'approvazione del Piano forestale regionale 2009/2013, di cui alla DGR n. 1764 del 27/11/2009;
d. il Piano Forestale Generale 2009/2013 è stato più volte oggetto di proroga e, da ultimo, con la DGR n. 687 del 24/10/2018, è stato prorogato fino al 31/12/2020;
e. il Decreto legislativo 3 aprile 2018, n. 34 "*Testo unico in materia di foreste e filiere forestali*", all'art. 6 "*Programmazione e pianificazione forestale*", assegna alla Strategia forestale nazionale il compito di definire gli indirizzi nazionali per la tutela, la valorizzazione e la gestione attiva del patrimonio forestale e per lo sviluppo del settore e delle sue filiere produttive, ambientali e socio-culturali, prevedendo che le Regioni, in coerenza con la stessa, adottino Programmi forestali regionali e provvedano alla loro revisione periodica in considerazione delle strategie, dei criteri e degli indicatori da esse stesse individuati;
f. con Delibera di Giunta Regionale n. 135 del 31 marzo 2021, tra l'altro, è stato dato mandato alla Direzione Generale per le Politiche Agricole, Alimentari e Forestali di provvedere ad intraprendere il procedimento tecnico amministrativo preordinato alla redazione del nuovo Piano Forestale Regionale (PFG);
g. con la Comunicazione Com(2021) 572 *final* del 16 luglio 2021, la Commissione europea ha presentato la nuova strategia dell'Ue per le foreste per il 2030 con l'obiettivo prioritario del rafforzamento in chiave multifunzionale del patrimonio forestale europeo incentrato sul principio della "*Gestione Forestale Sostenibile (GFS)*";
h. i contenuti della nuova strategia europea sono stati recepiti dalla Strategia Forestale Nazionale (SFN) approvata con D.I. n. 677064 del 24/12/2021 del Ministro delle Politiche Agricole Alimentari e Forestali, di concerto con il Ministro della Cultura, il Ministro della transizione ecologica ed il Ministro dello Sviluppo Economico;

PRESO ATTO, dall'istruttoria dei competenti uffici regionali, che

a. con nota prot. n. 81719 del 15/02/2024, la Direzione Generale per le Politiche Agricole, Alimentari e Forestali - UOS Ambiente e Foreste, ha prodotto istanza all'Ufficio Speciale Valutazioni Ambientali per l'avvio della procedura di Valutazione Ambientale Strategica (VAS)

ai sensi degli artt. 13 e ss. del D. lgs. n. 152/2006 e s.m.i. per il "Piano Generale Forestale della Campania", poi integrata con la procedura di Valutazione di Incidenza Appropriata (VIncA);

b. con nota prot. n 122262 del 07/03/2024, l'Ufficio Speciale Valutazioni Ambientali, in qualità di Autorità Competente in materia di Valutazioni ambientali strategiche (VAS) e di Valutazione di incidenza ambientale (VIncA), ha comunicato l'avvio della fase di *scoping* e, a conclusione della stessa, con nota prot. n.194348 del 17/04/2024 ha dato comunicazione dell'avvenuta pubblicazione delle osservazioni e dei contributi pervenuti, invitando l'autorità proponente a valutare gli stessi;

c. con Decreto Dirigenziale n. 56 del 27/02/2026, in seguito all'invio dei chiarimenti ed integrazioni richiesti all'UOS Ambiente e Foreste, nonché alla successiva acquisizione dei "*sentito*" da parte dei soggetti gestori dei Siti della Rete Natura 2000, l'Ufficio Speciale Valutazioni Ambientali, ha espresso relativamente al "Piano Generale Forestale della Campania 2026/2035" parere favorevole di V.A.S., integrata con la V.I.A., su conforme parere della "Commissione V.I.A. - V.A.S. - V.I.", emesso nella seduta del 20/2/2026, con la formulazione delle seguenti prescrizioni:
   c.1 predisporre la Dichiarazione di Sintesi, ai sensi dell'art. 17, comma 1, lettera b) del D. Lgs. n. 152/2006 e ss.mm.ii.;
   c.2 predisporre le misure per il monitoraggio, ai sensi dell'art. 17, comma 1, lettera c) del D. Lgs. n. 152/2006 e s.m.i.;
   c.3 dare attuazione a tutte le altre disposizioni normative previste dagli artt. 15 (c. 2), 16, 17 e 18 del D.Lgs. n. 152/2006 e ss.mm.ii., con particolare riferimento alle disposizioni dell'art. 18 intervenute a seguito delle modifiche introdotte dalla Legge n. 108/2021;

d. con Decreto Dirigenziale n. 44 del 08.06.2026, la Direzione Generale Politiche Agricole, Alimentari e Forestali ha preso atto del parere favorevole di cui al succitato DD n. 56 del 27/02/2026, nonché della redazione della Dichiarazione di Sintesi ai sensi dell'art. 17, comma 1, lettera b) del D.Lgs. n. 152/2006 e ss.mm.ii., contenente anche le misure da adottare in relazione al monitoraggio di cui all'art. 18 del medesimo D.Lgs. n. 152/2006;

e. il Piano Forestale Regionale, nel rispetto del D.Lgs. n. 152/2006, risulta composto dai seguenti allegati:
   e.1 Rapporto ambientale;
   e.2 Studio di incidenza;
   e.3 Dichiarazione di sintesi;

f. dunque, sussistono tutti gli elementi per poter procedere alla sua approvazione da parte della Giunta Regionale, ai sensi dell'art. 5 del Regolamento forestale regionale n. 3/2017;

g. il Piano Forestale Generale della Regione Campania sostituisce il precedente Piano, di cui alla DGR n. 1764 del 27/11/2009, vigente fino al 31/12/2020;

h. per l'attuazione della Strategia Nazionale per il Settore Forestale e le sue Filiere (SFN), il compito che il Decreto legislativo 3 aprile 2018, n. 34 "Testo unico in materia di foreste e filiere forestali", e il Regolamento regionale 28 settembre 2017 n. 3 "Regolamento di tutela e gestione sostenibile del patrimonio forestale regionale", assegnano al Piano Forestale Generale regionale è quello di definire "*gli obiettivi e le relative linee d'azione, coerenti con la Strategia Forestale Nazionale in relazione alle specifiche esigenze socio-economiche, ambientali e paesaggistiche, nonché alle necessità di prevenzione del rischio idrogeologico, di mitigazione e di adattamento al cambiamento climatico*";

i. in linea con la nuova strategia europea, il menzionato Piano individua i seguenti obiettivi prioritari:
   i.1 promuovere una governance forestale in Campania basata sulla cooperazione istituzionale, l'integrazione di strumenti e politiche, la partecipazione e condivisione degli obiettivi di Gestione Forestale Sostenibile (GFS);

i.2 rafforzare il capitale naturale, assicurare i servizi ecologici essenziali, prevenire i rischi ambientali, tutelare e rafforzare la biodiversità forestale nella rete di aree protette della Campania, guidare l'adattamento delle coperture forestali al cambiamento climatico globale;
i.3 curare e gestire in chiave multifunzionale le risorse forestali della Campania, i rimboschimenti storici, i boschi planiziali, i sistemi agroforestali, i castagneti da frutto, i boschi vetusti e gli alberi monumentali, il patrimonio di praterie, prati e pascoli permanenti;
i.4 rafforzare e promuovere e le filiere forestali in Campania per lo sviluppo locale, l'economia circolare, la bioeconomia;
i.5 promuovere un programma integrato di monitoraggio e cartografia delle risorse forestali regionali, implementare pienamente il Sistema informativo forestale regionale e lo Sportello unico regionale per le attività forestali (SUAF);
i.6 sostenere la funzione sociale, culturale, ricreativa delle foreste della Campania mediante iniziative e programmi divulgativi per rafforzare la consapevolezza pubblica dell'importanza e il ruolo ecologico del patrimonio forestale della Campania;
i.7 valorizzare e potenziare i vivai forestali, estendere la superficie dei boschi da seme, valorizzare le risorse genetiche, potenziare la produzione di materiale di propagazione forestale, favorire il ricorso a tecniche forestali per il recupero dei siti degradati in Campania;

j. in attuazione della strategia forestale regionale, il Piano assolve agli specifici compiti ad esso assegnati dal Decreto legislativo 3 aprile 2018, n. 34 "Testo unico in materia di foreste e filiere forestali" e dal Regolamento forestale regionale n. 3/2017 e in particolare:
j.1 individuazione e definizione di linee guida di gestione dei boschi di protezione diretta;
j.2 definizione degli ambiti del territorio regionale cui riferire i Piani forestali di indirizzo territoriale;

RITENUTO, pertanto

a. di dover approvare, ai sensi, dell'art. 5 c. 2 del Regolamento forestale regionale n. 3/2017, il Piano Forestale Generale della Regione Campania 2026/2035, con i relativi allegati, che ne costituiscono parte integrante e sostanziale, come di seguito indicati:
a.1 Rapporto ambientale;
a.2 Studio di incidenza;
a.3 Dichiarazione di sintesi;
b. di dover demandare tutti gli adempimenti consequenziali alla Direzione Generale Politiche Agricole, Alimentari e Forestali;

VISTI

a. la Legge regionale n. 11/1996 ed in particolare l'art. 5;
b. il D. Lgs. n. 152/2006 e s.m.i.;
c. Il Regolamento regionale 28 settembre 2017, n. 3 "*Regolamento di tutela e gestione sostenibile del patrimonio forestale regionale*" e s.m.i.;
d. il Decreto legislativo 3 aprile 2018, n. 34 "Testo unico in materia di foreste e filiere forestali";

PROPONE e la Giunta, in conformità, a voto unanime,

DELIBERA

per i motivi espressi in narrativa, che qui si intendono integralmente riportati e confermati

1. di approvare, ai sensi, dell'art. 5 c. 2 del Regolamento forestale regionale n. 3/2017, il Piano Forestale Generale della Regione Campania 2026/2035, con i relativi allegati, che ne costituiscono parte integrante e sostanziale, come di seguito indicati:

- Rapporto ambientale;
- Studio di incidenza;
- Dichiarazione di sintesi;

2. di demandare tutti gli adempimenti consequenziali alla Direzione Generale Politiche Agricole, Alimentari e Forestali;
3. di trasmettere il presente provvedimento, per quanto di rispettiva competenza, al Gabinetto del Presidente, al Presidente della VIII Commissione Consiliare Permanente del Consiglio Regionale della Campania "Agricoltura, Caccia, Pesca, Risorse comunitarie e statali per lo sviluppo", alla Direzione Generale Politiche Agricole, Alimentari e Forestali, all'Ufficio Speciale Valutazioni Ambientali, alla Sezione Amministrativa Trasparente / Regione Casa di Vetro del sito istituzionale ai sensi dell'art. 5 della L.R. n. 23/2017 e al BURC per la pubblicazione.

1. Introduzione

Il quadro programmatico in materia di forestazione è radicalmente mutato negli ultimi 24 mesi. La Commissione europea ha di recente licenziato la nuova strategia forestale europea. Essa costituisce, assieme alla strategia per la biodiversità, uno dei principali strumenti del New Green Deal europeo e di Next Generation UE.

La strategia europea identifica nel patrimonio forestale e nella sua gestione sostenibile in chiave multifunzionale uno dei principali strumenti di contrasto del cambiamento climatico, e nelle filiere forestali un settore di produzione primaria da rilanciare nel quadro dell'economia circolare e della bioeconomia.

La strategia mette anche in risalto il ruolo delle foreste di prossimità urbana, come spazio di vita e ricreazione all'aria aperta per le popolazioni delle città europee, oltre che di mitigazione del rischio ambientale, in risposta alle nuove esigenze nate con la pandemia.

Nel nostro Paese, la Strategia forestale nazionale messa a punto di concerto da MIPAAF MIBACT e MITE riprende le nuove politiche comunitarie in materia, con i relativi obiettivi, adattandole al contesto nazionale specifico, in attuazione anche degli obiettivi definiti dal "Testo unico in materia di foreste e filiere forestali" (TUFF, D.lgs. 3 aprile 2018, n. 34).

Il fatto nuovo rispetto al passato è che tutte queste novità non riguardano un ambito strettamente settoriale, ma le politiche di recupero e resilienza nel loro complesso.

I servizi ecosistemici forniti dal patrimonio forestale, insieme alle molteplici economie che a partire da esso si generano, sono al centro del New Green Deal e della strumentazione finanziaria di Next Generation Ue. Questi temi sono ampiamente presenti nel Piano italiano per la Transizione Ecologica, e ad essi sono dedicate specifiche missioni del PNRR, con le relative linee di finanziamento.

Sempre a scala nazionale, sul piano legislativo, la nuova idea di forestazione necessaria per sostenere l'intero processo, è declinata nei diversi decreti attuativi previsti dal Testo Unico in materia di foreste e filiere forestali, a cominciare da quelli più recenti sulla pianificazione e la cartografia delle risorse forestali.

Se la crisi ambientale e quella pandemica hanno innescato questo poderoso processo evolutivo delle politiche forestali ai diversi livelli, è evidente l'esigenza per la Campania di prendervi parte, con un ruolo e con responsabilità adeguate alla sfida.

Il patrimonio forestale della Campania è ingente. Secondo i dati dell'Inventario Forestale Nazionale 2015, il 35,8% del territorio regionale è ora ricoperto da ecosistemi forestali, e la superficie forestale è in costante aumento a causa delle dinamiche di abbandono agricolo. Questi processi interessano in prevalenza le aree collinari e montane interne, ma in maniera sorprendente anche l'area metropolitana regionale Caserta-Napoli-Salerno, dove in mezzo alla maglia urbana pure sono presenti 20.000 ettari di foreste, che sono proprio quei boschi di prossimità il cui ruolo viene ribadito ed esaltato nella strategia forestale europea ma anche nel PNRR.

Per consentire alla Campania di vivere da protagonista il processo in corso, che costituisce un'occasione storica unica, che non tornerà, è necessaria una rivisitazione urgente, tempestiva e

fonte: http://burc.regione.campania.it

vigorosa del nostro complessivo sistema di governance del patrimonio forestale, e delle politiche pubbliche sino ad ora messe in campo.
La possibilità per il settore forestale della Campania di cogliere le opportunità offerte dal New Green Deal europeo, da Next Generation EU, dalla nuova Politica Agricola Europea 2023-2027 e dal PNRR sono innanzitutto legate al completamento urgente del quadro programmatico regionale.
Nel nuovo quadro programmatico definito dal Testo unico, il Piano forestale generale si pone l'obiettivo di delineare con chiarezza una nuova strategia forestale per la Campania, riferita al complessivo patrimonio forestale regionale, in grado di definire operativamente i fabbisogni, gli obiettivi misurabili, e le azioni da promuovere, a partire da quelle indicate nella Strategia forestale nazionale, cogliendo tutte le opportunità offerte dai differenti strumenti di finanziamento comunitari, nazionali, regionali.
La necessità di una stretta integrazione della pianificazione forestale con i diversi strumenti settoriali, sottolineata nel recente decreto attuativo costituisce un indirizzo stringente per il ridisegno della governance forestale in Campania.
Risulta evidente come gli interventi prioritari di valorizzazione e gestione sostenibile del patrimonio forestale regionale dovranno, anche per ovvie esigenze di efficienza ed efficacia delle politiche pubbliche, essere riferiti a un patrimonio forestale inteso come bene unitario, al di là della suddivisione di competenze tra soggetti, quali gli Enti delegati in materia forestale dalla legislazione regionale vigente (Comunità montane, Province, Città metropolitana di Napoli), gli Enti parco, gli Enti di gestione dei siti della rete Natura 2000, il Distretto idrografico, la Protezione civile, promovendo attivamente e richiedendo anzi la cooperazione attiva questi soggetti per il conseguimento di obiettivi condivisi.
Quindi, non più una pletora di interventi puntuali, scollegati e parcellizzati, il cui impatto è difficilmente stimabile, ma piuttosto un programma coordinato di azioni e di progetti prioritari, rispondenti ai fabbisogni territoriali specifici, definiti di concerto tra i diversi soggetti, in funzione delle rispettive competenze ed obiettivi istituzionali, con un forte ruolo di coordinamento della Regione, con i suoi atti di programmazione, così come richiesto dalla legislazione vigente.

2. La procedura di VAS

La valutazione ambientale strategica (VAS) e definita e disciplinata a livello europeo dalla Direttiva 2001/42/CE, concernente la valutazione degli effetti di determinati piani e programmi sull'ambiente, con l'obiettivo di garantire un elevato livello di protezione dell'ambiente.
I piani e programmi soggetti a VAS sono quelli riferiti alla gestione ambientale, territoriale e settoriale e che definiscono il quadro di riferimento per l'autorizzazione dei progetti sottoposti a valutazione di impatto ambientale, ai sensi della Direttiva 85/337/CEE, concernente la valutazione dell'impatto ambientale di determinati progetti pubblici e privati, oppure per i quali si ritiene necessaria la valutazione di incidenza, ai sensi della Direttiva 92/43/CEE, relativa alla conservazione degli habitat naturali e semi naturali e della flora e della fauna selvatiche, in considerazione dei possibili effetti sui siti della rete Natura 2000. Lo Stato Italiano ha recepito la Direttiva 2001/42/CE, con il D. Lgs. 3 aprile 2006, n. 152, recante Norme in materia ambientale, la cui "Parte Seconda", entrata in vigore il 31 luglio 2007, è stata completamente sostituita dal D. Lgs. del 16 gennaio 2008, n. 4 Ulteriori disposizioni correttive ed integrative del decreto legislativo del 3 aprile 2006, n. 152, recante norme in materia ambientale e ulteriormente modificata dal D. Lgs. del 29 giugno 2010, n. 128 Modifiche ed integrazioni al D. Lgs. 3 aprile 2006, n. 152, recante norme in materia ambientale, a norma dell'articolo 12 della legge 18 giugno 2009, n. 69. Il recepimento a livello nazionale ha dettagliato le modalità di svolgimento della VAS, specificando competenze e tempistiche associate alle diverse fasi del processo. Va sottolineato che, ai sensi dell'art. 10 del D. Lgs. n. 152/2006, la procedura di VAS comprende le procedure di valutazione di incidenza previste dall'art. 5 del D.P.R. n. 357/1997 (Regolamento recante attuazione della direttiva 92/43/CEE relativa alla conservazione degli habitat naturali e semi naturali, nonché della flora e della fauna selvatiche). In particolare, la Direttiva prevede che la VAS trovi espressione nel Rapporto Ambientale che costituisce parte integrante degli atti di pianificazione e riporta gli esiti dell'intero percorso di valutazione ambientale. In particolare, il Rapporto Ambientale indica le modalità di integrazione dell'ambiente nel Piano e le alternative considerate, individua, descrive e valuta gli effetti significativi che l'attuazione del Piano potrebbe avere sull'ambiente alla luce degli obiettivi prefissati, indicandone le eventuali misure di mitigazione e/o compensazione, e infine presenta un opportuno sistema di monitoraggio dello stato dell'ambiente nel tempo.
In base alla norma comunitaria, la procedura di VAS si sviluppa secondo la seguente articolazione generale:

- informazione al pubblico dell'avvio del procedimento di formazione del Piano/Programma e della relativa valutazione ambientale;
- fase di Scoping, con la definizione dell'ambito di influenza del Piano/Programma in esame e delle informazioni da raccogliere ed elaborare nel corso del processo di valutazione ambientale;
- elaborazione di un Rapporto Ambientale, documento di riferimento per l'intero processo VAS, contenente la descrizione dello scenario ambientale/territoriale oggetto del

fonte: http://burc.regione.campania.it

Piano/Programma, i criteri di valutazione assunti e il resoconto finale del processo di valutazione ambientale effettuato;

- consultazione del pubblico e delle autorità competenti in materia ambientale;
- valutazione del Rapporto Ambientale e dei risultati delle consultazioni;
- messa a disposizione delle informazioni sulle decisioni;
- monitoraggio ambientale.

Nell'ambito del procedimento generale qui sopra richiamato, si evidenziano due aspetti di specifica rilevanza per l'efficacia della valutazione ambientale: il coinvolgimento nel processo decisionale e valutativo delle autorità ambientali e del pubblico, ossia cittadini, associazioni, organizzazioni o gruppi presenti sul territorio, accompagnato dalla produzione di documenti informativi sugli impatti e gli effetti stimati e sulle soluzioni pianificatorie adottate, e la definizione di un sistema di monitoraggio da implementare in seguito all'attuazione del Piano/Programma al fine di verificare il raggiungimento degli obiettivi prefissati e accertare le reali conseguenze generate dalle decisioni e dalle azioni previste per poter intervenire con le azioni correttive eventualmente necessarie.

3. Il quadro programmatico del settore forestale. La Strategia Forestale Nazionale

La Strategia Nazionale per il settore forestale e le sue filiere (SFN) è il documento strategico di indirizzo nazionale a supporto delle Amministrazioni centrali dello Stato e di quelle regionali e delle Province autonome, previsto all'art. 6, comma 1, del decreto legislativo 3 aprile 2018 n. 34 (TUFF).
La SFN promuove, con una visione di lungo termine e in attuazione degli impegni assunti dall'Italia a livello internazionale ed europeo, la gestione sostenibile del patrimonio forestale nazionale, e quindi lo sviluppo del settore e delle sue risorse produttive, ambientali e socioculturali.
In particolare, il fine della SFN è quello di concorrere efficacemente, in linea con il Green Deal europeo, al perseguimento delle priorità e degli impegni sottoscritti in ambito internazionale in materia di clima, ambiente e biodiversità, energia e sviluppo socioeconomico sostenibile.
La SFN si propone di fornire risposte operative alle principali sfide a cui il settore forestale nazionale è chiamato a contribuire alla crisi climatica con riferimento tra l'altro:

- alla protezione dell'ambiente, alla conservazione della biodiversità e al recupero funzionale e strutturale degli ecosistemi;
- alla tutela del paesaggio;
- alle esigenze di decarbonizzazione della economia e di sviluppo delle energie rinnovabili;
- all'uso efficiente delle risorse e alla necessità di sostenere uno sviluppo sostenibile volto sempre di più verso una economia circolare e a garantire il presidio dei territori rurali e montani;
- alla commercializzazione e trasformazione di prodotti forestali di origine legale e, quindi, alla cooperazione internazionale per la protezione delle foreste e il ripristino dei territori degradati.

In particolare, all'interno del quadro programmatico complessivo del New Green Deal Europeo, la Strategia Forestale Nazionale:

- riconosce il patrimonio forestale come risorsa e bene comune primario del Paese e della società, e propone un progetto di sviluppo (in termini di obiettivi e di azioni) rivolto non solo a una migliore "organizzazione e gestione delle risorse", ma anche alla protezione e ricostruzione, attraverso l'integrazione delle politiche, di una relazione identitaria, consapevole e responsabile tra foreste e società, di cui l'integrazione tra gli aspetti economico, conservazionistico ed ecologico costituiscono fondamento;

- riconosce e promuove la "Gestione forestale sostenibile o gestione attiva" (art.3, comma 2, lettera b) del TUFF) quale strumento programmatico e operativo di scelta responsabile, in grado di portare le diverse esigenze dell'economia, dell'ambiente e della società sul territorio al fine di garantire la conservazione delle foreste e la fornitura di beni e relativi Servizi ecosistemici;

fonte: http://burc.regione.campania.it

- riconosce il contributo attivo del settore forestale e delle sue filiere nel perseguimento degli impegni internazionali sottoscritti dal Governo italiano e da cui discendono gli indirizzi strategici europei e le Strategie e politiche nazionali in ambito climatico, di tutela e conservazione della biodiversità, sviluppo della bioeconomia, energia e mantenimento dell'occupazione nelle aree rurali;

- indica un percorso condiviso e partecipativo tra le istituzioni statali e regionali competenti, le autonomie locali, le organizzazioni sociali ed economiche associazioni ambientaliste e di categoria, il mondo produttivo e imprenditoriale, gli ordini professionali e il mondo scientifico, proponendo un nuovo paradigma nella lettura del ruolo delle filiere del settore forestale nella società.

Per il perseguimento di tali finalità, la Strategia individua 3 Obiettivi generali riconducibili ai tre Principi-guida della Strategia Strategia forestale UE per il 2030 declinandoli e contestualizzandoli alle esigenze ambientali e socio-economiche del territorio nazionale.

A. Gestione sostenibile e ruolo multifunzionale delle foreste. Favorire la Gestione Forestale Sostenibile e il ruolo multifunzionale delle foreste, per garantire, a scala nazionale, ecoregionale, regionale e locale, la fornitura equilibrata, costante e continua di Servizi ecosistemici.

B. Efficienza nell'impiego delle risorse forestali per uno sviluppo sostenibile delle economie nelle aree rurali, interne e urbane del Paese. Migliorare l'efficienza nell'impiego delle risorse, ottimizzando il contributo multifunzionale delle foreste allo sviluppo della bioeconomia e delle economie forestali e delle aree rurali e interne del Paese, promuovendo inoltre l'espansione e la valorizzazione delle foreste nei contesti urbani e suburbani per migliorare il benessere e la qualità ambientale.

C. Responsabilità e conoscenza globale delle foreste. Monitorare e sviluppare una conoscenza multidisciplinare e una responsabilità globale nella tutela delle foreste, anche attraverso la ricerca scientifica multidisciplinare, l'assistenza tecnica, la formazione professionale e la promozione dei prodotti forestali e di pratiche, produzioni e consumi sostenibili.

I tre obiettivi della Strategia forestale nazionale indicano la direzione da seguire per un'azione unitaria e mirata alla tutela del patrimonio forestale, alla valorizzazione e allo sviluppo sostenibile del settore forestale e delle sue filiere, coerentemente con gli orientamenti e gli impegni definiti in ambito internazionale ed europeo. Essi concorrono al perseguimento delle 11 finalità del decreto legislativo 3 aprile 2018 n.34 art. 2 comma 1 (Tabella 1).
Denominatore comune alla base di queste linee strategiche è la Gestione Forestale Sostenibile (GFS), così come definita a livello internazionale nell'ambito delle Conferenze ministeriali per la protezione delle foreste in Europa (*Forest Europe*) e recepita dall'UE e dall'Italia quale strumento essenziale per equilibrare gli interessi e le responsabilità della società, dei proprietari e degli

fonte: http://burc.regione.campania.it

operatori del settore con il fine di tutelare e conservare gli ecosistemi, la diversità strutturale e funzionale delle foreste, frenare il processo di abbandono colturale e culturale, valorizzare il ruolo del bosco e la funzione del settore forestale e delle sue filiere nello sviluppo socioeconomico del Paese.
In coerenza con gli impegni internazionali, all'art. 3 com. 2, lettera b) del TUFF, la GFS o *gestione attiva*, viene definita come:

> *"insieme delle azioni selvicolturali volte a valorizzare la molteplicità delle funzioni del bosco, a garantire la produzione sostenibile di beni e Servizi ecosistemici, nonché una gestione e uso delle foreste e dei terreni forestali nelle forme e ad un tasso di utilizzo che consenta di mantenere la loro biodiversità, produttività, rinnovazione, vitalità e potenzialità di adempiere, ora e in futuro, a rilevanti funzioni ecologiche, economiche e sociali a livello locale, nazionale e globale, senza comportare danni ad altri ecosistemi".*

I 3 obiettivi della Strategia forestale nazionale sono stati declinati in 8 *Aree prioritarie di intervento* che ispirano i contenuti della Strategia:

1. Sostenere le comunità rurali e urbane - un settore forestale sostenibile e competitivo può svolgere un ruolo importante nello sviluppo delle aree rurali e montane per l'intera economia del paese, fornendo al contempo benefici senza prezzo per la società.

2. Migliorare la competitività e la sostenibilità delle industrie forestali dell'UE, della bioenergia e dell'economia verde in generale - le foreste e le materie prime da esse derivate possono offrire opportunità per mantenere o creare posti di lavoro e diversificare le entrate in un'economia verde a basse emissioni di carbonio.

3. Foreste e cambiamenti climatici - le foreste possono aiutare a mitigare i cambiamenti climatici e gli eventi meteorologici estremi associati, e devono quindi mantenere e migliorare la loro capacità di ripresa e adattabilità, e di resilienza in genere legata alla tutela della biodiversità e alla presenza di specie coerenti per ecologia e biogeografia alla vegetazione potenziale.

4. Proteggere le foreste e migliorare i Servizi ecosistemici - le foreste forniscono Servizi ecosistemici da cui dipendono le comunità rurali e urbane e ospitano un'enorme varietà di biodiversità.

5. Informazioni e monitoraggio forestale - il rafforzamento della base di conoscenze forestali consentirà una migliore comprensione delle complesse sfide ambientali e sociali che il settore forestale sta affrontando.

6. Prodotti forestali nuovi e innovativi che generano valore aggiunto - uno spazio di ricerca forestale coerente e ambizioso dell'UE stimolerà l'innovazione in tutto il settore forestale.

fonte: http://burc.regione.campania.it

7. Collaborare per conoscere meglio le nostre foreste e gestirle in maniera coerente - il coordinamento tra le diverse competenze disciplinari e professionali, la cooperazione e la comunicazione contribuiranno al raggiungimento della coerenza e della complementarietà delle politiche.

8. Foreste in una prospettiva globale - occorre garantire la coerenza tra le politiche e gli obiettivi dell'UE e degli Stati membri e gli impegni relativi alle questioni connesse alle foreste a livello internazionale.

Il perseguimento dei 3 Obiettivi generali della SFN avviene attraverso l'attuazione di:

- 16 Azioni operative, declinate per competenze e responsabilità dal livello statale a quello delle Regioni e Province autonome, e trovano diretta attuazione nei Programmi Forestali Regionali, dove saranno finalizzate al perseguimento di risultati concreti con interventi contestualizzati alle esigenze istituzionali, territoriali, ecologiche, socioeconomiche e paesaggistiche delle specifiche realtà locali.

- 8 Azioni specifiche, che rappresentano linee di intervento che riguardano particolari ambiti di carattere strategico per l'azione di governance, definendo approfondimenti, linee-guida e buone prassi per le autorità centrali dello Stato, le Regioni e le Province autonome volte al perseguimento congiunto e coordinato degli obiettivi nazionali, nonché degli impegni internazionali ed europei.

- 5 Azioni strumentali, che costituiscono azioni portanti e fondamentali per garantire l'attuazione delle Azioni Operative e delle Azioni Specifiche. Costituiscono infatti, una sorta di "misure di supporto diretto" ai necessari adattamenti dell'assetto delle istituzioni.

Le Azioni Strumentali rappresentano elementi cardine per l'attuazione della SFN e delle politiche forestali a livello nazionale e locale per il perseguimento degli impegni internazionali sottoscritti dal Governo italiano, per organizzare e armonizzare le competenze istituzionali, per un adeguamento degli strumenti normativi e degli atti di programmazione, per un utilizzo efficace delle risorse finanziarie, nonché per l'ottenimento del più ampio coinvolgimento possibile delle parti sociali. Le Azioni strumentali contengono elementi di specificazione dei contenuti delle Azioni Operative e delle Azioni Specifiche, costituendo delle misure di accompagnamento relativamente all'assetto delle istituzioni e dei portatori d'interesse nell'implementazione operativa della SFN.
In accordo con quanto previsto dal TUFF, il Piano forestale della Campania definisce, per il territorio regionale, gli obiettivi e le relative linee d'azione, coerenti con la Strategia Forestale Nazionale in relazione alle specifiche esigenze socio-economiche, ambientali e paesaggistiche, nonche' alle necessita' di prevenzione del rischio idrogeologico, di mitigazione e di adattamento al cambiamento climatico.

fonte: http://burc.regione.campania.it

Tab. 1. Le 11 finalità del TUFF (Dlgs 3 aprile 2018, n. 34, art. 2 comma 1)

a. Garantire la salvaguardia delle foreste nella loro estensione, distribuzione, ripartizione geografica, diversità ecologica e bio-culturale.

b. Promuovere la gestione attiva e razionale del patrimonio forestale nazionale al fine di garantire le funzioni ambientali, economiche e socioculturali.

c. Promuovere e tutelare l'economia forestale, l'economia montana e le rispettive filiere produttive nonché lo sviluppo delle attività agro- silvo-pastorali attraverso la protezione e il razionale utilizzo del suolo e il recupero produttivo delle proprietà fondiarie frammentate e dei terreni abbandonati (colturalmente), sostenendo lo sviluppo di forme di gestione associata delle proprietà forestali pubbliche e private.

d. Proteggere la foresta promuovendo azioni di prevenzione da rischi naturali e antropici, di difesa idrogeologica, di difesa dagli incendi e dalle avversità biotiche ed abiotiche, di adattamento al cambiamento climatico, di recupero delle aree degradate o danneggiate, di sequestro del carbonio e di erogazione di altri Servizi ecosistemici generati dalla GFS.

e. Promuovere la programmazione e la pianificazione degli interventi di gestione forestale nel rispetto del ruolo delle Regioni e delle autonomie locali.

f. Favorire l'elaborazione di principi generali, di linee guida e di indirizzo nazionali per la tutela e la valorizzazione del patrimonio forestale e del paesaggio rurale, con riferimento anche agli strumenti di intervento previsti dalla Politica Agricola Comunitaria.

g. Favorire la partecipazione attiva del settore forestale italiano alla definizione, implementazione e sviluppo della Strategia Forestale dell'UE e delle politiche ad essa collegate.

h. Garantire e promuovere la conoscenza e il monitoraggio del patrimonio forestale nazionale e dei suoi ecosistemi, anche al fine di supportare l'esercizio delle funzioni di indirizzo politico nel settore forestale e ambientale.

i. Promuovere e coordinare la formazione e l'aggiornamento degli operatori e la qualificazione delle imprese del settore.

j. Promuovere l'attività di ricerca, sperimentazione e divulgazione tecnica nel settore forestale.

k. Promuovere la cultura forestale e l'educazione ambientale.

fonte: http://burc.regione.campania.it

4. Il Piano forestale generale della Campania nel quadro della programmazione forestale nazionale

In accordo con il "Testo unico in materia di foreste e filiere forestali" (TUFF, D.lgs. 3 aprile 2018, n. 34) e con la legislazione regionale vigente, il Piano forestale generale della Campania[1] definisce gli obiettivi e le azioni per la tutela e la gestione attiva del patrimonio forestale regionale.
In accordo con l'art. 6 del Testo unico, il Piano forestale generale della Campania si inserisce nel complessivo quadro programmatico nazionale, che si articola in 4 livelli:

- La **Strategia Forestale Nazionale** che definisce gli indirizzi nazionali per la tutela, la valorizzazione e la gestione attiva del patrimonio forestale nazionale e per lo sviluppo del settore e delle sue filiere produttive, ambientali e socio-culturali;

- Il **Programma forestale regionale**, che definisce gli obiettivi e le relative linee d'azione, coerenti con la Strategia Forestale Nazionale in relazione alle specifiche esigenze socio-economiche, ambientali e paesaggistiche, nonché alle necessita' di prevenzione del rischio idrogeologico, di mitigazione e di adattamento al cambiamento climatico;

- I **piani forestali di indirizzo territoriale**, che possono essere predisposti dalle regioni con riferimento a comprensori territoriali omogenei per caratteristiche ambientali, paesaggistiche, economico-produttive o amministrative, finalizzati all'individuazione, al mantenimento e alla valorizzazione delle risorse silvo-pastorali e al coordinamento delle attivita' necessarie alla loro tutela e gestione attiva, nonche' al coordinamento degli strumenti di pianificazione forestale;

- I **piani di gestione forestale**, redatti per le proprietà pubbliche e private, riferiti ad un ambito aziendale o sovraziendale di livello locale, quali strumenti indispensabili a garantire la tutela, la valorizzazione e la gestione attiva delle risorse forestali, attuativi dei Programmi forestali regionali e coordinati con i Piani forestali di indirizzo territoriale.

Compito del Piano forestale generale è pertanto quello di attuare nel territorio della regione Campania, in considerazione delle specifiche caratteristiche ed esigenze, gli obiettivi e le azioni della Strategia Forestale Nazionale, che a sua volta recepisce per il territorio nazionale i contenuti degli accordi internazionali e della legislazione e programmazione comunitaria in materia di risorse forestali e ambientali, biodiversità, lotta al cambiamento climatico, tutela del paesaggio.

[1] La denominazione dello strumento di programmazione forestale di livello regionale è differente nelle disposizioni di legge ai diversi livelli: il TUFF lo definisce "Programma forestale regionale"; il Regolamento 3/2017 della Regione Campania di tutela e gestione sostenibile del patrimonio forestale regionale lo definisce "Piano forestale generale"; la precedente legge forest ale della Campania L.R. 11/96 "Piano forestale regionale". Per comodità, nel presente documento è adottata la dizione "Piano forestale generale".

fonte: http://burc.regione.campania.it

Al centro del modello di programmazione forestale definito dal Testo unico rimane il concetto-guida di *Gestione Forestale Sostenibile* (GFS) o *gestione attiva* del patrimonio forestale.
A livello regionale, in piena coerenza con il Testo unico, il Regolamento 3/2017 della Regione Campania di tutela e gestione sostenibile del patrimonio forestale regionale, definisce ulteriormente all'art. 5 i contenuti del Piano Forestale Generale che:

a. descrive le caratteristiche ecologiche, strutturali ed evolutive del patrimonio forestale regionale;

b. definisce le strategie generali di tutela e gestione sostenibile del patrimonio forestale regionale ed individua gli obiettivi da conseguire e le azioni prioritarie di miglioramento delle foreste pubbliche e private, tenendo conto degli obiettivi della tutela ambientale e dello sviluppo socio-economico delle popolazioni interessate e costituendo il quadro di riferimento per la pianificazione forestale a livello territoriale e locale;

c. si coordina con la pianificazione specialistica vigente, con espresso riferimento al piano paesaggistico di cui all'articolo 135 del D.Lgs. 22 gennaio 2004, n. 42 (Codice dei beni culturali e del paesaggio); ai piani di bacino di cui all'articolo 66 del D.Lgs. 3 aprile 2006, n. 152 (Norme in materia ambientale); ai piani di gestione della Rete Natura 2000 di cui al D.P.R 8 settembre 1997, n. 357 (Regolamento recante attuazione della direttiva 92/43/CEE relativa alla conservazione degli habitat naturali e seminaturali, nonché della flora e della fauna selvatiche).

Ai fini della caratterizzazione del patrimonio boschivo regionale il Piano forestale generale fa riferimento alla **Carta delle risorse forestali della Campania**, redatta contestualmente ad esso.

fonte: http://burc.regione.campania.it

5. La Carta delle risorse forestali del territorio della Regione Campania: struttura della legenda e del data base associato

In accordo con quanto disposto dall'articolo 5 della L.R. 11/1996 e dell'articolo 12 del Regolamento regionale 3/2017, la Carta delle risorse forestali "… illustra la distribuzione geografica, la superficie e la qualità delle diverse formazioni forestali presenti nel territorio regionale, anche in relazione alle infrastrutture ed alle sistemazioni forestali eventualmente presenti. Essa costituisce l'inventario di base, unitamente al piano forestale regionale, per la definizione delle strategie di protezione e valorizzazione delle risorse forestali a scala regionale e per la corretta programmazione degli interventi in materia forestale."
La carta regionale delle risorse forestali è parte del Sistema Informativo Regionale delle Foreste (S.I.R.F.), a sua volta, ricompreso nel Sistema informativo territoriale - S.I.T. - regionale di cui all'articolo 17 della L. R. 22 dicembre 2004, n. 16 (Norme sul governo del territorio), ed all'articolo 9 della L. R. 13 ottobre 2008, n. 13 (Piano Territoriale Regionale).
L'articolo 9 del Regolamento regionale n. 3/2017 stabilisce che lo strumento di coordinamento delle diverse attività amministrative e autorizzative legate alla tutela, gestione sostenibile e monitoraggio delle risorse forestali è lo Sportello Unico delle Attività Forestali (S.U.A.F.), che costituisce la piattaforma informatica unitaria a livello regionale in materia forestale.
La versione della Carta delle risorse forestali del territorio della Regione Campania in scala di semidettaglio 1:25.000 che accompagna il Piano forestale generale è stata realizzata mediante attività di fotointerpretazione e di analisi, revisione, integrazione in ambiente GIS dei dati cartografici contenuti nei seguenti strati informativi:

- Carta della natura della Regione Campania (Ispra, Arpac 2017);
- Carta delle risorse forestali della Campania (Risorsa, 2015);
- Carta forestale della Campania (Sma Campania 2010);
- Carta dell'uso agricolo dei suoli della Campania (Regione Campania, Settore Sirca 2009);
- Indagine sui pascoli pubblici della Campania (Regione Campania settore Sirca, Agristudio 2005).

Il data base associato alla Carta delle risorse forestali è organizzato in cinque livelli gerarchici, che consentono di descrivere le coperture forestali a diversi livelli di aggregazione e generalizzazione, in funzione delle specifiche esigenze.
Le descrizioni ai diversi livelli utilizzano le denominazioni impiegate nell'Inventario forestale nazionale, allo scopo di favorire le correlazioni tra Carta delle risorse forestali e le informazioni contenute nell'Inventario forestale nazionale. Tutto ciò tenendo sempre presente le differenze tra i due strumenti, che hanno finalità e modalità realizzative proprie.

fonte: http://burc.regione.campania.it

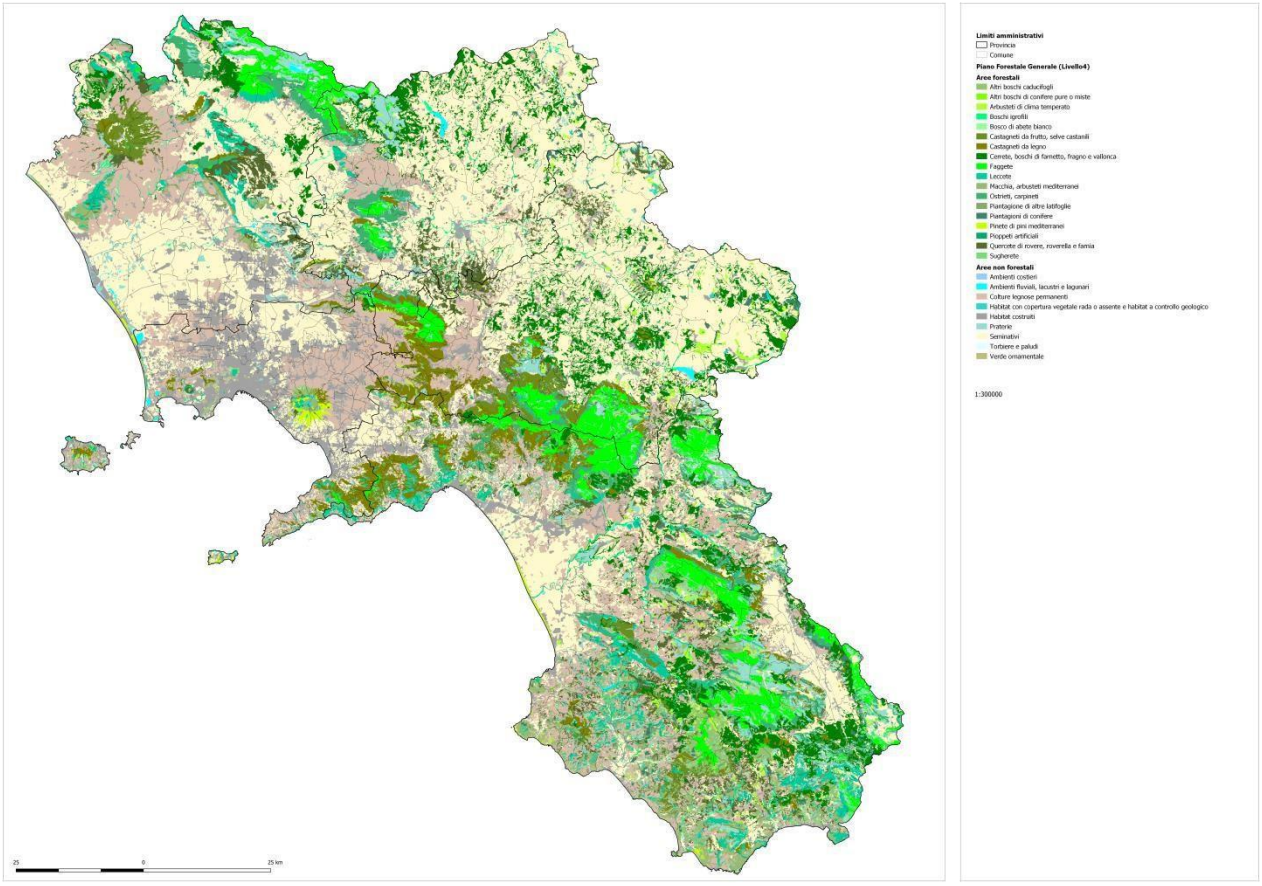

Fig. 4.1. La Carta delle risorse forestali della Regione Campania realizzata a supporto del Piano forestale generale

Associato alla Carta delle risorse forestali è stato messo a punto un primo nucleo del Sistema informativo delle foreste regionali contenente una libreria di strati informativi relativi ai principali aspetti amministrativi, di tutela e di rischio:

- Confini amministrativi degli Enti delegati (Comunità Montane, Province, Città metropolitana di Napoli)
- Confini amministrativi comunali
- Sistemi del territorio rurale
- Siti della Rete Natura 2000
- Carta dei pascoli della Campania
- Aree protette e riserve nazionali e regionali
- Rischio idrogeologico ai sensi della pianificazione di bacino vigente
- Aree percorse dal fuoco (periodo 2000-2020)
- Sistemi di terre
- Modello digitale del terreno
- Carta delle pendenze

fonte: http://burc.regione.campania.it

- Carta delle aree di interfaccia foresta/urbano (buffer di 2000 intorno alle aree urbanizzate)
- Carta delle dinamiche di uso del suolo

L'incrocio tematico in ambiente GIS della Carta delle risorse forestali con gli strati informativi già disponibili nella versione del SIT Foreste messa a punto nell'ambito dell'incarico, consentono una vasta gamma di interrogazioni ed elaborazioni, a supporto dell'azione amministrativa e programmatica della regione e degli altri Enti con competenze in materia forestale.
Tra gli strati tematici facenti parte del SIT FORESTE è presente una Carta regionale della risorsa pascolo, realizzata a partire dallo studio floristico-vegetazionale e agronomico sui pascoli pubblici realizzato da Regione Campania. L'indagine aveva condotto alla realizzazione di cartografie dei pascoli pubblici relative ai territori di 19 Comunità montane. Le 19 cartografie sono state integrate in una cartografia unitaria di scala regionale. Per le aree a pascolo non interessate dallo studio, l'identificazione è stata effettuata attingendo alle informazioni contenute in altri strati informativi, in primo luogo la Carta della natura della Regione Campania (Ispra, Arpac 2017), e la Carta dell'uso agricolo dei suoli della Campania (Regione Campania, Settore Sirca 2009).
Il Catalogo dei dati della "Carta delle Risorse Forestali della Regione Campania", con l'elenco strati informativi prodotti, la descrizione dei principali attributi di ciascuno strato informativo è riportato in Allegato.

6. Il patrimonio forestale della Campania: un profilo sintetico

Superfici forestali e loro dinamica

Secondo l'Inventario Nazionale delle Foreste e dei Serbatoi forestali di Carbonio 2015, la superficie forestale complessiva della Regione Campania è attualmente di 491.259 ettari
Nel decennio intercorso tra i due Inventari Forestali Nazionali (2005-2015), la superficie forestale regionale è aumentata di 45.983 ettari (+10,3%), rispetto alla superficie 2005, che era di 442.037 ettari.
La superficie forestale 2015 copre ora il 35,9% del territorio della Campania (32,6% nel 2005).
La superficie dei boschi è aumentata di 19.530 ettari (+5,1%), con spiccate differenze tra i diversi tipi forestali: le faggete aumentano dell'1,9%, i castagneti del 5,2%, le cerrete del 9,7%, i boschi a roverella dell'11,1%, mentre i boschi igrofili e ripariali diminuiscono del 6,2%.

TIPOLOGIE DI BOSCO	SUPERFICIE 2015 (HA)	SUPERFICIE 2005 (HA)	DIFFERENZA 2005-2015 (HA)	DIFFERENZA 2005-2015 (%)
Pinete di pino nero	5.524	6.260	-736	-11,8
Pinete di pini mediterranei	9.146	7.734	1.412	18,3
Altri boschi di conifere, pure o miste	864	1.105	-241	-21,8
Boschi di faggio	56.244	55.197	1.047	1,9
Boschi di roverella, rovere e farnia	60.934	54.856	6.078	11,1
Boschi di cerro	74.644	68.051	6.593	9,7
Boschi di castagno	55.986	53.200	2.786	5,2
Ostrieti, carpineti	53.030	53.766	-736	-1,4
Boschi igrofili	11.048	11.784	-736	-6,2
Altri boschi caducifogli	34.386	30.197	4.189	13,9
Boschi di leccio	37.485	37.117	368	1
Sugherete	368	368	0	0
Altri boschi di latifoglie sempreverdi	737	368	369	100,3
Non classificato	368	0	368	-
Aree temporan. prive di soprassuolo	1.434	3.237	-1.803	-55,7
Totale boschi alti	**400.764**	**380.003**	**20.761**	**120,2**
Impianti di arboricoltura da legno	3.163	1.156	2.007	173,6
Totale boschi	**403.927**	**383.240**	**19.530**	**5,1**
Boschi bassi	5.156	5.156	0	0
Boschi radi	9.389	5.892	3.497	59,4
Boscaglie	1.473	1.473	0	0
Arbusteti	50.397	28.348	22.049	77,8
Aree boscate inaccessibili o non classificate	20.918	20.010	908	4,5
Totale Altre terre boscate	***87.333***	***60.879***	***26.453***	***43,5***
TOTALE	**491.260**	**444.119**	**45.983**	**10,4**

Tab.5.1. La superficie delle tipologie di bosco del territorio regionale della Campania negli Inventari forestali nazionali del 2005 e del 2015

fonte: http://burc.regione.campania.it

La superficie delle Altre terre boscate (boschi bassi, boschi radi, boscaglie, arbusteti) passa da 60.879 ettari nel 2005, a 87.332 ettari del 2015, con un incremento di 26.453 ettari (+43,5%), legato in particolar modo all'espansione rilevante degli arbusteti (22.049 ettari, +77,8%).
Queste variazioni rappresentano il saldo netto di dinamiche differenziate: le persistenze forestali, sarebbe a dire le aree forestali rilevate nel 2005 che non hanno subito variazioni d'uso hanno estensione di 440.049 ettari. I processi di forestazione di aree che al 2005 erano agricole, pascolative, o comunque non forestali, che sono diventate bosco al 2015, hanno interessato una superficie di 50.210 ettari. I diboscamenti, le aree forestali al 2005 e che hanno subito una variazione ad usi non forestali nel 2015, hanno interessato una superficie di 4.301 ettari.

Tipo colturale, proprietà

Secondo INFC 2015, il 43,7% dei boschi della Campania è governato a ceduo (175.324 ettari), il 27,2% a fustaia (109.293 ettari), il 5% (20.372 ettari) con forme di governo speciali (castagneti da frutto in attualità di coltura, noceti ecc.), il 23,8% (95.775 ettari) con forme di governo non definite o non classificate.

CATEGORIE FORESTALI	TIPO COLTURALE			SUPERFICIE TOTALE (HA)
	FUSTAIA	CEDUO	NON DEFINITO	
Pinete di pino nero	4.603	-	921	5.524
Pinete di pini mediterranei	8.287	-	859	9.146
Altri boschi di conifere	496	-	368	864
Faggete	51.612	3.198	1.434	56.244
Boschi di roverella	8.084	16.961	35.889	60.934
Boschi di cerro	18.766	41.482	14.396	74.644
Castagneti	-	29.718	26.268	55.986
Ostrieti, carpineti	1.768	47.727	3.535	53.030
Boschi igrofili	3.663	20	7.365	11.048
Altri boschi caducifogli	9.942	2.853	21.591	34.386
Leccete	2.046	33.393	2.046	37.485
Totale	**109.267**	**175.352**	**114.672**	**399.291**

Tab.5.2. I tipi colturali censiti dall'Inventario forestale nazionale 2015 per le diverse categorie forestali (ettari)

Il 54,9% dei boschi della Campania è di proprietà privata, il restante 45,1% di proprietà pubblica. La proprietà delle altre terre boscate (boschi bassi, boschi radi, boscaglie, arbusteti) è per il 41,9% privata, per il 26,0% pubblica, per il restante 32,0% non determinata. Nel complesso la proprietà delle aree forestali della Campania (boschi + altre terre boscate) è pubblica per il 52,6% della superficie forestale complessiva; privata per il 41,3%, con un restante 6,1% che risulta non classificato.
Disaggregando il dato della proprietà comunale, emerge che i comuni proprietari di bosco sono in totale 479, di questi

- 108 comuni con superficie boscata < 50 ettari
- 70 comuni con superficie boscata compresa tra 50 e 100 ettari
- 169 comuni con superficie boscata compresa tra 100 e 500 ettari
- 79 comuni con superficie boscata compresa tra 500 e 1000 ettari

fonte: http://burc.regione.campania.it

- 53 comuni con superficie boscata > 1.000 ettari

Tredici comuni hanno una superficie boscata compresa tra 2.000 e 3.000 ettari e solo sette comuni hanno una superficie superiore a 3.000 ettari.

CATEGORIE FORESTALI	PROPRIETÀ PRIVATA (HA)	PROPRIETÀ PUBBLICA (HA)	PROPRIETÀ PRIVATA (%)	PROPRIETÀ PUBBLICA (%)

Tab.5.3. I tipi di proprietà delle diverse categorie forestali secondo l'Inventario forestale nazionale 2015

Incrociando per le diverse categorie forestali i dati relativi alla proprietà, con quelli relativi al tipo colturale, è possibile rilevare come il patrimonio forestale pubblico e quello privato presentino spiccate differenze e specificità, rappresentando in qualche misura mondi notevolmente diversi.

I boschi di proprietà pubblica della Campania coprono una superficie di 179.800 ettari, pari al 45% della superficie boschiva regionale. Essi sono costituiti per la metà circa da fustaie, con il faggio specie prevalente (47%), seguita dal cerro (17%), dai boschi misti di latifoglie (9%), dalle pinete di pini mediterranei (7%).

La superficie dei boschi cedui di proprietà pubblica copre una superficie di 70.000 ettari circa, con le categorie forestali prevalenti rappresentate dagli ostrieti carpineti (36%), dal leccio (22%), dagli altri boschi di latifoglie (18%), dai castagneti (10%), dalla roverella (9%).

I boschi di proprietà privata della Campania coprono una superficie di 218.082 ettari, pari al 55% della superficie boschiva regionale. Essi sono costituiti per oltre l'85% da cedui, con le categorie forestali maggiormente rappresentate che sono roverella (24%), cerro (22%), castagno (21%), ostrieti-carpineti (10%), leccio (8%).

Regimi di tutela: aree protette, Rete Natura 2000

Il sistema delle aree protette della Campania (parchi nazionali e regionali, riserve statali e regionali) interessa una superficie di 350.204 ettari, pari 25,6% del territorio regionale, contro una media nazionale del 10,5%.

La Rete Natura 2000 della Campania comprende 123 siti terrestri per una superficie complessiva di 373.031 ettari, pari al 27,3% del territorio regionale (media nazionale 19,4%).

fonte: http://burc.regione.campania.it

Secondo INFC 2015 la superficie dei boschi ricadenti in aree a tutela naturalistica (parchi nazionali e regionali, riserve statali e regionali, siti della rete Natura 2000) è di 261.918 ettari, corrispondente al 64,8% della superficie regionale complessiva dei boschi. Di questa superficie:

- 194.369 ettari ricadono contemporaneamente in area parco e in Rete Natura 2000;
- 67.713 ettari ricadono esclusivamente in rete Natura 2000.

La superficie delle altre terre boscate ricadenti in aree a tutela naturalistica (parchi nazionali e regionali, riserve statali e regionali, siti della rete Natura 2000) è di 59.986 ettari, corrispondente al 64,7% della superficie regionale complessiva delle altre terre boscate.
L'incrocio tematico in ambiente GIS tra lo strato informativo "Carta delle risorse forestali" e quello relativo alla perimetrazione e zonizzazione dei parchi nazionali e regionali ha consentito una stima delle superfici delle diverse categorie forstali ricadenti nelle zone a diverso grado di tutela. I dati in tabella mostrano come, dei 194.369 ettari di boschi ricadenti in parchi e riserve, 34.248 ettari ricadono all'interno della zona "A" di riserva integrale, i restanti 159.957 ettari in zone di parco o riserva diverse dalla zona A.

CATEGORIA FORESTALE	SUPERFICIE IN ZONA A (HA)	SUPERFICIE IN ZONA B (HA)	SUPERFICIE IN ZONA C (HA)	SUPERFICIE IN ZONA D (HA)	SUPERFICIE TOTALE IN AREA PARCO (HA)	SUPERF. TOTALE IN AREA PARCO (%)

15. Sugherete	727	2	0,3

Tab. 5.5. Superfici delle categorie forestali ricadenti nella rete Natura 2000 della Campania.

Rischio idrogeologico, usi civici

Secondo INFC 2015 l'84,3% dei boschi alti della Campania e il 61,7% delle altre terre boscate, ricade in aree interessate da vincolo idrogeologico ai sensi del Regio Decreto 30 dicembre 1923, n. 3267 ("Riordinamento e riforma della legislazione in materia di boschi e di terreni montani").
L'incrocio della Carta delle risorse forestali con lo strato informativo relativo alla pianificazione di bacino vigente, ha consentito di stimare in 78.628 ettari le aree forestali che risultano ricadere in aree a pericolosità idrogeologica "elevata" o "molto elevata".
Secondo INFC2015 la superficie dei boschi della Campania interessati da dinamiche di dissesto è di 46.368 ettari, con 7.365 ettari interessati da frane o smottamenti; 12.241 ettari interessati da erosione idrica e fenomeni alluvionali; 26.752 ettari da distacco e rotolamento di materiale lapideo.
Una stima delle superfici forestali della Campania gravate da usi civici non è al momento disponibile, lo sarà a breve, al completamento della digitalizzazione della cartografia delle aree del territorio regionale gravate da usi civici, in corso di realizzazione nell'ambito delle analisi per la formazione del Piano paesaggistico regionale ai sensi del Dlgs 42/2004 (Codice dei beni culturali e del paesaggio). Per inciso, la superficie complessiva regionale delle aree gravate da usi civici è di circa 350.000 ettari.

Pratiche colturali

La superficie dei boschi presenti nel territorio regionale interessata secondo IFNC 2015 da gestione attiva - dall'effettuazione cioè di pratiche colturali a diversa intensità - è di 261.125 ettari (65,1% della superficie dei boschi regionali).
Di questa superficie, 187.976 ettari (72%) sono oggetto di pratiche colturali minimali, limitate al taglio a fine turno, per la raccolta del prodotto, senza che vengano eseguiti interventi di coltivazione e/o cure colturali (sfolli e/o diradamenti); sono comprese in questo dato le utilizzazioni non programmate, per esempio quelle effettuate in seguito a schianti e valanghe.
Una superficie di 46.925 ettari (11,7%) è interessata da pratiche colturali "classiche", improntate alla selvicoltura tradizionale; oltre alla raccolta del prodotto alla fine del ciclo produttivo (turno) vengono eseguite cure colturali, ma non sono previsti quegli interventi di coltivazione tipici delle pratiche agronomiche, di solito applicati nelle piantagioni specializzate. Rientrano nella sottoclasse tutti quei casi in cui in previsione del taglio finale si associano interventi atti a favorire l'insediamento della rinnovazione e la selezione delle piante portaseme, ad es. tagli di sementazione, secondari, ecc.

fonte: http://burc.regione.campania.it

Una superficie di 18.877 ettari (7,2%) è interessata da pratiche colturali "speciali", e comprende i castagneti da frutto in attualità di coltura.
Secondo INFC la superficie dei boschi regionali caratterizzata dall'assenza di pratiche colturali è di 139.358 ettari, pari al 34,7% della superficie regionale dei boschi. In queste aree non sono rilevati o previsti all'attualità interventi selvicolturali di nessun tipo, neppure le utilizzazioni finali. Esse comprendono i soprassuoli ad evoluzione naturale, sia quando questa è dettata da motivazioni di natura giuridica (ad esempio boschi in riserve naturali integrali) sia nel caso in cui le utilizzazioni siano impraticabili (terreni inaccessibili o scomodi) o economicamente non convenienti (boschi a macchiatico negativo).
Questa partizione dei boschi regionali comprende dunque, tra gli altri, i boschi ricadenti nelle zone di protezione integrale "A" del sistema regionale di parchi e riserve, nazionali e regionali. Questi boschi, come detto in precedenza, coprono una superficie complessiva di 34.248 ettari, pari all'8,5% della superficie regionale dei boschi.
Una parte importante dei boschi caratterizzati secondo l'Inventario forestale nazionale dall'assenza di pratiche di gestione è costituita da boschi di ricolonizzazione naturale di aree agricole collinari e montane interessate da abbandono colturale a partire dal secondo dopoguerra.
E' importante sottolineare a tale riguardo come la progressiva estensione della superficie boschiva regionale dal dal 1960 ad oggi (+185.134 ettari dal 1960 al 2015, pari a un incremento dell'84%) comporta che l'attuale superficie forestale della Campania sia costituita per il 54,2% da boschi a maggior grado di maturità, già presenti nel 1960; per il restante 45,8% da boschi di neoformazione, che hanno spontaneamente colonizzato aree agricole montane e collinari ad "agricoltura eroica", interessate da abbandono colturale, sovente interessate da sistemazioni storiche tradizionali (ciglionamenti, terrazzamenti).
La partizione dei boschi caratterizzati dall'assenza di pratiche gestionali contiene anche una porzione rilevante dei boschi regionali ai quali è possibile attribuire una funzione prioritaria di protezione diretta. Si tratta di soprassuoli costituiti da cedui invecchiati e boscaglie di ricolonizzazione, in aree estremamente acclivi con accessibilità difficile o nulla, su suoli altamente vulnerabili: ecosistemi forestali entrati in crisi ad esempio negli eventi drammatici di Sarno (1998) e Casamicciola (2023). In queste aree la funzione prioritaria del soprassuolo forestale ai fini della prevenzione/mitigazione del rischio idrogeologico (colate piroclastiche, colate di detrito) a carico degli abitati e del patrimonio infrastrutturale, impone l'adozione di una strategia gestionale specifica, di seguito delineata nel cap. 9 del presente piano.

Stato della pianificazione forestale

Come ricordato in precedenza, secondo INFC 2015 i boschi di proprietà pubblica della Campania coprono una superficie di 179.800 ettari, pari al 45% della superficie boschiva regionale.
Un aspetto rilevante del patrimonio forestale pubblico in Campania è il fatto che la superficie interessata da piani di gestione (142.892 ettari) costituisce oramai la porzione prevalente, di poco inferiore all'80% della superficie complessiva dei boschi pubblici.
La superficie pianificata delle aree forestali e pascolativa di proprietà pubblica in Regione Campania è così ripartita:

fonte: http://burc.regione.campania.it

PROVINCIA	TOTALE SUPERFICIE DEMANIALE PIANIFICATA (HA)	SUPERFICIE BOSCATA (HA)	SUPERFICIE PASCOLABILE (HA)	ALTRE SUPERFICI (HA)
Avellino	32.909,49	27.955,40	3.646,17	1.307,92
Benevento	17.964,41	12.894,14	4.591,10	479,17
Caserta	34.885,42	26.520,26	7.618,45	746,71
Napoli	2.283,62	1.641,68	612,93	29,01
Salerno	112.626,97	73.880,28	35.686,90	3.059,79
TOTALE	**200.669,91**	**142.891,76**	**52.155,55**	**5.622,60**

Tab. 5.6. Superficie delle aree forestali e pascolative di proprietà pubblica dotate di Piano di gestione forestale.

Al momento della redazione del presente Piano la situazione dei Piani di Gestione Forestale dei soggetti pubblici è la seguente:

- i Comuni/Enti dotati di P.G.F. vigente sono 117
- i Comuni/Enti con P.G.F. in istruttoria sono 119
- i Comuni/Enti con P.G.F. non vigenti sono 75, di cui 37 in attesa di richiesta di avvio istruttoria.

Come ricordato in precedenza i boschi di proprietà privata della Campania coprono una superficie di 218.082 ettari. Al momento della redazione del presente Piano i piani di gestione forestale approvati di boschi di proprietà privata sono 239, per una superficie di circa 7.500 ettari, pari al 3,4% della superficie complessiva dei boschi di proprietà privata in Campania.

Utilizzazioni legnose forestali

In tab. 5.7 sono riportati alcuni dati salienti pubblicati da ISTAT relativi ai prelievi legnosi in Campania. La tabella comprende tra gli altri gli ultimi rilevati da parte dell'Ente nazionale di statistica, nelle annate 2014-2015, prima della cessazione delle rilevazioni forestali. L'ultimo dato plausibile per la Campania si riferisce comunque all'annata 2014, con un prelievo legnoso di circa 314.251 mc, essendo il dato 2015 evidentemente sottostimato e non attendibile.
Il dato di prelievo legnoso fornito da INFC 2015 per la Campania è invece di 397.081 mc, superiore quindi al dato ISTAT 2014.
L'incremento legnoso complessivo annuo dei boschi regionali è stimato da INFC2015 in 2.001.817 mc. L'incremento legnoso complessivo stimato dall'Inventario nazionale 2005 era di 1.556.093 mc. Il valore dell'incremento annuo stimato dal Piano forestale regionale della Campania 2009-2013 era di 1,2 milioni di mc.

fonte: http://burc.regione.campania.it

Prendendo a riferimento la stima di incremento legnoso fornita da INFC2015, il tasso di utilizzo legnoso dei boschi della Campania è del 15,7% se si considera il dato di prelievo ISTAT 2014, del 19,8% se si considera invece il dato di prelievo INFC2015.
A scala nazionale, secondo Pettenella, l'attuale tasso di prelievo forestale è compreso tra il 18,4% e il 37,4% dell'incremento annuo, molto inferiore alla media europea, pari al 73% (Pettenella, 2023).
Nella relazione tecnica della Strategia Forestale Nazionale è scritto che "…considerando l'attuale tasso di utilizzo nazionale, stimato nel 33% dell'incremento annuo (RAF, 2019), con la gestione forestale in Italia le attività di prelievo potrebbe raggiungere un massimo del 40-45% dell'incremento annuo dei boschi sottoposti a pianificazione forestale".
Il tasso di utilizzo legnoso dei boschi della Campania si colloca quindi entro l'intervallo fornito da Pettenella, e comunque molto al di sotto del tasso di utilizzo medio nazionale del 33% indicato nella relazione tecnica della Strategia forestale nazionale.
Rimane il fatto che i dati sui prelievi e il tasso di utilizzo legnoso devono essere trattati e interpretati con le dovute precauzioni, essendo il prodotto di rilevazioni non facili, complesse, sovente frammentarie e incomplete.
In particolare, la stima del tasso di utilizzo legnoso dei boschi campani non può rappresentare tout court una base per le attività di programmazione, rappresentando la media di situazioni opposte, di sotto-utilizzazione della risorsa in alcuni ambiti del territorio regionale; di sovra-utilizzo dei boschi in altri contesti forestali regionali, con differenze notevoli nell'intensità di utilizzo, anche legate al regime di proprietà.
Ai fini di un governo sostenibile del patrimonio boschivo regionale si avverte quindi la necessità di disporre di dati disaggregati, relativi a sistemi forestali omogenei.
Il presente Piano si propone di soddisfare tale esigenza basilare promuovendo con una specifica azione la realizzazione, attraverso lo Sportello per le Attività Forestali (SUAF), espressamente prevista dal Regolamento forestale regionale, di una piattaforma digitale a scala regionale alla quale possano confluire in tempo reale i dati sui piani di gestione, le istanze di taglio, le autorizzazioni, e i controlli effettuati a scala locale dagli uffici regionali e dagli Enti delegati.

ANNO	UTILIZZAZIONI LEGNOSE (METRI CUBI)			TOTALE GENERALE (METRI CUBI)

Tab. 5.8. Numero e superficie delle tagliate in Campania secondo ISTAT.

La struttura duale del patrimonio forestale regionale

Il profilo del patrimonio forestale regionale fornito nei paragrafi precedenti evidenzia come esso costituisca un sistema di risorse estremamente diversificato e articolato, sotto molteplici punti di vista, ecologico, vegetazionale, amministrativo, gestionale. Come in altre regioni italiane, ad emergere, sono anche le differenze che caratterizzano nel complesso il patrimonio forestale di proprietà pubblica da quello di proprietà privata.
In definitiva, il patrimonio forestale pubblico della Campania, comprendente il 45% dei boschi della regione, è caratterizzato:

- da un rapporto più equilibrato tra le diverse forme di governo (fustaia, ceduo), con un peso rilevante delle fustaie di faggio e di querce caducifoglie che costituiscono la metà circa dei boschi di proprietà pubblica;

- dal fatto di essere in larga misura (l'80% circa della superficie complessiva) interessato da una pianificazione forestale vigente.

Il patrimonio forestale di proprietà privata della Campania, che copre il restante al 55% della superficie boschiva regionale, è costituito per l'85% da boschi cedui. Esso presenta in maniera accentuata gli aspetti di debolezza identificati dalla Strategia forestale nazionale nei termini di una "elevata frammentazione delle proprietà forestali e della ridotta dimensione aziendale con scarsa propensione alla gestione associata e all'adeguamento gestionale, strutturale e produttivo". Come visto in precedenza, la superficie dei boschi privati dotata di piani di gestione forestale vigenti è estremamente ridotta, rappresentando il 3,4% appena di quella totale.

fonte: http://burc.regione.campania.it

7. La procedura di VAS: riferimenti normativi e metodologici

Riferimenti normativi

La procedura di valutazione ambientale dei piani e programmi o Valutazione Ambientale Strategica (VAS) è stata introdotta a livello comunitario dalla Direttiva 2001/42/CE del 27 giugno 2001 "Direttiva del Parlamento Europeo e del Consiglio concernente la valutazione degli effetti di determinati piani e programmi sull'ambiente" e recepita a livello nazionale dal D.Lgs. 152/2006 e s.m.i.. Nello specificare gli ambiti di applicazione, la direttiva include i piani e i programmi elaborati per i settori agricolo, forestale, della pesca, energetico, industriale, dei trasporti, della gestione dei rifiuti e delle acque, delle telecomunicazioni, turistico, della pianificazione territoriale o della destinazione dei suoli, e che definiscono il quadro di riferimento per l'autorizzazione dei progetti elencati negli allegati I e II della direttiva 85/337/CEE (VIA) o per i quali, in considerazione dei possibili effetti sui siti, si ritiene necessaria una valutazione di incidenza ai sensi degli articoli 6 e 7 della direttiva 92/43/CEE (Habitat).
La Direttiva 2001/42/CE ha introdotto la VAS con "l'obiettivo di garantire un elevato livello di protezione dell'ambiente e di contribuire all'integrazione di considerazioni ambientali all'atto dell'elaborazione e dell'adozione di determinati piani e programmi che possono avere un impatto significativo sull'ambiente" (art.1 della Direttiva). Sulla base di quanto disciplinato dall'art. 6 della Direttiva elemento di peculiarità della VAS è costituito dalla consultazione del pubblico e dei soggetti con competenza ambientale, che è prevista prima dell'adozione del piano o programma o dell'avvio della relativa procedura legislativa. La VAS costituisce parte integrante del procedimento di adozione e approvazione dei piani e dei programmi che vi sono sottoposti.
Secondo la normativa vigente, la VAS si applica a:

- I piani che riguardano i settori agricolo-forestale, della pesca, della pianificazione territoriale e della destinazione dei suoli;
- i piani contenenti "la definizione del quadro di riferimento per l'approvazione, l'autorizzazione, l'area di localizzazione o comunque la realizzazione di progetti sottoposti a valutazione di impatto ambientale o verifica di assoggettabilità a VIA in base alla normativa vigente";
- i piani e i programmi concernenti i siti designati come zone di protezione speciale per la conservazione degli uccelli selvatici e quelli classificati come siti di importanza comunitaria per la protezione degli habitat naturali e della flora e della fauna selvatica.

La VAS riguarda, inoltre, i Programmi cofinanziati dall'Unione europea, al fine di migliorare la qualità decisionale complessiva delle attività di programmazione e orientare alla sostenibilità la scelta delle azioni da finanziare.

fonte: http://burc.regione.campania.it

A livello nazionale la VAS è stata recepita dal Decreto Legislativo 152/2006 "Norme in materia ambientale", che: ha definito gli aspetti procedurali (ad es. i tempi per le consultazioni); ha specificato la necessità di produrre un Rapporto Preliminare sul quale avviare la consultazione con i soggetti aventi competenza in materia ambientale e un Rapporto Ambientale che accompagni la proposta di piano o programma; ha introdotto la necessità del parere motivato di VAS; ha individuato i ruoli dell'Autorità procedente (responsabile per l'elaborazione del piano o programma soggetto a VAS) e dell'Autorità competente (responsabile dell'espressione del parere motivato di VAS).
Il Decreto Legislativo 04/2008 ha corretto e integrato quando disposto precedentemente nel Decreto Legislativo 152/06 estendendo il processo di VAS agli impatti sull'ambiente e sul patrimonio culturale e introducendo tra i principi di riferimento quelli inerenti allo sviluppo sostenibile intergenerazionale. Inoltre, ha confermato la centralità dell'accesso del pubblico agli atti del percorso di pianificazione e alla VAS, inquadrando, anche normativamente, tale accesso.
Il fine della valutazione è preservare la salute umana, la salubrità dell'ambiente, la capacità di riproduzione degli ecosistemi e la qualità della vita; nella VAS sono valutati gli impatti diretti e indiretti del piano sui seguenti fattori:

- l'uomo, la fauna e la flora;
- il suolo, l'acqua, l'aria e il clima;
- i beni materiali e il patrimonio culturale;
- l'interazione dei fattori sopraindicati.

Il Decreto Legislativo 128/2010 ha introdotto alcune ulteriori specifiche, ad esempio in merito alla verifica di assoggettabilità e alla necessità di dare conto, nel Rapporto ambientale, delle consultazioni svolte e delle modalità con cui sono state recepite le osservazioni pervenute.
Non da ultimo, la disciplina è stata ulteriormente modificata dall'art. 28, comma 1, lettera a), del Decreto Legge n. 77 del 2021 (Decreto Semplificazioni-bis), convertito con modificazioni dalla legge n. 108 del 29 luglio 2021 (pubblicata sulla Gazzetta Ufficiale n.181 del 30 luglio 2021).
In base alla normativa sopra riportata il Piano forestale generale della Campania (PFG) rientra pienamente nell'ambito di applicazione della normativa in materia di valutazione ambientale strategica.

L'iter procedurale

L'applicazione delle disposizioni in materia di VAS ad un qualsiasi piano o programma prevede una serie di tappe procedurali che devono essere inserite organicamente nell'iter ordinario della programmazione nelle diverse fasi di redazione, adozione ed approvazione.
La VAS deve essere avviata durante la preparazione del Programma e deve essere "completata" prima della sua adozione e presentazione alla Commissione.
In particolare la VAS appare caratterizzata dalle seguenti fasi e attività:

- **Scoping:** il termine identifica un'analisi preliminare con finalità di definire i riferimenti

fonte: http://burc.regione.campania.it

concettuali e operativi attraverso i quali si procederà poi alla fase di valutazione ambientale. In particolare durante la fase di scoping viene valutato quali siano le fonti di informazioni e dati per la realizzazione del rapporto ambientale. Inoltre in questa fase si procede alla definizione delle autorità da coinvolgere che abbiano specifiche competenze in materia ambientale, e del pubblico che subisce o può subire gli effetti delle procedure decisionali o che ha un interesse in tali procedure.

- **Consultazioni preliminari:** le consultazioni preliminari hanno lo scopo di consentire l'acquisizione di elementi informativi, contributi, prime valutazioni e riferimenti ambientali, utili a definire la portata ed il livello di dettaglio delle informazioni da includere nel rapporto ambientale.
- **Elaborazione del rapporto ambientale e della proposta di programma**: il Rapporto Ambientale è il documento attraverso il quale debbono essere individuati, descritti e valutati gli effetti significativi che l'attuazione del Programma può determinare sull'ambiente, nonché le ragionevoli alternative che possono adottarsi in considerazione degli obiettivi e dell'ambito territoriale interessato dal Programma stesso. Nello specifico le analisi da svolgere sono finalizzate a:
  - definizione del contesto ambientale di riferimento
  - analisi di coerenza del Programma
  - proposta di possibili alternative
  - analisi dettagliata degli effetti diretti e indiretti del Programma sull'ambiente regionale e globale
  - definizione delle misure correttive da introdurre per limitare o eliminare gli effetti negativi del Programma sull'ambiente
  - definizione delle misure di monitoraggio previste in fase di attuazione del programma
  - una sintesi non tecnica delle attività realizzate e dei principali risultati conseguiti.
- **Svolgimento delle consultazioni del pubblico**: la consultazione è una fase importante della procedura VAS. Il suo obiettivo è duplice: da un lato informare il pubblico sugli effetti ambientali del Programma e, dall'altro raccogliere, presso un pubblico più ampio, eventuali elementi metodologici aggiuntivi e/o suggerimenti di modifiche del Programma in modo da ottimizzare l'impatto ambientale del Programma stesso.
- **Valutazione della proposta di programma, del Rapporto ambientale e della Sintesi non tecnica** attraverso l'espressione del parere motivato dell'autorità competente: in tale fase l'autorità competente, ricevute le osservazioni e i contributi da parte dell'autorità procedente, pervenuti durante la fase della consultazione pubblica, esprime il parere motivato.
- **Decisione**: in tale fase l'autorità procedente provvede a trasmettere all'organo competente, per l'adozione o l'approvazione, il Programma, il parere motivato e tutta la documentazione acquisita nell'ambito della consultazione. L'organo competente, con apposito atto, adotta/approva il programma.
- **Informazione sulla decisione**: in tale fase l'atto di adozione/approvazione del nuovo Programma viene pubblicato sugli strumenti ufficiali di comunicazione

fonte: http://burc.regione.campania.it

dell'Amministrazione affinché il pubblico possa prendere visione del Programma e di tutta la documentazione oggetto dell'istruttoria.

- **Monitoraggio**: il monitoraggio ha lo scopo di assicurare il controllo degli impatti significativi sull'ambiente derivanti dall'attuazione del Programma nonché la verifica del raggiungimento degli obiettivi di sostenibilità prefissati, così da individuare tempestivamente gli impatti negativi imprevisti e adottare le opportune misure correttive. Le attività di monitoraggio previste costituiscono parte integrante del Rapporto Ambientale. Esse comprendono il controllo degli indicatori preventivamente selezionati, con riferimento specifico sia agli obiettivi del Programma ed alle azioni in esso previste, sia agli impatti significativi ed alle situazioni di criticità ambientale individuate nel Rapporto Ambientale. E' opportuno precisare che la corretta applicazione delle disposizioni normative precedentemente esaminate richiede la presenza di alcuni elementi fondamentali, trasversali a tutte le fasi procedurali, quali: la trasparenza delle decisioni, la ripercorribilità del processo e la disponibilità di una base di conoscenza comune condivisa ed accessibile da parte di chiunque.

Avvio della procedura

La Direzione Generale per le Politiche Agricole, Alimentari e Forestali - UOD 50.07.18 -Ambiente Foreste e Clima con comunicazione del 9 febbraio 2024 ha presentato all' All'Ufficio Speciale Valutazioni ambientali istanza di Valutazione Ambientale Strategica integrata con la VIncA per il Piano Forestale generale della Campania, rientrando il suddetto piano nelle tipologie previste dall'articolo 6 comma 2 lett. b del D.Lgs. 152/2006.

Fase di scoping

L'Ufficio Valutazioni Ambientali con comunicazione del 07/03/2024 PG/2024/0122262 ha dato avvio alla fase di scoping della VAS integrata con la VIncA per il piano "Piano Forestale Generale della Campania", rendendo disponibili e scaricabili sul sito tematico viavas.regione.campania.it nella sezione Area VAS i seguenti documenti:

- Preliminare di Piano;
- Rapporto Preliminare Ambientale
- N. 4 tavole;

Nella comunicazione l'Ufficio Valutazioni Ambientali ha individuato:

- l'Ufficio Compatibilità Ambientale, quale Autorità Competente;
- la Direzione Generale del Dipartimento Ambiente e Energia, quale Autorità Procedente/Proponente.

fonte: http://burc.regione.campania.it

La predetta comunicazione riportava in allegato il seguente l'elenco dei Soggetti con competenza ambientale:

- MINISTERO DELL'AMBIENTE E DELLA SICUREZZA ENERGETICA
- Direzione generale per il patrimonio naturalistico e mare (PNM)
- Direzione generale per la crescita sostenibile e la qualità dello sviluppo (CreSS) – Divisione V Sistemi di Valutazione Ambientale
- MINISTERO della POLITICHE, AGRICOLE, ALIMENTARI E FORESTALI (MASAF)
- Dipartimento delle politiche europee e internazionali e dello sviluppo rurale Direzione generale dello sviluppo rurale
- Soprintendenza Archeologia, Belle Arti e Paesaggio per il Comune di Napoli
- Soprintendenza Archeologia, Belle Arti e Paesaggio per l'Area Metropolitana di Napoli
- Soprintendenza Archeologia, Belle Arti e Paesaggio per le Province di Caserta e Benevento
- Soprintendenza Archeologia, Belle Arti e Paesaggio per le Province di Salerno e Avellino
- Segretariato regionale MiC per la Campania
- ISTITUTO SUPERIORE PER LA PROTEZIONE E LA RICERCA AMBIENTALE
- REGIONE CAMPANIA
- Direzione Generale per la Difesa del Suolo e l'Ecosistema

Infine, con comunicazione del 17/04/2024, l'Ufficio Speciale Valutazioni Ambientali comunicava gli esiti della procedura di scoping con la specifica delle osservazioni pervenute.

Durante la fase di consultazione sono pervenute le seguenti comunicazioni e/o osservazioni da parte degli SCA coinvolti nel procedimento:

- Ente Riserve Naturali Regionali Foce Sele Tanagro e Monti Eremita-Marzano, nella quale si comunicava che la Commissione consultiva dell'Ente ha esaminato la richiesta non titenendo in questa fase di fornire contributi, rimandando alle prossime fasi l'espressione del parere di competenza;
- ARPA Campania, che impiegando il questionario allegato al Rapporto preliminare ha fatto una serie motivata di osservazioni/raccomandazioni che vengono riassunte di seguito, assieme alle modifiche/integrazioni apportate alla proposta di piano ovvero al presente rapporto.

fonte: http://burc.regione.campania.it

Osservazioni	**Analisi e valutazione delle osservazioni ed eventuali modifiche, integrazioni, controdeduzioni** **Indicazione dei punti della proposta di piano o del rapporto ambientale eventualmente modificati**
4.1 Ulteriori componenti che si propone di considerare *Agricoltura* - Agroselvicoltura, sistemi agroforestali, salvaguardia degli habitat faunistici - Tutela e valorizzazione dei castagneti da frutto della Campania *Turismo* - Promuovere e valorizzare i servizi socioculturali delle foreste in Campania - Valorizzazione multifunzionale della viabilità forestale e silvo- pastorale e della sentieristica in Campania	Richiesta accolta e integrata. Le tematiche sono state incluse come Obiettivi/Azioni specifici nel PFG (Capitolo 15): Agricoltura/Agroselvicoltura: Azioni C4 (Tutela dei castagneti da frutto) e C7 (Promuovere i sistemi agroforestali). Turismo/Servizi Socioculturali: Azioni E1 (Valorizzare le foreste regionali come laboratori) e E2 (Valorizzazione della viabilità e sentieristica). Inoltre, la Matrice di Impatto (RA Cap. 12) valuta esplicitamente i Servizi Ecosistemici (inclusi socio-culturali e di approvvigionamento), recependo la richiesta.
Si riscontra inoltre la mancata corrispondenza tra le componenti ambientali considerate nel tab. 5 del Rapporto di scoping e quanto riportato nella tabella precedente.	Richiesta accolta e integrata. Il Rapporto Ambientale definitivo ha rettificato questa discrepanza, adottando una matrice di valutazione degli impatti (Capitolo 12) coerente e ampliata rispetto al solo elenco iniziale.
4.2. Nel rapporto di scoping, la descrizione del contesto è limitata a: - Le aree protette della Campania - Aree Natura 2000 - Il patrimonio forestale della Campania	Richiesta accolta e integrata. La Caratterizzazione delle Matrici Ambientali (RA Cap. 9) è stata ampliata per includere l'analisi di: geomorfologia, idrogeologia, clima, aria, acqua, e biodiversità/paesaggio, superando i limiti del documento preliminare.
5.1. Si segnala l'opportunità di far riferimento prevalentemente al documento dell'ONU "l'Agenda 2030 per lo Sviluppo Sostenibile", alla "Strategia Nazionale per lo Sviluppo Sostenibile", alla "Strategia Regionale per lo Sviluppo Sostenibile"	Richiesta accolta e integrata. Il Rapporto Ambientale (Capitolo 8) elenca e analizza in dettaglio la coerenza con tutte le strategie citate, come base obbligatoria per la definizione degli obiettivi di sostenibilità del Piano.
7.1 Si riscontra la mancata corrispondenza tra le componenti ambientali considerate nel tab. 5 del Rapporto di scoping e quelle indicate al precedente punto 4.1.	Richiesta accolta e integrata. Il **Rapporto Ambientale definitivo** ha rettificato questa discrepanza, adottando una matrice di valutazione degli impatti (Capitolo 12) coerente e ampliata rispetto al solo elenco iniziale.
8.1. Evidenziare nella descrizione dei contenuti e delle azioni di Piano, come si sia tenuto conto delle criticità e peculiarità che caratterizzano il territorio regionale	Richiesta accolta e integrata. La Caratterizzazione delle Matrici Ambientali (RA Cap. 9: geomorfologia, idrogeologia, clima, aria, acqua, e biodiversità/paesaggio) considera i principali aspetti di criticità e peculiarità.
Nell'ambito dell'analisi di coerenza, descrivere come il Piano proposto si relaziona a quello precedente e attualmente vigente, evidenziando eventuali elementi di continuità e/o differenze oltre gli esiti delle previste attività di monitoraggio relative al Piano vigente.	Richiesta accolta e integrata Il **Rapporto Ambientale (Capitolo 11)** include l'analisi dello stato di attuazione e dei risultati del PFG 2009-2013 per giustificare gli obiettivi del nuovo Piano.
Produrre una attenta analisi del contesto territoriale ed ambientale di riferimento in cui evidenziare peculiarità e criticità del territorio regionale rispetto a cui relazionare e valutare le azioni specifiche del piano; le componenti da descrivere nell'analisi di contesto dovranno	Richiesta accolta e integrata. La proposta di Piano forestale generale analizza nei capitoli da 5 a 11 le principali peculiarità e criticità territoriali che sono influenzate e interagiscono con la gestione del patrimonio forestale.

fonte: http://burc.regione.campania.it

essere quelle presumibilmente interessate dalle azioni del Piano.	
Individuare, nell'ambito di un piano di monitoraggio, un set di indicatori che, in coerenza con la scelta delle componenti ambientali/territoriali considerate in fase di analisi e valutazione degli impatti, cosi come precedentemente proposto, siano idonei a: - verificare l'attuazione e l'efficacia delle azioni proposte; - descrivere qualitativamente e quantitativamente gli effetti delle azioni del Piano sui sistemi ambientali e territoriali interessati e di monitorare la sommatoria degli effetti a livello di area vasta/provinciale. Per agevolare il processo di valutazione si segnala l'opportunità di utilizzare gli stessi indicatori nella descrizione del contesto e nel piano di monitoraggio. Il piano di monitoraggio dovrà altresì contenere indicazioni in merito a:" le modalità di raccolta dei dati e di elaborazione degli indicatori necessari alla valutazione degli impatti, la periodicità della produzione di un rapporto illustrante i risultati della valutazione degli impatti e le misure correttive da adottare".	Richiesta accolta e integrata. In relazione al programma di monitoraggio si è proceduto all'integrazione del paragrafo 13 del RA alla luce delle indicazioni contenute negli "Indirizzi operativi per il monitoraggio ambientale di piani e programmi (art.18 del Dlgs 152/2006)" a cura del progetto CreiamoPA del MASE, ampliando la lista di indicatori, e mettendo in relazione gli indicatori con le azioni di Piano previste, evidenziando le responsabilità per la realizzazione e gestione del piano di monitoraggio e i tempi previsti. (Vedi anche oss. 17 dell'Ufficio VIA VAS)
Predisporre un apposito capitolo (relazione o studio d'incidenza), redatto da idonei professionisti, secondo le indicazioni riportate nell'allegato G del DPR 357/1997 e s.m.i. e nelle LL GG finalizzato ad analizzare e valutare gli effetti, diretti ed indiretti, che l'attuazione del Piano potrà potenzialmente indurre in particolare sui siti della rete Natura 2000 e sul relativo sistema ecologico ad essi funzionalmente connesso. In particolare si suggerisce, una volta definiti i fattori di pressione e le minacce su ciascun elemento della Rete Natura 2000, di delineare un quadro previsionale delle possibili interferenze in termini di: 1) perdita di superficie, frammentazione e deterioramento di habitat e habitat di specie; 2) rarefazione e frammentazione delle popolazioni di specie di interesse comunitario. Lo Studio verificherà altresì la coerenza delle azioni pianificatorie con le misure di conservazione vigenti per i Siti della Rete Natura 2000 del territorio campano, come definite dal D.G.R. n. 2295 del 29/12/2007 e dal D.G.R. 795 del 19/12/2017.	Richiesta accolta. La **Valutazione di Incidenza Ambientale (RA Cap. 14)** è stata integrata per fornire un'analisi dettagliata degli effetti potenziali delle azioni del PFG sugli habitat e sulle specie di interesse comunitario, verificando la coerenza con le misure di conservazione regionali (D.G.R. 795/2017).

fonte: http://burc.regione.campania.it

Nel documento di osservazioni dell'ARPA Campania si raccomanda di considerare adeguatamente le relazioni delle azioni di piano con:

- le attività agricole, con riferimento ad esempio all'agroselvicoltura, ai sistemi agroforestali, alla salvaguardia degli habitat faunistici; alla tutela e valorizzazione dei castagneti da frutto della Campania.
- il turismo, con riferimento ad aspetti quali la promozione e valorizzazione dei servizi socioculturali delle foreste in Campania; la - Valorizzazione multifunzionale della viabilità forestale e silvo- pastorale e della sentieristica in Campania

Si segnala l'opportunità di far riferimento prevalentemente al documento dell'ONU "l'Agenda 2030 per lo Sviluppo Sostenibile", alla "Strategia Nazionale per lo Sviluppo Sostenibile", alla "Strategia Regionale per lo Sviluppo Sostenibile".

Nel documento di osservazioni si raccomanda inoltre di:

- Evidenziare nella descrizione dei contenuti e delle azioni di Piano, come si sia tenuto conto delle criticità e peculiarità che caratterizzano il territorio regionale.
- Nell'ambito dell'analisi di coerenza, descrivere come il Piano proposto si relaziona a quello precedente e attualmente vigente, evidenziando eventuali elementi di continuità e/o differenze oltre gli esiti delle previste attività di monitoraggio relative al Piano vigente.
- Produrre una attenta analisi del contesto territoriale ed ambientale di riferimento in cui evidenziare peculiarità e criticità del territorio regionale rispetto a cui relazionare e valutare le azioni specifiche del piano; le componenti da descrivere nell'analisi di contesto dovranno essere quelle presumibilmente interessate dalle azioni del Piano.
- Individuare, nell'ambito di un piano di monitoraggio, un set di indicatori che, in coerenza con la scelta delle componenti ambientali/territoriali considerate in fase di analisi e valutazione degli impatti, cosi come precedentemente proposto, siano idonei a: verificare l'attuazione e l'efficacia delle azioni proposte; descrivere qualitativamente e quantitativamente gli effetti delle azioni del Piano sui sistemi ambientali e territoriali interessati e di monitorare la sommatoria degli effetti a livello di area vasta/provinciale. Per agevolare il processo di valutazione si segnala l'opportunità di utilizzare gli stessi indicatori nella descrizione del contesto e nel piano di monitoraggio. Il piano di monitoraggio dovrà altresì contenere indicazioni in merito a:" le modalità di raccolta dei dati e di elaborazione degli indicatori necessari alla valutazione degli impatti, la periodicità della produzione di un rapporto illustrante i risultati della valutazione degli impatti e le misure correttive da adottare".

Si raccomanda inoltre di predisporre un apposito capitolo (relazione o studio d'incidenza), redatto da idonei professionisti, secondo le indicazioni riportate nell'allegato G del DPR 357/1997 e s.m.i. e nelle LL GG finalizzato ad analizzare e valutare gli effetti, diretti ed indiretti, che l'attuazione del Piano potrà potenzialmente indurre in particolare sui siti della rete Natura 2000 e sul relativo sistema ecologico ad essi funzionalmente connesso.

fonte: http://burc.regione.campania.it

In particolare si suggerisce, una volta definiti i fattori di pressione e le minacce su ciascun elemento della Rete Natura 2000, di delineare un quadro previsionale delle possibili interferenze in termini di: 1) perdita di superficie, frammentazione e deterioramento di habitat e habitat di specie; 2) rarefazione e frammentazione delle popolazioni di specie di interesse comunitario. Lo Studio verificherà altresì la coerenza delle azioni pianificatorie con le misure di conservazione vigenti per i Siti della Rete Natura 2000 del territorio campano, come definite dal D.G.R. n. 2295 del 29/12/2007 e dal D.G.R. 795 del 19/12/2017.
Le osservazioni/raccomandazioni fatte da ARPA Campania sono state tutte pienamente condivise in sede di redazione del Rapporto ambientale, come è possibile puntualmente verificare, anche per gli aspetti riguardanti la VIncA.

Fase di consultazione pubblica

In data 5 aprile 2024 si è conclusa la fase di consultazione pubblica prevista dall'art. 14 del D.Lgs 152/2006 e ss.mm.ii. Le osservazioni pervenute sono pubblicate sul sito web e consultabili all'indirizzo: Area VAS – Consultazione fascicoli – Valutazione Ambientale Strategica e consultando la cartella relativa al CUP 9858. In particolare, sono pervenute osservazioni da parte dei seguenti soggetti:

- ARPA Campania
- ARPA Puglia
- Confagricoltura Campania
- Associazione Forestale Italiana – AFI
- SPRING, Custer Italiano della Bioeconomia Circolare
- Ordine dei Dottori Agronomi e Forestali della Provincia di Salerno

L'Autorità procedente ha dato riscontro alle stesse, producendo e trasmettendo un documento di sintesi nel quale sono state analizzate le suddette osservazioni ed è stato valutato il loro accoglimento o respingimento con le necessarie motivazioni. Sono stati indicati i punti del Piano, del Rapporto Ambientale o dello Studio di Incidenza che hanno modifiche a seguito dell'eventuale accoglimento delle osservazioni pervenute.

8. Il quadro programmatico di riferimento

Il quadro programmatico internazionale, comunitario, nazionale

Paesaggio e patrimonio culturale

Convenzione Europea del Paesaggio Firenze 20 ottobre 2000. La Convenzione Europea del Paesaggio (CEP) è il trattato internazionale interamente dedicato al paesaggio stipulato tra gli stati membri della Comunità europea a Firenze il 20 ottobre 2000 ed entrato in vigore in Italia il 1° Settembre 2006 con la legge n. 14 del 9 gennaio 2006. Gli obiettivi della Convenzione mirano a far recepire alle amministrazioni locali, nazionali e internazionali, provvedimenti, atti e politiche che sostengano il paesaggio con operazioni di salvaguardia, gestione e pianificazione del paesaggio.

Convenzione quadro sul valore del patrimonio culturale per la società (Convenzione di Faro).

entrata in vigore il 1 giugno 2011. Essa ha come scopo il riconoscimento del valore che per la società hanno il patrimonio culturale e la cultura visti come realtà dinamiche, risultanti dagli scambi tra le creazioni dell'uomo trasmesse nel passato e quelle che l'umanità trasmetterà nel futuro. La Convenzione affronta la dimensione sociale del patrimonio spostandosi dal diritto del patrimonio, inteso come la definizione delle modalità della sua conservazione, al diritto al patrimonio, affrontando le ragioni e i modi della sua valorizzazione. l patrimonio culturale secondo la Convenzione quadro è un insieme di risorse ereditate del passato, identificate come espressione dei valori, credenze, conoscenze e tradizioni di una comunità patrimoniale (art. 2 lett. b) che sono in constante evoluzione (art. 2, lett. a).

Piani e programmi di livello nazionale

Di seguito sono elencati piani, programmi e strumenti strategici vigenti che compongono il quadro pianificatorio e programmatico di riferimento per il Piano Forestale generale della Campania.

Strategia Nazionale per lo Sviluppo Sostenibile (SNSvS)
Approvata il 22 dicembre 2017 dal CIPE, rappresenta il primo passo per declinare, a partire da quanto già disposto nella "Strategia d'azione ambientale per lo sviluppo sostenibile in Italia 2002-2010", gli obiettivi dell'Agenda 2030, assumendo i 4 principi di base: integrazione, universalità, trasformazione e inclusione.

Piano Nazionale Ripresa e Resilienza (PNRR)
Il PNRR è stato approvato il 13 luglio 2021 con Decisione di esecuzione del Consiglio, che ha recepito la proposta della Commissione europea. Alla Decisione è allegato un corposo allegato con cui vengono definiti, in relazione a ciascun investimento e riforma, precisi obiettivi e traguardi, cadenzati temporalmente, al cui conseguimento si lega l'assegnazione delle risorse (235 miliardi di euro tra risorse europee e nazionali) su base semestrale.

fonte: http://burc.regione.campania.it

Piano per la transizione ecologica.
A partire dalle linee già individuate dal PNRR, il Piano di cui all'articolo 57 bis del D.Lgs 152/2006 (così come modificato dal DL 1° marzo 2021, n. 22, convertito con modificazioni dalla Legge 22 aprile 2021, n. 55) si sviluppa fino al completo raggiungimento degli obiettivi al 2050. Frutto del lavoro collettivo del Comitato interministeriale della transizione ecologica (CITE) e coordinato dal MiTE, la prima versione del Piano italiano, presentato nel luglio 2021, subirà periodici aggiustamenti.

Strategia nazionale per l'economia circolare.
In fase di consultazione pubblica (sett-nov 2021), aggiorna il documento "Verso un modello di economia circolare per l'Italia. Documento di inquadramento e di posizionamento strategico" pubblicato nel 2017. L'aggiornamento della strategia, previsto dal PNRR - Missione 2, interesserà anche le aree di intervento: eco-progettazione ed innovazione di prodotto, bioeconomia, blue economy, materie prime critiche.
Strategia Nazionale di Adattamento ai Cambiamenti Climatici (SNAC) Redatta dal MATTM e approvata il 30/10/14 dalla Conferenza Unificata delle Regioni e Province autonome documento, la SNAC ha l'obiettivo di elaborare una visione nazionale sui percorsi comuni da intraprendere per far fronte ai cambiamenti climatici contrastando e attenuando i loro impatti.
Piano Nazionale di Adattamento ai Cambiamenti Climatici (PNACC). La sua elaborazione, avviata nel maggio 2016, si basa sulla SNAC, rispetto alla quale si configura come uno strumento più operativo diretto a supportare da un punto di vista conoscitivo le istituzioni nazionali, regionali e locali nella definizione di propri percorsi settoriali e locali di adattamento anche in relazione alle criticità che le connotano maggiormente. Il Piano non è ancora stato approvato dal legislatore nazionale.

Piano nazionale integrato per l'energia e il clima per gli anni 2021-2030 (PNIEC).
Il Piano predisposto dal MISE, con il Ministero dell'Ambiente e della tutela del territorio e del mare e il Ministero delle Infrastrutture e dei Trasporti, inviato nella sua versione definitiva, nel gennaio 2021, alla Commissione UE in attuazione del Regolamento 2018/1999/UE, a termine di un percorso avviato nel dicembre 2018. Il Piano stabilisce gli obiettivi nazionali al 2030 sull'efficienza energetica, sulle fonti rinnovabili e sulla riduzione delle emissioni di CO2, nonché gli obiettivi in tema di sicurezza energetica, interconnessioni, mercato unico dell'energia e competitività, sviluppo e mobilità sostenibile, delineando per ciascuno di essi le misure che saranno attuate per assicurarne il raggiungimento. Il Piano supera quanto previsto dalla Strategia Energetica Nazionale 2017 (SEN), il Piano d'azione Nazionale per la riduzione di gas serra 2013-2020 e dal Piano d'Azione italiano per l'Efficienza Energetica 2017 (PAEE).

Piano Nazionale d'Azione sul Green Public Procurement - PAN GPP.
Il PAN GPP, ovvero il piano nazionale d'azione per la sostenibilità ambientale dei consumi nel settore della Pubblica Amministrazione, adottato con il Decreto Interministeriale dell'11 aprile 2008, aggiornato con Decreto 10 aprile 2013 e in fase di ulteriore revisione, prevede i seguenti tre

fonte: http://burc.regione.campania.it

principali obiettivi ambientali strategici: riduzione delle emissioni di gas a effetto serra, riduzione delle sostanze chimiche pericolose, riciclo e riuso dei materiali.

Piano d'azione in materia di produzione e consumo sostenibile (PAN SCP)
Il Piano, previsto dalla L. 221/2015 (art. 21), si colloca nell'ambito delle politiche e delle strategie internazionali e nazionali su economia circolare, uso efficiente delle risorse e protezione del clima, dando attuazione agli indirizzi comunitari relativi al Piano d'azione europeo su Produzione e consumo sostenibili e su Politica industriale sostenibile COM(2008)397 e all'Agenda 2030 delle Nazioni Unite.

Strategia nazionale per la Biodiversità.
Elaborata dal Ministero dell'Ambiente e della Tutela del Territorio e del Mare nel 2010, si pone come strumento di integrazione delle esigenze della biodiversità nelle politiche nazionali di settore. Nel maggio 2021 è stato adottato il Rapporto conclusivo sull'attuazione della Strategia Nazionale per la Biodiversità, che analizza lo stato di conservazione della biodiversità e lo stato di attuazione degli obiettivi specifici delle 15 aree di lavoro, traendo insegnamento dall'esperienza maturata in vista della definizione della nuova Strategia per la Biodiversità al 2030.

Strategia forestale nazionale.
La Strategia Forestale Nazionale è lo strumento adottato in attuazione del d.lgs. 3 aprile 2018, n. 34 (Testo unico in materia di foreste e filiere forestali, TUFF) per la protezione, l'uso sostenibile e la valorizzazione del patrimonio forestale italiano, nell'interesse collettivo. La sua missione è quella di portare il Paese ad avere foreste estese e resilienti, ricche di biodiversità, capaci di contribuire alle azioni di mitigazione e adattamento alla crisi climatica, offrendo benefici ecologici, sociali ed economici per le comunità rurali e montane, per i cittadini di oggi e per le prossime generazioni. La Strategia Forestale Nazionale incentiva e promuove la tutela e l'uso consapevole e responsabile delle risorse naturali, con il coinvolgimento di tutti, in azioni orientate dai criteri della sostenibilità, della collaborazione e dell'unità di azione.

Il quadro programmatico regionale

Nel presente sotto-capitolo viene sintetizzato lo stato dell'arte delle principali pianificazioni di competenza regionale che riguardano le matrici e i comparti ambientali che interagiscono con le attività agroforestali e con le quali le politiche agricole del nuovo ciclo 2021-2027 dovranno integrarsi e coordinarsi, aggiornato alla data del 16/04/2023.
Le informazioni sono state acquisite contattando direttamente referenti i diversi uffici regionali e amministrazioni coinvolte. Lì dove possibile, sono stati forniti i link e i riferimenti alla documentazione completa dei diversi piani. In particolare, sono considerati i seguenti piani specialistici:

fonte: http://burc.regione.campania.it

La Strategia Regionale per lo Sviluppo Sostenibile della Campania (SRSvS)

La Strategia Regionale per lo Sviluppo Sostenibile della Campania (SRSvS) definisce le prospettive strategiche, normative e procedurali volte a orientare le politiche regionali in coerenza con i principi e gli obiettivi dello sviluppo sostenibile.

La Strategia completa ed integra il complesso di norme, le condizioni organizzative ed i meccanismi operativi destinati a selezionare gli interventi volti a realizzare gli obiettivi di sviluppo sostenibile. La Strategia rappresenta, dunque, il quadro di riferimento nelle attività di cooperazione istituzionale con gli Enti locali e territoriali in tema di sviluppo sostenibile e per il coinvolgimento attivo delle parti economiche e sociali nella co- progettazione e verifica degli interventi.

La SRSvS è costituita da due documenti:

- Documento strategico che riporta, tra l'altro, obiettivi strategici e specifici, modello di governance, strumenti di attuazione, sistema di monitoraggio e reporting e gli indicatori;
- Piano di azione per lo sviluppo sostenibile con gli interventi che possono essere effettivamente realizzati e le modalità operative per darvi attuazione

Il quadro strategico di riferimento per la SRSvS è basato sui diciassette Obiettivi di Sviluppo Sostenibile (Sustainable Development Goals - SDGs) dell'Agenda 2030, associati ai principi chiave del Pilastro europeo dei Diritti Sociali, agli obiettivi dell'Accordo di Parigi sui Cambiamenti Climatici, alle iniziative del Green Deal europeo ed agli orientamenti della Politica di Coesione 2021-2027. Inoltre, nella elaborazione della SRSvS si è tenuto conto delle indicazioni contenute nella "Strategia annuale per la crescita sostenibile e delle raccomandazioni specifiche per Paese" adottate annualmente dalla Commissione Europea nell'ambito del Semestre europeo, nonché del Programma Nazionale di Riforma elaborato dal Governo nazionale e della Strategia Nazionale per lo Sviluppo Sostenibile.

Gli obiettivi strategici e specifici della SRSvS, in coerenza con gli SDGs dell'Agenda 2030, rappresentano un insieme integrato e interdipendente che consente di sviluppare politiche regionali che tengano conto degli aspetti economici, sociali ed ambientali, nonché di quelli della governance. Del resto, assumere i principi dello sviluppo sostenibile come prospettiva di azione pubblica implica l'adozione di un modello di governance in grado di tenere conto del carattere multilivello degli interventi, che assicuri la partecipazione delle parti economiche e sociali e che contempli appropriati meccanismi di attuazione, monitoraggio, valutazione e revisione.

L'integrazione e l'interdipendenza degli obiettivi strategici e specifici della SRSvS consentono di combinare diversi ambiti tematici per definire azioni che impattano in modo simultaneo su più obiettivi, migliorando così l'efficacia delle policy; ne discende che le misure di contrasto alla povertà devono essere associate ad quelle di inclusione sociale, di politiche attive del lavoro, dell'istruzione e della salute e devono essere in grado di assicurare nel complesso la crescita economica favorendo il contrasto al cambiamento climatico e la protezione ambientale.

Ulteriore elemento chiave della SRSvS è rappresentato dalla selezione di indicatori e target, aggiornati sistematicamente e direttamente connessi agli obiettivi della stessa, che consentono di monitorarne le performance, valutare gli effetti e l'impatto degli interventi programmati, rendere disponibili informazioni qualificate per un'appropriata attività di reporting e per il confronto

fonte: http://burc.regione.campania.it

pubblico circa le decisioni assunte e i risultati conseguiti in attuazione del principio di accountability.
Gli indicatori della SRSvS sono selezionati in base agli obiettivi strategici e specifici tenendo conto dei territori di riferimento (aree urbane, aree interne, aggregati territoriali); essi devono essere associati a target predefiniti, essere chiaramente connessi agli interventi ed essere in grado di rappresentare l'andamento delle priorità identificate. La frequenza dell'aggiornamento delle informazioni statistiche che alimentano il sistema di indicatori, insieme al collegamento con gli indicatori rilevati in sede ONU, Eurostat e Sistan rappresentano elementi dirimenti per la qualità dell'informazione.
Nell'ambito del sistema informativo regionale sono disponibili i dati di monitoraggio dai quali si può desumere la coerenza delle misure attivate con gli obiettivi della SRSvS. I dati di avanzamento delle misure sono finalizzati a rendere note le attività svolte che possono essere utilizzate per la Relazione annuale sulla strategia regionale per lo sviluppo sostenibile.
La Strategia è finalizzata anche a rendere la Campania un esempio di economia decarbonizzata, efficiente nel consumo delle risorse e ad elevata intensità digitale, garantendo al contempo equità sociale e riduzione delle disuguaglianze; la stessa implica un modello di finanza pubblica in grado di includere gli obiettivi di sviluppo sostenibile collegando le poste di bilancio a ciascuno degli Obiettivi della SRSvS.
In questo ambito, il Documento di Economia e Finanza Regionale può rappresentare lo strumento di raccordo tra SRSvS e finanza regionale.
L'innovazione del modello di intervento pubblico che la SRSvS promuove, la sua forza trasformativa e la natura multidisciplinare, attraverso percorsi di rinnovamento e trasformazione dell'Amministrazione, con il rafforzamento della capacità operativa e l'adeguamento delle competenze per gestire procedure e fenomeni sempre più complessi, con strumenti amministrativi nuovi, più efficaci e veloci.
Tra gli obiettivi dell'Amministrazione è presente quello volto ad investire nella valorizzazione del capitale umano per acquisire le competenze trasversali (softskills) che concorrono alla soluzione di problemi complessi e per migliorare la capacità amministrativa alla quale sono dedicate risorse specifiche.
La SRSvS fonda la propria efficacia sul coinvolgimento attivo delle principali parti economiche e sociali e dei portatori di interesse nell'attuazione degli obiettivi di sviluppo sostenibile; ciò implica che l'amministrazione sia capace di attivare procedure condivise dagli attori istituzionali e sociali, una comunicazione efficace e approcci partecipativi.
Il coinvolgimento delle parti economiche e sociali deve fondarsi su un flusso costante di informazioni tra l'Amministrazione ed i partner con regole procedurali in grado di assicurare una consultazione tempestiva, pertinente e informata. Gli strumenti della consultazione e dell'informazione sono calibrati in base ai soggetti a cui si rivolgono, utilizzando strumenti tradizionali (pubblicazioni, seminari) e digitali (consultazioni on line tramite questionari, webinar, eventi social).
Le regole di ingaggio delle parti economiche e sociali ed i principi per il confronto e la condivisione nell'ambito della SRSvS si ispirano alle disposizioni contenute nel Codice europeo di condotta del Partenariato adottato nell'ambito della Politica di Coesione.

fonte: http://burc.regione.campania.it

Al fine di assicurare una strutturata attività di coinvolgimento e partecipazione nell'ambito della SRSvS, un ruolo rilevante è assunto dal Partenariato economico e sociale della Politica di Coesione relativo ai Programmi comunitari regionali FESR, FSE e FEASR, eventualmente integrato con ulteriori associazioni e stakeholder in relazione alle materie da affrontare. Il Partenariato è chiamato, dunque, ad affrontare questioni di carattere strategico ed operativo relative anche all'attuazione degli interventi e all'avanzamento complessivo delle misure messe in campo verso obiettivi e target. Potranno essere attivati Tavoli Tematici che affrontano temi specifici legati all'attuazione e alla sorveglianza della Strategia e Focus Group che approfondiscono questioni tecniche e procedurali.

Complemento di sviluppo rurale 2023-2027.

Il Complemento regionale per lo Sviluppo Rurale (di seguito CSR) della Regione Campania è stato redatto in coerenza e uniformità rispetto al Piano Strategico Nazionale della PAC 2023 – 2027 (di seguito PSP) approvato per l'Italia dalla Commissione Europea inizialmente il 02/12/2022 con decisione C(2022) nr. 8645 e la successiva modifica con decisione C(2023) 6990 del 23/10/2023 (versione 2.1 del PS PAC).

Con il CSR la Regione programma e gestisce gli interventi di sviluppo rurale che ha inteso attivare esplicitandone le prerogative regionali. Il documento è infatti frutto di un'ampia attività di concertazione con il Ministero dell'Agricoltura, della Sovranità Alimentare e delle Foreste (MASAF), dell'ascolto degli operatori del comparto agricolo, nonché del partenariato economico e sociale insieme ai privati cittadini, a cui è stata data voce per costruire una batteria di interventi capace di rispondere alle istanze di tutela ambientale, sostenibilità, modernità e innovazione espresse dal territorio regionale.

Il CSR Campania 2023-2027, inoltre, per fare fronte comune alle straordinarie difficoltà presenti a livello mondiale, ha come obiettivo quello di agire in sinergia e complementarità con le ulteriori iniziative comunitarie (Dichiarazione FESR, FSE, FEASR) e con il Piano Nazionale di Ripresa e Resilienza (PNRR), nella consapevolezza che lo sviluppo dei territori e delle imprese passa attraverso la tenuta del sistema sociale e produttivo. Un'attenzione particolare è inoltre rivolta dal CSR Campania alla tutela dell'ambiente, alla salvaguardia della biodiversità – animale e vegetale - e alla mitigazione ed adattamento ai cambiamenti climatici per opera dell'agricoltura: ciò lo pone in linea con le principali strategie nazionali e internazionali di salvaguardia del patrimonio naturale (come ad es. "Nuova strategia dell'UE per le foreste per il 2030", "Strategia dell'UE sulla biodiversità per il 2030" e le strategie regionali di recepimento: Strategia nazionale per la biodiversità, Strategia Forestale Nazionale, Programmi forestali regionali, ecc).

Tutto ciò considerato, in un'ottica di sostanziale continuità con il ciclo di programmazione 2014-2022 e, in particolare, con il biennio di estensione 2021-2022, si garantisce un intervento sistemico e pragmatico alle esigenze dei settori agricoli e forestali e delle aree rurali. La strategia regionale di sviluppo rurale della Regione Campania per il quinquennio 2023-2027 intende quindi supportare quegli interventi che siano al contempo sostenibili e remunerativi e capaci di premiare le scelte virtuose a tutela dell'ambiente.

Il CSR pone grande attenzione alla riduzione dell'inquinamento dell'acqua, dell'aria e ad una corretta gestione del suolo (Obiettivi Specifici (OS) 4 "Contribuire alla mitigazione dei

fonte: http://burc.regione.campania.it

cambiamenti climatici e all'adattamento a essi, come pure allo sviluppo dell'energia sostenibile" e 5 "Favorire lo sviluppo sostenibile e un'efficiente gestione delle risorse naturali come l'acqua, il suolo e l'aria"), principalmente attraverso il sostegno all'agricoltura condotta col metodo biologico e integrato (cui sono state assegnate risorse pari a più del 20% della dotazione complessiva) che, insieme, contribuiscono in maniera determinante al miglioramento della qualità delle acque, una delle principali criticità evidenziate dall'analisi di contesto regionale, e all'ottemperamento degli obiettivi della strategia "farm to fork". Sempre a favore di un'agricoltura sostenibile, agiscono gli interventi volti a ridurre il fenomeno erosivo e il dissesto idrogeologico, nonché gli interventi innovativi che promuovono l'efficientamento nell'utilizzo della risorsa acqua e nell'utilizzo dell'agricoltura di precisione. L'impegno sul versante della tutela della biodiversità, del rafforzamento dei servizi eco-sistemici e della preservazione degli habitat e del paesaggio (OS 6) si qualifica nel sostegno all'allevamento di razze in via di estinzione, così come al settore apistico. La cura dei paesaggi agrari di rilevante valore estetico percettivo e conservativo e la loro valorizzazione è sostenuta attraverso la promozione della gestione attiva e sostenibile delle foreste e la tutela delle colture arboree a valenza ambientale e paesaggistica.

Il CSR sostiene anche gli investimenti aziendali, facendone uno strumento capace di generare processi di crescita economica, sociale e territoriale. All'interno degli Obiettivi Specifici che guardano al mercato, alla competitività aziendale e all'occupazione – giovanile e di genere – (OS 2 "Migliorare l'orientamento al mercato e aumentare la competitività delle aziende agricole, sia a breve che a lungo termine, compresa una maggiore attenzione alla ricerca, alla tecnologia e alla digitalizzazione" e OS 8 "promuovere l'occupazione, la crescita, inclusa la parità di genere e l'imprenditorialità femminile, l'inclusione sociale e lo sviluppo locale nelle aree rurali, comprese la bioeconomia e la silvicoltura sostenibile"), la progettualità sarà a sostegno di investimenti strutturali in grado di aumentare la competitività aziendale (Intervento SRD01, 14,7% del totale CSR) e la produttività forestale, mentre la sostenibilità ambientale dei sistemi produttivi agricoli sarà ulteriormente rafforzata attraverso l'Intervento SRD02 (3,2% sul totale CSR, con una dotazione finanziaria di 40 Meuro). Un'ampia gamma di interventi sarà poi rivolta alla modernizzazione e alla diversificazione delle attività aziendali: oltre all'agriturismo è previsto il rilancio dell'agricoltura sociale e delle attività educative/didattiche; l'introduzione della trasformazione di prodotti agricoli e loro lavorazione e commercializzazione in punti vendita aziendali e infine le attività turistico-ricreative e attività legate alle tradizioni rurali e alla valorizzazione delle risorse naturali e paesaggistiche.

All'interno dell'OS 8 è programmato l'intervento dedicato alla realizzazione della strategia LEADER (SRG06): con un peso finanziario significativo pari all'8,5% del totale della spesa programmata del CSR. Il sostegno allo sviluppo di territori omogenei grazie ai GAL sarà sostenuto in sinergia con gli aspetti qualificanti della strategia di sviluppo rurale regionale tout court.

Il CSR si impegna altresì nel fornire all'agricoltura gli strumenti adatti a rispondere alle esigenze della società in materia di alimentazione e salute, compresi alimenti sicuri, nutrienti e sostenibili, sprechi alimentari e benessere degli animali (OS 9): la dotazione finanziaria di quasi 63 milioni sull'intervento SRA30 (5%) fa del "favorire un maggior benessere degli animali" - attraverso l'applicazione del sistema innovativo "CLASSYFARM" - il quarto macro obiettivo regionale dopo gli investimenti, le pratiche agricole sostenibili, gli interventi di sviluppo territoriale ed il

fonte: http://burc.regione.campania.it

rafforzamento delle filiere verticali. Si tratta di continuare nel solco tracciato su questo tema dalla Misura 14 "Benessere Animale" durante la programmazione 2014-2022,
laddove il comparto zootecnico, seppur interessato da criticità specifiche, ha mostrato la sua centralità per l'economia agricola campana.
Ulteriori interventi mirati sono stati previsti a sostegno dei giovani: con una dotazione finanziaria pari a quasi 48 milioni di euro, l'OS 7 "Attrarre e sostenere i giovani agricoltori e altri nuovi agricoltori e facilitare lo sviluppo imprenditoriale sostenibile nelle zone rurali" è dedicato all'insediamento di 857 giovani agricoltori (SRE01) e, come altre poche regioni in Italia, alla garanzia di un "premio" per i nuovi agricoltori (imprenditori agricoli "over 40" - SRE02). L'impegno di Regione Campania al sostegno di questo "asset" specifico sottolinea l'attenzione posta all'urgenza del ricambio generazionale nel settore agricolo, come pure alla qualità della vita nelle zone rurali versus il rischio di abbandono dei territori e della pratica agricola nelle zone marginali.
Per quanto riguarda le filiere (OS 3) la strategia regionale prevede di migliorare la posizione degli agricoltori nelle filiere agricole ed alimentari puntando sulla promozione delle produzioni di qualità (biologiche e denominazioni DOC/IGP) in continuità con il precedente periodo di programmazione, migliorandone e rendendo più efficaci i sistemi di sostegno e migliorando la loro conoscenza/percezione verso i consumatori e gli operatori del settore.
L'obiettivo trasversale X (circa 44,3 milioni di euro, pari al 3,5% delle risorse) sostiene lo sviluppo del sistema AKIS (Agricultural Knowledge and Innovation System) per la creazione di un ambiente fortemente integrato in cui i diversi attori – aziende agricole/forestali/agroalimentari, ambiente della ricerca, imprese, società di consulenza e formazione – si possano confrontare e sviluppare idee capaci di rispondere in modo concreto alle esigenze dei comparti di riferimento. Nella programmazione 2023-2027 si è scelto di adottare un approccio più di sistema rispetto al passato portando avanti le iniziative – cooperazione, informazione, consulenza, formazione e supporto all'innovazione – in maniera coordinata e parallela. Regione Campania ha definito il ruolo di AKIS nel promuovere un percorso strategico di sviluppo che potrà accompagnare, sin dalla fase di avvio del nuovo ciclo di programmazione, gli attori economici e della ricerca che operano sul territorio regionale.

Il Programma regionale FESR 2021-2027

Il PR - Programma Regionale FESR 2021-2027 della Campania è definito in stretta coerenza con il quadro delle principali strategie europee e nazionali che individuano nella transizione ecologica e digitale i due pilastri su cui basare lo sviluppo economico e sociale dei territori, rafforzando la coesione. Rispetto al quadro nazionale, il PR si inserisce nelle priorità tracciate dall'Accordo di Partenariato, risponde alle sfide indicate nelle raccomandazioni specifiche per paese del 2020 e nell'Allegato D al Country Report 2019 e intende agire in piena sinergia e complementarità con il Piano Nazionale di Ripresa e Resilienza (PNRR).
Il PR è stato elaborato alla luce della necessaria demarcazione e sinergia con i consistenti interventi finanziati su PNRR e sui PN, da un lato, evidenziando gli elementi che rafforzino, qualifichino e migliorino la realizzazione e gli esiti della programmazione territoriale e, dall'altro, favorendo la

fonte: http://burc.regione.campania.it

complementarità e l'intersezionalità degli interventi, per ampliare i destinatari e gli impatti territoriali delle azioni nazionali, convergendo sui medesimi obiettivi per incrementare gli impatti.
A livello regionale, il PR si inserisce nel quadro di una visione strategica e unitaria della programmazione dei fondi europei, nazionali e regionali, che ha assunto come proprie le priorità del Green Deal e dell'Agenda 2030, nonché la Strategia Nazionale di Adattamento ai Cambiamenti Climatici, declinandole territorialmente nel confronto con il partenariato istituzionale, economico e sociale.
Gli assi prioritari e gli obiettivi specifici del PR 2021-2027 si articolano attorno a cinque "sfide prioritarie", con l'obiettivo di rafforzare il sistema socio-economico regionale rendendolo più resiliente, accompagnandolo nel processo di transizione digitale e verde e contribuendo a ridurre le diseguaglianze economiche, sociali, di genere, generazionali e territoriali:

UNA CAMPANIA PIÙ INTELLIGENTE E COMPETITIVA

Asse prioritario 1 "Ricerca, Innovazione, Digitalizzazione e Competitività"

L'obiettivo è quello di migliorare il grado di attrattività della regione, per intensificare gli investimenti nel settore, la qualificazione e l'aggiornamento delle competenze per accompagnare i processi di trasformazione digitale e verde delle imprese, soprattutto le PMI, per il rilancio della competitività del sistema produttivo, stimolando gli investimenti tecnologici, compresi quelli per il supercalcolo, intelligenza artificiale, robotica, internet delle cose e cybersecurity e incentivando il deposito di licenze e brevetti nell'ambito dei progetti di innovazione. Allo stesso tempo, sarà necessario accompagnare i processi di digitalizzazione della PA, contribuendo al raggiungimento degli obiettivi di semplificazione e di ampliamento dei servizi digitale alle imprese e ai cittadini.

UNA CAMPANIA PIÙ VERDE

Asse prioritario 2 "Energia, Ambiente e Sostenibilità". La strategia è quella di indirizzare gli investimenti nella prevenzione e nell'adattamento ai rischi idrogeologico, sismico e vulcanico, anche attraverso un più capillare e sistematico monitoraggio e controllo del territorio. Per quanto riguarda la transizione energetica, la strategia regionale punta ad accompagnare la transizione ecologica delle imprese, a rafforzare la sostenibilità di edifici pubblici e imprese agendo in modo integrato attraverso la riqualificazione e l'efficientamento energetico, la produzione di energia da fonti rinnovabili per l'autoconsumo e la creazione di comunità energetiche, la riduzione dei consumi e l'adeguamento sismico nonché la promozione di interventi di protezione della biodiversità. In via prioritaria, saranno affrontate le criticità legate al superamento delle procedure di infrazione (acque e rifiuti) mediante appositi action plan.

UNA CAMPANIA PIÙ CONNESSA.

Asse prioritario 3 "Infrastrutture per la mobilità"

L'obiettivo è il completamento e/o potenziamento delle connessioni di mobilità (aeroportuale, ferroviario, portuale e stradale per le aree interne) in un'ottica di compiuta sostenibilità ambientale, tramite la messa in sicurezza e/o la realizzazione di infrastrutture e il rinnovo del parco mezzi circolante. Inoltre, assumono un ruolo cardine lo sviluppo di infrastrutture necessarie a garantire una mobilità dolce, sostenibile e a zero emissioni, il rafforzamento del parco mezzi a low

fonte: http://burc.regione.campania.it

carbon/zero emission, oltre che il potenziamento della sicurezza e la sostenibilità ambientale della rete infrastrutturale.

UNA CAMPANIA PIÙ INCLUSIVA,

Asse prioritario 4 "Sviluppo, Inclusione e Competenze"

Attuare il Pilastro Europeo dei diritti sociali, puntando sulla riduzione delle diseguaglianze nell'accesso ai servizi di istruzione e formazione, anche tramite una rete di welfare e protezione sociale che veda una collaborazione virtuosa del settore pubblico e del terzo settore, potenziando i servizi e delle infrastrutture sociali e sanitarie. In particolare, saranno sostenuti gli investimenti in tecnologie digitali per potenziare i servizi di diagnosi e consulenza medica a distanza. Inoltre, saranno sperimentate forme innovative di sostegno ai beni e alle attività culturali anch'esse finalizzate all'inclusione e all'innovazione sociale.

SFIDA 5 UNA CAMPANIA PIÙ VICINA AI CITTADINI

Asse priotario 5 "Sviluppo Territoriale Integrato"

Rafforzare il tessuto delle reti territoriali esistenti, valorizzando le strategie territoriali promosse dalle Autorità urbane, dalle Aree Vaste e dalle Aree Interne e promuovendo una condivisione ampia del partenariato socioeconomico locale nell'individuazione degli interventi portanti delle strategie.

Piano stralcio di assetto idrogeologico (PSAI)

Il Piano Stralcio di assetto idrogeologico elaborato per il territorio regionale dall'Autorità di Bacino Distrettuale dell'Appennino Meridionale è lo strumento operativo di riferimento per la mappatura delle aree a pericolosità idrogeologica, al fine di garantire livelli sostenibili di gestione del rischio da dissesti di natura geomorfologica, privilegiando la difesa della vita umana, del patrimonio ambientale, culturale, infrastrutturale ed insediativo, da perseguire mediante misure di prevenzione, di protezione, di preparazione e di risposta e ripristino tali da fronteggiare e mitigare i fenomeni di dissesto in atto o potenziali.

I contenuti tecnico-amministrativi dei PSAI costituiscono riferimenti importanti per la programmazione degli interventi in ambito forestale, con riferimento in particolare ai seguenti aspetti:

- la sistemazione, la conservazione ed il recupero del suolo nei bacini idrografici, con interventi idrogeologici, idraulici, idraulico-forestali, idraulico-agrari, silvo-pastorali, di forestazione e di bonifica, anche attraverso processi di recupero naturalistico, botanico e faunistico;
- la difesa, la sistemazione e la regolazione dei corsi d'acqua, dei rami terminali dei fiumi e delle loro foci nel mare, nonché delle zone umide;
- la regolamentazione dei territori interessati dagli interventi di cui ai punti precedenti ai fini della loro tutela ambientale, anche mediante la determinazione di criteri per la salvaguardia e la conservazione delle aree demaniali e la costituzione di parchi fluviali e lacuali e di aree protette;
- il riordino del vincolo idrogeologico.

fonte: http://burc.regione.campania.it

I PSAI rappresentano dunque gli strumenti conoscitivi, normativi e tecnico- operativi attraverso i quali sono dettate le regole ed individuate le azioni necessarie alla conservazione e difesa del suolo, previa individuazione delle aree caratterizzate da pericolosità per eventi di frana e di alluvione e dei relativi livelli di rischiosecondo quanto previsto dal DPCM 29/9/98.

Piano di Tutela delle Acque

Il Piano di Tutela delle Acque della Regione Campania di competenza regionale della D.G. per l'Ambiente, la Difesa del Suolo e L'Ecosistema - UOD 50.06.08 "Tutela dell'Acqua – Contratti di fiume" – Ambito Territoriale di riferimento: Territorio regionale.

Il Piano di Tutela delle Acque (PTA), rappresenta ai sensi del D. Lgs. 152/2006 e dalla Direttiva europea 2000/60 CE (Direttiva Quadro sulle Acque), lo strumento regionale per il raggiungimento degli obiettivi di qualità dei corpi idrici superficiali e sotterranei e della protezione e valorizzazione delle risorse idriche.

Il PTA è l'articolazione di dettaglio, a scala regionale, del Piano di Gestione Acque del distretto idrografico (PGdA), previsto dall'articolo 117 del D. Lgs 152/2006 che, per ogni distretto idrografico, definisce le misure (azioni, interventi, regole) e le risorse necessarie al raggiungimento degli obiettivi di qualità previsti dalla richiamata direttiva europea che istituisce il "Quadro per l'azione comunitaria in materia di acque - WFD".

Piano di Gestione delle Acque

Piano di Gestione delle Acque è uno strumento di pianificazione di competenza dell'Autorità di Distretto dell'Appennino Meridionale e delle Regioni appartenenti al Distretto Idrografico dell'Appennino Meridionale – Ambito Territoriale di riferimento: Distretto Idrografico dell'Appennino Meridionale. L'Autorità di Bacino Distrettuale dell'Appennino Meridionale ha fatto proprie, con l'entrata in vigore del D.M. 294/2016, le attività di pianificazione e programmazione a scala di Bacino e di Distretto idrografico svolte dalle ex Autorità di Bacino Nazionali, Regionali, Interregionali, relative alla difesa, tutela, uso e gestione sostenibile delle risorse suolo e acqua, alla salvaguardia degli aspetti ambientali e concorre, pertanto, alla difesa, alla tutela e al risanamento del suolo e del sottosuolo, alla tutela quali–quantitativa della risorsa idrica, alla mitigazione del rischio idrogeologico, alla lotta alla desertificazione, alla tutela della fascia costiera ed al risanamento del litorale. L'Autorità di Distretto ha ripreso, recepito e integrato la pianificazione di bacino fino ad oggi svolta dalle ex Autorità di Bacino Nazionali, Regionali, Interregionali.

Piano di Gestione del rischio Alluvioni

Il Piano di Gestione del rischio Alluvioni rientra nella competenza dell'Autorità di Distretto dell'Appennino Meridionale e delle Regioni appartenenti al Distretto Idrografico dell'Appennino Meridionale – Ambito Territoriale di riferimento: Distretto Idrografico dell'Appennino Meridionale. Il piano rappresenta lo strumento con cui coordinare il sistema della pianificazione in capo all'Autorità di Bacino e quello della Protezione Civile, con la direzione del Dipartimento Nazionale e i livelli di governo locale, rafforzando lo scambio reciproco di informazioni ed avendo quale comune finalità la mitigazione del rischio di alluvioni. Il Piano di Gestione Rischio di Alluvioni – I Ciclo 2011-2016 del Distretto idrografico Appennino Meridionale PGRA DAM è

fonte: http://burc.regione.campania.it

stato adottato, ai sensi dell'art. 66 del d.lgs. 152/2006, con Delibera n° 1 del Comitato Istituzionale Integrato del 17 dicembre 2015, è stato approvato dal Comitato Istituzionale Integrato in data 3 marzo 2016. Con l'emanazione del DPCM in data 27/10/2017 si è concluso il I ciclo di Gestione. Attualmente sono in corso le attività del II ciclo (2016/2021) che prevedono la predisposizione delle mappe di pericolosità e del rischio di alluvioni e l'adozione del Piano - II ciclo entro il 2021. La valutazione preliminare del rischio di alluvioni unitamente alla determinazione delle aree a potenziale rischio significativo è stata predisposta e costituisce argomento posto all'attenzione della Conferenza Istituzionale permanente del 19/12/2018. Nel frattempo con Delibera n. 3 del 20 dicembre 2019, il Comitato Istituzionale permanente del Distretto Idrografico dell'Appennino Meridionale ha approvato la "Valutazione globale provvisoria dei principali problemi di gestione delle acque", identificati nel bacino idrografico, ai fini dell'aggiornamento del Piano di Gestione del Rischio di alluvioni (2021-2027) ai sensi della Direttiva 2007/60/CE.

Piani d'Ambito

Con la Legge Regionale n. 15 del 2 dicembre 2015 "Riordino del servizio idrico integrato ed istituzione dell'Ente Idrico Campano", la Regione Campania ha individuato un unico ambito territoriale ottimale coincidente con il territorio regionale, suddiviso in 5 Ambiti distrettuali denominati: Ambito distrettuale Napoli, Ambito distrettuale Sarnese-Vesuviano, Ambito distrettuale Sele, Ambito distrettuale Caserta, Ambito distrettuale Calore Irpino. Il soggetto di governo dell'ambito unico regionale è l'Ente Idrico Campano (EIC), istituito con la suddetta legge, a cui aderiscono obbligatoriamente tutti i Comuni del territorio Campano. L'EIC predispone, adotta ed aggiorna il Piano d'Ambito dell'ATO unico regionale, affida per ogni Ambito distrettuale la gestione del servizio idrico integrato al soggetto gestore sulla base delle indicazioni di ciascun Consiglio di distretto.

Piano Regolatore Generale degli Acquedotti

Il Piano Regolatore Generale degli Acquedotti approvato con DPR 2774/1968, mirava alla programmazione idrica dell'intero territorio nazionale fino al 2015; con il DPR 616/77 le regioni sono state delegate all'aggiornamento e modifiche del PRGA a scala regionale. Con Deliberazione di Giunta Regionale n. 182 del 14/04/2015, nelle more dell'approvazione del nuovo Piano Regolatore Generale degli Acquedotti della Campania, è stato approvato lo Strumento Direttore del Ciclo Idrico Integrato delle Acque della Regione Campania, con recepimento del "Progetto di Aggiornamento del PRGA della Campania", redatto dalla SOGESID.

Programma d'Azione per le Zone Vulnerabili all'inquinamento da Nitrati di origine agricola

Il Programma d'Azione per le Zone Vulnerabili all'inquinamento da Nitrati di origine agricola rientra nelle competenze della Direzione Generale per le Politiche Agricole, Alimentari e Forestali - UOD 50 07 06 Tutela della qualità, tracciabilità dei prodotti agricoli e zootecnici servizi di sviluppo agricolo d'intesa con la Direzione Generale per la Difesa del suolo e l'Ecosistema - UOD 50 06 08 Tutela delle acque – Contratti di fiume. – Ambito Territoriale di riferimento: Territorio regionale.
Con DRD n. 2 del 12.02.2018 la Regione Campania ha avviato la revisione del vigente Programma di azione per le zone vulnerabili all'inquinamento da nitrati di origine agricola (di cui alla D.G.R. n.

fonte: http://burc.regione.campania.it

209/2007), che ai sensi del D.lgs 152/2006 deve essere sottoposto a procedura di Valutazione Ambientale Strategica (VAS), e con Avviso pubblicato sul BURC n. 46 del 5 Agosto 2019, è stata avviata la fase di consultazione per la VAS-VI del "Programma d'azione per le zone vulnerabili all'inquinamento da nitrati di origine agricola" della Regione Campania. Attualmente il Programma si trova nella fase finale della procedura VAS-VI di riscontro alle osservazioni pervenute in fase di consultazione pubblica e rilascio del parere motivato da parte dell'autorità competente.

Piano Energetico Ambientale Regionale (PEAR)

Piano Energetico Ambientale Regionale (PEAR) della Regione Campania di competenza regionale della Direzione generale per lo Sviluppo Economico e le Attività Produttive – Ambito Territoriale di riferimento: Territorio regionale. Il Piano Energetico Ambientale Regionale (PEAR) si propone come un contribuito alla programmazione energetico-ambientale del territorio con l'obiettivo finale di pianificare lo sviluppo delle FER, rendere energeticamente efficiente il patrimonio edilizio e produttivo esistente, programmare lo sviluppo delle reti distributive al servizio del territorio e disegnare un modello di sviluppo costituto da piccoli e medi impianti allacciati a reti "intelligenti" ad alta capacità, nella logica della smart grid diffusa. Con Decreto Dirigenziale n. n. 253 del 19/07/2019 si è proceduto alla presa d'atto in sede tecnica della proposta di "Piano Energia e Ambiente Regionale" e dei connessi elaborati che attualmente è in fase di VAS-VI, in data 10/10/2019 si è conclusa la fase di consultazione pubblica prevista ai sensi dell'art. 14 del D. Lgs. 152/2006 e s.m.i. e il 18/02/2020 sono state pubblicate le risposte/controdeduzioni/modifiche e le relative motivazioni.

Il Piano Energetico Ambientale della Regione Campania è stato approvato con delibera di Giunta Regionale n. 377 del 15/07/2020 e con presa d'atto con decreto della DG 2 - Direzione Generale per lo sviluppo economico e le attività produttive n. 353 del 18/09/2020.

Piano regionale per la tutela della qualità dell'aria

Piano regionale per la tutela della qualità dell'aria di competenza della Regione Campania D.G. per l'Ambiente, la Difesa del Suolo e L'Ecosistema - UOD 500604, risulta in fase di elaborazione la proposta di aggiornamento del Piano Regionale per la Tutela della Qualità dell'Aria, redatta secondo i criteri previsti nel D.Lgs. n. 155/2010, in attuazione della direttiva comunitaria 2008/50/CE, da sottoporre alla procedura di Valutazione Ambientale Strategica ai sensi del D. Lgs 152/2006 e ss.mm.ii. La Regione Campania ha adottato un Piano regionale di risanamento e mantenimento della qualità dell'aria approvato con delibera di Giunta Regionale n. 167 del 14/02/2006 e pubblicato sul BURC numero speciale del 5/10/2007, con gli emendamenti approvati dal Consiglio Regionale nella seduta del 27/06/2007.

Successivamente il Piano, nelle more del suo aggiornamento, è stato integrato con:

- la Delibera della Giunta Regionale n. 811 del 27/12/2012, che integra il Piano con delle misure aggiuntive volte al contenimento dell'inquinamento atmosferico;
- la Delibera della Giunta Regionale n. 683 del 23/12/2014, che integra il Piano con la nuova zonizzazione regionale ed il nuovo progetto di rete.

fonte: http://burc.regione.campania.it

Nell'ambito dell'aggiornamento del piano regionale per la tutela della qualità dell'aria è in elaborazione l'inventario delle emissioni in atmosfera secondo i criteri previsti nel D.Lgs. n. 155/2010 in attuazione della direttiva comunitaria 2008/50/CE. Con DGR n. 120 del 26.3.2019 - pubblicata sul BURC n. 17 del 28 Marzo 2019 - è stato approvato lo schema di "Accordo di programma per l'adozione di misure per il miglioramento della qualità dell'aria nella Regione Campania". L'accordo tra il Ministero dell'Ambiente e della Tutela del Territorio e del Mare e la Regione Campania contiene le misure e gli interventi necessari al superamento della procedura di infrazione aperta dalla Corte di Giustizia UE contro lo Stato italiano.
Dopo il completamento della procedura di VAS, la Giunta della Regione Campania, nella seduta del 28.09.2021, ha adottato l'aggiornamento del Piano di Tutela della Qualità dell'Aria con deliberazione n. 412
Le misure del Piano recepiscono ed ampliano quelle stabilite nell'Accordo Ministero Ambiente (oggi MiTe)/Regione Campania sottoscritto l'11 febbraio 2021 e sono entrate in vigore dalla data di appovazione.

Il Quadro di Azioni Prioritarie per la programmazione 2021-2027 (Prioritized Action Framework, PAF)

Il quadro di azioni prioritarie per la gestione dei siti Natura 2000 della Regione Campania costituisce il documento di riepilogo delle esigenze finanziare per la gestione nel suo insieme dei Siti Natura 2000 e comprende sia le spese di esercizio (ricorrenti), che quelle una tantum, previste nel periodo di riferimento. per il quadro finanziario pluriennale 2021-2027.
Il PAF è redatto Direzione Generale per la Difesa del Suolo e l'Ecosistema della Regione Campania – UOD 50 06 07 Gestione delle risorse naturali protette - Tutela e salvaguardia dell'habitat marino e costiero – Parchi e riserve naturali. Ambito Territoriale di riferimento: Territorio regionale, e adottato con DGR n. 615 del 28/12/2021 ("Adozione del Quadro di Azioni Prioritarie (Prioritized Action framework, PAF) per la programmazione 2021-2027 per la Rete Natura 2000 nel territorio della regione Campania ai sensi dell'art. 8 della Direttiva 92-43- CEE 'Habitat' e dell'art. 3 del DPR 357/97.").
Il documento è utilizzato dalla Regione Campania e dai soggetti gestori, per prevedere nei propri bilanci voci specifiche che coprano i costi previsti per la gestione dei Siti, includendo sia risorse proprie sia finanziamenti e contributi esterni, compresi quelli dei fondi europei (PSR, FESR, ecc.).
Le misure contenute PAF si basano e fanno riferimento ai rilevanti provvedimenti concernenti il governo istituzionale della Rete Natura 2000 della Campania:

- Con DM del 21/05/2019 e 27/11/2019 sono state designate 108 ZSC. Per esse sono stati definiti, con DGR 795/2017, gli obiettivi specifici di conservazione a livello di sito e le misure di conservazione.
- Con la DGR n. 684 del 30/12/2019 sono stati individuati gli Enti Gestori della Rete Natura 2000 della Campania, ed in particolare sono stati individuati le Aree protette Naturali Regionali, per le zone in esse ricadenti e la Regione stessa con l'impegno di affidare la gestione, anche congiunta, ad amministrazioni pubbliche o Enti del terzo Settore o a privati proprietari dei terreni, anche consorziati tra loro, riconoscendo

fonte: http://burc.regione.campania.it

l’importanza di strutturare un'adeguata rete di collaborazioni con le altre istituzioni e gli stakeholder.

- Nel quadro della Misura 7 del PSR Campania 2014-2020 è stato avviato il processo per bandire e finanziare la fornitura di servizi di realizzazione delle carte degli habitat e delle specie e piani di gestione di molti dei siti Natura 2000, finanziabili con le risorse del PSR (D.G.R. n. 335/2018).

Uno dei principali obiettivi del PAF è la definizione entro il 2022 della Rete ecologica regionale, come necessario completamento e integrazione della Rete Natura 2000 della Campania. Secondo il PAF, la definizione della Rete ecologica è una priorità perché, senza di essa, si rischia di rendere vano il ruolo di ZPS e ZSC, mancando l'essenziale funzione di corridoi ecologici per consentire la connessione di habitat e specie nei Siti.
Con la pianificazione della Rete Ecologica regionale si dovrà pertanto considerare la necessità di riconnettere le aree urbanizzate alle aree naturali protette, assegnando alle prime un ruolo nella funzionalità delle seconde, affinché le aree protette non siano isole in una matrice territoriale di cattivo uso del territorio, quanto tasselli di un medesimo mosaico a supporto della biodiversità e della qualità della vita.

fonte: http://burc.regione.campania.it

9. Caratterizzazione delle matrici ambientali

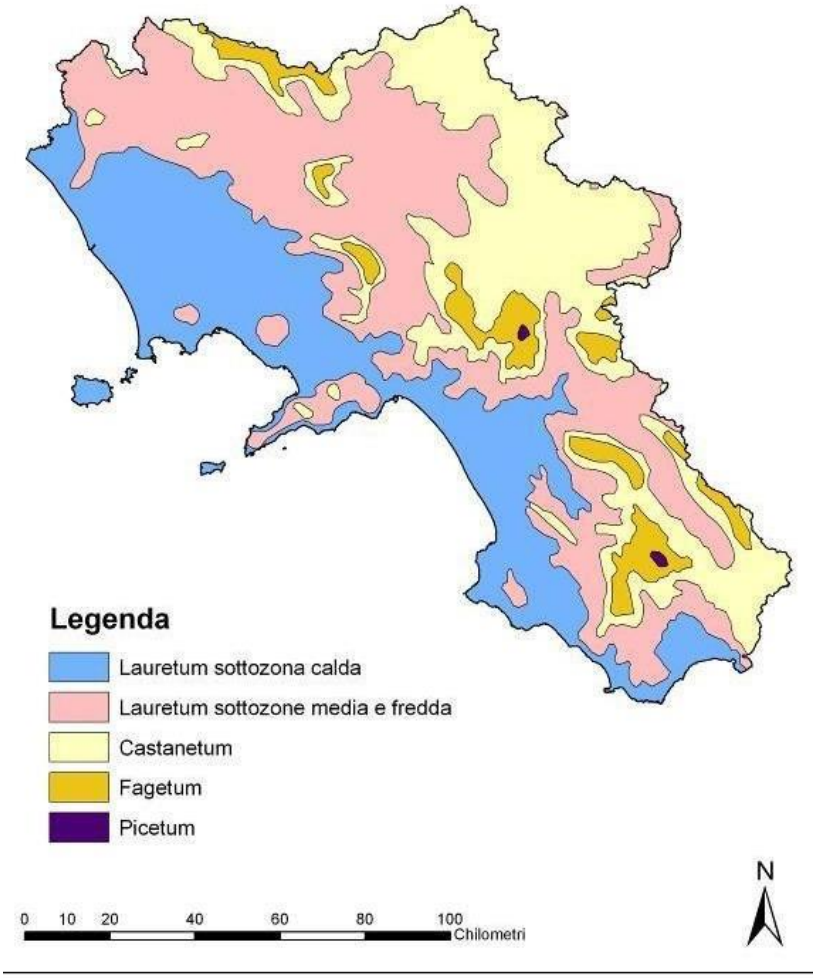
Nel presente capitolo viene proposta un'analisi del contesto ambientale finalizzata a valutare il livello di qualità sul territorio regionale delle diverse componenti ambientali che saranno prese in considerazione nel corso della redazione del Rapporto Ambientale e ad individuare eventuali elementi di criticità/peculiarità. Nel Rapporto Ambientale l'analisi di contesto verrà trattata dal punto di vista ambientale, territoriale e socio-economico, prendendo in considerazione tutte le componenti che interagiscono con il Piano e degli orientamenti comunitari in materia ambientale. Infatti negli ultimi anni il legislatore europeo (attraverso per esempio la nuova Direttiva NEC) ha posto l'attenzione in particolare alle ripercussioni che l'inquinamento atmosferico ha sulla salute umana, sugli ecosistemi naturali e seminaturali, come ad esempio le terre agricole, ma anche sull'economia. Sono sempre maggiori, infatti, gli studi che mettono in evidenza la relazione causa/effetto tra inquinamento e danni ambientali (ad es: eutrofizzazione delle acque), decessi per complicazioni cardio-respiratorie oppure stato di aggravamento delle malattie delle vie aeree.
Tale analisi di contesto ambientale costituirà un riferimento per l'individuazione degli impatti ambientali potenziali diretti ed indiretti del Programma d'Azione delle Zone Vulnerabili ai Nitrati. Considerata la tipologia e la scala del Piano, si ipotizza che tutte le componenti ambientali/territoriali possano essere interessate, direttamente o indirettamente, dalle azioni del PdA.

Inquadramento territoriale

La Regione Campania si estende su una superficie di 1.359.354 ha. Si affacciasul Mare Tirreno per circa 360 km, tra la foce del fiume Garigliano ed il golfo di Policastro. All'interno, per alcuni tratti, è delimitata dai rilievi della dorsale principaledell'Appennino.
Nel golfo di Napoli, a completamento della complessa morfologia, ci sono isole vulcaniche direttamente collegate con la caldera Flegrea come Ischia, Procida e Vivara. L'isola di Capri è costituita invece da un unico blocco calcareo.
Il territorio può essere diviso in due grandi sub-regioni:
la zona prevalentemente pianeggiante, che si estende dal fiume Garigliano al Golfo di Salerno ed è interrotta dal Monte Massico e dai Monti Lattari e dagli apparati vulcanici del Roccamonfina, dei Campi Flegrei e del Somma-Vesuvio (m 1.277);
la zona collinare e montuosa, che si affaccia sul mare con ampia fronte nel Cilento ed è costituita dai rilievi calcarei minori del Sub-Appennino, dalle colline argillose ed arenacee dell'Appennino Sannita e dagli aspri massicci calcareidell'Appennino.
La costa si presenta per lunghi tratti bassa e sabbiosa con qualche stagno retrodunale mentre è alta, frastagliata e incisa da profonde gole in corrispondenza dei Monti Lattari e, talora, del Cilento.
La zona pianeggiante (con altitudine inferiore ai 100 metri), costituita da depositi di materiali alluvionali e vulcanici, occupa più di un quarto del territorio regionale; ben coltivata e fertile, sede di insediamenti fin da tempi antichissimi,costituisce la Campania felix degli Autori classici. Per il resto la Regione presenta un'incidenza piuttosto elevata della montuosità, essendo costituita per

fonte: http://burc.regione.campania.it

oltre un terzo da alte colline e montagne e circa il 25% del territorio è compreso nella zona altimetrica 300 e 500 m.
Sono prevalentemente collinari la fascia nord-orientale della Regione ed i territori Sub-appenninici. Le montagne calcaree assumono la disposizione di due giganteschi archi contigui che si appoggiano al cuneo dei Picentini, con le cime principali del M. Cervialto (m 1809) e del M. Terminio (1786), ed al pilone calcareo– dolomitico dei Monti Lattari (m 1443). La fascia dei rilievi comprende così il M. Massico (m 811), il massiccio del Matese (M. Miletto m 2050 in Molise), il M. Taburno (m 1393) ed il M. Partenio (m 1591) a Nord – Ovest ed il M. Marzano (m 1530), la Catena della Maddalena (con la cima de Lo Serrone a m 1502), il M. Alburno (m 1742), il M. Cervati (m 1899), la più alta cima della Campania, ed il M. Bulgheria (m 1225) a Sud – Est.
Questi monti sono sede di fenomeni carsici talora imponenti (grotte di Pertosa, di Castelcivita). Il lago del Matese è il più importante tra i laghi carsici italiani.



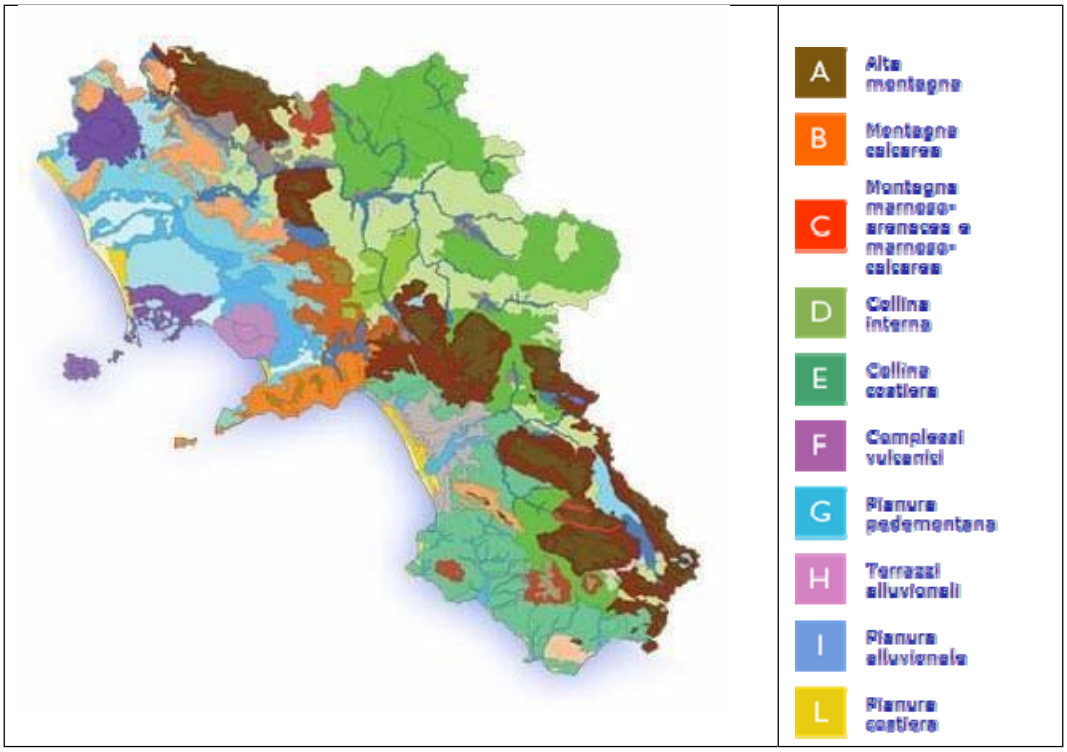
Aspetti climatici

La Regione Campania è caratterizzata da una notevole variabilità climatica, a causa della notevole complessità morfologica del suo territorio. Di seguito si illustrano le caratteristiche climatiche dei principali ambiti territoriali:
le pianure costiere e le loro inserzioni vallive con temperatura media annua tra i 16 e 17 °C (media del mese più freddo 8 °C, media del mese più caldo 25 – 26
°C), minime estreme poco al disotto di 0 °C e massime assolute intorno ai 38 °C. Le precipitazioni medie sono per lo più inferiori a 1.000 mm annui, di cui solo1/3 in estate.
la parte bassa dei rilievi con temperatura media annua di 15 °C (media del mese più freddo 5 °C, del mese più caldo 24 °C). Forti escursioni termiche con valori estremi da 2 °C a 40 °C. Le precipitazioni sono di poco superiori a 1.000 mm annui.
La parte alta dei rilievi con una temperatura media annua tra 8 e 13 °C (media delmese più freddo da –3 °C a +3 °C a, media del mese più caldo tra 18 °C e 23 °C).Piovosità con picchi sino a 2.200 mm annui e neve che permane a lungo sul suolo.
Il tratto comune al clima del territorio regionale riguarda la distribuzione irregolare delle piogge, che mostrano un massimo autunno-invernale e un minimo estivo, quest'ultimo mitigato dall'altidudine. Si tratta di una distribuzione delle piogge peculiare del clima mediterraneo.

Zone fitoclimatiche della Campania
Al fine di evidenziare in modo sintetico le relazioni esistenti tra condizioni climatiche e vegetazione, è stata elaborata la carta delle zone fitoclimatiche secondo la procedura di classificazione proposta da PAVARI. La carta oltre a consentire una immediata lettura dell'attuale distribuzione delle formazioni forestali, consente anche di evidenziare le relazioni con le altre modalità di uso del suolo (Figura 1.2).
La classificazione di PAVARI permette di inquadrare ciascun ambito territoriale in una zona fitoclimatica, rappresentativa di uno scenario climatico e di uno scenario vegetazionale. Tale classificazione utilizza i parametri climatici che maggiormente agiscono da fattori influenzanti lo

fonte: http://burc.regione.campania.it

sviluppo della vegetazione e come tali indicativi delle condizioni di esistenza delle singole formazione forestali.
Secondo tale classificazione, il 29% della superficie regionale rientra nel*Lauretum* sottozona calda, il 38% nel *Lauretum* sottozona media e fredda, il 28% nel *Castanetum*, il 5% nel *Fagetum* e una piccolissima parte nel *Picetum* (0.1%).



Le zone fitoclimatiche della Campania secondo Pavari

fonte: http://burc.regione.campania.it

Aspetti fisiografici e pedo-morfologici

Dal punto di vista pedo-fisiografico è possibile definire all'interno del territorio regionale i seguenti ambiti fisiografici e pedo-morfologici:

I Sistemi di Terre della Campania (Regione Campania, 2002)

ALTA MONTAGNA, con una superficie complessiva di 1044 km^2, pari al 7,7% del territorio regionale, comprende le aree sommitali ed i versanti montani alti (tra 900 e 1900 m s.l.m.) dei rilievi calcarei, marnoso-arenacei e marnoso- calcarei. E' caratterizzata dalla presenza di coperture pedologiche ad elevata variabilità laterale, su depositi piroclastici o di regolite, con mosaico complesso di suoli sottili di erosione su substrato roccioso, e suoli profondi, con orizzonti di superficie molto spessi nelle tasche del substrato e nelle depressioni morfologiche. Il 92% circa della superficie del sistema Alta Montagna è costituita da aree a vegetazione naturale o semi-naturale (complessivamente 1/5 dell'intera Regione), con boschi di faggio, praterie di vetta, prati-pascoli dei campi carsici. Gli insediamenti antropici sono sporadici. L'uso prevalente è forestale, zootecnico-pascolativo e ricreativo.

MONTAGNA CALCAREA, con una superficie complessiva di 2.755 km^2, parial 20% circa del territorio regionale, comprende le aree della media e bassa montagna calcarea (tra 0 e 1.100 m s.l.m.). Questo sistema di terre è caratterizzato dalla presenza di coperture podologiche ad elevata variabilità laterale e verticale, con sequenze di suoli con proprietà andiche fortemente espresse su

fonte: http://burc.regione.campania.it

depositi piroclastici ricoprenti il substrato calcareo, variamente troncate dai processi erosivi di versante (suoli ripidi o molto ripidi). I versanti meridionali ed occidentali sono localmente interessati da intensi processi denudativi, con suoli andici sottili, rocciosi, su substrato calcareo. Localmente (monte Bulgheria), sono presenti suoli a profilo fortemente differenziato, adalterazione geochimica, con orizzonti profondi ad accumulo di argilla illuviale. Nel complesso, il 70% circa della superficie del sistema Montagna Calcarea è rappresentato da aree a vegetazione naturale o semi-naturale (poco inferiore alla metà delle aree naturali dell'intera Regione) e per il 30% circa da aree agricole. Alle quote superiori e sui versanti settentrionali, prevalgono gli usi forestali e zootecnico-pascolativi (boschi misti di latifoglie, boschi di castagno, arbusteti, praterie). Sui versanti assolati e denudati sono presenti boscaglie (prevalentemente cedui invecchiati e degradati) di latifoglie decidue mesoxerofile e leccio, arbusteti, praterie xerofile. Sui versanti bassi, con sistemazioni antropiche (terrazzamenti), l'uso prevalente è agricolo con oliveti, vigneti, agrumeti, orti arborati, mais, colture foraggere.

MONTAGNA MARNOSO-ARENACEA E MARNOSO CALCAREA, con una superficie complessiva di 226 km^2, pari all'1,7% del territorio regionale, comprende le aree della media e bassa montagna marnoso-arenacea e marnoso- calcarea (tra i 400 ed i 1.110 m s.l.m.). I suoli su regolite, sono a profilomoderatamente differenziato per formazione di orizzonti di superficie spessi e inscuriti dalla sostanza organica. Presentano decarbonatazione degli orizzonti di superficie e profondi, formazione di orizzonti profondi ad accumulo di argilla illuviale. I suoli subordinati, su lembi di coperture piroclastiche, ricoprono il substrato terrigeno o carbonatico. Nel complesso, il 70% circa della superficie del sistema Montagna Marnoso-Arenacea e Marnoso Calcarea è rappresentato daaree a vegetazione naturale o semi-naturale, mentre il 30% da aree agricole. Alle quote superiori e sui versanti settentrionali prevalgono gli usi forestali e zootecnico-pascolativi (boschi di querce caducifoglie, boschi di castagno, arbusteti, praterie). Sui versanti bassi con sistemazioni antropiche (ciglionamenti, terrazzamenti) l'uso prevalente è agricolo con oliveti, vigneti, orti arborati, colture foraggere.

COLLINA INTERNA, con una superficie complessiva di 4.126 km^2, pari al 30%circa del territorio regionale, comprende i rilievi collinari interni (tra i 230 ed i 950 m s.l.m.). I suoli si presentano a profilo differenziato, per formazione di orizzonti di superficie spessi e inscuriti dalla sostanza organica, dalla redistribuzione interna dei carbonati e dalla omogeneizzazione degli orizzonti, legata alla contrazione/rigonfiamento delle argille. Presenti anche suoli con proprietà andiche su lembi di coperture piroclastiche, suoli a profilo poco differenziato e suoli minerali grezzi. Nel complesso l'80% della superficie del sistema Collina Interna, è occupato da aree agricole (40% circa di quelle regionali), mentre il 20% da vegetazione naturale o semi-naturale (1/6 di quella dell'intera superficie regionale). L'utilizzazione agricola del suolo è molto articolata (colture industriali di pieno campo, foraggere, mosaico complesso di seminativi, colture arboree specializzate, orti arborati). L'uso forestale è subordinato, con boschi di latifoglie decidue e formazioni artificiali darimboschimento.

fonte: http://burc.regione.campania.it

COLLINA COSTIERA con una superficie complessiva di 1.276 km^2, pari al 9% circa del territorio regionale, comprende i rilievi collinari costieri (tra 0 e 950 m s.l.m.). I suoli, in corrispondenza delle superfici a maggiore stabilità, sono a profilo differenziato, per redistribuzione interna dei carbonati o decarbonatazione. In corrispondenza dei versanti soggetti a più intense dinamiche erosive, i suoli sono troncati e a profilo poco differenziato. Nel complesso, il 40% circa della superficie del sistema Collina Costiera è rappresentato da aree a vegetazione naturale o semi-naturale (boschi di querce caducifoglie e leccio, macchia mediterranea, praterie ad ampelodesma), mentre il60% circa risulta costituito da aree agricole (oliveti e colture cerealicolo- foraggere).

COMPLESSI VULCANICI con una superficie complessiva di 792 km^2, pari al 6% circa del territorio regionale, comprende le sommità ed i versanti degli apparati vulcanici (da 0 a 1.280 m s.l.m.). I suoli, generalmente con proprietà andiche, sono evoluti da depositi di ceneri e pomici da caduta, da flusso piroclastico, tufi e lave delle eruzioni di età preistorica e storica del Roccamonfina e dei Campi Flegrei e su colate con suolo a profilo da poco a fortemente differenziato. Alle quote più elevate e sui versanti settentrionali l'uso prevalente è forestale, con cedui di castagno, latifoglie mesofile e castagneti da frutto. Alle quote inferiori, sui versanti con sistemazioni antropiche (ciglionamenti, terrazzamenti), sono presenti frutteti, vigneti, orti arborati e vitati, colture ortive di pieno campo ed in coltura protetta. Sui versanti meridionali con suoli sottili, prevalgono formazioni a macchia, praterie ad *Arundo pliniana* e *Ampelodesmos mauritanicus*. All'interno del sistema Complessi Vulcanici, learee a vegetazione naturale o semi-naturale ricoprono il 28%. Tuttavia il 22% circa delle aree urbane compatte ed il 19% delle aree urbane discontinue, è compreso in questo sistema.

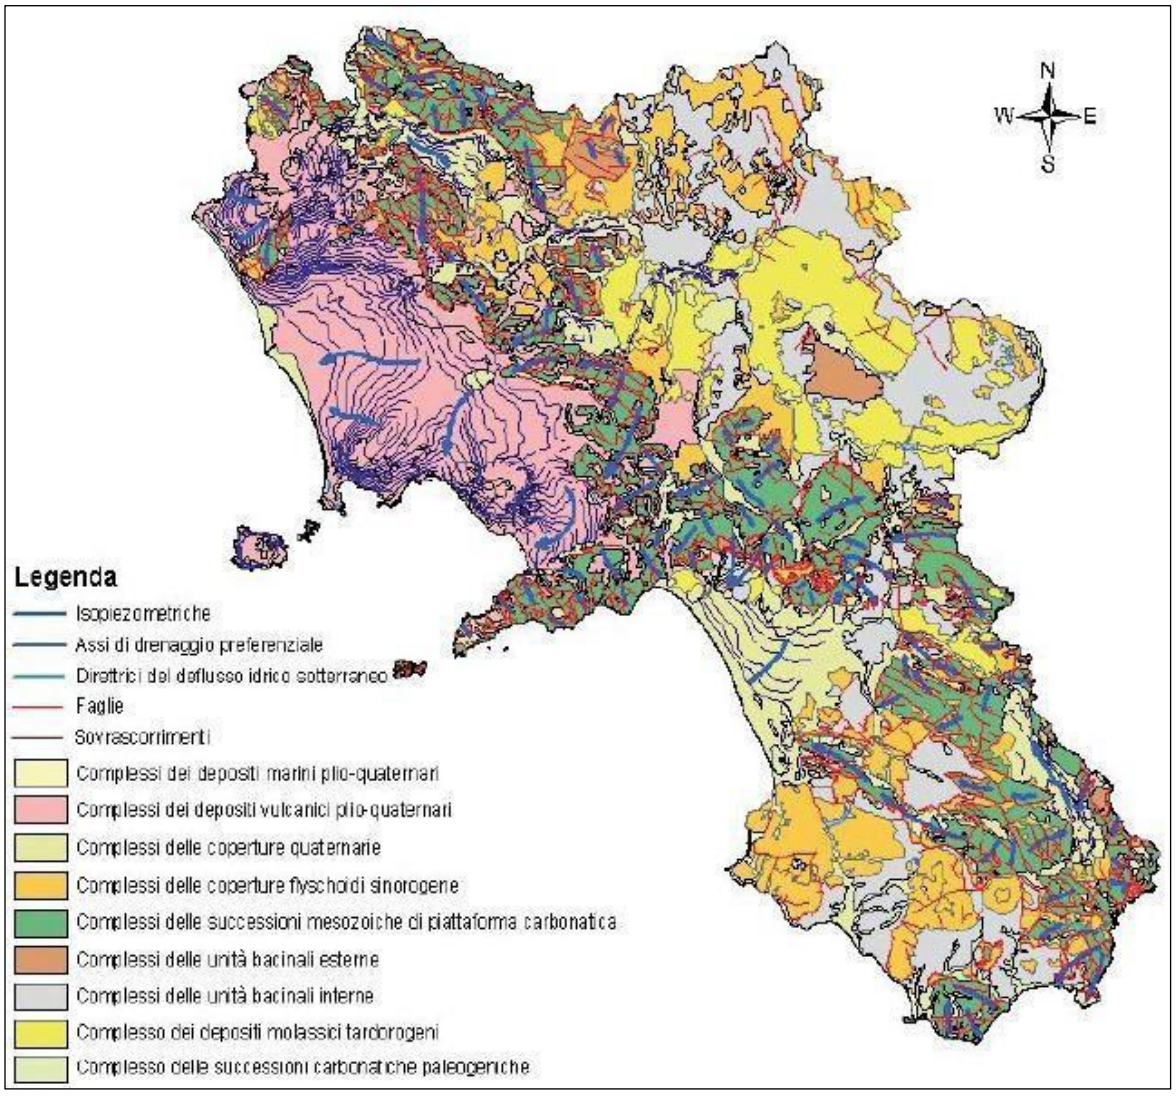
PIANURA PEDEMONTANA con una superficie complessiva di 1.099 km^2, pari all'8% circa del territorio regionale, comprende le aree della pianura pedemontana, morfologicamente rilevate rispetto al livello di base della pianura alluvionale. I suoli evoluti da depositi da caduta di ceneri e pomici e da flusso piroclastico, sono localmente rielaborati e risedimentati dalle acque di ruscellamento superficiale. Il loro profilo moderatamente differenziato, con proprietà andiche moderatamente o debolmente espresse. In corrispondenza delle superfici stabili da più tempo (posteriori a 35.000 anni dal presente), si rinvengono suoli andici su depositi di ceneri ricoprenti in profondità il tufo grigiocampano. Nelle aree non interessate da urbanizzazione (il 21% di quella dell'intera superficie regionale), l'uso dominante è agricolo, con colture legnose permanenti, orti e seminativi erborati, colture industriali, colture ortive da pieno campo ed in coltura protetta, incolti.

TERRAZZI ALLUVIONALI con una superficie complessiva di 629 km^2, pari al 5% del territorio regionale, comprende le aree dei terrazzi e delle conoidi alluvionali, morfologicamente rilevate rispetto al livello di base della pianura alluvionale (tra 230 e 950 m s.l.m.). I suoli evoluti da sedimenti alluvionali antichi, sono a profilo molto differenziato. Talvolta sono presenti anche suoli andici su depositi di ceneri ricoprenti in profondità il tufo grigio campano e depositi alluvionali antichi o travertini. Sulle superfici erose insistono suoli subordinati a profilo debolmente differenziato, scheletrici. Nelle aree non urbanizzate l'uso del suolo è agricolo, con colture legnose

fonte: http://burc.regione.campania.it

specializzate (frutteti, vigneti, noccioleti), colture foraggere, colture cerealicole e industriali di pieno campo, colture ortive in pieno campo ed in coltura protetta, incolti.

PIANURA ALLUVIONALE con una superficie complessiva di 1.397 km^2, pari al 10% circa del territorio regionale, comprende le aree della pianura alluvionale (fino a 490 m s.l.m.). I suoli, evoluti da sedimenti fluviali attuali e recenti e da depositi antropici di colmata, sono localmente intercalati a depositi di ceneri, pomici e lapilli da caduta o da flusso piroclastico. Sia nelle aree morfologicamente rilevate che depresse, sono presenti suoli ad idromorfia profonda, a profilo debolmente o moderatamente differenziato. L'uso del suolo (nelle aree non urbanizzate) è agricolo, con seminativi, colture foraggiere, colture ortive e industriali di pieno campo. Nelle pianure alluvionali prossime ai centri vulcanici ed alle grandi conurbazioni prevalgono le colture ortive intensive di pieno campo ed in coltura protetta. Locale diffusione di colture legnose permanenti con vigneti, noccioleti, agrumeti. Nel complesso, il sistema Pianura Alluvionale comprende il 33% delle aree urbane compatte ed il 14% delle aree urbane discontinue della Regione Campania.



PIANURA COSTIERA con una superficie complessiva di 221 km^2, pari all'1.6% del territorio regionale, comprende le aree planiziari costiere. I suoli derivano da sedimenti eolici di duna, sedimenti fini di laguna, sedimenti organici e depositi antropici di colmata. Le loro proprietà chimico-fisiche sono influenzate dalla tessitura sabbiosa o dall'idromorfia superficiale legata alla presenza di falde pocoprofonde ad elevata salinità. Presenti anche suoli su depositi di duna antica e di terrazzi marini, a profilo moderatamente o molto differenziato. L'uso attuale è ricreativo ed agricolo, con pinete da rimboschimento, macchia mediterranea a diversa fisionomia, vegetazione psammofila, colture ortive di pieno campo ed in coltura protetta, incolti.

Geomorfologia ed idrogeologia

La Campania è caratterizzata da tre principali elementi geomorfologici che influenzano, in modo determinante l'idrografia superficiale nonché la circolazione idrica sotterranea:

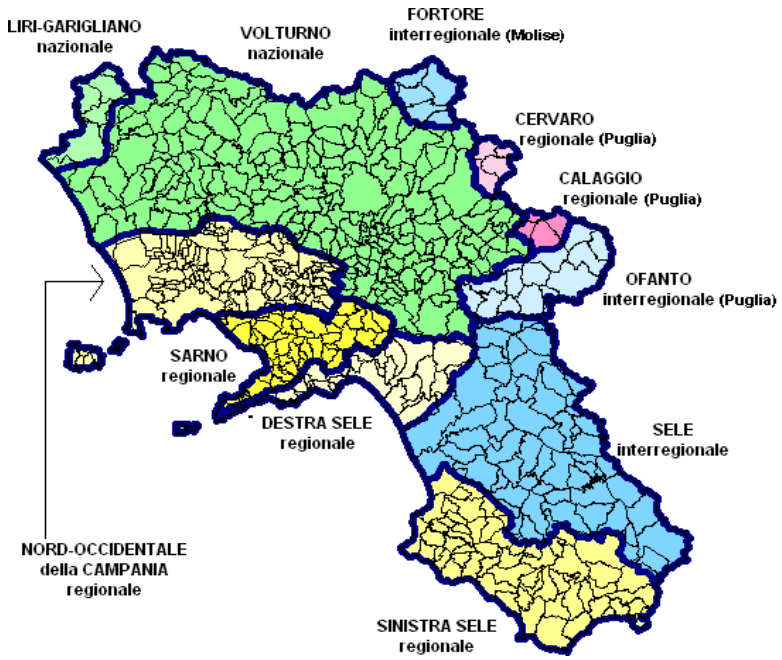
- Una dorsale calcareo-dolomitica, quale elemento orografico principale (dalle aree collinari sannite-irpine a quelle cilentane) per oltre il 40% del territorio.
- Un settore tirrenico pianeggiante (Piana del Garigliano p.p., Piana Campana e Piana del Sele) per il 30% del territorio.
- Vari e diffusi edifici vulcanici (Somma-Vesuvio, Roccamonfina e dai rilievi piroclastici dei Campi Flegrei continentali e insulari) per circa il 5% della superficie.

fonte: http://burc.regione.campania.it

Assetto idrogeologico della Campania

La variabilità dell'assetto geomorfologico e delle condizioni termometriche e pluviometriche caratterizza l'idrografia della Campania, che presenta pochi ma estesi bacini idrografici di primo ordine, e numerosi corsi d'acqua secondari di modesta entità e di dimensioni ridotte, con presenza di corsi d'acqua effimeri o stagionali anche con deflusso diretto a mare. Il PTA Campania adottato nel 2007 individua nel territorio regionale 60 corsi d'acqua caratterizzati da una superficie di bacino idrografico superiore a 10 km2 (con 12 laghi o invasi), ed una grande varietà di morfotipi fluviali, disposti secondo tre fasce sub parallele in direzione conforme alla dorsale appenninica posta lungo il margine nord orientale della Regione. Nella dorsale calcareo-dolomitica sono presenti conche endoreiche che costituiscono la zona di alimentazione di sorgenti, anche piuttosto significative, ed in cui insistono corsi d'acqua e torrenti perenni con scarse pressioni e impatti antropici. Tale dorsale montuosa è collegata morfologicamente alle piane da una estesa fascia collinare in cui si sviluppano corsi d'acqua a regime torrentizio ma con un pattern superficiale anche piuttosto esteso, che se sviluppato su versanti con depositi argillosi e flyschoidi contribuisce a condizioni di elevata instabilità degli stessi. Pressioni ed impatti antropici sulla risorsa idrica sono qui più significativi per la presenza di insediamenti e agricoltura diffusa. Nelle piane la risorsa idrica superficiale è maggiormente sottoposta a pressioni ed impatti antropici elevati data la presenza di centri urbani, infrastrutture industriali, agricoltura intensiva e zootecnia. Dal punto di vista idrogeologico, gli acquiferi più estesi e produttivi della regione sono costituiti dai complessi delle successioni carbonatiche mesozoiche e paleogeniche, con un'elevata infiltrazione efficace, che contribuisce alla formazione di consistenti falde di base.
Il PTA ha individuato in Campania 49 corpi idrici sotterranei significativi così distinti:

- n. 23 corrispondenti ad acquiferi carbonatici;
- n. 11 corrispondenti ad acquiferi alluvionali di piane interne;
- n. 8 corrispondenti ad acquiferi alluvionali di piane costiere;
- n. 4 corrispondenti ad acquiferi vulcanici;
- n. 3 corrispondenti ad acquiferi flyschoidi.



Le portate in uscita delle sorgenti presenti nei massicci carbonatici appenninici, ammontano a circa 70 m^3/s, mentre i travasi sotterranei verso le piane sono di circa 27 m^3/s (Ducci et al. 2006, Celico et al. in SOGESID 2006). Numerose sono le sorgenti con portate superiori a 1m^3/s come quelle di Serino, che forniscono acqua alla città di Napoli, o di Torano e Maretto utilizzate anche per usi irrigui, o le sorgenti di Cassano Irpino e di Caposele, che alimentano l'acquedotto pugliese oltre ad Irpinia e Salernitano. L'alimentazione di tali sorgenti proviene da corpi idrici sotterranei carbonatici, ad elevata permeabilità per carsismo e fratturazione, che spesso convogliano le acque verso poche sorgenti estremamente cospicue, ubicati lungo tutta la dorsale appenninica. La dorsale calcareo dolomitica degli Appennini pertanto contribuisce con notevoli travasi idrogeologici ad alimentare gli acquiferi delle piane la cui permeabilità per porosità, anche medio-alta in funzione della granulometria dei sedimenti, consente inoltre un loro ricarico per infiltrazione diretta. Sono

fonte: http://burc.regione.campania.it

corpi idrici sotterranei alluvionali ubicati nelle piane interne, in corrispondenza dei principali corsi d'acqua, con livelli ad elevata permeabilità e porosità intercalati a livelli a media permeabilità, con una o più falde idriche sovrapposte (es. acquiferi multi strato della Piana del Sele) o anche con presenza di falde superficiali di esiguo spessore in relazione alla stratigrafia locale. In questi corpi idrici sotterranei le caratteristiche geochimiche sono fortemente condizionate dagli apporti di circuiti profondi anche di natura vulcanica. Infine, gli apparati vulcanici di Roccamonfina, Campi Flegrei e Vesuvio esprimono corpi idrici sotterranei, ad elevata permeabilità per porosità o fratturazione, intercalati a livelli a bassa permeabilità che favoriscono la formazione di piccole sorgenti. Qui il deflusso idrico sotterraneo è condizionato dalla permeabilità e trasmissività dei depositi, ed assume in genere uno sviluppo radiale.
La regione Campania dispone pertanto di considerevoli risorse idriche (piovosità media annua di circa 1.000 mm) pari a un volume complessivo annuo di 13.6 miliardi di metri cubi (Di Meo et al. 2006), di cui un terzo viene rilasciato in atmosfera per evapotraspirazione delle superfici vegetate, un terzo defluisce in superficie ed il restante terzo contribuisce ad alimentare le falde idriche sotterranee (90 % della risorsa idrica idropotabile utilizzata).
A seguito della legge 183/1989 "Norme per il riassetto organizzativo e funzionale della difesa del suolo" e delle successive normative a livello nazionale e regionale, la pianificazione relativa al governo delle acque e della difesa del suolo nella Regione Campania era stata ripartita tra otto Autorità di Bacino, attualmente ricomprese nel Autorità di Bacino Distrettuale dell'Appennino Meridionale (Figura 1.3):

- l'Autorità di Bacino Nazionale dei Fiumi Liri-Garigliano e Volturno;
- l'Autorità di Bacino Interregionale del Fiume Sele;
- l'Autorità di Bacino Interregionale della Puglia, per le porzioni della Regione Campania ricadenti nei bacini del Cervaro, del Calaggio e dell'Ofanto;
- l'Autorità di Bacino Interregionale del Molise, per una porzione del bacino del Fortore ricadente nella Regione Campania;
- l'Autorità di Bacino Regionale Nord-Occidentale;
- l'Autorità di Bacino Regionale del Fiume Sarno;
- l'Autorità di Bacino Regionale del Destra Sele;
- l'Autorità di Bacino Regionale del Sinistra Sele;

fonte: http://burc.regione.campania.it

Corografia degli ambiti territoriali di pertinenza delle otto Autorità di Bacino diinteresse per la Regione Campania ora confluite nel Autorità di Bacino Distrettuale dell'Appennino Meridionale

All'Autorità di Bacino è affidato il compito di redigere il "Piano di Bacino", definito come "lo strumento conoscitivo, normativo e tecnico operativo mediante il quale sono pianificate e programmate le azioni e le norme d'uso, finalizzate alla conservazione, alla difesa e alla valorizzazione del suolo e alla corretta utilizzazione delle acque, sulla base delle caratteristiche fisiche ed ambientali del territorio interessato". Il Piano di Bacino è dunque uno strumento dinamico ed in continuo aggiornamento preposto alla tutela dell'integrità fisica del territorio sotto i suoi molteplici aspetti (geologico, idrologico, idrogeologico, idraulico, ambientale, urbanistico, agrario e paesaggistico).
Atti legislativi successivi (art. 1 comma 1 del D.L.180/98 e art. 1 comma 1 della L.267/98 del 03/08/98) hanno assegnato all'Autorità di Bacino il compito di predisporre il Piano Stralcio per l'Assetto Idrogeologico (PSAI), definito come piano territoriale di settore contenente norme, indirizzi, interventi diretti alla conservazione e gestione del territorio, relativamente agli aspetti idrogeologici.
I contenuti tecnico-amministrativi dei PSAI costituiscono riferimenti importanti per la programmazione degli interventi in ambito forestale, essendo i PSAI inquadrati nell'ambito delle finalità generali dei Piani di Bacino, che a loro volta contengono molti punti di raccordo con tematiche di interesse per il settore forestale, tra cui (cfr. paragrafi a), b), n) e p) di cui all'art. 3 legge n°183/89):

- la sistemazione, la conservazione ed il recupero del suolo nei bacini idrografici, con interventi idrogeologici, idraulici, idraulico-forestali, idraulico-agrari, silvo-pastorali, di

fonte: http://burc.regione.campania.it

forestazione e di bonifica, anche attraverso processi di recupero naturalistico, botanico e faunistico;
- la difesa, la sistemazione e la regolazione dei corsi d'acqua, dei rami terminali dei fiumi e delle loro foci nel mare, nonché delle zone umide;
- la regolamentazione dei territori interessati dagli interventi di cui ai punti precedenti ai fini della loro tutela ambientale, anche mediante la determinazione di criteri per la salvaguardia e la conservazione delle aree demaniali e la costituzione di parchi fluviali e lacuali e di aree protette;
- il riordino del vincolo idrogeologico.

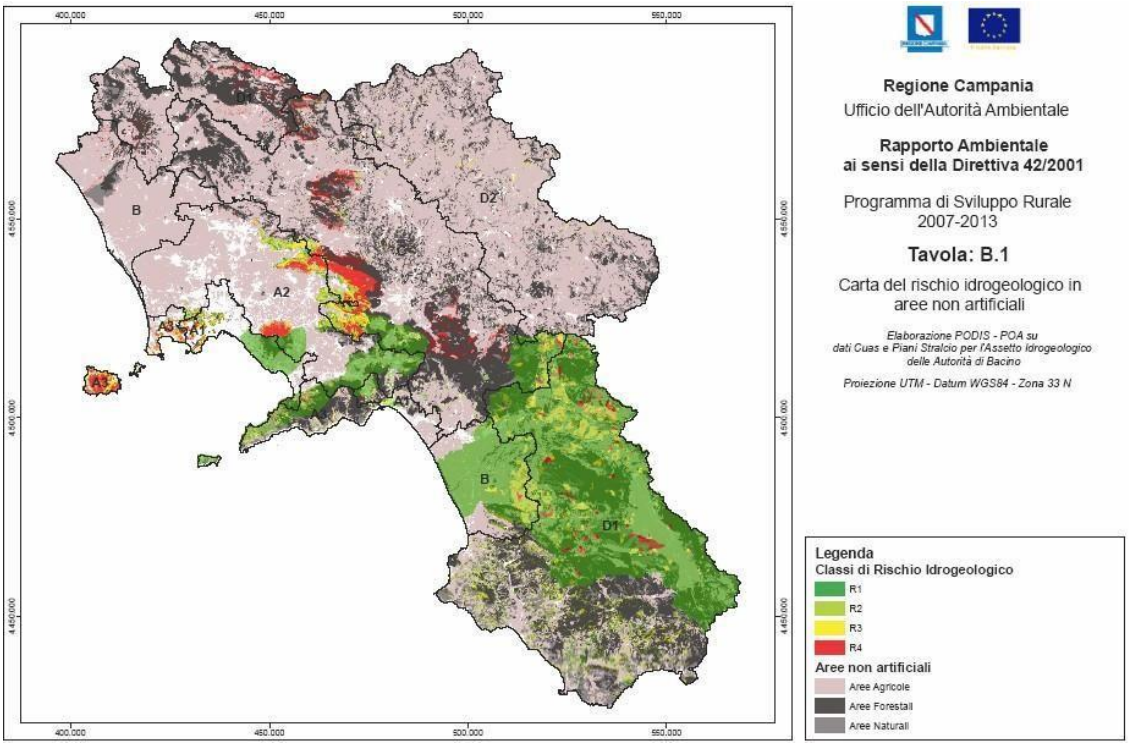
I PSAI rappresentano dunque gli strumenti conoscitivi, normativi e tecnico- operativi attraverso i quali sono dettate le regole ed individuate le azioni necessarie alla conservazione e difesa del suolo, previa individuazione delle aree caratterizzate da pericolosità per eventi di frana e di alluvione e dei relativi livelli di rischiosecondo quanto previsto dal DPCM 29/9/98.
I documenti fondamentali dei PSAI sono le carte di pericolosità e di rischio per frana ed alluvione, con le reletive norme di attuazione. E' opportuno illustrare i contenuti informativi delle carte di pericolosità e rischio dei PSAI ai fini di una loro corretta interpretazione nell'ambito della pianificazione degli interventi utili allo sviluppo sostenibile delle attività silvopastorali.
Il rischio ambientale, secondo una definizione universalmente riconosciuta ("Landslide Hazard Zonation: a review of principles and practise" - UNESCO 1984 che riprende quanto proposto dall'UNDRO, Office of United Nations Disaster Relief Coordinator) è definito come l'entità del danno atteso in una data area e in un certo intervallo di tempo a seguito del verificarsi di un particolare evento calamitoso. Perun dato elemento a rischio, l'entità dei danni attesi è ottenuta dal prodotto dei seguenti fattori: i) la pericolosità, ovvero la probabilità di occorrenza dell'evento calamitoso entro un certo intervallo di tempo ed in una zona tale da influenzare l'elemento a rischio; ii) la vulnerabilità, ovvero il grado di perdita prodotto su uncerto elemento o gruppo di elementi esposti a rischio risultante dal verificarsi dell'evento calamitoso temuto; iii) il valore esposto, ovvero il valore (che può essere espresso in termini monetari o di numero o quantità di unità esposte) della popolazione, delle proprietà e delle attività economiche, inclusi i servizi pubblici, a rischio in una data area. Il prodotto tra vulnerabilità ed il valore esposto rappresenta il danno atteso per effetto dell'evento temuto. Vista la notevole difficoltà che si
riscontra nella valutazione oggettiva di questi fattori, il rischio è generalmente definito in termini di classi, sulla base di assegnate matrici di contingenza tra ulteriori classi di pericolosità e classi di danno.
Il DPCM 29/9/98 prevede in particolare l'individuazione di quattro classi di rischio:

- rischio modesto (R1), con soli danni economici e sociali marginali;
- rischio medio (R2), con possibili danni minori agli edifici e alle infrastrutture senza perdita di funzionalità e senza pericoli per l'incolumità delle persone;
- rischio elevato (R3), con possibili problemi per l'incolumità delle persone, danni funzionali agli edifici e alle infrastrutture con conseguente inagibilità degli stessi e l'interruzione delle attività socio - economiche, danni al patrimonio culturale;
- rischio molto elevato (R4), con possibili perdite di vite umane e lesioni gravi alle persone,

fonte: http://burc.regione.campania.it

danni gravi agli edifici e alle infrastrutture, danni al patrimonio culturale, la distruzione delle attività socio economiche.

Le carte del rischio dei PSAI rappresentano quindi il danno atteso, secondo classi indicative del valore del bene esposto per assegnati livelli di pericolosità degli eventi di frana e di alluvione. Come tali, le carte del rischio sono finalizzate all'individuazione degli interventi prioritari di tipo strutturale e non strutturale per la mitigazione dei danni di natura sociale ed economica in occasione di eventi calamitosi di natura idrogeologica.



I criteri seguiti dalle diverse Autorità di Bacino nella definizione delle suddette classi di rischio non sono omogenei. Differenze sostanziali si registrano in particolare nei seguenti aspetti:

- la tipologia di beni presi esame nella valutazione del danno;
- i criteri di valutazione del valore dei beni esposti e del livello di dannoassociato;
- la modalità di rappresentazione dei diversi livelli di pericolosità, soprattutto in tema di rischio frane.

Questo ha comportato una rappresentazione dei diversi livelli di rischio alquanto disomogenea nel territorio regionale, soprattutto in ambito rurale. La Figura illustra la carta del rischio idrogeologico nelle aree non urbanizzate, allegata al PSR 2007-2013 della Regione Campania.

Il danno conseguente ad un evento di frana o di alluvione in aree rurali è generalmente considerato modesto o nullo e, conseguentemente, anche il relativo livello di rischio è considerato modesto o nullo. Solo l'Autorità di Bacino Nord- Occidentale ha esplicitamente preso in esame il valore dei terreni agro-forestali nella valutazione dei danni di natura socio-economica per eventi di frana in ambito rurale. E' importante inoltre evidenziare che generalmente i PSAI, ai fini della valutazione del danno e quindi della redazione delle carte del rischio, non prendono esplicitamente in considerazione le infrastrutture per le attività silvo-pastorali, quali le strade forestali.

fonte: http://burc.regione.campania.it

Carta del rischio idrogeologico della Regione Campania, ottenuta dalla unione dei risultati del PSAI delle rispettive 8 Autorità di Bacino operanti nel territorio della Regione Campania.

Per quanto sopra illustrato, ai fini della pianificazione degli interventi nei territori silvo-pastorali, occorre prendere in esame innanzitutto le carte di pericolosità. Le carte di pericolosità, unitamente agli studi a corredo del PSAI per la parte concernente la definizione della pericolosità per eventi di frana ed alluvione, costituiscono un utile strumento di analisi delle dinamiche di dissesto in atto o potenziali nel territorio rurale. Le carte di pericolosità rappresentano la probabilità di accadimento dei fenomeni idrogeologici calamitosi indipendentemente dalla tipologia dei beni esposti e, come tali, possono essere adottate per la valutazione della compatibilità idrogeologica degli interventi silvo-pastorali e per la pianificazionedelle azioni di salvaguardia delle attività socio-economiche in ambito silvopastorale. Le carte del rischio sono invece utili alla identificazione di beni esposti ad eventi calamitosi che possono avere origine in ambiti territoriali di competenza delle attività silvo-pastorali forestale e per la valutazione di eventuali effetti degli interventi silvo- pastorali sul grado di pericolosità cui sono esposti questi beni a rischio. Quanto sopra esposto è ben evidenziato nelle norme di attuazione a corredo dei PSAI, che, attraverso specifiche prescrizioni, tendono a disciplinare le attività in ambito silvopastorale ai fini di una loro compatibilità con l'assetto idrogeologico a scala di bacino, coerentemente con lo spirito generale della legge 183/89.

fonte: http://burc.regione.campania.it

Di seguito si illustrano nelle linee generali i contenuti delle carte di pericolosità dei PSAI.

Pericolosità per eventi di alluvione

La pericolosità da alluvione è definita attraverso una rappresentazione delle massime altezze d'acqua e/o velocità di deflusso nelle aree inondabili per eventi di piena corrispondenti ad assegnati periodi di ritorno. Il periodo di ritorno di un evento di piena esprime il numero medio di anni intercorrenti fra due eventi di piena di pari osuperiore intensità.

La pericolosità da alluvione è generalmente rappresentata attraverso la delimitazione delle cosiddette "fasce fluviali". I criteri adottati dalle diverse Autorità di Bacino nella definizione delle fasce sono molto simili. A titolo di esempio si riporta la definizione delle fasce fluviali adottata dall'Autorità di Bacino SinistraSele.

Alveo di piena ordinaria. Si definisce alveo di piena ordinaria la parte della regione fluviale interessata dal deflusso idrico in condizioni di piena ordinaria, corrispondente al periodo di ritorno di 2-5 anni. Nel caso di corsi d'acqua dipianura, l'alveo di piena ordinaria coincide con la savanella, cioè con la fascia fluviale compresa tra le sponde dell'alveo incassato. Nel caso di alvei alluvionati, l'alveo di piena ordinaria coincide con il greto attivo, interessato (effettivamente nella fase attuale oppure storicamente) dai canali effimeri in cui defluisce la piena ordinaria.

Alveo di piena standard (Fascia A – Pericolosità Molto Elevata). La Fascia A viene definita come l'alveo di piena che assicura il libero deflusso della pienastandard, di norma assunta a base del dimensionamento delle opere di difesa. Nel Piano deve assumere, come piena standard, quella corrispondente ad un periodo di ritorno pari a 100 anni, calcolata portando in debito conto l'influenza delle varie opere esistenti nel bacino a monte e lungo le varie aste, e le eventuali esondazioni neitratti a monte. La fascia è definita dall'area nella quale, per la piena standard, l'altezza idrica è maggiore o uguale a 1 m e/o la velocità media maggiore o uguale a 1 m/s;

Fascia di esondazione (Fascia B). La Fascia B deve comprendere le aree inondabili dalla piena standard, eventualmente contenenti al loro interno sottofasce inondabili con periodo di ritorno T<100 anni. In particolare devono essere considerate tre sottofasce:

- la sottofascia B1 (Pericolosità Elevata) è quella compresa tra l'alveo di pienae la linea più esterna tra la congiungente l'altezza idrica h=30 cm delle piene con periodo di ritorno T=30 anni e altezza idrica h=90 cm delle piene con periodo di ritorno T=100 anni;
- la sottofascia B2 (Pericolosità Media) è quella compresa fra il limite della Fascia B1 e quello dell'altezza idrica h=30 cm delle piene con periodo di ritorno T=100 anni;
- la sottofascia B3 (Pericolosità Moderata) è quella compresa fra il limite della Fascia B2 e quello delle piene con periodo di ritorno T=100 anni.

Fascia di inondazione per piena d'intensità eccezionale (Fascia C). E' quella interessata dalla piena relativa a T = 300 anni o dalla piena storica nettamente superiore alla piena di progetto.

Nel caso di torrenti montani dove la definizione delle fasce fluviali è difficilmente valutabile o non rilevante per mancanza di significative aree di espansione limitrofe al corso d'acqua, la pericolosità degli eventi di piena per assegnato periodo di ritorno è definita da altri parametri

fonte: http://burc.regione.campania.it

morfologici o idraulici, quali il rapporto tra la portata massima transitabile attraverso l'alveo torrentizio ela portata corrispondente al periodo di ritorno di riferimento.
La pericolosità idraulica in alcuni ambiti territoriali, quali i Campi Flegrei, Vesuvio, Monti Lattari, Monti Sarno, Monti di Lauro, Monti di Avella e Monti Picentini, è definita anche in considerazione della possibilità che gli eventi di piena nei bacini collinari e montani possano essere associati a fenomeni di intenso trasportodi massa in alveo, anche nella forma di colate di fango.
Gli studi idrologici ed idraulici condotti nell'ambito dei PSAI si limitano generalmente alla valutazione della pericolosità idraulica solo lungo la reteidrografica principale, distinguibile ad una scala topografica non superiore a 1:5.000. Pertanto, all'atto della progettazione degli interventi di sistemazione idraulico- forestale o di infrastrutture permanenti potenzialmente interferenti con il deflusso superficiale in ambito collinare e montano, risulta spesso necessario approfondire gli studi idraulici ed idrologici, applicando allo scopo le prescrizioni tecniche contenute nelle norme di attuazione del PSAI dell'Autorità di Bacino territorialmente competente. Rispetto a quanto generalmente previsto dalle norme PSAI, gli studi a corredo degli interventi in ambito forestale dovrebbero porre particolare attenzione all'analisi dei fenomeni erosivi nei versanti e negli alvei, di maggior interesse per la tutela della produttività dei territori silvo-pastorali.

Pericolosità per eventi di frana
La definizione della pericolosità per eventi di frana non è definita su basi strettamente probabilistiche, questo a causa di difficoltà oggettive nella valutazione della frequenza degli eventi di frana avvenuti storicamente nel territorio. La pericolosità per eventi di frana è piuttosto definita in termini di classi di pericolosità relativa, in funzione dello stato di attività dei movimenti franosi, dei fattori (generalmente di natura morfologica) predisponenti alla genesi di movimenti franosi, e dalla intensità dei movimenti franosi. L'intensità dei movimenti franosi è espressain termini della massima velocità di movimento attesa per le masse interessate dal movimento franoso.
I criteri adottati dalle diverse Autorità di Bacino nella definizione della pericolosità per eventi di frana sono spesso tra loro molto diversi. I motivi di questa
diversità di analisi della pericolosità derivano sia dalla assenza di una metodologia di stima della pericolosità consolidata ed universalmente riconosciuta, sia per l'estrema variabilità della tipologia e della genesi dei movimenti franosi nella regione.
A titolo di esempio, si illustrano i livelli di pericolosità adottati dalla Autorità di Bacino Sinistra Sele:

- pericolosità moderata per frane di bassa (velocità inferiore a 100 m/anno) e media intensità (velocità inferiore a 5 cm/secondo) e stato inattivo o quiescente;
- pericolosità media per frane da bassa (velocità inferiore a 100 m/anno) ad alta intensità (velocità superiore a 5 cm/secondo) e stato rispettivamente da attivo ad inattivo;
- pericolosità elevata per frane da media (velocità inferiore a 5 cm/secondo) ad alta intensità (velocità superiore a 5 cm/secondo) e stato rispettivamente da attivo a quiescente;
- pericolosità molto elevata per frane di alta intensità (velocità superiore a 5 cm/secondo) e stato attivo.

fonte: http://burc.regione.campania.it

Le tipologie di movimenti franosi di prioritario interesse per il settore forestale sono i movimenti franosi superficiali, il cui innesco è determinato da eventi pluviometrici estremi ovvero da una cattiva condizione di drenaggio degli orizzonti più superficiali dei suoli. In questi ambiti territoriali, infatti, una corretta pianificazione delle attività silvo-pastorali, delle relative infrastrutture e degli interventi di sistemazione idraulico-forestale può fornire un contributo fondamentale alla tutela del territorio.
Nell'ambito dei movimenti franosi superficiali, le colate rapide di fango sono i fenomeni di dissesto idrogeologico più pericolosi in assoluto. Si tratta di fenomeni estremamente veloci, che si innescano in occasione di eventi pluviometrici particolarmente intensi ed in grado di distruggere ampie porzioni di territorio in brevetempo. Le colate rapide di fango si verificano sui rilievi carbonatici dell'Appennino Campano, caratterizzati da morfologia complessa e coperture di suoli di originepiroclastica. La porzione del territorio regionale a rischio di colate rapide di fango è molto estesa, interessando ben 212 Comuni, in una delle aree più densamente abitate.

Il vincolo idrogeologico
Come sopra accennato, la legge quadro 183/1989 ha assegnato alla pianificazione di bacino il necessario riordino della vincolistica idrogeologica, introdotta originariamente dal Regio Decreto n. 3267/1923, la cosiddetta "Legge Serpieri". In Regione Campania, a seguito dei trasferimenti delle competenze dall'Amministrazione dello Stato alle Regioni, il vincolo idrogeologico è stato disciplinato dalla L.R. 28 febbraio 1987 n. 23, L.R. 7 maggio 1996 n. 11 e L.R. 24 luglio 2006 n. 14. La normativa regionale prevede che nei boschi e nei terreni
sottoposti a vincolo idrogeologico, i movimenti di terra nonché la soppressione di piante, arbusti e cespugli, finalizzati ad una diversa destinazione d'uso dei medesimi, sono soggetti ad autorizzazione ai sensi dell'art. 7 R.D. 3 dicembre 1923 n. 3267" (cfr. art. 23 L.R. 11/1996). L'autorizzazione è rilasciata dal Presidente della Comunità Montana o dal Presidente della Provincia, previo parere dell'Area Generale di Coordinamento Sviluppo Attività Settore Primario attraverso il competente Settore Tecnico Amministrativo Provinciale delle Foreste.
L'articolo 56 del decreto legislativo n. 152/2006, nella riformulazione della legge n. 183/89, ha confermato il compito e l'obiettivo del riordino del vincolo idrogeologico, nell'ambito delle attività di pianificazione, di programmazione e di attuazione affidate ai soggetti istituzionalmente impegnati nella difesa del suolo. Il riordino del vincolo idrogeologico dovrebbe avvenire attraverso un effettivocoordinamento tra i vincoli introdotti dagli attuali Piani Stralcio di Assetto Idrogeologico delle Autorità di Bacino ed il preesistente vincolo idrogeologico, in modo da definire meglio gli ambiti di rispettiva competenza ed evitare inutili sovrapposizioni, nell'ottica di una efficace semplificazione delle procedure.

Aria

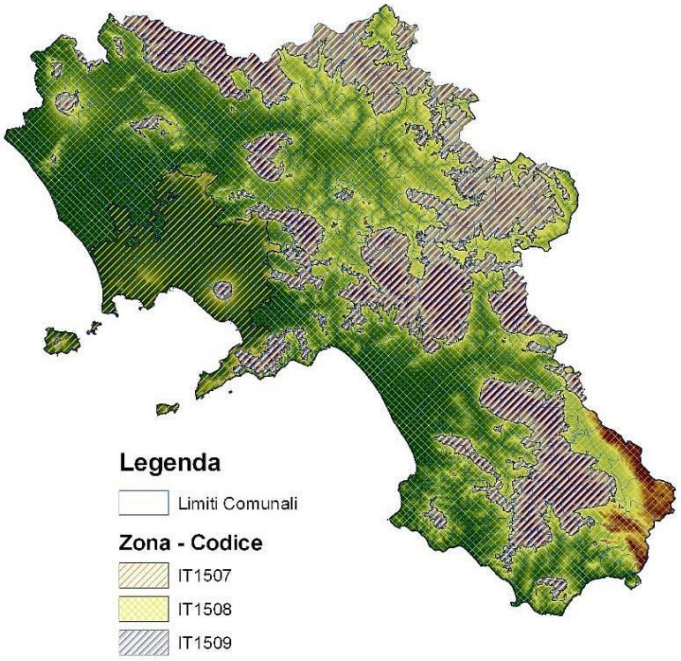
Con il termine “aria ambiente” o outdoor, si intende l’aria esterna presente nello strato inferiore dell’atmosfera terrestre, denominato troposfera e più precisamente ci si riferisce all’aria presente nella parte più bassa della troposfera, a diretto contatto con la superficie terrestre. E’ esclusa pertanto da questa definizione l’aria interna presente nei luoghi di lavoro e negli ambienti domestici e pubblici – aria indoor. L’inquinamento atmosferico è inteso come «ogni modificazione della normale composizione o stato fisico dell’aria atmosferica, dovuta alla presenza nella stessa di una o più sostanze in quantità e con caratteristiche tali da alterare le normali condizioni ambientali e di salubrità dell’aria; da costituire pericolo ovvero pregiudizio diretto o indiretto per la salute dell’uomo; da compromettere le attività ricreative e gli altri usi legittimi dell’ambiente; alterare le risorse biologiche e gli ecosistemi ed i beni materiali pubblici e privati». L’inquinamento atmosferico è un fenomeno estremamente complesso e determinato, oltre che dal carico emissivo conseguente all’antropizzazione del territorio che ne è la causa prima, anche dalle interazioni chimico-fisiche che avvengono tra sostanze in atmosfera, e dalle condizioni meteorologiche che hanno un ruolo fondamentale nella dinamica degli inquinanti atmosferici. L’inquinamento dell'aria può essere di origine naturale (ad esempio dovuto alle eruzioni vulcaniche o agli incendi boschivi), oppure provocato dalle attività umane (origine antropica). Gli inquinanti immessi in atmosfera si possono, a loro volta, classificare in:

- macroinquinanti - sostanze le cui concentrazioni nell’atmosfera sono dell’ordine dei milligrammi per metro cubo (mg/m3) o dei microgrammi per metro cubo (μg/m3) come, ad esempio, il monossido di carbonio (CO), l’anidride carbonica (CO2), gli ossidi di azoto (NO e NO2), l’anidride solforosa (SO2), l’ozono (O3) e il particolato;
- microinquinanti - sostanze le cui concentrazioni in atmosfera sono dell'ordine dei nanogrammi per metro cubo (ng/m3), come gli idrocarburi policiclici aromatici (IPA) e le diossine.

I bassi strati dell’atmosfera (troposfera) giocano un ruolo di primaria importanza relativamente al trasporto, alla dispersione e alla ricaduta al suolo degli inquinanti . Nella troposfera la temperatura diminuisce con la quota (circa 6,5°C ogni chilometro); i rimescolamenti verticali sono facilitati in quanto l’aria calda, e dunque più leggera, si trova sotto l’aria più fredda (più pesante). Ma all’interno della troposfera si osservano spesso delle singolarità che si estendono su una zona verticale di qualche centinaio di metri, chiamate strati di “inversione termica”, nelle quali la temperatura aumenta con la quota. In tal caso l’aria densa e fredda si trova sotto quella più calda e il rimescolamento verticale spontaneo non è più possibile. Questi strati, che si possono trovare sia al livello del suolo che in quota, costituiscono, quindi, un “coperchio” per le sostanze inquinanti che vengono continuamente emesse al livello del suolo, per cui si viene a creare una sacca di crescente concentrazione. I più gravi episodi di inquinamento si verificano in condizioni di inversione termica. In questi casi, infatti, gli inquinanti emessi al di sotto della quota di inversione non riescono a innalzarsi poiché, risalendo, si trovano a essere comunque più freddi e dunque più pesanti dell’aria circostante.
Sulla base degli ultimi dati disponibili della relazione tecnica di aggiornamento del Piano regionale di risanamento e mantenimento della qualità dell’aria, il territorio campano può essere così suddiviso:

fonte: http://burc.regione.campania.it

- Agglomerato Napoli-Caserta (IT1507);
- Zona costiera-collinare (IT1508);
- Zona montuosa (IT1509).



L'Agglomerato NA-CE ***IT1507*** è caratterizzato dalla presenza di un esteso territorio pianeggiante delimitato ai margini dai rilievi della catena appenninica che ostacolano il ricambio delle masse d'aria quando si verificato condizioni di alta pressione e bassa quota del PBL (Platenary Boundary Layer). Tale agglomerato delimita un'area urbana principale ed un insieme di aree urbane minori che dipendono da quella principale sul piano demografico e dei servizi, con una popolazione pari a 3.491.678. Infatti gravitano sul porto di Napoli i principali flussi di merci nell'area urbana distribuite attraverso un sistema integrato di infrastrutturazione stradale. In tale ambito territoriale si registrano la maggiore densità infrastrutturale del territorio regionale ed i maggiori flussi di traffico di persone e merci, con i due principali interporti di Maddaloni-Marcianise (CE) e Nola (NA). Nel medesimo ambito territoriale è presente la maggiore concentrazione di fonti emissive connesse ad impianti di produzione energetica ed industriale. Tali fattori determinano di fatto l'omogeneità di tale ambito territoriale caratterizzato da carichi emissivi sensibilmente superiori al resto del territorio regionale. Invece, le altre due zone sono state definite al disotto e al disopra dei 600 metri s.l.m., suddividendo la zona costiera-collinare dalla zona montuosa, caratterizzate dalle seguenti specificità:

- La Zona ***IT1508*** "costiero collinare" è posta al di sotto dei 600 m. s.l.m, si estende su 8549 kmq con 2.043.044 abitanti e comprende anche le aree urbane con popolazione inferiore a 250.000 abitanti. Questa zona si presenta omogenea perché è caratterizzata da una struttura policentrica con più centri urbani interconnessi fra loro da un sistema di strade statali e autostrade, che rappresenta una significativa sorgente di emissioni, con effetti sulla qualità dell'aria non riconducibili a singoli territori comunali. Inoltre l'assetto orografico, con assi vallivi che collegano i centri urbani, renderebbe poco significativa la suddivisione della zona costiero collinare in più zone distinte. La densità di popolazione di circa 240 ab/kmq, di poco superiore ai 200 ab/kmq (valore medio nazionale), è quella tipica dei territori italiani con insediamenti diffusi e privi di grandi aree urbane.

- La zona ***IT1509*** "montuosa", estesa su un quarto del territorio regionale (3.699 kmq su 13.595 kmq) con circa 160.000 abitanti, è posta al di sopra dei 600 m. s.l.m e comprende porzioni di territorio contraddistinte da densità di popolazione mediamente inferiore a 50 ab/Kmq e livello di infrastrutturazione molto contenuto, con assenza di emissioni inquinanti significative. Dal punto di vista climatico, in questa zona i venti sono mediamente più intensi rispetto alle valli ubicate a quote inferiori, mentre la radiazione solare non presenta nell'insieme differenze significative rispetto alle altre zone e le temperature sono mediamente inferiori e le precipitazioni più elevate, con valori che localmente superano i 2000 mm annui. In questa zona sono presenti piccoli comuni con popolazione inferiore a 10.000 abitanti, e generalmente inferiore a 4.000, con centro abitato principale ubicato a quote superiori ai 600 m s.l.m.. Le uniche eccezioni sono Ariano Irpino a 788 m s.l.m., con circa 23.000 abitanti, che comunque si trova sulla sommità di un rilievo e pertanto non risente delle condizioni climatiche

fonte: http://burc.regione.campania.it

tipiche della zona costiera-collinare, e Sala Consilina a 614 m s.l.m., con circa 13.000 abitanti.

Le Zone definite nel Piano regionale di risanamento e mantenimento della qualità dell'aria

Una volta che l'intero territorio regionale è stato suddiviso in zone e agglomerati, è stata realizzata un'ulteriore classificazione ai fini della valutazione della qualità dell'aria ambiente, ai sensi dell'Allegato II (art. 4, comma 1, art. 6 comma 1 e art. 19 comma 3) del D. Lgs. 155/10 mediante l'utilizzo delle soglie di valutazione superiore (SVS) e inferiore (SVI) per biossido di zolfo, biossido di azoto, ossidi di azoto, particolato (PM10 e PM2,5), piombo, benzene, monossido di carbonio, arsenico, cadmio, nichel e benzo(a) pirene, valutate in base alle concentrazioni degli inquinanti nell'aria ambiente nei cinque anni civili precedenti con dati estrapolati dai questionari CE (2006-2010).
Per la zona costiera-collinare (IT1508), nella quale ricadono le zone precedentemente definite (IT1502, IT1503, IT1504 e parzialmente IT1505 e IT1506), il superamento delle SV é determinato quando almeno una delle zone supera tale valore (vedi anche allegato 2). Per la zona montuosa (IT1509), non avendo mai elaborato alcun dato proveniente dal monitoraggio ai sensi del DM 60/02, si é stabilito di classificare tale zona per gli inquinanti di tipo secondario (PM, O3, SO2 ed NOx). Infine, per ciò che concerne i metalli pesanti e gli IPA sono state effettuate campagne di monitoraggio spot nei comuni di Afragola, Amalfi, Battipaglia, Cava dei Tirreni, Giffoni Sei Casali, Salerno e Sant'Egidio del Monte Albino, svolto negli anni che vanno dal 2005 al 2011 tramite campionatore installato nel mezzo mobile gestito dal Dipartimento Provinciale ARPAC di Salerno. Da tali analisi si rileva come sia stata superata la soglia SVS; pertanto si stima di classificare l'agglomerato NA-CE e la zona costiera-collinare come > SVS relativamente a metalli pesanti e IPA.
Il monitoraggio della qualità dell'aria in Campania è attualmente svolto dall'ARPAC mediante un sistema composto da una rete fissa, che consta di 20 centraline localizzate nei capoluoghi di Provincia (Tabella 38), e da una rete mobile. Le centraline, in attività dal 1994, misurano ad

fonte: http://burc.regione.campania.it

intervalli di un'ora, la concentrazione in atmosfera degli inquinanti. Le tipologie di centraline indicate rispondono alla classificazione in uso prima della adozione delle nuove direttive sulla qualità dell'aria. Le centraline di tipo A sono localizzate in aree verdi, lontano da fonti di inquinamento, e misurano tutti gli inquinanti primari e secondari, allo scopo di fornire una misura di fondo da utilizzare come riferimento. Le centraline di tipo B sono localizzate in zone ad elevata densità abitativa, e misurano la concentrazione degli inquinanti (SO_2, NO_2, polveri) emessi (es. dal riscaldamento domestico). Le centraline di tipo C vengono sistemate in zone ad elevato traffico, per la misura degli inquinanti emessi direttamente dal traffico veicolare (NO_2, CO, polveri). Le centraline di tipo D sono situate in periferia e sono finalizzate alla misura dell'inquinamento fotochimico o secondario (ozono, NO_2). Le centraline sono attrezzate anche per la misurazione di parametri meteoclimatici.
Dal marzo 2001 alla rete di monitoraggio ARPAC si è affiancata una rete (6 centraline) gestita dalla provincia di Napoli e localizzata nei comuni di Afragola, Castellamare di Stabia, Frattamaggiore, Giugliano, San Giorgio a Cremano, Torre del Greco, Portici. Vi sono anche diversi punti di campionamento del benzene, tutti ubicati nella città di Napoli, e precisamente a: Fuorigrotta (Via Cinthia; Via G. Cesare; Largo Lala); Centro (Riviera di Chiaia; Piazza Augusteo; Piazza Carità; Piazza S. Domenico Maggiore; Via Depretis; Ente Ferrovie); Vomero (Scuola Vanvitelli; Via Cilea; Via P. Castellino). L'Indice di Qualità dell'Aria IQA elaborato dall'ARPAC è un parametro adimensionale che consente la comunicazione sintetica del livello qualitativo di inquinamento atmosferico rilevato. L'elaborazione di tale parametro viene, di solito, effettuata su base giornaliera consentendo una rappresentazione di immediata comprensione dello stato qualitativo dell'aria riferito, generalmente, al giorno precedente. Per la costruzione dell'indice sono stati considerati gli inquinanti misurati mediante la Rete Regionale di Monitoraggio della Qualità dell'Aria per i quali risultano frequenti superamenti dei limiti imposti dal D.Lgs. 155/2010. Tali parametri, risultando rappresentativi delle maggiori criticità, consentono di correlare lo stato complessivo della qualità dell'aria al conseguente impatto generale sulla salute pubblica. I parametri che sono stati scelti per costruire l'IQA sono PM_{10}, NO_2 e O_3.

Acqua

La Campania è caratterizzata da un territorio ricco di acque superficiali e sotterranee di qualità, la cui captazione e distribuzione avviene anche attraverso importati scambi di acque potabili con le regioni limitrofe che si realizzano mediante infrastrutture di rilevanza strategica realizzate per la maggior parte, nel secolo scorso, dalla ex Cassa per il Mezzogiorno. L'entità ed il pregio delle risorse idriche della Campania rivestono notevole importanza nel bilancio idrico dell'Appennino meridionale; circa 230 milioni di metri cubi d'acqua all'anno sono trasferiti prevalentemente in Puglia (217 Mmc) e parte in Basilicata (16 Mmc). A compensazione di tale ingente quantitativo d'acqua in uscita dal sistema idrologico e idrogeologico del territorio campano vengono trasferiti in Campania quantitativi altrettanto ingenti di acque da altre regioni limitrofe per circa 200 milioni di metri cubi all'anno (106 Mmc dal Molise e 95 Mmc dal Lazio). Per l'uso irriguo in Campania vengono utilizzati in media 350 milioni di metri cubi d'acqua all'anno, corrispondenti al 3% circa del totale nazionale (stimato in oltre 10 miliardi di metri cubi) che collocano la regione al 7° posto in Italia in termini di volumi irrigui utilizzati. Riguardo, invece, alla tipologia di fonti di approvvigionamento irriguo la Campania è una delle

fonte: http://burc.regione.campania.it

prime regioni, assieme a Puglia, Lazio e Toscana, per l'uso in agricoltura di acque sotterranee captate in proprio dalle aziende (55% del totale regionale) rispetto a quelle fornite da consorzi ed enti irrigui (34% del totale). Nonostante sia una terra ricca di acqua, la Campania presenta ancora problemi di disponibilità della risorsa idrica associati, talora, al deterioramento della sua qualità. I dati del monitoraggio ARPAC e la classificazione dello stato chimico ed ecologico riportati nel Piano di Gestione delle Acque 2015-2021 del Distretto Idrografico dell'Appennino Meridionale evidenziano, ad esempio, che solo il 35% dei corpi idrici fluviali della Campania sono classificati con lo stato ecologico almeno "*buono*", il 29% sono classificati in stato ecologico "*sufficiente*", mentre risultano criticità evidenti per il 29% dei casi. Migliore è la situazione riguardo allo stato chimico, in quanto l'87% dei corpi idrici fluviali sono classificati con lo stato chimico "*buono*", mentre solo il 6% risultano in stato chimico "*non buono*". Altrettanto avviene per i corpi idrici sotterranei dei quali l'88% presenta uno stato chimico "*buono*". Alcuni squilibri sono legati a deficit infrastrutturali dovuti anche ai mutamenti delle esigenze territoriali oltre che all'obsolescenza di molte opere che necessitano di urgenti interventi di ammodernamento. Per quanto concerne il trattamento delle acque reflue urbane, ad esempio, la Campania è interessata da due procedure di infrazione comunitaria per un elevato numero di agglomerati depurativi urbani ritenuti non conformi alla direttiva comunitaria 91/271/CE a causa del mancato o insufficiente collettamento ed inadeguato trattamento dei reflui. Per far fronte ad alcune delle criticità sopra richiamate e nelle more della completa definizione del percorso di approvazione del proprio Piano di Tutela delle Acque, negli ultimi anni, la Regione Campania ha intrapreso, anche attraverso l'emanazione di atti e regolamenti, diverse azioni in merito alla tutela e gestione della risorsa idrica, in attuazione del D.lgs. 152/2006 e in linea con gli obiettivi stabiliti dalla Direttiva Quadro sulle Acque. Per la tutela quali-quantitativa della risorsa idrica sono state finanziate e avviate le attività di monitoraggio, da parte dell'A.R.P.A. Campania, delle acque marino costiere e di transizione attraverso le nuove metodologie e criteri stabiliti dal D.M. 260/2010 rendendo in tal modo possibile il completamento del monitoraggio relativo al triennio 2013 – 2015. Il riesame delle Zone vulnerabili ai nitrati di origine agricola della Campania è stato effettuato sulla base dei dati di monitoraggio ARPAC per l'ultimo quadriennio disponibile (2012-2015) rivedendo la prima zonazione risalente al 2003. Ai fini del controllo dell'uso della risorsa sono state regolamentate le procedure relative alle autorizzazioni, concessioni e licenze per la ricerca e l'utilizzo di acque pubbliche sotterranee e superficiali, mediante piccole derivazioni per utenze minori e attingimenti temporanei, nonché i depositi per derivazioni di acque sotterranee ad uso domestico. Analogamente, in merito alla disciplina degli scarichi, sono stati stabiliti i criteri di assimilazione alle acque reflue domestiche ai sensi dell'articolo 101, comma 7, del D.lgs. 152/2006 ed approvata una direttiva tecnica regionale recante gli indirizzi sul periodo di avvio, arresto e per l'eventualità di guasti degli impianti di depurazione, ai sensi dell'articolo 101, comma 1 del D.lgs. 152/2006. Riguardo agli usi irrigui delle acque, la regione Campania ha recepito con un proprio regolamento le "*Linee guida per la regolamentazione da parte delle Regioni delle modalità di quantificazione dei volumi idrici ad uso irriguo*" (Decreto MIPAAF del 31 luglio 2015). Inoltre, al fine di incentivare adeguatamente gli utenti a usare le risorse irrigue in modo efficiente, sono stati stabiliti i criteri per la determinazione su base volumetrica dei canoni di concessione ed è stato introdotto l'uso di tariffe incentivanti basate sui volumi idrici utilizzati. Al fine di prevedere un adeguato contributo al recupero dei costi ambientali e della risorsa a carico dei vari settori di impiego dell'acqua, con il comma 34, articolo 1 della Legge Regionale n.10 del 31.03.2017, è stato stabilito un vincolo di destinazione d'uso su tutti i

fonte: http://burc.regione.campania.it

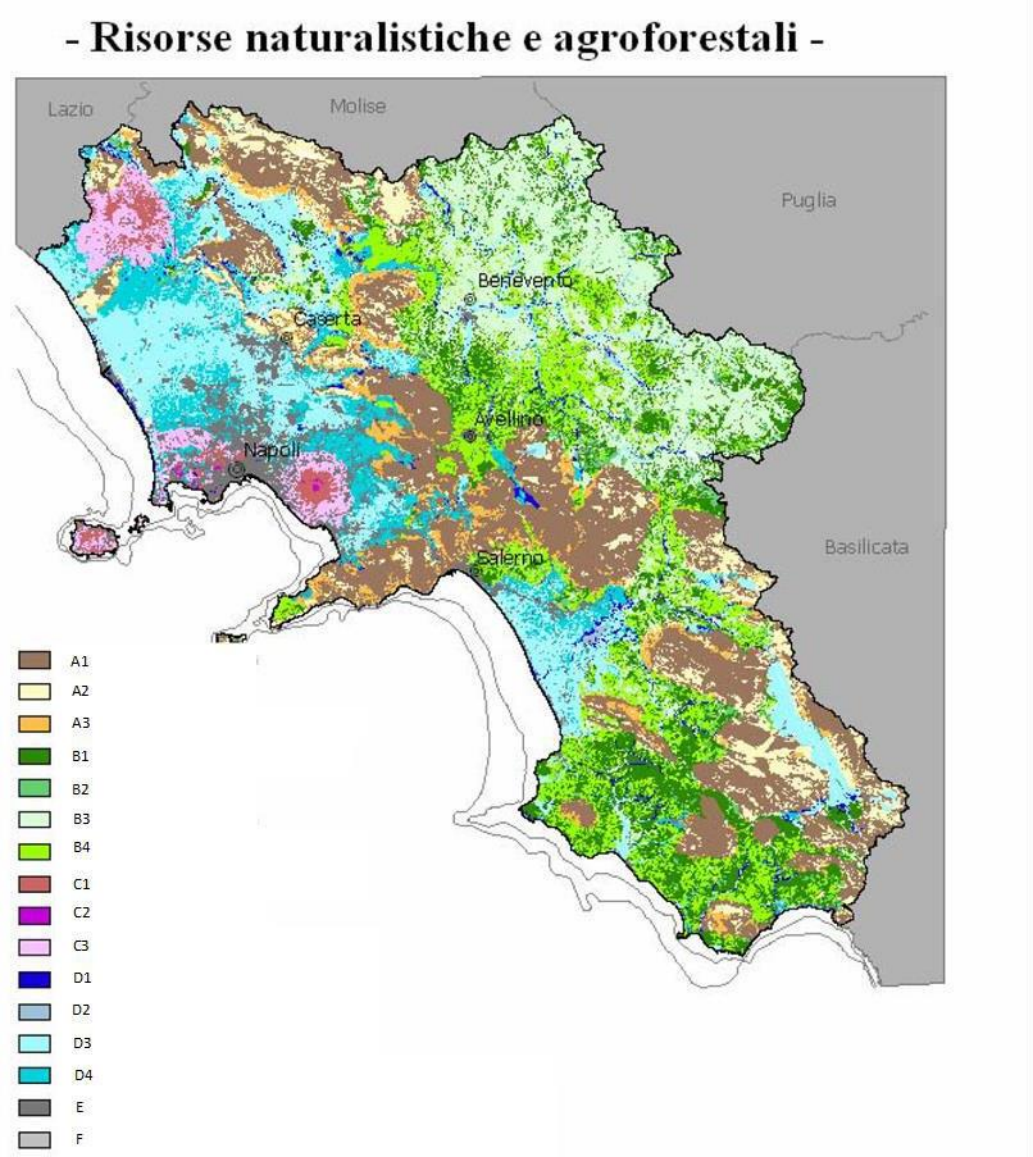
proventi derivanti dai canoni di concessione di derivazione di acque pubbliche. Il dispositivo stabilisce che tutte le suddette entrate siano destinate a finanziare le misure stabilite dal "Piano di tutela delle acque" oltre che gli interventi relativi al risanamento e alla riduzione dell'inquinamento dei corpi idrici superficiali e sotterranei della regione Campania. Le suddette azioni rappresentano sicuramente un importante contributo al raggiungimento degli obiettivi ambientali stabiliti dalla Direttiva Quadro sulle Acque.

La rete ecologica della Regione Campania

Il concetto di "Rete ecologica" sta ad indicare una strategia di tutela della diversità biologica e del paesaggio basata sul collegamento di aree di rilevante interesse ambientale-paesistico in una rete continua di elementi naturali e seminaturali. Essa rappresenta un'integrazione e in qualche misura un'evoluzione del modello di tutela concentrato esclusivamente sulla creazione di Aree Protette, finalizzato alla conservazione della natura all'interno di "isole" circondate da attività umane intensive, che pone difficoltà crescenti all'obiettivo di assicurare la conservazione a lungo termine della biodiversità.
In sede di descrizione generale, la descrizione della Rete ecologica regionale della Campania può essere condotta con riferimento alle diverse interpretazioni del concetto di "rete ecologica" emergenti dalle principali esperienze internazionali:

1. Rete ecologica come sistema interconnesso di habitat: obiettivi primari sono la conservazione della natura e della biodiversità, da perseguirsi non solo e non necessariamente all'interno delle aree protette istituzionalmente riconosciute. Questa interpretazione ha il principale riferimento giuridico e operativo nella direttiva Habitat, che si pone la finalità di proteggere luoghi inseriti in un sistema continentale coordinato di biotopi tutelati in funzione della conservazione di specie minacciate. Secondo questa accezione, la rete ecologica regionale può essere allora considerata come l'insieme dei SN2000 presenti nel territorio regionale, da integrarsi con aree di interposizione ecologica e di collegamento funzionale (buffer zones, corridors).
2. Rete ecologica come sistema di parchi e riserve: questa accezione risponde alle esigenze di coordinamento del sistema regionale di aree protette di diverso rango (nazionale, regionale, locale) all'interno di una strategia unitaria e coerente, allo scopo di generare sinergie di valorizzazione. Si tratta di un approccio afferente in senso più generale alla politica regionale di protezione dell'ambiente e di governo e gestione del territorio, così come istituzionalmente definita, a partire dal Piano territoriale regionale approvato con L.R. 13/2008. Le connessioni da incentivare possono basarsi sulla valorizzazione di corridoi ecologici esistenti o sulla ricostruzione di nuovi, e sul potenziamento delle infrastrutture verdi di collegamento tra aree protette che coinvolge i territori esterni alle aree tutelate e in particolare i SIC e ZPS istituiti ai sensi delle direttive comunitarie "Habitat" e "Uccelli selvatici".
3. Rete ecologica come sistema paesistico: in questo caso l'obiettivo primario è quello della conservazione e fruizione dei paesaggi regionali, in recepimento della Convenzione europea del paesaggio e del Codice dei beni culturali e del paesaggio. Anche questa accezione di "Rete ecologica" è richiamata nel Piano territoriale regionale vigente, che integra fortemente i due obiettivi di identificazione e tutale dei paesaggi, e di costruzione della rete ecologica regionale. In questo approccio, la componente vivente considerata è in primo luogo quella vegetazionale e di land use, con riferimento agli aspetti strutturali, funzionali e dinamici, lasciando in secondo

fonte: http://burc.regione.campania.it



piano la componente faunistica. La geometria di questa rete è variabile e dipendente dalla natura e dalla forma dei paesaggi. Un ruolo importante gioca il sistema dei percorsi a basso impatto ambientale che consentono la fruizione delle risorse paesistiche e territoriali, sull'esempio delle "greenways" americane, una rete verde fatta più per l'uomo che per gli elementi naturali, ma di grande interesse anche come elemento di continuità ecologica.

4. Rete ecologica come mosaico ecosistemico polivalente: il concetto di "rete ecologica" rispondente a quest'ultima definizione è più ampio e complesso, e persegue non solo la conservazione degli ecosistemi a maggiore naturalità, ma anche la gestione sostenibile del complessivo mosaico ecosistemico regionale. La geometria della rete è in questo caso definita con riferimento ad una struttura fondamentale composta da matrici naturali di base, gangli funzionali di appoggio, fasce di connessione, agroecosistemi complementari ecosostenibili. Questo tipo di approccio è anch'esso presente bel Piano territoriale regionale della Campania, e si sostanzia nella "Carta delle risorse naturalistiche ed agroforestali" e nei relativi indirizzi di tutela e gestione, così come definiti nelle "Linee guida per il paesaggio in Campania", che costituiscono parte integrante, con valore normativo, del PTR.
   Risulta evidente come i differenti modelli avanti richiamati non siano tra loro alternativi, ma rispondano piuttosto a obiettivi differenti e complementari all'interno di una più complessiva politica regionale di protezione ambientale e di governo del territorio.
   La figura a seguire mostra lo schema sintetico di rete ecologica contenuto nel Piano territoriale regionale, che evidenzia le direttrici dei principali corridoi di collegamento funzionale identificati a scala regionale.
   Lo schema proposto dal PTR del 2008 fa riferimento al quarto dei criteri descritti in precedenza ("Rete ecologica come scenario ecosistemico polivalente"), nella misura in cui esso prescinde dai perimetri delle aree protette e dei SN2000 presenti nel territorio regionale.
   Ad un livello di maggiore definizione, ulteriori elementi utili all'identificazione della Rete ecologica regionale sono contenuti in un'altra cartografia del PTR: la Carta delle Risorse naturalistiche e forestali. Questo elaborato, come detto in precedenza, è contenuto nelle "Linee guida per il paesaggio in Campania", che costituiscono parte integrante, con valore normativo, del PTR.
   La Carta delle risorse naturalistiche e agroforestali è un documento di analisi del PTR della Campania (2008), che illustra la distribuzione nel territorio regionale dei differenti tipi di ecosistemi naturali e seminaturali, forestali ed agricoli, descrivendone preliminarmente valori, funzioni, attitudini e sensibilità specifiche.
   Le unità tipologiche presenti in legenda sono descritte ad un livello elevato di generalizzazione, idoneo alle esigenze di analisi e pianificazione a scala regionale delle risorse, in funzione:

   - delle caratteristiche fisionomico-strutturali delle coperture naturali, seminaturali ed agricole.
   - degli aspetti fisiografici locali (clima, geomorfologia, suoli) che condizionano le qualità specifiche e le dinamiche evolutive delle coperture di cui al punto precedente.
   - In particolare, la definizione delle diverse tipologie di risorse naturalistiche ed agroforestali mira ad evidenziare il ruolo e le funzioni svolte da ciascuna di esse nel più ampio contesto del mosaico ecologico locale e regionale, considerando i principali aspetti relazionali, in accordo con le linee guida definite dal Council for the Pan-European Biological and Landscape Diversity Strategy. Tali elementi costituiscono la base conoscitiva per la progettazione della rete ecologica regionale e per la definizione

fonte: http://burc.regione.campania.it

di indirizzi per la salvaguardia e gestione sostenibile delle risorse naturalistiche ed agroforestali all'interno delle diverse partizioni del territorio regionale individuate nella carta dei sistemi del territorio rurale e aperto.

Carta delle Risorse naturalistiche e agroforestali

Le unità definite nella legenda della Carta delle risorse naturalistiche ed agroforestali sono le seguenti:

- A1. Aree forestali dei rilievi montani. L'unità comprende una gamma differenziata di habitat seminaturali a diverso grado di maturità e complessità strutturale (boschi, arbusteti, aree in evoluzione), che per estensione e grado di continuità costituiscono le principali aree centrali e corridoi ecologici della rete ecologica regionale.
- A2. Praterie dei rilievi montani. L'unità comprende una gamma differenziata di habitat

fonte: http://burc.regione.campania.it

seminaturali aperti (praterie di versante, di vetta, degli altopiani e dei campi carsici sommitali), che rappresentano un elemento chiave della diversità ecologica a scala locale e regionale.

- A3. Mosaici agricoli ed agroforestali dei rilievi montani, ed aree agricole a più elevata complessità strutturale, con funzione di habitat complementari e di zone cuscinetto rispetto alle aree a maggiore naturalità, con diffusa presenza di elementi di diversità biologica (siepi, filari arborei, alberi isolati) e sistemazioni tradizionali (terrazzamenti, ciglionamenti, muretti divisori in pietra).
- B1. Aree forestali dei rilievi collinari. L'unità comprende una gamma differenziata di habitat seminaturali a diverso grado di maturità e complessità strutturale (boschi, arbusteti, aree in evoluzione). L'unità si caratterizza, rispetto a quella A1 (Aree forestali dei rilievi montani), per la presenza di habitat aventi solitamente minore estensione e grado di continuità, all'interno di una matrice agricola prevalente, in corrispondenza delle sommità dei rilievi, degli affioramenti rocciosi e dei versanti delle incisioni idriche, con funzione di stepping stones, di corridoi ecologici e talvolta di zone centrali della rete ecologica regionale.
- B2. Praterie dei rilievi collinari: habitat seminaturali aperti (praterie, praterie cespugliate ed arborate).
- B3. Aree agricole dei rilievi collinari, con prevalenza di seminativi a campi aperti, e locale presenza di elementi di diversità biologica (siepi, filari arborei, alberi isolati) e sistemazioni tradizionali (terrazzamenti, ciglionamenti, muretti in pietra).
- B4. Mosaici agricoli ed agroforestali dei rilievi collinari, ed aree agricole a più elevata complessità strutturale, con funzione di habitat complementari e zone cuscinetto rispetto alle aree a maggiore naturalità, con diffusa presenza di elementi di diversità biologica (siepi, filari arborei, alberi isolati) e sistemazioni tradizionali (terrazzamenti, ciglionamenti, muretti divisori in pietra).
- C1. Aree forestali dei rilievi vulcanici. L'unità comprende una gamma differenziata di habitat seminaturali a diverso grado di maturità e complessità strutturale (boschi, arbusteti, ecosistemi pionieri, aree in evoluzione). Sono presenti aree forestali a maggiore estensione e continuità (Somma-Vesuvio, Roccamonfina), che costituiscono aree centrali della rete ecologica regionale; ed aree forestali a maggior grado di frammentazione e/o isolamento (Rilievi vulcanici flegrei, isola d'Ischia), con funzione di stepping stones e corridoi ecologici della rete ecologica regionale.
- C2. Praterie dei rilievi vulcanici. L'unità comprende habitat seminaturali aperti di elevato valore naturalistico (praterie discontinue pioniere su substrati vulcanici recenti e attuali).
- C3. Mosaici agricoli ed agroforestali dei rilievi vulcanici, ed aree agricole a più elevata complessità strutturale (arboreti tradizionali, promiscui e specializzati; orti arborati, orti vitati), con funzione di habitat complementari, di zone cuscinetto e di collegamento ecologico rispetto alle aree a maggiore naturalità, con diffusa presenza di elementi di diversità biologica (siepi, filari arborei, alberi isolati) e sistemazioni tradizionali (terrazzamenti, ciglionamenti, muretti divisori in pietra).
- D1. Aree forestali della pianura. L'unità comprende lembi di habitat seminaturali ripariali e planiziali, a vario stato di conservazione e a diverso grado di maturità e complessità strutturale (boschi, arbusteti, aree in evoluzione); habitat seminaturali costieri a vario grado di frammentazione (vegetazione psammofila, macchia mediterranea, pinete antropiche, vegetazione igrofila delle depressioni retrodunari) con funzione di stepping stones e di corridoi ecologici.

fonte: http://burc.regione.campania.it

- D2. Praterie della pianura. Prati stabili e incolti della pianura alluvionale e terrazzata.
- D3. Aree agricole della pianura, con prevalenza di seminativi a campi aperti, e locale presenza di elementi di diversità biologica (siepi, filari arborei, alberi isolati).
- D4. Mosaici agricoli della pianura ed aree agricole a più elevata complessità strutturale (arboreti tradizionali, promiscui e specializzati; orti arborati, orti vitati), con funzione di habitat complementari, di zone cuscinetto e di collegamento ecologico rispetto alle aree a maggiore naturalità, con locale presenza di elementi di diversità biologica (siepi, filari arborei, alberi isolati).
- E. Ambiti di più diretta influenza dei sistemi urbani e della rete infrastrutturale. L'unità comprende le aree urbane continue, le aree urbane discontinue e le infrastrutture di trasporto, unitamente al complesso mosaico di spazi aperti di loro pertinenza, costituito da superfici artificiali; parchi e giardini; aree seminaturali, agricole e ruderali di frangia ed intercluse, sovente caratterizzate dalla presenza di sistemazioni tradizionali (terrazzamenti, ciglionamenti); aree costiere (spiagge, versanti costieri); aree verdi per lo sport ed il tempo libero; aree verdi di pertinenza della rete infrastrutturale e delle attrezzature; aree estrattive, discariche, aree degradate.
- F. Spiagge. L'unità comprende le aree di spiaggia così come identificate nella Carta dell'utilizzazione agricola del suolo della Regione Campania (CUAS).
- G. Corpi idrici. L'unità comprende i corpi idrici così come identificati nella Carta dell'utilizzazione agricola del suolo della Regione Campania (CUAS).

  La carta delle risorse naturalistiche ed agroforestali definisce inoltre i perimetri di ambiti di particolare rilevanza ecologico-ambientale a scala regionale:

- H - Aree dell'alta montagna (versanti alto-montani, altopiani e pianori carsici sommitali, crinali e aree di vetta);
- I - Pianure costiere, caratterizzate dalla caratteristica sequenza di elementi morfologici ed habitat di costa bassa (aree di foce, dune costiere, depressioni retrodunari idromorfe, paleodune).

  Allorché ci si intenda riferire al secondo dei criteri di definizione di "rete ecologica" proposti in precedenza ("Rete ecologica come sistema di parchi e riserve"), il riferimento diventa il sistema regionale di aree protette, mostrato in Figura a seguire.

Biodiversità e Paesaggio

La biodiversità rappresenta la varietà della vita sulla Terra ossia l'insieme degli organismi viventi e degli ecosistemi ad essi correlati, e in tale contesto rientra a pieno titolo l'agrobiodiversità ossia la varietà delle razze dovuta alla coltivazione della terra e all'allevamento del bestiame. Le "risorse genetiche in agricoltura", come definite dal Regolamento (CE) n. 870/04, rappresentano l'agrobiodiversità, ossia la selezione effettuata dall'uomo partendo da un pool genetico selvatico per ottenere razze e varietà adattabili alle diverse condizioni ecologiche e sociali specifiche dei differenti territori. Le razze autoctone e gli ecotipi locali oltre a rappresentare uno strumento di lavoro per l'agricoltura ed una risorsa per il miglioramento genetico rappresentano un patrimonio esemplificativo del mondo rurale in tutte le sue componenti. La tutela dell'identità culturale dei prodotti agroalimentari è attuata in sede europea principalmente attraverso i "Marchi d'Origine" (DOP, IGP, STG, IGT, DOC, DOCG)

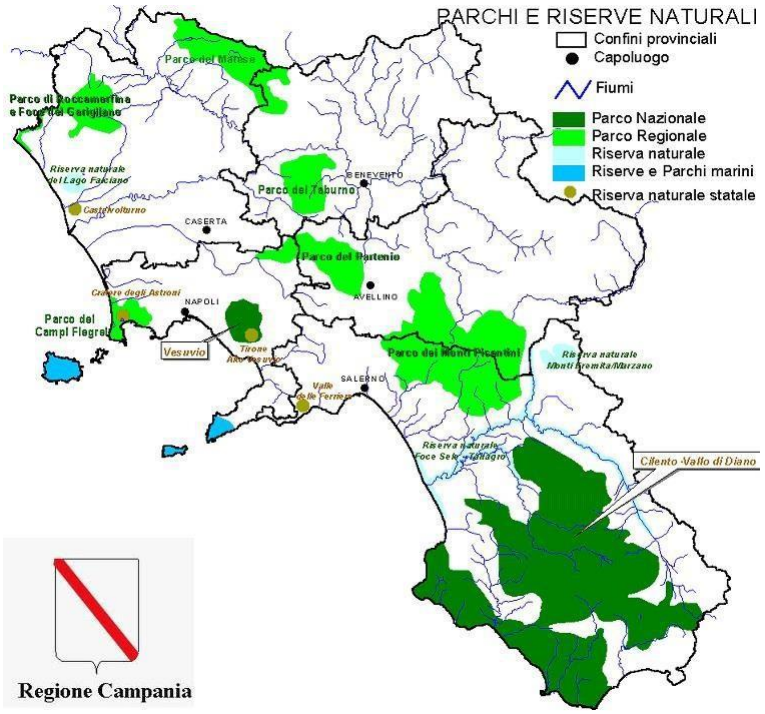
fonte: http://burc.regione.campania.it

che sono normati da regolamenti europei e leggi statali. La Campania è ricca di ambienti naturali altamente diversificati , in funzione delle caratteristiche morfologiche e climatiche, che possiamo distinguere in:

- ambienti marino – costieri (falesie, dune, delta ed estuari, lagune, stagni costieri);
- ambienti con vegetazione arbustiva prevalente(ambienti di macchia mediterranea),
- ambienti con vegetazione arborea prevalente (boschi),ambienti con vegetazione erbacea prevalente (praterie),
- ambienti umidi in aree interne (corsi d'acqua e specchi acquei).

Nelle acque costiere della Campania, che si estendono per circa 480 km, è possibile trovare ecosistemi di particolare valore naturalistico: le praterie di fanerogame marine, le associazioni di coralli e nei tratti bassi di costa ambienti dunari con vegetazione psammofila. In corrispondenza di tali tratti costieri si aprono possibili foci di fiumi, lagune e stagni che rappresentano gli ambienti tipici di transizione tra le acque dolci e le acque salate, caratterizzati da una ricchezza specifica di flora e fauna. Le coste alte si trovano in corrispondenza delle aree di origine vulcanica (area Flegrea), della penisola Amalfitano - Sorrentina di origine carbonatica e di alcuni tratti della costa cilentana: questi ambienti sono caratterizzati dalla presenza di varie specie vegetali che si sono adattate a condizioni estreme. La vegetazione più rappresentativa della zona costiera è rappresentata dalla macchia mediterranea che racchiude una grande ricchezza di tipo floristico e faunistico. Gli ambienti di macchia bassa rappresentano il rifugio di numerose specie appartenenti a gruppi faunistici diversi. Gli ambienti delle piane costiere, costituite dai depositi alluvionali, sono quelli che hanno risentito maggiormente delle trasformazioni prodotte dalle attività umane, inizialmente sono stati trasformati in aree coltivate poi successivamente in centri insediativi, produttivi e commerciali. Dal punto di vista ecosistemico è rilevante il ruolo attribuito alle fasce ripariali dei fiumi che svolgono funzione di conservazione del suolo, della biodiversità e hanno la capacità di influenzare i sistemi acquatici in quanto rappresentano importanti biofiltri naturali di protezione dall'eccessiva sedimentazione e dal ruscellamento contaminato e dall'erosione. Le zone di collina e di montagna presenti sul territorio regionale sono caratterizzate da aree boscate ed aree agricole. Gli ambienti boschivi delle quote più elevate (1300-1800 metri) sono caratterizzati dalla presenza del faggio (Fagus silvatica). Nella zona del Sannio fino a 1000 metri si trovano boschi misti di latifoglie che, caratterizzati da condizioni di elevata umidità, sono costituiti da specie mesofile decidue con presenza prevalente di carpino nero (Ostrya carpinifolia), carpino orientale (Carpinus orientalis), roverella (Quercus pubescens) e orniello (Fraxinus ornus), unitamente ad aceri (Acer sp.) e ontani (Alnus cordata). In ambienti caratterizzati da minore umidità la presenza dominante è costituita dalla roverella, mentre sui suoli argillosi è maggiore la presenza del cerro (Quercus cerris). Una particolarità del patrimonio boschivo regionale sono le formazioni di pino nero e di nuclei relitti di betulla e abete bianco. La betulla e l'abete bianco sono rinvenibile sui Monti Picentini e nell'area cilentana . In condizioni di intensa esposizione alla radiazione solare e di minore disponibilità idrica nelle fasce più basse delle aree collinari e montane si trova il leccio. Da segnalare, inoltre, la presenza di pinete in ambiti montani. Di rilievo regionale sono le coperture erbacee tipiche delle praterie secondarie che negli ultimi anni hanno determinato fenomeni di colonizzazione dei sistemi pascolativi che in precedenza erano stati abbandonati. Anche il sovrapascolo determina alterazioni della composizione della copertura erbacea che si sostanziano in diminuzione della diversità specifica a favore delle specie maggiormente

fonte: http://burc.regione.campania.it



resistenti. L'interazione dell'uomo con l'ambiente ha prodotto profonde trasformazioni del territorio, determinando in molti casi riduzione (distruzione o diminuzione) o modificazioni più o meno profonde della biodiversità, a seguito per lo più di fenomeni di inquinamento, artificializzazione, frammentazione ed introduzione di specie alloctone. I fattori di pressione antropica sono rappresentati dall'espansione dei poli insediativi, produttivi e commerciali, la creazione di infrastrutture di collegamento, l'intensivizzazione delle pratiche agricole in alcune aree, la presenza di scarichi civili e industriali non adeguatamente trattati a causa di inefficienze dei sistemi depurativi, che determinano la contaminazione delle matrici suolo e acqua. L'aumento generale della sensibilità e dell'attenzione nei confronti di tematiche quali la tutela e conservazione del patrimonio naturale e della diversità biologica, nonché la presenza di significativi valori naturalistici ed ecosistemici hanno contributo all'istituzione nel sistema regionale di aree naturali protette che sono oggetto di particolari regimi di gestione e misure specifiche di conservazione.Il processo di riforma delle politiche agricole avviato a partire dagli anni '90 ha contribuito a contestualizzare la funzione sociale del settore agricolo in un'ottica di sviluppo economico e tutela ambientale, attraverso l'adozione di processi produttivi responsabili, remunerativi e socialmente desiderabili. Questo nuovo modo di concepire la funzione agricola ha indotto ad un'evoluzione della disciplina istituzionale in relazione ai vincoli e alle limitazioni poste in essere per l'esercizio dell'attività agricola delle aree protette. In quest'ottica l'istituzione delle aree protette non costituisce una barriera allo sviluppo delle strategie imprenditoriali e allo svolgimento dell'attività agricola in questi territori, bensì favorisce l'adozione di pratiche agronomiche ecosostenibili creando le condizioni che sono alla base della valorizzazione della tipicità e di tradizioni che caratterizzano queste aree. Le aree protette della Regione Campania costituiscono un elemento rilevante del territorio per il loro numero, l'estensione e le loro caratteristiche naturali e socio-economiche. La previsione della costituzione dei parchi regionali e nazionali in Campania è avvenuta con l'emanazione della "Legge Quadro sulle aree protette" n. 394 del 6 dicembre 1991 (recepita dalla regione con la legge regionale n. 33 del 1993 "Istituzione di Parche e Riserve naturali in Campania) con l'obiettivo di preservare l'ambiente ed il territorio, proteggere le specie animali e vegetali, promuovere attività di educazione ambientale e attività di sensibilizzazione ai valori naturalistici.

Il sistema delle aree naturali protette in Campania è costituito da:

- i Parchi e le Riserve Naturali di rilievo nazionale o regionale istituiti sulla base della Legge n. 394/91 "Legge quadro sulle aree protette" e della Legge Regionale n. 33/93 "Istituzione di parchi e riserve naturali in Campania";
- le aree marine protette istituite sulla base della Legge n. 979/82 o della Legge n. 394/91;
- i siti della Rete Natura 2000 (Zone di Protezione Speciale e Siti di Importanza Comunitaria) individuati sulla base della normativa di recepimento della Direttiva 79/409/CEE sostituita dalla 2009/147/CE e delle Decisioni 2018/42/UE, 2018/43/UE e 2018/37/UE;
- le zone umide di importanza internazionale individuate sulla base della normativa di recepimento della Convenzione di Ramsar del 1971;
- i parchi urbani di interesse regionale istituiti sulla base della Legge Regionale n.17/2003 "Istituzione del sistema parchi urbani di interesse regionale";
- le oasi naturalistiche.

fonte: http://burc.regione.campania.it

Dal punto di vista della pianificazione ambientale i Parchi Naturali e le Riserve Naturali sono stati istituiti allo scopo di conservare e valorizzare il patrimonio naturale. Il Piano ed il Regolamento del Parco o della Riserva sono gli strumenti attraverso i quali si disciplinano l'uso, il godimento e la tutela, dei vincoli e delle destinazioni d'uso pubblico e privato, le modalità di realizzazione e svolgimento di interventi e le attività consentite: rappresentano il riferimento rispetto al quale verificare la conformità degli interventi nelle aree ricadenti all'interno del perimetro dell'area protetta, al fine di acquisire il nulla osta dall'Ente gestore. Nel complesso tali aree protette coprono poco più di 338.000 ettari di territorio regionale (pari al 25% circa della superficie totale della Campania).

I Parchi e le Riserve Naturali della Campania

Le aree marine protette sono state istituite al fine di salvaguardare e valorizzare il patrimonio naturalistico associato alle acque ed ai fondali marini, anche attraverso specifica regolamentazione delle attività antropiche in tali ambiti, finalizzata ad assicurare la tutela dell'ambiente geofisico, delle caratteristiche chimiche ed idrobiologiche delle acque, della flora, della fauna, dei reperti archeologici. Nella tabella seguente si riporta il dettaglio delle aree marine protette.

fonte: http://burc.regione.campania.it

Tipologia area protetta	Denominazione	Superficie (ha)
Area marina protetta	Punta Campanella	**1.539**
Area marina protetta	Regno di Nettuno	**11.256**
Area marina protetta	Santa Maria di Castellabate	**7.095**
Area marina protetta	Costa degli Infreschi e della Masseta	**2.332**
GAPN	Parco sommerso di Baia	**5**
GAPN	Parco sommerso di Gaiola	**3**
Parco Nazionale	Cilento - Vallo di Diana	**167.859**
Parco Nazionale	Vesuvio	**8.268**
Parco Regionale	Campi Flegrei	**2.547**
Parco Regionale	Fiume Sarno	**3.437**
Parco Regionale	Matese	**33.272**
Parco Regionale	Monti Lattari	**14.369**
Parco Regionale	Monti Picentini	**59.035**
Parco Regionale	Partenio	**14.870**
Parco Regionale	Roccamonfina-Foce Garigliano	**8.695**
Parco Regionale	Taburno-Camposauro	**13.683**
Riserva Nat. Region.	Foce Sele-Tanagro	**7.273**
Riserva Nat. Region.	Foce Volturno-Costa di Licola	**992**
Riserva Nat. Region.	Lago Falciano	**95**
Riserva Nat. Region.	Monti Eremita-Marzano	**1.694**
Riserva Nat. Statale	Riserva naturale Castelvolturno	**276**
Riserva Nat. Statale	Riserva naturale Cratere degli Astroni	**263**
Riserva Nat. Statale	Riserva naturale statale Isola di Vivara	**35**
Riserva Nat. Statale	Riserva naturale Tirone Alto Vesuvio	**1.044**
Riserva Nat. Statale	Riserva naturale Valle delle Ferriere	**455**

Le Aree marine protette in Campania

La Regione Campania è inoltre dotata di un patrimonio ambientale di elevata valenza naturalistica costituito da 123 Siti Natura 2000, di cui 92 Siti di Importanza Comunitaria (SIC), 15 Zone di Protezione Speciale (ZPS) e 16 siti con duplice valenza di SIC e ZPS che, per la maggior parte, risultano ancora privi di piano di gestione. Nell'ottica della valorizzazione di tale patrimonio naturalistico ed in attuazione della normativa vigente in materia, anche al fine di ottemperare alla richiesta del Ministero dell'Ambiente di approvare gli obiettivi e le misure di conservazione necessarie per il superamento della procedura d'infrazione n. 2015/2163, aperta dalla Commissione Europea per la mancata designazione delle ZSC (Zone Speciali di Conservazione) entro sei anni dall'adozione dell'elenco dei SIC e per la mancata definizione delle misure di conservazione (Direttiva Habitat), con Delibera di Giunta Regionale n. 795 del 19/12/2017 sono state approvate le "Misure di Conservazione dei SIC per la designazione delle ZSC della Rete Natura 2000 della Regione Campania".
Per una descrizione più dettagliata della Rete Natura 2000 della Campania si rimanda al capitolo 12 dedicato alla Valutazione di incidenza ambientale (VIncA).

10. Gli obiettivi e le azioni del Piano forestale regionale

In accordo con il Testo unico in materia di foreste e filiere forestali, articolo 6 comma 2, il Piano forestale generale della Campania è chiamato a definire gli obiettivi e le relative linee d'azione, coerenti con la Strategia Forestale Nazionale, in relazione alle specifiche esigenze socio-economiche, ambientali e paesaggistiche, nonché alle necessità di prevenzione del rischio idrogeologico, di mitigazione e di adattamento al cambiamento climatico.
Alla luce delle indagini e delle elaborazioni svolte, il Piano forestale regionale della Campania individua 7 differenti obiettivi prioritari articolati in 26 differenti azioni, descritte nei seguenti paragrafi. Lo schema degli obiettivi e delle azioni di piano è riportato nella tabella alla pagina seguente.
Le azioni individuate dal Piano forestale generale trovano preciso riferimento in quelle indicate nella Strategia Forestale Nazionale, oltre che nella legislazione nazionale e regionale vigente (vedi cap. 10 e 13).
B5. Mitigazione e adattamento dei sistemi forestali della Campania ai cambiamenti climatici
Il Piano forestale generale della Campania persegue il rafforzamento della capacità di mitigazione e adattamento dei sistemi forestali della Campania ai cambiamenti climatici in maniera trasversale, attraverso l'implementazione combinata delle diverse azioni di piano finalizzate:

- all'incremento della superficie boschiva regionale pubblica e privata interessata da pianificazione forestale alle diverse scale (aziendale, territoriale) e da gestione attiva, in grado di assicurarne l'integrità fisica e funzionale, nel rispetto delle dinamiche ecologico-evolutive, degli aspetti di biodiversità, della capacità di fornire in maniera sostenibile il pool di servizi ecosistemici di supporto e regolazione;
-
- alla diffusione di Disciplinari di gestione forestale sostenibile, per le diverse categorie forestali e tipi colturali, finalizzati all'aumento della resistenza/resilienza del bosco nei confronti del rischio climatico e ambientale;
-
- Alla capacità di "governare l'abbandono", promuovendo e incentivando la cura e la gestione attiva dei boschi abbandonati e/o silenti, dei boschi di neoformazione, degli arbusteti mediterranei e temperati di ricolonizzazione dei coltivi eroici abbandonati.

fonte: http://burc.regione.campania.it

A. Una nuova governance per le foreste in Campania

A1. Promuovere una governance forestale in Campania basata sulla cooperazione istituzionale, l'integrazione di strumenti e politiche, la partecipazione e condivisione degli obiettivi di Gestione Forestale Sostenibile (GFS)

A2. Estendere la superficie dei beni silvo-pastorali di proprietà pubblica, privata e collettiva della Campania dotati di piani di gestione forestale

A3. Promuovere la pianificazione forestale di area vasta (Piani Forestali di Indirizzo Territoriale)

B. Rafforzare il capitale naturale, assicurare i servizi ecologici essenziali, prevenire i rischi

B1. Conservazione e miglioramento della biodiversità forestale nella rete regionale di aree protette

B2. Gestione attiva dei boschi di protezione.

B3. Incrementare la capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica del territorio e tutela delle acque

B4. Prevenzione attiva dei rischi naturali o antropici, incendi, calamità naturali ed eventi catastrofici

C. Curare e gestire le risorse forestali della Campania

C1. Curare i rimboschimenti storici della Campania

C2. Valorizzare in chiave multifunzionale le foreste urbane e periurbane

C3. Curare e proteggere i boschi planiziali della Campania

C4. Tutela e valorizzazione dei castagneti da frutto della Campania

C5. Tutelare i boschi vetusti e gli alberi monumentali

C6. Promuovere la gestione sostenibile dei prati e pascoli permanenti

C7. Promuovere e valorizzare i sistemi agroforestali

D. Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare

D1. Rafforzare la capacità operativa delle imprese boschive. Promuovere la qualificazione degli operatori forestali

D2. Promuovere la certificazione delle foreste del territorio regionale e la tracciabilità lungo tutta la filiera, dal tronco al mobile finito

D3. Riconoscere e remunerare i servizi di interesse pubblico, ambientale e sociale forniti dalle aree forestali (foreste e pascoli) e mantenuti ed accresciuti dalla GFS

D4. Promozione delle produzioni forestali non legnose in una prospettiva di filiera

D5. Adesione al Cluster legno-foresta italiano e costituzione del Cluster legno foresta della Campania

E. Vivere le foreste della Campania

E1. Valorizzare le 10 foreste regionali come "laboratori verdi multifunzionali" e centri di diffusione permanente della GFS in Campania

E2. Valorizzazione multifunzionale della viabilità forestale e silvo-pastorale e della sentieristica in Campania

F. Conoscere le foreste della Campania

F1. Promuovere un programma integrato di monitoraggio e cartografia delle risorse forestali della Campania

F2. Implementazione dello Sportello unico regionale per le attività forestali (SUAF)

F3. Promozione di iniziative e programmi divulgativi per rafforzare la consapevolezza pubblica dell'importanza e il ruolo ecologico del patrimonio forestale della Campania

G. Le nuove foreste della Campania

G1 Valorizzare e potenziare i vivai forestali; estendere la superficie dei boschi da seme; valorizzare le risorse genetiche; potenziare la produzione di materiale di propagazione forestale

G2 Promozione di tecniche forestali per il recupero dei siti degradati in Campania

Tab. 15.1 Il Piano Forestale Generale della Campania identifica 7 obiettivi e 26 azioni operative

fonte: http://burc.regione.campania.it

A. Una nuova governance per le foreste in Campania

Un primo gruppo di azioni si pone l'obiettivo di **rafforzare e rendere più efficace ed efficiente la governance del patrimonio forestale della Campania**, integrando e coordinando l'attività delle diverse Istituzioni ed Enti che esercitano competenze specifiche in campo forestale.

A1. Promuovere una governance forestale in Campania basata sulla cooperazione istituzionale, l'integrazione di strumenti e politiche, la partecipazione e condivisione degli obiettivi di Gestione Forestale Sostenibile (GFS).

L'applicazione concreta, la più ampia e diffusa possibile, al patrimonio forestale della Campania, dei criteri e degli approcci della Gestione Forestale Sostenibile (GFS), in accordo con la Strategia Forestale Nazionale, richiede innanzitutto la costruzione di una nuova governance in grado di armonizzare l'azione delle molteplici competenze in gioco.
L'esigenza discende dalla natura particolare delle aree ricoperte da boschi, che sono considerate nel nostro ordinamento:

- un bene e una risorsa di interesse pubblico, al di là dei regimi proprietari, in quanto componente fondamentale degli ecosistemi e dei paesaggi della nazione, e per questo oggetto di tutele che rientrano nella competenza diretta dello Stato;
- una risorsa in grado di produrre un flusso di servizi ecosistemici di supporto, regolazione, approvvigionamento e culturali a beneficio dell'intera collettività;
- una risorsa produttiva di beni e servizi di mercato che alimentano e sostengono molteplici filiere di interesse economico e sociale, in particolare nelle aree montane e interne del Paese.

A partire da tali assunti, il Testo Unico in materia di foreste e filiere forestali, all'art. 3 com. 2, lettera b), definisce la gestione forestale sostenibile o gestione attiva, come l'insieme delle azioni selvicolturali volte a rispettare e valorizzare queste diverse funzioni del bosco, consentendo il mantenimento dei diversi aspetti di biodiversità, produttività, rinnovazione, vitalità e potenzialità, e adempiendo in tal modo "… ora e in futuro, a rilevanti funzioni ecologiche, economiche e sociali a livello locale, nazionale e globale, senza comportare danni ad altri ecosistemi".
Per la sua natura di risorsa di fondamentale interesse pubblico il bosco è dunque oggetto di tutele molteplici, afferenti a competenze diversificate tra le quali:

- la tutela paesaggistica ai sensi del Codice dei beni culturali e del paesaggio;
- la tutela degli aspetti naturalistici, ecologici e di biodiversità ai sensi della Legge quadro sulle aree protette e della Direttiva comunitaria "Habitat";
- la tutela della funzione idrogeologica ai sensi della legislazione sulla difesa del suolo contenuta nel Testo unico ambientale;
- la tutela dell'integrità strutturale, funzionale ed evolutiva e della capacità produttiva del bosco, così come regolata dalla legislazione forestale regionale in vigore, in coerenza con il testo unico in materia di foreste e filiere forestali.

fonte: http://burc.regione.campania.it

L'attuazione delle azioni e degli interventi selvicolturali ricompresi nel concetto di gestione forestale sostenibile è quindi sottoposta a procedure amministrative di autorizzazione e controllo di volta in volta facenti capo a enti e amministrazioni diverse (soprintendenze, autorità di bacino, enti parco, enti di gestione delle aree protette, regione ed enti delegati in materia forestale).
E' proprio a partire dal concetto operativo di gestione forestale sostenibile, così come definito dalla Strategia forestale nazionale, che l'amministrazione regionale della Campania promuove la costruzione, attraverso la più ampia cooperazione istituzionale, di una governance condivisa per il sistema forestale, in grado di portare il più possibile a sintesi i diversi procedimenti autorizzativi e di controllo, garantendone il coordinamento, la coerenza, l'efficacia e la tempestività in relazione ai molteplici obiettivi posti dalla complessa e articolata legislazione vigente.

A2. Estendere la superficie dei beni silvo-pastorali di proprietà pubblica, privata e collettiva della Campania dotati di piani di gestione forestale

E' stata evidenziata nei capitoli precedenti la struttura duale del patrimonio forestale regionale. Da un lato, infatti, il patrimonio forestale pubblico della Campania, comprendente il 45% dei boschi della regione, è caratterizzato da un rapporto paritario tra fustaie e cedui, e dal fatto di essere per una quota rilevante, dell'80% circa, dotato di piani di gestione forestale vigenti.
I piani di gestione approvati per i boschi pubblici della Campania, unitamente al corredo cartografico in formato cartaceo e/o digitale, costituiscono una base informativa di grande importanza ai fini dell'aggiornamento del quadro conoscitivo e delle cartografie forestali a scala regionale, in un'ottica di sistema informativo forestale.
In considerazione di tali aspetti rilevanti, le azioni prioritarie per il patrimonio forestale pubblico che l'Amministrazione si propone saranno finalizzate al conseguimento dei seguenti obiettivi:

- l'estensione in tempi brevi della pianificazione forestale all'intera superficie dei boschi pubblici della Campania, proseguendo il lavoro positivo compiuto dall'amministrazione nello scorso periodo di programmazione, che ha già condotto al conseguimento di risultati notevoli, con il decisivo sostegno degli aiuti previsti per i soggetti pubblici dal PSR Campania 2014-2020, con due tipologie di intervento, la 8.5.1 ("Sostegno agli investimenti destinati ad accrescere la resilienza ed il pregio ambientale degli ecosistemi forestali") e la 16.8.1 ("Sostegno alla stesura di piani di gestione forestale o strumenti equivalenti"). Nel periodo di programmazione in corso, questa azione potrà fare ricorso agli aiuti previsti da due misure del CSR Campania 2023-2027: la SRD15 ("Investimenti produttivi forestali"), che finanzia tra l'altro l'elaborazione di Piani di gestione forestale o strumenti equivalenti per superfici singole e/o associate, nonché la revisione dei Piani di gestione e strumenti equivalenti in scadenza o scaduti, secondo quanto disposto dalla normativa regionale vigente; e la SRG07 ("Cooperazione per lo sviluppo rurale, locale e smart villages").

- il proseguimento e l'estensione ad altri ambiti forestali del territorio regionale delle esperienze innovative di gestione e programmazione associata del patrimonio forestale pubblico. Tra queste, la stipula dell'accordo di partenariato tra i 13 comuni della Comunità del Parco Nazionale del Vesuvio e dall'Ente Parco per la redazione in forma

fonte: http://burc.regione.campania.it

associata dei piani di gestione forestale; o ancora il progetto di costituzione di un'Agenzia forestale per il coordinamento permanente del partenariato di comuni dell'Area Pilota "Alta Irpinia" nell'ambito della Strategia Nazionale per le Aree Interne (SNAI);

- il rafforzamento della cooperazione istituzionale e del coordinamento tra comuni, comunità montane ed enti di gestione delle aree protette per l'integrazione delle diverse procedure autorizzative e di programmazione forestale, ai fini di un migliore conseguimento degli obiettivi condivisi di tutela e gestione sostenibile delle risorse forestali.

A3. Promuovere la pianificazione forestale di area vasta (Piani Forestali di Indirizzo Territoriale)

Come ricordato nel capitolo 9, una delle innovazioni rilevanti introdotte dal Testo unico è la definizione giuridica e formale all'interno del sistema di programmazione forestale italiano di un livello di pianificazione di area vasta - i Piani forestali di indirizzo territoriale (PFIT) - che si collocano ad una scala intermedia tra quella generale del Programma forestale redatto dalla Regione, funzionale alla definizione di strategie e politiche complessive per l'intero patrimonio forestale, e quella aziendale dei Piani di gestione forestale.
I Piani forestali di indirizzo territoriale sono redatti, secondo le disposizioni del Testo unico e del successivo Decreto attuativo sui criteri minimi per la loro elaborazione, con riferimento a ambiti o comprensori territoriali omogenei per caratteristiche ambientali, paesaggistiche, economico-produttive e/o amministrative. All'interno di tali ambiti, i PFIT individuano le risorse silvo-pastorali presenti, definendo le attività necessarie alla loro tutela e uso sostenibile, e favorendo il coordinamento dei piani di gestione forestale e degli strumenti ad essi equivalenti.
Sempre in accordo con l'art. 6 comma 8 del Testo unico e con il Decreto attuativo, è compito della Regione l'individuazione degli ambiti geografici cui riferire la redazione dei Piani forestali di indirizzo territoriale (PFIT), compito che è stato assolto dal presente Piano.
L'individuazione degli ambiti di riferimento per la redazione dei PFIT in Campania è stata condotta, in accordo con il Decreto attuativo, attraverso l'identificazione dei diversi sistemi forestali omogenei presenti nel territorio regionale, su base ecologica e fisiografica, nella loro interezza e continuità, rispettando i limiti amministrativi comunali, e non considerando invece quelli sovracomunali di provincia, città metropolitana o comunità montana.
L'obiettivo è quello di favorire, per i diversi complessi forestali della regione, una pianificazione e gestione quanto più coordinata, unitaria e coerente, evitando controproducenti frammentazioni, e incentivando invece la cooperazione istituzionale e la condivisione di obiettivi comuni di promozione del patrimonio forestale in chiave multifunzionale.
A partire dall'identificazione degli ambiti territoriali di riferimento, il Piano forestale regionale assegna un importanza prioritaria alla redazione dei PFIT in Campania, come strumento cardine per l'applicazione la più ampia, diffusa e generalizzata, dei criteri di Gestione Forestale Sostenibile al patrimonio forestale regionale.
In tale ottica, i Piani forestali di indirizzo territoriale, potranno costituire in progresso di tempo un riferimento essenziale in Campania per:

fonte: http://burc.regione.campania.it

- il coordinamento a scala territoriale della pianificazione dei boschi pubblici, sull'esempio dell'esperienza pilota condotta in Alta Irpinia;
- la definizione dei progetti di valorizzazione e messa in sicurezza dell'infrastruttura forestale regionale attuati dagli enti delegati con l'impiego degli operai forestali;
- estendere e promuovere la pianificazione dei boschi privati, attraverso la messa a disposizione di una base di dati e di un quadro di conoscenze di valore ufficiale esauriente, robusto, rigoroso, in grado di rendere la stesura dei piani di gestione forestale da parte dei proprietari e possessori privati più rapida, coordinata, agevole, meno onerosa;
- favorire, attraverso una rappresentazione comprensiva del patrimonio, esperienze di pianificazione e gestione aggregata delle proprietà forestali private, superando in tal modo le limitazioni causate dall'elevata frammentazione e polverizzazione proprietaria;
- individuare ad una scala di maggior dettaglio i boschi di protezione diretta, i boschi abbandonati e silenti, i boschi di ricolonizzazione per i quali si renda necessario il ricorso a forme di sostituzione della gestione e di conferimento delle superfici forestali in accordo con gli articoli 10 e 12 del testo unico.

In conclusione, la redazione dei PFIT è sinergica con gran parte delle azioni previste dal presente Piano. Così come sono pensati nel Testo unico e nel Decreto attuativo, i Piani Forestali di indirizzo territoriale rappresentano in prospettiva strumenti potenti a supporto delle attività istituzionali di pianificazione del paesaggio, della tutela della biodiversità, della difesa del suolo, della prevenzione e adattamento ai rischi ambientali.
Per favorirne e avviarne in tempi celeri la redazione, la Regione finanzierà la loro redazione con risorse del Fondo per lo sviluppo delle montagne italiane (FOSMIT), secondo un programma operativo che sarà definito con Decreto dirigenziale entro 60 giorni dall'adozione del presente Piano.

B. Rafforzare il capitale naturale, assicurare i servizi ecologici essenziali, prevenire i rischi

Un secondo gruppo di azioni del Piano forestale regionale si propone l'obiettivo di **rafforzare il capitale naturale** costituito dai boschi e dai pascoli della Campania, assicurando **la fornitura dei servizi ecologici essenziali** che tali risorse forniscono alla collettività, e orientandone la gestione in chiave di prevenzione dei rischi locali e globali.
Queste azioni saranno attuate in stretto coordinamento con gli Enti Parco, gli Enti di gestione dei siti della Rete Natura 2000 della Campania, il Distretto idrografico dell'Appennino meridionale.

B1. Conservazione e miglioramento della biodiversità forestale nella rete regionale di aree protette

Uno degli aspetti centrali per il governo dei boschi della Campania riguarda le superfici forestali (boschi, altre terre boscate) ricadenti nel sistema regionale delle aree a tutela naturalistica (parchi nazionali e regionali, riserve statali e regionali, siti della rete Natura 2000). Queste aree

fonte: http://burc.regione.campania.it

forestali coprono una superficie di 321.904 ettari, pari al 64,8% del patrimonio forestale regionale.
Il sistema delle aree protette della Campania (parchi nazionali e regionali, riserve statali e regionali) interessa una superficie di 350.204 ettari, pari 25,6% del territorio regionale, contro una media nazionale del 10,5%.
La Rete Natura 2000 della Campania comprende invece 123 siti terrestri per una superficie complessiva di 373.031 ettari, pari al 27,3% del territorio regionale (media nazionale 19,4%).
Considerando la sola categoria "Boschi", la superficie ricadente nelle diverse tipologie di aree protette parchi nazionali e regionali, riserve statali e regionali, siti della Rete Natura 2000, è di 262.068 ettari, pari come detto in precedenza al 64,8% della superficie regionale dei boschi.
La superficie dei boschi ricadenti nei parchi nazionali e regionali e nelle riserve statali e regionali è di 194.369 ettari, corrispondente al 48,5% della superficie regionale complessiva dei boschi.
Di questi, 34.248 ettari ricadono in zona "A" di riserva integrale, i restanti 159.957 ettari in zone di parco o riserva diverse dalla zona A.
Dei 194.369 ettari di bosco che ricadono nel sistema delle aree protette regionali (parchi nazionali e regionali, riserve statali e regionali), 164.963 ettari (40,8% dei boschi regionali) ricadono anche in siti della Rete Natura 2000.
La superficie dei boschi che ricadono esclusivamente in siti della Rete Natura 2000 è invece di 67.713 ettari, pari al 16,8% della superficie regionale dei boschi.
La superficie complessiva di boschi che ricadono in Rete natura 2000 è di 232.676 ettari, pari al 57,6% della superficie regionale dei boschi.
Prescindendo per ora dagli altri tipi di vincoli e tutele che interessano le aree forestali della Campania ai sensi della legislazione vigente (vincolo paesaggistico, vincolo idrogeologico, vincoli derivanti dalla pianificazione di distretto idrografico, vincoli derivanti dai piani di gestione dei rischi ambientali) risulta evidente dai dati sinteticamente esposti come la definizione di una strategia di gestione forestale sostenibile a scala regionale non possa prescindere dal suo necessario coordinamento e integrazione con la disciplina prevista dai piani di gestione delle aree protette e dei siti facenti parte della Rete 2000.
In tale ottica di coordinamento e integrazione, la strategia di gestione forestale sostenibile che il piano forestale generale è chiamato a definire deve:

- Contribuire efficacemente al conseguimento degli obiettivi di tutela dell'ecosistema e del patrimonio naturalistico indicati dai piani e regolamenti di gestione delle aree protette e dei siti della Rete Natura 2000;
- Definire per le diverse partizioni forestali omogenee identificate alle diverse scale (generale, di coordinamento, aziendale), funzioni prevalenti (naturalistica, ricreativa, protettiva indiretta, protettiva diretta, produzione legnosa, produzione non legnosa) coerenti con il tipo e il livello di tutela di volta in volta previsto dagli strumenti di gestione delle aree protette e dei siti della Rete Natura 2000;
- Definire per le diverse partizioni forestali omogenee identificate alle diverse scale pratiche colturali compatibili con il tipo e il livello di tutela di volta in volta previsto dagli strumenti di gestione delle aree protette e dei siti della Rete Natura 2000.

Un punto fermo è costituito dai 34.248 ettari di boschi che ricadono in zona "A" di riserva integrale dei parchi e riserve nazionali e regionali.

fonte: http://burc.regione.campania.it

Risulta evidente come questa porzione del patrimonio forestale regionale debba necessariamente essere destinata alla funzione prioritaria di protezione ecologica e naturalistica. Essa è costituita in prevalenza da fustaie di faggio, subordinatamente di cerro, e da boschi misti di latifoglie, di proprietà pubblica.
Ci sono poi i 159.957 ettari di bosco situati in zone di parco o riserva diverse dalla zona A; di questi, 130.715 ettari ricadono anche in siti della Rete Natura 2000. A questi si aggiungono i boschi ricadenti esclusivamente in Rete Natura 2000, che coprono una ulteriore superficie di 67.713 ettari.
I boschi che ricadono in zona parco diversa dalla A, e in Rete Natura 2000 coprono una superficie di 227.670 ettari, che rappresentano il 56% della superficie regionale coperta da boschi. In queste aree, l'attuazione di pratiche colturali anche finalizzate alla produzione legnosa e non legnosa, costituisce in accordo con la Strategia Forestale Nazionale un aspetto rilevante della gestione attiva del bosco, necessaria al mantenimento in chiave multifunzionale degli equilibri ecologici, paesaggistici, socio-economici, culturali e alla prevenzione e mitigazione dei rischi ambientali.
Il punto centrale è il coordinamento del sistema di gestione forestale sostenibile con le diverse discipline di tutela vigenti. Nella situazione attuale. la conduzione in questi boschi delle ordinarie pratiche colturali è sottoposta, in ossequio alle disposizioni di legge vigenti, all'ottenimento dei necessari nulla osta e "sentito" da parte degli enti di gestione delle aree protette e dei siti Natura 2000.
La strada indicata dal Piano forestale regionale della Campania per contribuire congiuntamente a una più elevata efficacia ed efficienza del sistema complessivo di tutele, e alla riduzione dei costi amministrativi e dei tempi delle procedure autorizzative, è quello della definizione preliminare, a partire da criteri di gestione descritti nel presente Piano (vedi Cap. 8), di Disciplinari di gestione forestale sostenibile, per le diverse categorie forestali e tipi colturali, il cui recepimento da parte dei gestori forestali pubblici e privati sia in grado di assicurare la tutela e il rafforzamento della diversità biologica degli ecosistemi forestali della Campania, in coerenza con i Piani dei parchi, i Piani di gestione dei siti della Rete natura 2000 della Campania e il PAF (Prioritized Action Framework).
In un'ottica di necessaria cooperazione istituzionale, i Disciplinari di gestione forestale sostenibile, coerenti con la disciplina delle aree protette, con le misure di conservazione e le condizioni d'obbligo dei siti Natura 2000, potranno essere sottoposti a valutazione preliminare di compatibilità e di incidenza ambientale, anche ai sensi delle vigenti "Linee Guida Nazionali per la Valutazione di Incidenza", sempre assicurando le indispensabili valutazioni tecniche preliminari sito-specifiche. L'adesione volontaria ai Disciplinari di gestione forestale sostenibile in tal modo concepiti potrà contribuire in progresso di tempo:

- Alla valorizzazione delle attività forestali multifunzionali all'interno del sistema regionale di aree protette per il conseguimento degli obiettivi di tutela attraverso un approccio basato sulla gestione attiva delle risorse forestali;
- Alla certificazione ambientale delle produzioni legnose e non legnose provenienti dai boschi della Campania;
- A rendere più celeri gli iter autorizzativi.

La definizione dei Disciplinari di gestione forestale sostenibile sarà condotta da Regione Campania entro in collaborazione con gli Enti di ricerca, gli Enti di gestione delle aree protette,

fonte: http://burc.regione.campania.it

gli Ordini professionali, le associazioni professionali e d'impresa, garantendo la più ampia partecipazione pubblica.

B2. Gestione attiva dei boschi di protezione diretta.

Come descritto nel capitolo 9, il Piano Forestale Generale ha provveduto, in accordo con l'art. 8 comma 7 del Testo unico all'individuazione e riconoscimento, con un'apposita cartografia in scala 1:25.000, dei boschi di protezione diretta presenti nel territorio regionale.
Questi boschi rientrano nei "Boschi in situazione speciale" disciplinati dal Regolamento forestale regionale 2/2017 all'Art. 26 comma 1, lettera b).
Sia il Testo unico che il Regolamento forestale regionale prevedono che i boschi di protezione diretta siano in primo luogo individuati in sede di pianificazione regionale.

Linee guida di gestione dei boschi di protezione diretta

La gestione forestale sostenibile dei boschi di protezione diretta deve innanzitutto affrontare le conseguenze negative dovute all'assenza prolungata di cure gestionali:

1. Aumento della vulnerabilità biotica e delle patologie
L'invecchiamento e l'assenza di gestione rendono il soprassuolo più suscettibile agli attacchi parassitari e fungini, che contribuiscono al declino (d**eperimento da Cinipide Galligeno (*Dryocosmus kuriphilus,* Cancro Corticale (*Cryphonectria parasitica*), Mal dell'Inchiostro (*Phytophthora cambivora*)**.

2. Crisi fisiologica e morte della ceppaia
L'accumulo e l'invecchiamento della biomassa epigea compromettono la vitalità della ceppaia e la sua capacità di sopravvivere nel tempo. L'eccessiva densità di polloni a causa del mancato diradamento comporta uno stress Idrico e nutrizionale dovuto all'intensa competizione per acqua e nutrienti. In queste condizioni le ceppaie più deboli o colpite da malattie deperiscono e muoiono, riducendo la densità del popolamento boschivo.

3. Squilibrio biomeccanico, instabilità e vulnerabilità strutturale
L'aumento di biomassa epigea conseguente all'abbandono non è compensato da un corrispondente sviluppo dell'apparato radicale, specialmente dove i suoli sono sottili e poggiano su substrati rocciosi impenetrabili. La disproporzione tra la massa aerea (epigea) e l'apparato radicale (ipogeo), rende le ceppaie vulnerabili allo **sradicamento/ribaltamento** in caso di sovraccarico (neve) o piogge intense, anche in conseguenza delle **sollecitazioni dinamiche** che le chiome trasmettono alle radici e alla copertura pedologica in occasione di eventi meteorici intensi o estremi ("effetto leva").

Di grande importanza sono le conseguenze dell'abbandono sulla **coesione radicale**. Come evidenziato in precedenza, la prolungata sospensione delle operazioni colturali causa l'invecchiamento e il progressivo aumento della **biomassa epigea** (fusti e chiome), che si sviluppa in modo sproporzionato rispetto all'accrescimento radicale. In particolare su suoli sottili (come quelli piroclastici dei rilievi montani calcarei), l'apparato radicale, limitato dalla

fonte: http://burc.regione.campania.it

presenza di un substrato roccioso o di orizzonti comunque non abitabili dagli apparati radicali, non riesce a svilupparsi a sufficienza per ancorare il peso crescente della parte aerea.

D'altro canto, l'estensione e la vitalità degli apparati radicali declina nel tempo a causa del decadimento delle ceppaie per i motivi innanzi descritti (crisi fisiologica, vulnerabilità alle malattie e attacchi parassitari) Questa sproporzione riduce l'efficacia della rete radicale nel consolidare e tenere insieme la coltre superficiale del suolo.

L'insieme dei fenomeni descritti contribuisce alla drastica diminuzione della capacità protettiva del bosco nei confronti dei processi di dissesto e erosione idrica accelerata. Gli incavi prodotti dallo sradicamento di ceppaie vive o morte ("pit-mounds") costituiscono **vie preferenziali di infiltrazione dell'acqua**, destabilizzando ulteriormente lo strato superficiale del suolo. D'altro canto, l'assenza di pratiche gestionali conduce all'accumulo di necromassa e vegetazione secca, aumentando la **carica di combustibile** e il rischio di incendio.

La strategia di gestione dei boschi di protezione diretta identificati dal Piano forestale generale, in funzione di prevenzione e mitigazione del rischio, ha come obiettivo il superamento, con modalità di intervento diversificate e appropriate, delle condizioni di abbandono dei soprassuoli attraverso il ripristino della Gestione Forestale Sostenibile (GFS), o Gestione Attiva, riducendo gli aspetti di vulnerabilità e di instabilità, aumentando la resilienza ecologica delle cenosi forestali e la loro funzione di preventiva e protettiva.

La definizione delle specifiche strategie di intervento ad opera dei Piani forestali di indirizzo territoriale e dei Piani di gestione forestale, a partire dallo screening di scala regionale realizzato per la redazione del Piano forestale generale, sulla base dei necessari approfondimenti sito-specifici, seguirà il percorso valutativo sintetizzato in Fig. 9.3.

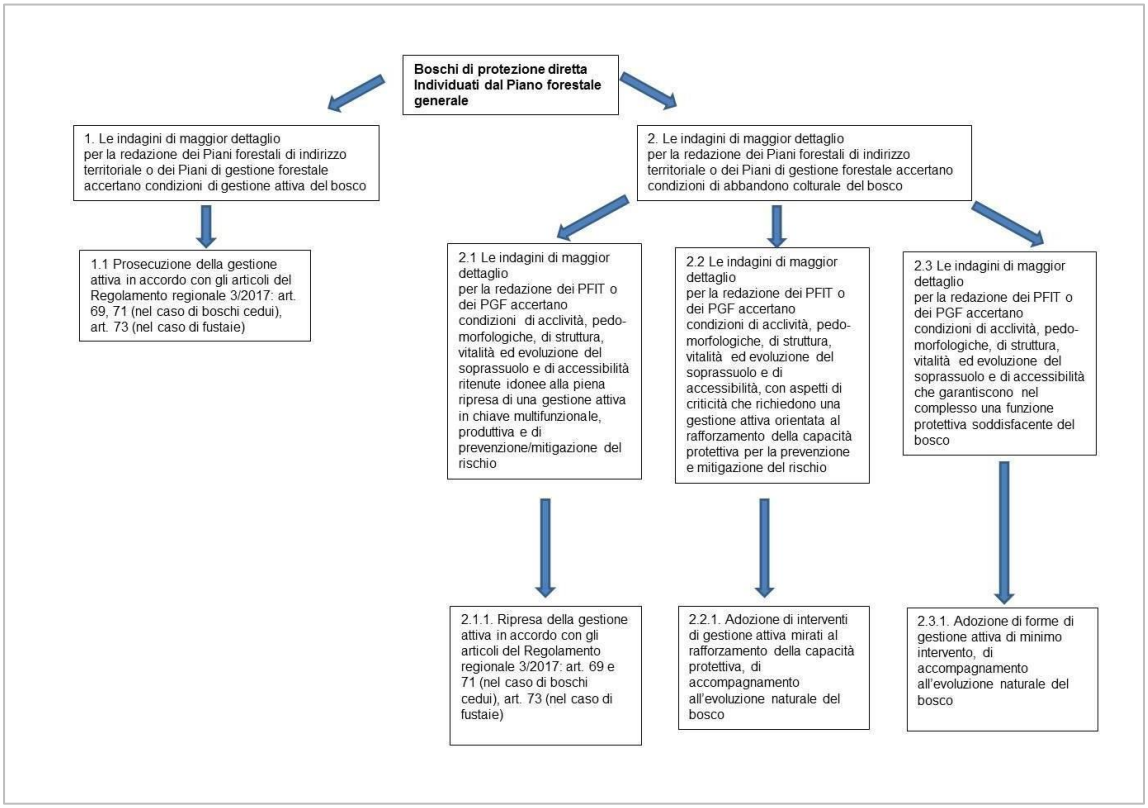

Fig. 9.3. Il percorso valutativo per la definizione delle strategie gestionali specifiche dei boschi di protezione diretta

fonte: http://burc.regione.campania.it

I punti essenziali della strategia gestionale di rafforzamento della capacità protettiva per la prevenzione e mitigazione del rischio, da adottarsi nella condizione 2.2.1., comprendono:

- la ceduazione controllata, con esecuzione di tagli e diradamenti selettivi su ceppaia per ridurre il carico statico e dinamico, e ristabilire l'equilibrio tra parte aerea e apparato radicale;
- tagli e diradamenti verranno condotti salvaguardando e preservando la rinnovazione di specie autoctone (macchia, latifoglie) allo scopo di favorire l'incremento di complessità strutturale, della resilienza e della capacità protettiva del soprassuolo;
- gestione della ramaglia in funzione protettiva. In accordo con l'art. 58 del Reg. 3/2017 la ramaglia di risulta (diametro inferiore a 2,5 cm) deve essere rilasciata in sito e distribuita in modo diffuso o in andane lungo le curve di livello, in funzione di protezione dei suoli e interruzione dei flussi idrici superficiali.
- Conduzione delle necessarie attività di monitoraggio e controllo periodico a fini preventivi delle condizioni del soprassuolo, dei fossi di drenaggio, dello stato della viabilità e dei fenomeni di dissesto, mettendo in opera tempestivamente gli interventi eventualmente necessari.

B3. Incrementare la capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica del territorio e tutela delle acque

In base all'Art. 12 della L.R. 11/1996, la Regione è responsabile degli interventi di rimboschimento a scopo protettivo o ad altro scopo di pubblico interesse, che rientrano nel quadro degli interventi di sistemazione idraulico- forestale e di difesa del suolo. Detti interventi riguardano, in particolare, i rimboschimenti di terreni nudi o cespugliati e la ricostituzione boschiva occorrente sia ai fini della difesa idrogeologica sia per la valorizzazione delle bellezze naturali e paesaggistiche. Fanno parte degli interventi di forestazione, oltre alle opere direttamente occorrenti per l'impianto di nuovi boschi e per la ricostituzione di quelli esistenti, tutte le altre opere ad esse strettamente connesse e consistenti nella costruzione e risanamento di strade forestali e di chiudende, nell'attuazione di impianti e misure antincendio ed ogni altra opera ritenuta necessaria per assicurare la riuscita degli interventi medesimi.
Tra gli interventi estensivi rientra anche il recupero delle aree soggette a intensi fenomeni di erosione di tipo calanchivo. In situazioni di abbandono colturale la sistemazione estensiva "in verde" dei calanchi, basata essenzialmente su indirizzi naturalistici, dovrebbe essere privilegiata rispetto alla capillare sistemazione idraulico-agraria un tempo operata direttamente dagli agricoltori. Tale sistemazione "in verde" si basa essenzialmente sulla realizzazione di briglie in terra, con la ricolonizzazione naturale aiutata dall'uomo delle risultanti colmate, corredata da semine e piantagioni di specie erbacee e arbustive nei compluvi minori e da affossature nelle aree precalanchive.
Gli interventi a carattere intensivo sono interventi per la correzione dei torrenti, interventi di drenaggio delle acque superficiali e subsuperficiali ed interventi di consolidamento dei versanti attraverso opere dotate di una propria autonomia strutturale. Rientrano in tale categoria anche le opere di consolidamento con tecniche di ingegneria naturalistica in legno, quali grate vive e palificate vive, i cui elementi strutturali inerti sono dimensionati al fine di garantire una funzione statica in un orizzonte temporale lungo (> 10 anni), prima della completa affermazione

fonte: http://burc.regione.campania.it

della vegetazione messa a dimora.Nell'ambito della presente azione è prevista la realizzazione e la manutenzione di opere sia carattere estensivo sia a carattere intensivo.
Per le opere a carattere estensivo, ad integrazione degli imboschimenti, si privilegeranno:

- gli interventi antierosivi lungo i versanti;
- gli interventi stabilizzanti, mediante messa a dimora di talee, piantagione di arbusti o di alberi, trapianto di zolle erbose, cespi e rizomi, viminate, gradonate, fascinate, cordonate.

B4. Prevenzione attiva dei rischi naturali o antropici, incendi, calamità naturali ed eventi catastrofici

Nel ventennio 2003-2023 si sono registrati in Campania **58.140 incendi di aree forestali** che hanno interessato una superficie di circa **115.383 ettari,** dei quali 63.938 ettari di aree boscate, 51.446 di aree non boscate. Alcune annate (2007, 2017) hanno fatto registrare picchi anomali della superficie forestale percorsa da incendi, ma il verificarsi di periodi critici, di tipo emergenziale, caratterizzati da una particolare recrudescenza del fenomeno, rappresenta purtroppo periodicamente **un'emergenza che riguarda l'intero bacino del Mediterraneo**, strettamente collegata con il **cambiamento climatico globale**.
In tale mutato contesto le azioni del Piano forestale regionale intendono contribuire al rafforzamento della necessaria **integrazione e cooperazione fra le diverse competenze in materia di prevenzione e lotta attiva agli incendi**.
Il Piano forestale generale con le sue diverse azioni promuove in modo trasversale interventi gestionali finalizzati ad accrescere la resistenza e la resilienza delle coperture forestali nei confronti degli incendi boschivi, nell'ottica di una prevenzione attiva del fenomeno. L'idea di base è che **la gestione attiva e capillare del patrimonio boschivo regionale rappresenti la necessaria precondizione per una effettiva messa in sicurezza dei territori**.
Le politiche forestali pubbliche finanziate dal FESR e attuate dagli Enti a ciò delegati dalla legge regionale 11/97 (comunità montane, province, città metropolitana di Napoli) con l'impiego degli operai forestali prevendono specificatamente interventi di messa in sicurezza e prevenzione attiva attraverso il miglioramento strutturale del bosco, il decespugliamento selettivo del sottobosco con l'asportazione della vegetazione instabile, deperiente o secca, la cura delle fasce forestali di contatto e interfaccia con la rete infrastrutturale e gli insediamenti antropici.
Tali attività sono programmate a cadenza triennale dal Documento esecutivo di programmazione forestale (DEPF), secondo quanto previsto dall'art. 5 bis della legge regionale 7 maggio 1996, n. 11 ("Modifiche ed integrazioni alla Legge Regionale 28 febbraio 1987, n. 13, concernente la delega in materia di economia, bonifica montana e difesa del suolo").
La programmazione degli interventi di lotta attiva sono programmati e attuati secondo quanto stabilito dall'Assessorato ai Lavori Pubblici e Protezione Civile Regione Campania *nel Piano regionale per la programmazione delle attività di previsione, prevenzione e lotta attiva contro gli incendi boschivi*. E' importante a questo riguardo sottolineare le importanti sinergie che si verificano tra le azioni forestali coordinate dalla Direzione generale politiche agricole, e il piano AIB regionale predisposto e attuato dalla Protezione Civile, tenuto conto che gli interventi di lotta attiva si basano in larga misura sull'impiego della macchina operativa stabilmente messa in campo dagli Enti delegati per la realizzazione degli interventi di gestione preventiva dei boschi:

fonte: http://burc.regione.campania.it

una macchina operativa che ha fornito nel 2023 al servizio AIB 875 unità di personale, organizzate in 85 squadre di intervento.
In particolare, alla luce anche della valutazione dei risultati conseguiti nel biennio 2022 -2023, allo scopo di assicurare il perseguimento degli obiettivi di messa in sicurezza dell'infrastruttura forestale regionale definiti nel presente documento, il DEPF per il triennio 2024-2026 ha definito l'obiettivo di attuare gli interventi colturali di prevenzione e messa in sicurezza su una superficie forestale stimata in 3.370 ettari annui, puntando su un ulteriore rafforzamento della capacità progettuale e operativa degli Enti delegati, realisticamente perseguibile anche grazie agli investimenti effettuati per l'adeguamento tecnologico (acquisto di macchine operatrici).
Queste politiche e interventi potranno anche essere finanziati con risorse a valere sulla programmazione 2021-2027 del POR FESR Campania, Obiettivo specifico RSO2.4. "Promuovere l'adattamento ai cambiamenti climatici, la prevenzione dei rischi di catastrofe e la resilienza, prendendo in considerazione approcci ecosistemici", e più specificatamente l'Azione 2.4.3. "Promuovere un'impostazione sistemica e precauzionale migliorando la resilienza attraverso interventi mirati a ridurre il livello di esposizione ai rischi connessi al clima".

C. Curare e gestire le risorse forestali della Campania

Un terzo gruppo di azioni del Piano forestale generale risponde all'obiettivo di gestire e valorizzare con strategie di intervento specifiche e appropriate, alcune tipologie forestali di particolare significato e valore ambientale, paesaggistico e storico-culturale, conservativo, protettivo. In particolare, a partire dalla Carta delle risorse forestali, il Piano forestale regionale pone l'attenzione sulle seguenti tipologie forestali:

C1. Curare i rimboschimenti storici della Campania

I rimboschimenti storici che lo Stato unitario ha impiantato in Campania grazie alle politiche pubbliche e agli interventi a finalità ambientale e sociale, attuate a più riprese nel corso del XX secolo, interessano a scala regionale, in accordo con le analisi cartografiche condotte per la formazione del presente piano, una superficie di circa 15.000 ettari. Si tratta di boschi per la maggior parte a conifere, che rappresentano una componente identitaria di importanti paesaggi costieri, vulcanici, collinari e montani della regione, e che necessitano dopo decenni di sostanziale abbandono di un programma specifico di cura, gestione, valorizzazione.
Le condizioni ecologico-strutturali di questo importante patrimonio riflettono la sostanziale carenza di una cura e manutenzione attiva pluridecennale: eccessiva densità, sfilatura, rinnovazione stentata, accumulo abonorme di lettiera e necromassa, tutti aspetti che comportano una elevata vulnerabilità di questi boschi nei confronti delle avversità, attacchi parassitari, incendi. Si pensi a tale riguardo ai rilevanti danni provocati dalla cocciniglia tartaruga Toumeyella parvicornis e al ruolo negativo che le ingenti quantità di melata prodotti dal parassita hanno avuto nell'alimentare gli incendi del 2017 delle pinete del Vesuvio.
La definizione di un programma regionale di cura e manutenzione straordinaria del patrimonio storico, ambientale e paesaggistico costituito dai rimboschimenti novecenteschi rappresenta una priorità nell'ambito delle politiche forestali pubbliche che il presente piano è chiamato a definire.
Gli interventi di diradamento/sfollamento, di asportazione della vegetazione instabile,

fonte: http://burc.regione.campania.it

deperiente o secca, la rimozione della necromassa in eccesso, la cura delle fasce forestali di contatto e interfaccia con la rete infrastrutturale e gli insediamenti antropici rivestono carattere di urgenza, anche allo scopo di favorire, in una prospettiva necessariamente evolutiva e non cristallizzata dei rimboschimenti storici, le dinamiche di rinnovazione delle conifere e delle specie autoctone.

C2. Valorizzare in chiave multifunzionale le foreste urbane e periurbane.

Le analisi cartografiche condotte per la formazione del Piano forestale regionale evidenziano come siano presenti in Campania circa 32.000 ettari di foreste urbane e boschi di prossimità, localizzate cioè a contatto diretto con le aree urbanizzate, o addirittura al loro interno, o comunque entro una fascia di 500 m dal confine urbano.
Una porzione significativa delle foreste urbane della Campania, 4.200 ettari circa, ricade nel sistema nei parchi urbani di interesse regionale istituiti in attuazione della Legge regionale n. 17 del 7-10-2003. Uno dei maggiori esempi riguarda proprio il capoluogo partenopeo, con le selve castanili del Parco Metropolitano delle Colline di Napoli
La foresta urbana di prossimità è una infrastruttura ecologica che abbiamo imparato ad apprezzare negli anni di pandemia. Le foreste urbane contribuiscono a rendere più sostenibili e abitabili le nostre città, migliorano la qualità della vita e la salute delle persone. La loro cura e gestione appropriata risponde agli obiettivi di massimizzare i benefici legati ai molteplici servizi ecosistemici che esse producono, a beneficio della qualità urbana complessiva, in termini di mitigazione dell'effetto "isola di calore", di protezione del suolo, di biodiversità, di disponibilità per i cittadini di spazi verdi di prossimità, ad elevata naturalità, per la ricreazione, la salute, la vita all'aria aperta.
La gestione forestale sostenibile o gestione attiva dei boschi urbani è un'esigenza inderogabile anche per garantire una adeguata prevenzione dei rischi ambientali che connotano le aree di contatto tra sistemi urbani e forestali, con specifico riferimento agli incendi di interfaccia, e alle dinamiche di rischio idrogeologico.
Si tratta di criticità che hanno assunto in alcuni momenti, in special modo nell'area metropolitana regionale Caserta-Napoli-Salerno, carattere di emergenza ambientale vera e propria, si pensi alle frane di Quindici e Sarno del 1998, a quelle di Casamicciola del 2022, ai vasti incendi che nel 2017 hanno interessato le pinete del Vesuvio. In tutti questi casi, la crisi di importanti sistemi forestali al contatto con la città genera dinamiche di rischio che finiscono con l'interessare porzioni non limitate del tessuto urbano e della popolazione che lo abita.
Nell'ambito delle analisi cartografiche per la redazione del Piano forestale generale si è proceduto all'identificazione cartografica di dettaglio delle foreste urbane e periurbane, propedeutica alla definizione di linee guida di gestione appropriate, finalizzate a massimizzarne il ruolo ecologico e a controllare il rischio ambientale.
Le linee guida di gestione delle foreste urbane si basano sull'assunto che esse necessitino di una adeguata pianificazione gestionale, comprensiva anche degli aspetti legati alle funzioni e attività molteplici che in esse si svolgono, di natura culturale, sociale, ricreativa, salutistica e di fitness; come anche di una efficiente, efficace e continua opera di cura attiva, in misura e con un'attenzione non inferiore a quelle delle foreste localizzate in territori a bassa urbanizzazione, o non urbanizzati.
Garantire l'integrità degli ecosistemi forestali integrati nel sistema urbano non è semplice: in

fonte: http://burc.regione.campania.it

molti casi è possibile osservare come i boschi urbani siano diffusamente interessati da fenomeni di abbandono gestionale, incuria, scarsa manutenzione, a causa di un intreccio di concause che attengono alla difficoltà attuale per le amministrazioni di farsi pienamente carico della loro gestione attiva, come anche di controllare, prevenire e reprimere i comportamenti individuali e collettivi impropri, dannosi, pericolosi, per la scarsità di risorse finanziarie ma anche tecnico-professionali e gestionali.
Alla luce delle considerazioni svolte, appare evidente come la valorizzazione delle foreste urbane della Campania richieda tra l'altro la capacità delle pubbliche amministrazioni di beneficiare in maniera integrata delle risorse di volta in volta disponibili, tra le quali si ricorda a titolo di esempio l'intervento SRG07 del CSR Campania 2023-2027, che finanzia azioni di cooperazione per lo sviluppo rurale, locale e smart villages e per la sostenibilità ambientale finalizzate a:

- favorire l'aggregazione fra aziende agricole e/o forestali, enti e attori locali impegnati nella gestione delle risorse ambientali a livello locale, aggregazioni tra i proprietari e conduttori di terreni forestali;
- realizzare progetti collettivi a finalità ambientale (ad esempio, volti a mitigare gli effetti dei cambiamenti climatici, utilizzare in maniera efficiente le risorse idriche, preservare la biodiversità agraria e naturalistica);
- predisporre/aggiornare i Piani di gestione delle superfici forestali pubbliche/private e la loro integrazione con altri strumenti di pianificazione territoriale.

Le foreste urbane e di prossimità della Campania sono anche ambiti elettivi per la realizzazione di interventi programmati di cura e gestione attiva da attuarsi in collaborazione con gli Enti delegati nel quadro delle politiche pubbliche di forestazione di cui al Documento esecutivo di programmazione forestale redatto a cadenza triennale in attuazione della dall'art. 5 bis della legge regionale 7 maggio 1996, n. 11, finanziati dal FESR Campania 2021-2027, Azione 2.4.3 ("Promuovere un'impostazione sistemica e precauzionale migliorando la resilienza attraverso interventi mirati a ridurre il livello di esposizione ai rischi connessi al clima"), avente come obiettivo, tra gli altri, la realizzazione, gestione e potenziamento delle infrastrutture verdi e dei servizi ecosistemici offerti dalla Rete Natura 2000 funzionali alla riduzione dei rischi connessi ai cambiamenti climatici.

C3. Curare e proteggere i boschi planiziali della Campania

Le pianure della Campania sono le aree più popolate e urbanizzate del territorio regionale: pur rappresentando solo il 25% circa del territorio complessivo, esse ospitano i tre quarti delle aree edificate e il 60% della popolazione regionale.
Come detto in precedenza, le aree forestali della Campania si estendono su una superficie di 491.259 ettari, pari al 35,9 del territorio regionale. Nei sistemi di pianura, le aree forestali hanno un'estensione complessiva di 22.381 ettari, pari al 6,43% della superficie complessiva delle pianure. Per tutti questi motivi, la cura e la conservazione dei boschi planiziali è un obiettivo prioritario del Piano forestale generale.
Nel mosaico di usi urbani e agricoli prevalenti, ad elevata pressione antropica, che contraddistingue le aree di pianura del territorio regionale, le aree forestali planiziali ancora presenti rappresentano, oltre che importanti aree di compensazione ecologica, persistenze di rilevantissimo valore testimoniale della copertura di boschi planiziali che 2.500 anni fa copriva

fonte: http://burc.regione.campania.it

a perdita d'occhio la pianura.
In accordo con la carta forestale elaborata nell'ambito della formazione del presente piano, i boschi di pianura della Campania sono costituiti da:

- 13.952 ettari di boschi planiziali, costituiti in prevalenza da boschi di querce caducifoglie;
- 6.903 ettari di boschi igrofili ripariali a Salice e Pioppo, nelle aree spondali e di pertinenza fluviale dei corsi d'acqua che solcano la pianura;
- 1.526 di boschi delle pianure costiere, in corrispondenza delle aree dunari e interdunari dei litorali bassi delle pianure del Garigliano, Volturno, Sele. Queste aree forestali sono costituite da boschi a Pino domestico, foreste di leccio, formazioni alte a macchia mediterranea.

La riduzione nell'ultimo decennio della superficie dei boschi igrofili e ripariali della Campania (-6,2%) è uno dei dati in controtendenza dell'Inventario forestale 2015. La contrazione di questi habitat di particolare significato ecologico e paesaggistico è evidentemente legata alla pressione d'uso che interessa le aree ripariali, ma anche localmente a interventi pubblici giustificati da esigenze di governo e sicurezza idraulica.
Ai fini della cura e tutela boschi planiziali ripariali presenti nel territorio regionale, così come identificati nella cartografia di piano, il Piano forestale regionale promuove azioni specifiche di concertazione istituzionale tra le diverse competenze in materia forestale, di gestione e tutela della risorsa idrica, di prevenzione del rischio idraulico, ai fini della definizione disciplinari di gestione sostenibile dei boschi ripariali in grado di assicurarne le funzioni ecologiche e di sicurezza idraulica.

C4. Tutela e valorizzazione dei castagneti da frutto della Campania

In attuazione della L.R. 10/2017 la Giunta regionale ha approvato il Regolamento regionale n. 11 del 12 novembre 2018, n. 11 di tutela e gestione sostenibile dei castagneti da frutto in attualità di coltura, con l'obiettivo di conciliare la funzione produttiva con la molteplicità dei servizi ecosistemici che questo particolare tipo di coltivazione legnosa permanente è in grado di assicurare.
Oltre alle disposizioni del Regolamento 11/2018 finalizzate alla preservazione degli aspetti di multifunzionalità dei castagneti da frutto, la gestione di questi ultimi deve anche tener conto delle norme paesaggistiche vigenti, che riconoscono il valore paesaggistico rilevante dei castagneti da frutto in Campania, come componente identitaria di importanti paesaggi regionali (Complesso vulcanico di Roccamonfina, Monti Lattari, Monti Picentini, Monti Vesole e Soprano), tutelandone la struttura, l'estensione, le sistemazioni tradizionali.
Gli interventi di cura, gestione sostenibile e tutela dei castagneti localizzati nelle aree di pregio paesaggistico del territorio regionale sono oggetto di uno specifico regime di aiuto previsto dalla Misura SRA 25 del CSR Campania 2023-2027 ("Tutela delle colture arboree a valenza ambientale e paesaggistica").
Ai sensi del Regolamento regionale n. 3/2017, i castagneti da frutto non soggetti a regolare pulizia ed abbandonati da più di 15 anni sono considerati boschi e, in tal caso, l'intervento di ripristino deve essere oggetto di un Piano di Gestione Forestale, sulla base di quanto previsto dal Testo unico in materia di risorse forestali art. 5 comma 2 lett. a).

fonte: http://burc.regione.campania.it

Per una stima dei castagneti da frutto in stato di abbandono può essere utile il confronto tra il dato relativo alla superficie produttiva censita da ISTAT, che ragionevolmente meglio approssima quello dei castagneti da frutto in attualità di coltura, e quello dell'Inventario forestale nazionale 2015. In questo modo è possibile dunque stimare la superficie dei castagneti da frutto in stato di abbandono in circa 8.500 ettari.
Il Piano forestale regionale prevede la definizione di opportune linee guida per la gestione dei castagneti da frutto in stato di abbandono allo scopo di guidarne l'evoluzione verso assetti ecologico-strutturali a maggiore stabilità, biodiversità, resistenza/resilienza ai diversi tipi di avversità e rischi ambientali.

C5. Tutelare i boschi vetusti e gli alberi monumentali.

La Legge 14 gennaio 2013, n. 10 "Norme per lo sviluppo degli spazi verdi urbani" pubblicata sulla Gazzetta Ufficiale n.27 del 1-2-2013, prevede all'articolo 7 ("Disposizioni per la tutela e la salvaguardia degli alberi monumentali, dei filari e delle alberate di particolare pregio paesaggistico, naturalistico, monumentale, storico e culturale") la definizione di "albero monumentale" con riferimento a tre tipologie:

- L'albero ad alto fusto isolato o facente parte di formazioni boschive naturali o artificiali ovunque ubicate ovvero l'albero secolare tipico, che possono essere considerati come rari esempi di maestosità e longevità, per età o dimensioni, o di particolare pregio naturalistico, per rarità botanica e peculiarità della specie, ovvero che recano un preciso riferimento ad eventi o memorie rilevanti dal punto di vista storico, culturale, documentario o delle tradizioni locali;
- I filari e le alberate di particolare pregio paesaggistico, monumentale, storico e culturale, ivi compresi quelli inseriti nei centri urbani;
- gli alberi ad alto fusto inseriti in particolari complessi architettonici di importanza storica e culturale, quali ad esempio ville, monasteri, chiese, orti botanici e residenze storiche private.

Con il Decreto interministeriale del 23 ottobre 2014 sono stati stabiliti i principi, i criteri, e le modalità operative per censire gli alberi monumentali d'Italia.
L'obiettivo primario è stato garantire un regime di tutela e dettare forme di gestione che siano rispettose degli alberi e dei sistemi omogenei di alberi (gruppo, filare), i quali, per tali peculiarità e pregevolezza, essenzialmente devono essere considerati alla stessa stregua dei monumenti.
La legge stabilisce che siano i Comuni ad effettuare il censimento degli esemplari monumentali ricadenti sul proprio territorio, trasmettendolo quindi alla Regione compente per territorio, alla quale spetta il compito di redigere l'Elenco Regionale e, a sua volta, di trasmettere tale elenco e i suoi aggiornamenti al Ministero per le Politiche Agricole, Alimentari e Forestali (MIPAAF), attuale Ministero Agricoltura, Sovranità Alimentare e Forestale (MASAF).
La Regione Campania – Direzione Generale per le Politiche Agricole, Alimentari e Forestali, al fine di avvalersi di un criterio generale univoco per la gestione delle segnalazioni da parte dei Comuni, ha istituito, con i decreti direttoriali n.523 del 24/11/2015 e successivo n.21 del 06/06/2016, una Commissione tecnica regionale sugli alberi monumentali, deputata alla istruttoria degli elenchi comunali trasmessi dai diversi Comuni, riportanti le proposte di

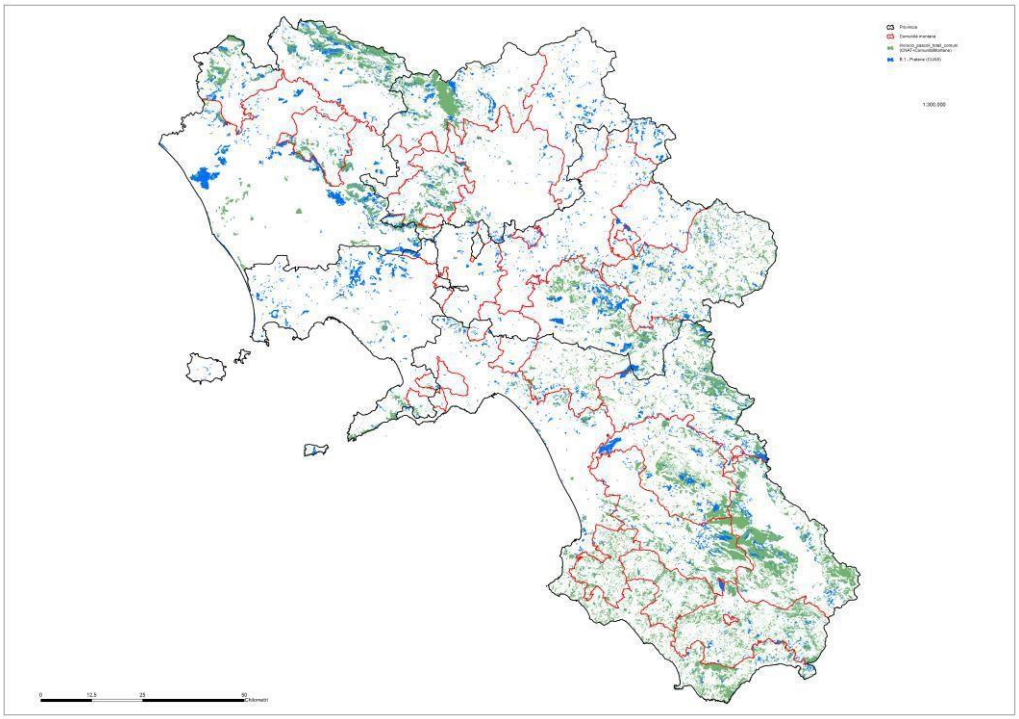
fonte: http://burc.regione.campania.it

attribuzione del carattere di monumentalità. Il lavoro svolto dalla Commissione, dal 2015 ad oggi, ha permesso l'iscrizione nell'Elenco Regionale di 308 esemplari di alberi e sistemi omogenei di alberi.
Nel corso degli ultimi 4 anni, utilizzando fondi ministeriali, si è quindi proceduto:

- ad acquisire strumenti informatici e attrezzature utili al censimento degli esemplari arborei;
- alla pubblicazione di due volumi sugli alberi monumentali della Regione Campania;
- alla elaborazione e stampa delle targhe informative per ciascun albero o filare di alberi e del materiale divulgativo (stampati roller-up e manifesti di dimensioni diverse) da utilizzare in convegni e manifestazioni sugli alberi monumentali.

Le azioni messe in campo dalla Direzione Generale per le Politiche Agricole, Alimentari e Forestali da attuare nel triennio 2024/2026 riguardano l'effettuazione delle opportune valutazioni della stabilità di ciascun albero monumentale censito sul territorio regionale, con il ricorso a risorse per il triennio 2024/2026, ammontanti a circa 300.000,00 €, provenienti dal "Fondo per le Foreste italiane" MASAF – DIFOR 04.
Il Piano forestale generale prevede inoltre un'azione specifica per l'identificazione delle aree definibili come boschi vetusti e la definizione di linee guida per la loro gestione e tutela. I criteri di identificazione dei boschi vetusti definiti dal TUFF sono i seguenti:

- la presenza di specie autoctone spontanee coerenti con il contesto biogeografico;
- una biodiversità caratteristica conseguente all'assenza di disturbi da almeno 60 anni;
- la presenza di stadi seriali legati alla rigenerazione e alla senescenza spontanee.



L'azione prevista ha anche l'obiettivo di contribuire alla creazione di una Rete regionale dei boschi vetusti, facente parte della Rete nazionale dei boschi vetusti, di cui all'articolo 7, comma 13 bis) del Testo unico in materia di foreste e filiere forestali e del relativo decreto attuativo

C6. Promuovere la gestione sostenibile dei prati e pascoli permanenti.

La legge forestale regionale 11/96 e il Regolamento forestale regionale n. 3/2017 definiscono gli obiettivi e le norme di tutela e gestione delle risorse pascolative presenti nel territorio regionale in relazione al ruolo ambientale, ecologico e socio-economico fondamentale svolto dagli ecosistemi a prateria come elemento cardine di biodiversità nei paesaggi montani e collinari della Campania.
La superficie a praterie identificata nella Carta regionale delle risorse forestali è di circa 108.000 ettari. Per inciso, la superficie delle aree a prateria è diminuita del 70% rispetto al 1960, a causa dei processi contrastanti di abbandono e forestazione spontanea da un lato, di dissodamento e messa a coltura dall'altro.
Il Piano forestale regionale, in attuazione della legislazione regionale vigente, prevede un'azione specifica di censimento dettagliato degli ecosistemi di prateria in regime sodivo (prati permanenti e pascoli) unitamente alla definizione di linee guida di gestione sostenibile e miglioramento dei pascoli della Campania.
Il punto di partenza per la progettazione dell'azione specifica è costituito dai risultati dello studio sull'utilizzo dei pascoli demaniali delle Comunità Montane della Campania commissionato dalla Direzione generale agricoltura, riassunti nella tabella seguente. Tale studio

fonte: http://burc.regione.campania.it

evidenzia come una porzione significativa del patrimonio pascolivo regionale sia interessato da una condizione gestione di “non-equilibrio”, dovuta localmente a una pressione d’uso eccessiva rispetto al carico ottimale, con problemi di degradazione del cotico e di erosione dei suoli; ovvero, all’opposto, da condizioni di sotto-utilizzo che favoriscono invece la ricolonizzazione arbustiva e arborea.
E’ interessante notare come le due condizione di sovra-utilizzo e sotto-utilizzo, possano convivere all’interno di un medesimo territorio, evidenziando una carenza di pianificazione della risorsa a scala locale che il Piano forestale intende superare attraverso la definizione, come detto in precedenza, di linee guida di corretta gestione delle diverse risorse pascolative, e la promozione di sistemi locali di uso sostenibile della risorsa, che tengano conto della produttività e della capacità di carico delle diverse risorse pascolative, come anche delle misure di conservazione e delle condizioni d’obbligo definite per i siti facenti parte della rete Natura 2000 della Campania.

Distribuzione geografica delle praterie (pascoli, prati-pascoli, prati permanenti) in Campania. In rosso, i limiti amministrativi delle Comunità montane

Il punto cruciale è rappresentato dalla redazione, dall’applicazione e dal rispetto, territorio per territorio, di piani di gestione sostenibile della risorsa pascolo, nell’ambito della pianificazione forestale prevista dalla legge.
Interventi di recupero e sistemazione dei pascoli montani di proprietà pubblica a fini di protezione idrogeologica possono essere realizzati nell’ambito progetti da attuarsi in collaborazione con gli Enti delegati nel quadro delle politiche pubbliche di forestazione di cui al Documento esecutivo di programmazione forestale redatto a cadenza triennale in attuazione della dall'art. 5 bis della legge regionale 7 maggio 1996, n. 11.

fonte: http://burc.regione.campania.it

C7. Promuovere e valorizzare i sistemi agroforestali

In accordo con la definizione data dalla FAO, "agroforestazione" è il termine collettivo comprendente i sistemi e le tecnologie di uso del territorio caratterizzati dalla compresenza nella medesima unità colturale, con forme di disposizione spaziale e temporale caratteristiche dei diversi paesaggi, di piante legnose perenni di interesse forestale - alberi, arbusti - e di colture agricole.
L'agroforestazione può anche essere definita come un sistema dinamico di gestione delle risorse naturali basato sull'ecologia che, attraverso l'integrazione di alberi nelle aziende agricole e nei paesaggi agricoli o attraverso la produzione di prodotti agricoli nelle foreste, diversifica e sostiene la produzione di maggiori benefici economici, sociali e ambientali per gli utilizzatori del territorio. L'agroforestazione è praticata tradizionalmente a scala mondiale, in una vasta gamma di paesaggi, con forme che variano notevolmente da paesaggio a paesaggio, a seconda dei bisogni e delle capacità umane e delle condizioni ambientali, culturali e ambientali prevalenti. Lo schema spaziale dei sistemi agroforestali può essere differenziato, in funzione della distribuzione delle componenti forestali (alberi, arbusti) all'interno della matrice erbacea, agricola o pastorale:

- in maniera diffusa, come esemplari distinti a disposizione cadenzata;
- in forma di chiazze o patches (boschetti aziendali)
- come elementi lineari (siepi, filari, fasce boscate).

Il dato rilevante è che molti dei paesaggi agrari tradizionali della Campania ad elevato valore ecologico, paesaggistico e conservativo, hanno una struttura che soddisfa i requisiti della definizione della FAO data in precedenza. A questo proposito, la Carta delle risorse forestali individua, oltre che le diverse tipologie di boschi e praterie, anche le aree interessate dalla presenza di mosaici agroforestali i cui elementi agricoli, pascolativi e arborei non sono distintamente cartografabili alla scala di semidettaglio 1:25.000. La superficie dei mosaici agrofoerstali è di circa 22.000 ettari. Si tratta di mosaici di alto valore ecologico e paesaggistico, che rappresentano inoltre habitat faunistici di rilevante interesse. La tutela e la gestione sostenibile dei mosaici agroforestali è una delle azioni del Piano forestale regionale, con il ricorso alle misure della PAC 2023-2027 finalizzate all'incremento, alla cura e tutela attiva degli elementi diffusi di biodiversità dei paesaggi agricoli regionali (nuclei boschivi, siepi, filari, alberi isolati). In particolare, l'intervento SRD04 ("Investimenti non produttivi agricoli con finalità ambientale"), con l'Azione 1 "Investimenti non produttivi finalizzati ad arrestare e invertire la perdita di biodiversità e a preservare il paesaggio rurale" prevede un sostegno ad investimenti che perseguono le finalità specifiche di contribuire a rendere il sistema agricolo più resiliente ai cambiamenti climatici, incrementando la complessità specifica ed ecosistemica delle aree coltivate attraverso:

- la realizzazione di formazioni arbustive e arboree a tutela della biodiversità: realizzazione di infrastrutture ecologiche quali, a titolo esemplificativo, boschetti, sistemi macchia radura;

fonte: http://burc.regione.campania.it

- interventi per la connettività ecologica della fauna selvatica mediante creazione o ripristino di corridoi ecologici e creazione di "pietre di guado" (stepping stones) mediante realizzazione di fasce arborate, di filari arborati, di boschetti, di siepi arborate e la piantagione di singoli soggetti arborei per favorire la biopermeabilità delle aree critiche;
- ripristino o impianto della vegetazione in alveo (macrofite) e sulle sponde (fasce riparie) nel reticolo idrico minore quali il ripristino e/o l'impianto della vegetazione acquatica e ripariale o altri interventi di riqualificazione ecologica;
- realizzazione fasce tampone, siepi e filari arborei e/o arbustivi: con funzione di riduzione dell'inquinamento nelle acque superficiali naturali ed artificiali.

L'intervento SRD05 ("Impianti forestazione/imboschimento e sistemi agroforestali su terreni agricoli", con l'Azione 1) ("Impianto di imboschimento naturaliforme su superfici agricole") finanzia l'impianto naturaliforme con finalità multiple (ambientali, paesaggistiche, socio-ricreative nonché produttive- legno, legname e tartufi), realizzato utilizzando specie forestali arboree e arbustive autoctone di origine certificata, anche micorizzate, adatte alle condizioni ambientali locali, al fine di creare nuove superfici forestali permanenti. Pertanto, le superfici agricole su cui viene realizzato l'imboschimento non sono reversibili al termine del periodo di permanenza, rientrano nella definizione di bosco di cui alle norme regionali di settore e su queste superfici si applicano le disposizioni regolamentari regionali del settore forestale previste per i boschi.

D. Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare

Il quarto gruppo di azioni del Piano forestale generale risponde all'obiettivo di promuovere e rafforzare in un'ottica di bioeconomia le filiere forestali in Campania in accordo con gli indirizzi della Strategia forestale nazionale.

D1. Rafforzare la capacità operativa delle imprese boschive. Promuovere la qualificazione degli operatori forestali.

Obiettivo prioritario del Piano forestale generale è il rafforzamento della rete di aziende boschive che opera nel territorio regionale.
L'Albo regionale delle imprese forestali della Campania è disciplinato dal Regolamento regionale forestale n. 3/ 2017, in attuazione dell'art. 7 del D.Lgs. 227/2001 (sostituito dal D.lgs. 34 del 3 aprile 2018).
Al momento della redazione del presente documento risultano iscritte all'Albo 325 imprese forestali, 126 con sede nella provincia di Salerno, 38 in quella di Napoli, 40 in quella di Benevento, 61 in quella di Avellino, 50 in quella di Caserta.
L'iscrizione all'Albo avviene su base volontaria, e viene fatta in prevalenza da imprese che intendono avere rapporti con la Pubblica Amministrazione. Le informazioni desumibili dall'Albo non hanno pertanto una rappresentatività esaustiva dell'universo imprenditoriale regionale, ma costituiscono comunque una prima importante fonte informativa sulle imprese boschive più dinamiche, professionali e qualificate a operare in bosco, oltre a consentire

fonte: http://burc.regione.campania.it

efficaci azioni di controllo e vigilanza anche in relazione agli adempimenti comunitari in materia di commercializzazione dei prodotti legnosi (Timber regulation).
La strategia di rafforzamento della rete di imprese boschive della Campania si basa su tre capisaldi:

1. Promuovere gli investimenti aziendali per l'innovazione, l'efficienza, la sostenibilità ambientale e il controllo dei costi di produzione;
2. Promuovere l'aggregazione e la cooperazione, anche mediante gli accordi di foresta;
3. Promuovere la formazione degli addetti, rafforzare il sistema della conoscenza.

Il Piano forestale generale promuove le azioni di consulenza e di formazione dei consulenti, degli imprenditori e degli operatori forestali, in forma singola o aggregata. Lo strumento principale è costituito dagli interventi della nuova PAC 2023-2027 dedicati al sistema della conoscenza, l'AKIS, con le tipologie di intervento SRH01 ("Erogazione di Servizi di Consulenza", SRH02 ("Formazione dei consulenti"), e SRH03 ("Formazione degli imprenditori agricoli").

D2. Promuovere la certificazione delle foreste del territorio regionale e la tracciabilità lungo tutta la filiera, dal tronco al mobile finito

La certificazione forestale è uno strumento volontario che si basa su due distinti processi, connessi tra loro:

- la certificazione di gestione forestale sostenibile
- la certificazione di catena di custodia.

La certificazione di gestione sostenibile delle foreste è la procedura che assicura che le foreste siano gestite nel rispetto degli standard ambientali, sociali ed economici definiti in sede regionale, nazionale, europea, globale.
La certificazione di catena di custodia è invece il sistema procedurale per il tracciamento dei prodotti forestali dalle foreste gestite in maniera sostenibile, sino al prodotto finale, mediante il monitoraggio della catena di approvvigionamento da parte di audit indipendenti.
La certificazione forestale è un importante fattore di competitività e riconoscibilità, nonché di creazione di nuovo valore, e costituisce quindi un prerequisito essenziale per accrescere e rafforzare la presenza sui mercati locali, nazionali, internazionali delle produzioni forestali della Campania.
Il Piano forestale generale promuove la diffusione di sistemi di tracciabilità lungo tutta la filiera, dal tronco al mobile finito e la certificazione delle foreste del territorio regionale gestite secondo criteri di sostenibilità ambientale, sociale ed economica sulla base di un set definito di standard di buona gestione forestale.
Gli obiettivi sono quelli di allineare le produzioni regionali agli standard largamente adottati a scala internazionale in modo da accrescerne la riconoscibilità e competitività; affermare uno strumento di valorizzazione delle foreste della Campania e dei suoi prodotti; fornire un riferimento chiaro e sintetico per proprietari boschivi e per le imprese forestali nella gestione del bosco con tecniche in grado di garantire l'efficienza economica e il rispetto degli ecosistemi e dei paesaggi regionali; fornire al consumatore e alla collettività la garanzia che il prodotto o il

fonte: http://burc.regione.campania.it

servizio offerto proviene da foreste gestite secondo principi di sostenibilità riconosciuti a livello internazionale.
La certificazione forestale è una certificazione ambientale di tipo volontario, consistente nell'attestazione, da parte di un organismo terzo indipendente, del rispetto di standard predefiniti di gestione forestale sostenibile (GFS), nell'utilizzo di una determinata area forestale, con riferimento ai diversi aspetti ambientali, sociali ed economici.
Essa coinvolge in maniera diretta l'intera filiera legno, dai proprietari forestali, alle diverse aziende che producono o che lavorano prodotti commerciali di origine forestale (legname da costruzione, pannelli, pellet, paste da cellulosa, prodotti secondari del bosco come il miele, i funghi, la cera, le essenze, le resine, i frutti di bosco, il sughero).
Se per quanto riguarda l'utilizzo del bosco sono presi in considerazione i principi di Gestione Forestale Sostenibile, per le fasi di lavorazione dei prodotti forestali, fino al prodotto finito, la certificazione forestale prende in considerazione la Catena di Custodia (Chain of Custody - CoC), con l'obiettivo di attestare che l'azienda sia effettivamente dotata di un sistema di tracciamento dei prodotti di origine forestale lungo tutti i passaggi del processo produttivo: dalla foresta certificata fino alla segheria o alla fabbrica, e da lì, fino ai consumatori. L'esito positivo dell'analisi della GFS e della CoC, conduce infine alla possibilità per il produttore di apporre un marchio per rendere visibile l'impegno delle imprese agli occhi del consumatore.
La certificazione forestale è un processo che rafforza la reputazione del prodotto, della foresta che lo ha generato, del territorio nel quale quella foresta è situata, e può essere considerata da questo punto di vista sia una componente del valore di mercato del bene, sia un'aspetto di multifunzionalità, legato alla produzione associata di benei e servizi ambientali con natura di bene pubblico.
La certificazione forestale consente una valorizzazione delle produzioni, legata al rispetto dei principi di sostenibilità ecologica, dei criteri etici e degli impegni di responsabilità sociale preliminarmente definiti e giuridicamente riconosciuti. Essa rappresenta quindi un'opportunità per i proprietari boschivi pubblici e privati e per le imprese forestali della Campania che il Piano forestale generale intendere promuovere, favorire, diffondere.
Gli schemi di certificazione forestale affermati a livello internazionale come Forest Stewardship Council (FSC) e il Programme for the Endorsement of Forest Certification (PEFC) hanno la funzione di attestare la conformità della gestione forestale ai principi e criteri di GFS. Questi schemi seguono il ciclo di vita dei prodotti garantendo che questi ultimi provengano da foreste gestite in modo ecologicamente appropriato.
Possono aderire ai sistemi di certificazione i proprietari forestali, le aziende che producono o che lavorano prodotti commerciali di origine forestale (legname da costruzione, pannelli, pellet, paste da cellulosa, e prodotti di tipo non legnoso come miele, funghi, cera, resine, frutti di bosco, sughero).
Il PEFC è un'organizzazione non governativa, no-profit indipendente, acronimo di Programme for the Endorsement of Forest Certification (Programma per il Riconoscimento di Schemi di Certificazione Forestale). Esso è il principale schema di gestione forestale in Europa, nato nel 1999 sulla scia delle Conferenze Ministeriali per la Protezione delle Foreste in Europa (Helsinki 1993, Lisbona 1998). E' stato fondato da un gruppo di stakeholders, tra cui associazioni ambientaliste, industrie del legno e della carta e proprietari forestali, con l'intento di definire un processo di valutazione e di mantenimento della certificazione che fosse alla portata delle grandi come delle piccole realtà produttive, pertanto idoneo ad essere applicato a contesti forestali con strutture proprietarie, gestionali e sociali differenziate.

fonte: http://burc.regione.campania.it

Lo schema di certificazione PECF è il più diffuso in Italia. Aderiscono al PECF amministrazioni pubbliche ai diversi livelli. Attualmente nessuna foresta della Campania è dotata di certificazione forestale PEFC.
Obiettivo prioritario del Piano forestale regionale è quello di diffondere, promuovere e facilitare l'adozione di schemi di certificazione forestale ad una parte significativa delle foreste regionali, pubbliche e private.
Le azioni messe in campo sono le seguenti:

- Adesione della Campania allo schema di certificazione PECF. Con l'adesione si intende favorire la massima cooperazione della Regione Campania con le altre pubbliche amministrazioni che a scala nazionale hanno già aderito a questo sistema di certificazione. L'adesione comporta anche l'impegno dell'Amministrazione regionale a dotare entro un biennio le foreste demaniale della Campania di strumenti di gestione aggiornati e di dotarle di certificazione forestale;
- Sostegno e promozione dell'adesione volontaria di proprietari forestali pubblici e privati, ditte boschive e imprese di trasformazione, a schemi di certificazione forestale riconosciuti, mediante gli aiuti previsti dal CSR Campania 2023-2027 mediante l'intervento SRD15 "Investimenti produttivi forestali", che finanzia le spese per l'adeguamento ai sistemi di tracciabilità dei prodotti della selvicoltura, compresi i materiali forestali di moltiplicazione e di certificazione della qualità dei combustibili legnosi basata sulla norma ISO 17225 (solo in abbinamento all'acquisto di nuovi macchinari ed attrezzature.

D3. Riconoscere e remunerare i servizi di interesse pubblico, ambientale e sociale forniti dalle aree forestali (foreste e pascoli) e mantenuti ed accresciuti dalla GFS

Le foreste e i suoli forestali sono il più importante "pozzo di assorbimento" di anidride carbonica a scala regionale. Secondo l'Inventario forestale nazionale 2015 i boschi della Campania hanno una capacità di fissazione valutata in 792.168 tonnellate/anno di carbonio organico, grazie all'accrescimento della biomassa epigea. Il rafforzamento di questa funzione strategica, attraverso una gestione accorta e lungimirante, può contribuire in misura determinante al conseguimento, da parte del sistema economico-ambientale regionale nel suo complesso, degli impegni e degli obiettivi definiti dalle convenzioni internazionali e dalle direttive comunitarie in materia di cambiamento climatico globale.
Il percorso che il Piano forestale regionale intende promuovere è quello definito dalla Strategia Forestale Nazionale, basato sulla capacità di portare a sintesi una pluralità di azioni e interventi già trattati in altre parti del Piano:

- definizione di schemi volontari di pagamento per l'offerta addizionale di Servizi ecosistemici che permettano lo sviluppo di mercati volontari locali dei servizi generati dalla GFS quali la fissazione di carbonio, il miglioramento della qualità del suolo, delle risorse idriche, l'aumento del valore ambientale e socioculturale dei boschi.
- Promozione e organizzazione di nuovi mercati, accordi, soluzioni contrattuali e altri strumenti volontari per il riconoscimento di forme di remunerazione diretta o indiretta dei prodotti e dei servizi generati dalla GFS.

fonte: http://burc.regione.campania.it

- Promozione della certificazione forestale e tracciabilità dei prodotti legnosi e non legnosi e dei Servizi ecosistemici.
- Promozione di forme innovative di gestione associata dei boschi in relazione alle esigenze di erogazione di prodotti e servizi per lo sviluppo di filiere forestali sostenibili.
- Introduzione di azioni economiche e fiscali a supporto dei gestori e degli operatori del settore che forniscono Servizi ecosistemici senza mercato (compensazioni monetarie, agevolazioni fiscali e defiscalizzazioni delle pratiche selvicolturali per il miglioramento dell'ecosistema forestale, per interventi di manutenzione idraulico-forestale, di prevenzione dei danni alle foreste, di recupero dei boschi danneggiati da eventi estremi ecc.).
- Promozione dell'utilizzo di strumenti di responsabilità ambientale e sociale da parte dei proprietari e delle imprese nella gestione delle risorse forestali, anche per attirare verso le attività di GFS investimenti etici di operatori esterni al settore.
- Riconoscimento dei Servizi ecosistemici nella conservazione e tutela della biodiversità, degli habitat e degli ecotoni generati dalla GFS attraverso sistemi di monitoraggio e valutazione univoci e integrati, per ottenere valori concreti e utili a migliorare la pianificazione e gestione forestale.
- Riconoscimento e promozione dei servizi di interesse pubblico di investimenti forestali nell'ambito delle Nature-sased solutions quali il fitorisanamento dei suoli contaminati, la depurazione delle acque, la protezione delle opere civili, la messa in sicurezza delle discariche, ecc.
- Promozione del ruolo delle aree protette e in particolare dei Parchi Nazionali e Regionali, anche per lo sviluppo di strumenti innovativi di gestione quali i mercati volontari dei Servizi ecosistemici e la loro certificazione, con le connesse attività di comunicazione e di marketing territoriale.

Il Piano forestale Generale intende promuovere l'accesso delle foreste della Campania al mercato dei crediti di carbonio mediante le seguenti azioni:

- Adesione della Campania allo schema di certificazione PECF dei Servizi Ecosistemici;
- Avviamento preliminare delle procedure per la certificazione dei Servizi Ecosistemici di stoccaggio, assorbimento e non emissione di carbonio prodotti dalle 10 foreste demaniali regionali, aventi una superficie complessiva di circa 5.000 ettari;
- Sostegno e promozione dell'adesione volontaria di proprietari forestali pubblici e privati, ditte boschive e imprese di trasformazione, a schemi di certificazione forestale riconosciuti, mediante gli aiuti previsti dal CSR Campania 2023-2027 mediante l'intervento SRD15 "Investimenti produttivi forestali".

D4. Promozione delle produzioni forestali non legnose in una prospettiva di filiera

Le produzioni forestali non legnose riguardano, per la Campania: castagne, nocciole, ghiande, funghi, pinoli con guscio, oltre a tartufi e frutti di bosco in misura nettamente inferiore.
L'analisi complessiva della filiera castanicola campana evidenzia una situazione di non completo sfruttamento delle potenzialità di questo sistema produttivo in termini di creazione e

fonte: http://burc.regione.campania.it

distribuzione di valore. A soffrire di questa situazione è soprattutto la fase agricola che non appare in grado di valorizzare pienamente le risorse impiegate nella produzione.
La scarsità di forme associative (organizzazioni di produttori, cooperative di raccolta e lavorazione, centrali ortofrutticole, ecc.), in presenza di una notevole scarsità di manodopera e di proprietà castanicole – in buona parte di piccole dimensioni – condotte da operatori non pienamente impegnati nell'attività agricola, spesso non consente di raccogliere i frutti tempestivamente e viene avviato al mercato un prodotto che non presenta un valore merceologico ottimale; questo risulta meno attraente per i consumatori finali e quindi il prezzo che possono spuntare i produttori risulta basso. Inoltre, per quanto riguarda i produttori che non sono in grado di curare il prodotto, incombe l'esigenza di cedere al più presto l'intera produzione che, una volta raccolta e non trattata, può, nel giro di pochi giorni, deteriorarsi e non trovare più una remunerativa collocazione sul mercato impedendo quindi la ricerca delle migliori condizioni di vendita.
Rispetto allo scarso interesse per la differenziazione si osserva che i quantitativi di castagne commercializzate come IGP, dove questo è possibile, sono assai inferiori a quelli che sarebbero possibili data la base produttiva. Le indagini di campo mostrerebbero che questo non dipende tanto da una difficoltà che il prodotto differenziato avrebbe a penetrare il mercato, quanto da uno scarso interesse degli operatori commerciali di maggiore peso per la valorizzazione del prodotto a denominazione.
Il peso economico della castanicoltura è rilevante nelle aree interessate e ancora di più potrebbe diventarlo, grazie ad una maggiore valorizzazione delle
castagne già nella fase agricola e grazie alle possibilità di manipolazione e trasformazione anche nelle singole aziende agricole, per la produzione di specialità la cui vendita, in una prospettiva di crescita del turismo rurale, può consentire un significativo incremento dei redditi aziendali. Oltre a ciò la qualificazione dell'offerta delle castagne potrà contribuire ad arricchire il paniere delle produzioni tipiche regionali aumentandone quindi la forza e la capacità competitiva.
In sintesi, le misure previste per l'attuazione di questa azione sono:

- interventi di miglioramento dei castagneti da frutto;
- incentivazione delle forme di gestione associata delle imprese forestali;
- servizi di assistenza tecnica alla proprietà privata;
- incentivazione alla diffusione dei marchi D.O.P. e I.G.P.
- gestione sostenibile dei noccioleti in zone sottoposte a vincolo idrogeologico.

D5. Adesione al Cluster legno-foresta italiano e costituzione del Cluster legno foresta della Campania

L'Adesione al Cluster legno-foresta italiano e la costituzione del Cluster legno foresta della Campania costituiscono i passaggi obbligati per l'attivazione, anche in Campania, di un coordinamento strutturato tra il mondo forestale e quello della prima e seconda trasformazione, con l'obiettivo di superare la frammentazione della filiera produttiva foresta-legno, sostenere iniziative di networking e di cooperazione, promuovere politiche di filiera, incentivare politiche di comunicazione per la promozione del settore, aumentare la trasparenza del mercato e, in definitiva, di incrementare la produttività del patrimonio boschivo regionale nelle aree interne e supportare i processi di innovazione tecnologica e di internazionalizzazione.

fonte: http://burc.regione.campania.it

Il punto di partenza è l'analisi del contesto attuale, caratterizzata anche in Campania dalla estrema frammentazione delle filiere produttive legate al settore foresta-legno.
Per superare tale situazione, la Strategia Forestale Nazionale indica un percorso preciso, attraverso la costituzione di cluster e la creazione di legami strutturati tra imprese, istituzioni territoriali ed enti di ricerca, per sostenere il trasferimento tecnologico al fine di mettere a sistema e promuovere le realtà di aggregazione le reti di impresa già presenti in ambito locale, regionale e sovra-regionale in materia di valorizzazione dei prodotti legnosi e delle multifunzionalità legate agli ecosistemi forestali, per creare sinergie nei processi di innovazione tecnologica, nelle attività di marketing, nell'acquisizione di finanziamenti esterni, nelle attività di normazione e certificazione nelle funzioni di rappresentanza, in particolare in sede europea e internazionale, nonché di sviluppo di nuovi modelli formativi in grado di rispondere ai mutati scenari legati alla gestione delle foreste e del legno.
Alla luce delle considerazioni svolte in precedenza, il Piano forestale generale prevede:

- l'adesione immediata di Regione Campania al cluster legno foresta italiano
-
- l'azione prioritaria di promozione della costituzione entro l'anno 2024 del Cluster legno foresta della regione Campania, con l'obiettivo di promuovere la nascita di una comunità di soggetti fortemente motivati e competenti con una forte volontà e motivazione, nonché una comunanza di linguaggi che renderà più agevole l'interazione tra le diverse competenze e attività coinvolte.

E. Vivere le foreste della Campania

Il quinto gruppo di azioni del Piano forestale generale risponde all'obiettivo di promuovere e valorizzare i servizi socioculturali delle foreste in Campania, in sinergia con il turismo sostenibile, con riferimento sia ai grandi paesaggi storici dei vulcani, della costa e delle isole del Golfo, sia in quelli da scoprire a promuovere della collina e della montagna interna, in particolare puntando su tre azioni chiave.

E1. Valorizzare le 10 foreste regionali come "laboratori verdi multifunzionali" e centri di diffusione permanente della GFS in Campania

Le 10 foreste demaniali della Campania: un patrimonio forestale pubblico di eccezionale valore che si estende su 5.400 ettari, e che grazie alla sua articolazione e distribuzione geografica comprende campioni eccellenti dell'intero spettro di biodiversità forestale regionale, dalle foreste mediterraneee costiere a quelle temperate della fascia alto-montana.

Il Piano forestale generale della Campania considera le 10 foreste demaniali alla stregua di 10 distinti laboratori territoriali nei quali:

- I cittadini della Campania possono scoprire, approfondire, apprendere, vivere tutta la gamma di opportunità, valori, esperienze che il bosco produce per il benessere integrale della persona, delle comunità e e delle economie locali;
-

fonte: http://burc.regione.campania.it

- Si definiscono e mettono a punto i modelli di gestione sostenibile delle foreste della Campania, in accordo con la Strategia forestale nazionale e con il Piano forestale generale, da diffondere e promuovere a scala regionale.

Le 10 foreste demaniali sono le aree forestali dove si dimostra che gli approcci innovativi, integrati, multifunzionali di gestione forestale che il presente Piano propone e promuove sono concretamente realizzabili. Sono i laboratori di ricerca, sperimentazione e divulgazione; luoghi elettivi di apprendimento e produzione di valori sociali e culturali e di benessere psicofisico; ma anche nuclei di attivazione delle economie locali.
Il modello multifunzionale di gestione forestale sostenibile delle 10 foreste regionali rientra nel concetto di "foresta modello": modelli di comunità forestali che si fondano su un partenariato più ampio possibile per diffondere la gestione forestale sostenibile e la cura dei paesaggi forestali. L'adesione alle foreste modello è volontaria, e si pone l'obiettivo di conciliare i possibili conflitti tra i diversi interessi legati alluso delle foreste, attraverso il confronto paritario, all'interno di processi trasparenti, con scelte condivise e rappresentative di tutti gli interessi in gioco, per un territorio forestale definito. La Rete Internazionale delle Foreste Modello vede in questo momento 60 Foreste Modello costituite in 30 Paesi di tutto il mondo. L'Italia, con la Regione Toscana, si è candidata a mantenere la gestione del Segretariato Mediterraneo delle Foreste Modello. IN Italia le Foreste Modello sono 2: la foresta della Valle dell'Aterno, in Abruzzo, e la foresta delle Montagne Fiorentine, in Toscana.
Come previsto dall'azione D4 del presente piano, le 10 foreste demaniali nel loro complesso sono anche i laboratori verdi che Regione Campania intende certificare per i servizi ecosistemici di assorbimento e stoccaggio di carbonio: un'azienda forestale regionale formalmente deputata alla produzione di crediti di carbonio certificati che costituiscono una posta attiva nel bilancio ambientale regionale.
Il Piano forestale generale prevede pertanto:

- che entro il 2025 tutte e le 10 foreste demaniali della Campania siano dotate di un Piano di gestione forestale ai sensi della legislazione regionale vigente;
- che entro il 2026 sia avviata per le 10 foreste demaniali la procedura di certificazione forestale, contestualmente a quella per il riconoscimento dei servizi ecosistemici da esse prodotti con specifico riferimento all'assorbimento e stoccaggio del carbonio;
- che entro il 2025 sia avviata la procedura di iscrizione delle 10 foreste demaniali alla Rete internazionale delle Foreste Modello.

E2. Valorizzazione multifunzionale della viabilità forestale e silvo-pastorale e della sentieristica in Campania

All'attualità non si dispone di una cartografia adeguata della viabilità forestale della Campania. L'azione propedeutica promossa dal Piano forestale generale è quindi quella di promuovere la realizzazione di una Banca dati georeferenziata della viabilità forestale e silvo-pastorale principale e secondaria da aggiornare periodicamente, in accordo con la classificazione e le specifiche tecniche indicate nel decreto attuativo n. 563734 /2021 e della relativa Tabella A allegata, anche allo scopo di contribuire alla realizzazione dell'archivio informatico a scala nazionale delle informazioni inerenti la rete della viabilità forestale e silvo-pastorale principale e

fonte: http://burc.regione.campania.it

secondaria.
Ai fini della Gestione Forestale Sostenibile e della prevenzione dei rischi naturali e antropici, il Piano forestale regionale promuove inoltre interventi programmati di cura e messa in sicurezza della viabilità forestale e silvo-pastorale esistente, unitamente alle opere ad essa associate, nel rispetto dei criteri descritti nel capitolo 11, anche mediante la definizione di progetti da attuarsi in collaborazione con gli Enti delegati nel quadro delle politiche pubbliche di forestazione di cui al Documento esecutivo di programmazione forestale redatto a cadenza triennale in attuazione della dall'art. 5 bis della legge regionale 7 maggio 1996, n. 1.
Particolare attenzione sarà rivolta alla manutenzione della viabilità forestale nelle aree forestali identificate dal presente piano come "boschi di protezione diretta". In queste aree i tagli stradali rappresentano importanti discontinuità della copertura pedologica, in corrispondenza delle quali si localizzano tipicamente le nicchie di distacco delle colate piroclastiche. D'altro canto, la manutenzione accurata e il mantenimento in efficienza della viabilità in queste aree critiche riveste valore strategico per le funzioni molteplici legate:

- all'attuazione delle pratiche colturali;
- al monitoraggio delle aree;
- alla realizzazione degli interventi ingegneristici di protezione attiva e passiva;
- alla manutenzione delle opere di cui al punto precedente;
- alle attività escursionistiche e ricreative.

In chiave di promozione multifunzionale del patrimonio forestale regionale, il Piano forestale generale si propone inoltre di dare piena attuazione alla legge regionale n. 14/2020 "Norme per la valorizzazione della sentieristica e della viabilità minore" che interessa una rete che innerva il territorio forestale, montano e rurale della regione, per una lunghezza complessiva di circa 5.000 km. In particolare, il Piano forestale regionale promuove le attività previste nel Regolamento attuativo della legge, finalizzate tra l'altro:

- alla definizione della Rete Escursionistica Campana (REC), ovvero la rete primaria dei sentieri così come individuati e classificati dalla Consulta Regionale prevista all'articolo 9 della medesima legge, facente parte della Rete escursionistica italiana (REI) del CAI, e della Rete europea della European Ramblers Association;
- alla realizzazione del Catasto regionale del patrimonio escursionistico;
- alla pianificazione degli interventi di manutenzione, gestione e valorizzazione della rete sentieristica regionale.

F. Conoscere le foreste della Campania

Il sesto gruppo di azioni del Piano forestale generale risponde all'obiettivo di favorire la conoscenza ai diversi livelli del patrimonio forestale regionale attraverso tre azioni chiave finalizzate alla realizzazione della nuova carta forestale regionale; all'implementazione dello Sportello per le attività forestali; allo sviluppo di azioni di informazione per il rafforzamento di una cultura forestale diffusa.

F1. Promuovere un programma integrato di monitoraggio e cartografia delle risorse forestali della Campania;

fonte: http://burc.regione.campania.it

L’azione di promozione di un programma regionale integrato di monitoraggio, cartografia e inventariazione delle risorse forestali della Campania sarà condotto in stretto coordinamento con il progetto SINFOR, promosso dal Ministero delle politiche alimentari in collaborazione con il CREA. Il progetto SINFOR è attuativo della Strategia Forestale Nazionale, si compone di due filoni operativi finalizzati alla redazione della Carta forestale nazionale, alla quale sarà associato Database foreste. I due strumenti integrati permetteranno attraverso la raccolta e consultazione di dati e informazioni puntuali e specifiche in materia forestale di poter disporre di informazioni e conoscenze aggiornate e affidabili sulle foreste sul settore forestale e sulle filiere produttive, ambientali e socio-culturali italiane.
La Regione Campania intende contribuire alla costruzione di SINFOR mediante la redazione della Carta forestale Regionale e del Data Base regionale attraverso un programma integrato di attività con la collaborazione di Enti di ricerca pubblici e privati comprendente:

- Attività di rilevamento campionario di campo delle tipologie forestali e dei tipi colturali;
- Attività di interpretazione diacronica di immagini ad alta risoluzione da satellite e da sensore aviotrasportato attraverso lo sviluppo di appositi algoritmi di machine learning;
- Valorizzazione dei dati derivati dai Piani di gestione forestale approvati e da altre basi informative già in possesso dell’Amministrazione.
- Lo sviluppo di un modello digitale delle foreste campane in grado di consentire la definizione di un bilancio quantitativo dinamico dei servizi ecosistemici prodotti dall’infrastruttura forestale regionale.

L’attività di programmazione forestale che l’Amministrazione regionale è chiamata a svolgere deve basarsi su conoscenze cartografiche aggiornate e dettagliate del patrimonio forestale regionale. La presente azione del Piano forestale regionale prevede pertanto la realizzazione della Carta Forestale della Campania costituisce un documento conoscitivo di carattere generale con finalità di:

- supportare indagini, studi e ricerche sul patrimonio forestale regionale;
- supportare l’esercizio delle funzioni di indirizzo politico nel settore forestale e ambientale;
- costituire la base conoscitiva per la pianificazione e programmazione forestale regionale;
- rappresentare uno strumento di supporto allo svolgimento delle funzioni tecniche e di vigilanza per le materie forestali e ambientali (in particolare il vincolo paesaggistico, il vincolo idrogeologico, il monitoraggio dei boschi ai fini fitosanitari, l’applicazione della normativa in materia di incendi boschivi, ecc.);
- costituire uno strumento dinamico da aggiornare sulla base di modifiche di origine antropica e naturale;
- acquisire informazione sull’utilizzo dei dati iperspettrali nel settore forestale in considerazione della presenza di un sensore iperspettrale sui satelliti della costellazione italiana IRIDE in orbita partire dal 2025, anche per il miglioramento dei servizi geospaziali offerti dalla piattaforma IRIDE .

La redazione della Carta Forestale della Campania; la superficie di indagine è pari a 1.367.095 ettari, corrispondente all’intero territorio regionale, di cui 403.927 ettari di superficie boscata

fonte: http://burc.regione.campania.it

stimata secondo i dati del più recente Inventario forestale nazionale e dei serbatori forestali di carbonio (INFC 2015).
La Carta sarà redatta alla scala nominale di 1:10.000, completa di un Geodatabase dei dati forestali, da realizzare da realizzare mediante l'integrazione di dati acquisiti da piattaforme aeree e satellitari e da rilievi in campo, a partire dal prototipo di cartografia forestale della regione Campania realizzato dal CREA nell'ambito del progetto SINFOR, con riferimento temporale nominale al 2020.
La presente azione del Piano forestale generale della Campania prevede che la realizzazione della Carta Forestale della Campania, finanziata con risorse del Fondo per lo sviluppo delle montagne italiane (FOSMIT), sia completata entro 30 mesi dall'entrata in vigore del Piano.

F2. Implementazione dello Sportello unico regionale per le attività forestali (SUAF)

Secondo quanto previsto dal comma 9 del Regolamento regionale n. 3/2017, lo Sportello Unico delle Attività Forestali (S.U.A.F.) costituisce il punto unificato di accesso ai servizi informativi forestali, fornisce chiarimenti tecnico-amministrativi in materia forestale, distribuisce la modulistica, riceve la documentazione riferita ai procedimenti normati dal presente regolamento, fornisce indicazioni in merito allo stato ed all'esito delle istanze presentate.
L'implementazione della base dati unificata del SUAF richiederà lo svolgimento delle seguenti attività:

- progettazione e realizzazione della piattaforma unificata, a partire da quella già realizzata dall'Amministrazione regionale per la gestione di patentini e autorizzazioni per la raccolta di Funghi e Tartufi;
- integrazione degli sportelli locali all'interno della piattaforma unificata;
- digitalizzazione della documentazione pregressa, a partire da quella relativa a PFG e tagli boschivi, in formato pdf editabile per la documentazione amministrativa, e in formato shp per le cartografie;
- acquisizione sistematica della documentazione in formato digitale relativa ai nuovi procedimenti autorizzativi e di controllo.

La presente azione del Piano forestale generale sarà finanziata con risorse FOSMIT e dovrà condurre entro 18 mesi dall'approvazione del Piano all'entrata in funzione della implementazione della piattaforma unitaria del SUAF Campania.

F3. Promozione di iniziative e programmi divulgativi per rafforzare la consapevolezza pubblica dell'importanza e il ruolo ecologico del patrimonio forestale della Campania;

Il Piano forestale generale promuove a tutti i livelli la formazione di una conoscenza multidisciplinare e di una responsabilità globale nella tutela delle foreste, anche attraverso la ricerca scientifica multidisciplinare, l'assistenza tecnica, la formazione professionale e la promozione dei prodotti forestali e di pratiche, produzioni e consumi sostenibili.
Il patrimonio forestale della regione Campania per le sue dimensioni territoriali, ambientali, produttive e socioculturali ha un ruolo strategico e trasversale per il benessere degli abitanti, ora

fonte: http://burc.regione.campania.it

e in futuro. Tutelare e garantire il ruolo delle foreste come bene di interesse collettivo è una responsabilità non solo politica ma anche un impegno da promuovere sul piano culturale, a partire dalle istituzioni scolastiche. Vi è la necessità di riportare la cultura del bosco nelle scelte di programmazione e nella vita civile del paese mediante azioni di informazione e sensibilizzazione che coinvolgano enti pubblici, imprese, associazioni non profit e privati cittadini.
Il Piano forestale generale promuove la corretta informazione, realizzando azioni specifiche di comunicazione, divulgazione e sensibilizzazione pubblica che consentano di far apprezzare la ricchezza e valore del patrimonio forestale regionale, al fine di accrescere la consapevolezza e responsabilità della società sul ruolo della foresta come fonte di Servizi ecosistemici essenziali per la qualità della vita, sulle pratiche e obiettivi della Gestione forestale sostenibile e della selvicoltura come strumento di mitigazione dei cambiamenti climatici e dei pericoli naturali.
Il Piano forestale generale della Campania sostiene pertanto iniziative di informazione e sensibilizzazione pubblica, sulla responsabilità della società nei confronti delle foreste come bene di interesse collettivo e strumento di tutela e sviluppo, facilitando azioni promosse anche da attori della società civile e da parte delle comunità locali. Il piano promuove, attraverso il finanziamento di progetti specifici di comunicazione e campagne di divulgazione per le diverse tipologie di utenti, l'informazione su:

- ricchezza e valore economico, sociale, ambientale e paesaggistico del patrimonio forestale della regione Campania;
- responsabilizzazione collettiva per la tutela attiva delle foreste e della biodiversità;
- ruolo svolto dalla Gestione Forestale Sostenibile e della selvicoltura;
- importanza e dignità del lavoro degli addetti alle operazioni di taglio, allestimento ed esbosco del legname;
- necessità del mantenimento della stabilità delle foreste, vulnerabilità degli ecosistemi forestali e ruolo delle foreste rispetto ai cambiamenti climatici;
- valore e ruolo del legno quale materia prima rinnovabile nei diversi possibili impieghi, necessità del riciclo e riutilizzo delle biomasse forestali;
- rischi connessi ai consumi di legname e altri prodotti la cui origine possa essere associata a deforestazione e degrado delle foreste.

G. Le nuove foreste della Campania

G1 Valorizzare e potenziare i vivai forestali; estendere la superficie dei boschi da seme; valorizzare le risorse genetiche; potenziare la produzione di materiale di propagazione forestale

Il settimo gruppo di azioni del Piano forestale generale risponde all'obiettivo di supportare i **nuovi interventi di forestazione** in accordo con il New Green Deal Europeo e con il PNRR; di **valorizzare e potenziare i vivai forestali**; **estendere la superficie dei boschi da seme**; **valorizzare le risorse genetiche**; potenziare la **produzione di materiale di propagazione forestale**; la promozione di **tecniche forestali per il recupero dei siti degradati** in Campania.
Per soddisfare le diverse finalità di impiego nel settore forestale, sul territorio campano sono presenti 12 vivai forestali demaniali regionali, dislocati in pedo ambienti diversi del territorio

fonte: http://burc.regione.campania.it

regionale. In tali cantieri si effettua la produzione di piante necessarie ai rimboschimenti, rinsaldamenti, ricostituzioni, rinfoltimenti dei boschi, arredo verde e paesaggistico, nonché all'attuazione di interventi di ingegneria naturalistica.
A seguito del ruolo fondamentale che il settore forestale è chiamato a svolgere per la sostenibilità e la circolarità dei processi di produzione e consumo, in coerenza con i documenti del New Green Deal europeo e i regolamenti della nuova PAC, basati su un concetto di condizionalità rafforzata, con maggiori impegni per garantire la gestione sostenibile e la tutela delle risorse di base: il suolo, l'acqua, l'aria, la biodiversità, il paesaggio, vi è una forte richiesta di materiale forestale certificato.
Per far fronte a tale richiesta, la Regione Campania - in cooperazione leale e costruttiva con i Ministeri di riferimento (MIPAAF, MITE, MIBACT), è impegnata seriamente in questo percorso, nel contesto definito dal New Green Deal e da Next Generation EU, che comprende sia il nuovo ciclo di programmazione delle risorse europee, sia il PNRR che è lo strumento centrale delle politiche di sostenibilità per i prossimi anni - con D.G.R. n. 505 del 23/11/2021 ha:

a) dato mandato di elaborare ed attuare un progetto volto a incrementare lo sviluppo delle foreste urbane e peri-urbane per il miglioramento della qualità ambientale (qualità dell'aria, clima locale, funzioni ricreative) e del benessere degli abitanti, che si inserisca pienamente nella strategia del Piano per la Transizione Ecologica e che costituisca, allo stesso tempo, la base conoscitiva e programmatica, ma anche il motore operativo, di molte delle azioni declinate nel PNRR;
b) previsto che per l'attuazione operativa di detto progetto di forestazione vengano utilizzati gli operai dei cantieri forestali regionali e gli operai idraulico forestali degli Enti delegati, da adibire preminentemente alla piantumazione e, all'occorrenza, alla cura ed alla manutenzione delle foreste urbane e dei boschi di prossimità dei centri urbani, nonché, in conformità alla disciplina vigente, il personale della società del polo ambientale regionale, i lavoratori dei Consorzi di Bacino, il volontariato regionale e la platea di disoccupati di lunga durata, già formalmente censita sulla base di provvedimenti dei competenti Uffici regionali;
c) previsto, altresì, la razionalizzazione e ottimizzazione delle strutture vivaistiche regionali presenti sul territorio, allo scopo di incrementare e migliorare la qualità delle piante di specie autoctone e certificate, per consentire la produzione di circa tre milioni di piante entro l'anno 2030, accentrando le produzioni in strutture attrezzate e di maggiori dimensioni, avvalendosi di maestranze adeguate e più qualificate;
e) demandato la D.G. per le Politiche Agricole, Alimentari e Forestali, a predisporre un nuovo modello organizzativo dei vivai forestali demaniali, comprensivo delle risorse finanziarie necessarie per gli adeguamenti e il potenziamento della forza lavoro, da sottoporre alle competenti determinazioni della Giunta Regionale.

G2 Promozione di tecniche forestali per il recupero dei siti degradati in Campania

I risultati degli importanti progetti di ricerca condotti in Campania nel quadro dell'emergenza "Terra dei fuochi" evidenziano il ruolo preminente delle tecniche sostenibili di recupero dei suoli potenzialmente contaminati basate sul fitorisanamento con l'impiego di essenze forestali.

fonte: http://burc.regione.campania.it

Queste tecniche consentono a seconda dei casi la bonifica e/o la messa in sicurezza dei suoli potenzialmente contaminati con costi e in tempi contenuti, consentendo la conservazione della risorsa ecosistemica essenziale: il suolo.
I progetti di recupero attuati negli ultimi anni con simili approcci in Campania (Podere di S. Giuseppiello, Giugliano; Area Ecobat, Marcianise) hanno ne hanno pienamente dimostrato la validità sotto il profilo giuridico-procedimentale, tecnico-scientifico, economico, sociale e culturale.
Per tali motivi il Piano forestale regionale promuove gli interventi di recupero dei siti degradati in Campania mediante bonifica ecosostenibile e/o messa in sicurezza permanente con il ricorso alle tecniche di fitorisanamento con l'impiego di essenze forestali, secondo il protocollo operativo messo a punto dal progetto LIFE11 ENV/IT/000275 ECOREMED, in accordo con il decreto ministeriale 1 marzo 2019, n. 46 relativo agli interventi di bonifica, di ripristino ambientale e di messa in sicurezza, d'emergenza, operativa e permanente, delle aree destinate alla produzione agricola e all'allevamento, ai sensi dell'articolo 241 del decreto legislativo 3 aprile 2006, n. 152. (19G00052) (GU Serie Generale n.132 del 07-06-2019).

fonte: http://burc.regione.campania.it

11. Analisi di coerenza

Analisi di coerenza esterna

Come sintetizzato nelle seguenti tabelle 11.1, 11.2 e 11.3, il confronto degli obiettivi del Piano Forestale Generale della Campania con gli obiettivi di sostenibilità complessivamente emergenti dal quadro programmatico di riferimento sintetizzato nel capitolo 8, evidenzia la profonda coerenza con i piani e programmi di livello comunitario/internazionale, nazionale e regionale.
Così come evidenziato nel capitolo 10, il Piano Forestale generale persegue, quale obiettivo prioritario, la definizione di criteri e indicazioni finalizzati a garantire la gestione sostenibile, in chiave multifunzionale, del patrimonio forestale regionale, applicando al territorio campano le misure, le buone pratiche e gli approcci operativi indicati dal Testo unico in materia di foreste e filiere forestali e dal Regolamento forestale regionale, come declinati dalla Strategia Forestale Nazionale, e debitamente adattati alle specifiche condizioni degli ecosistemi forestali della Campania, con la finalità di garantire e assicurare la gestione forestale sostenibile delle foreste regionali.
Il Piano Forestale Generale della Campania costituisce quindi uno strumento complessivo di tutela del sistema forestale regionale, finalizzato alla sua conservazione e miglioramento, sotto il profilo strutturale, funzionale ed evolutivo.
Il Piano Forestale Generale, in altre parole, è uno strumento che definisce misure, criteri e condizioni operative di tutela, salvaguardia e gestione attiva e sostenibile del patrimonio forestale, orientando in tal modo le diverse attività di progettazione, autorizzazione, attuazione, gestione, controllo e monitoraggio degli interventi e delle pratiche gestionali e conservative, come anche dello stato complessivo della risorsa.
Questo approccio concorre sinergicamente agli obiettivi di conservazione del patrimonio di risorse ambientali, tutela della biodiversità e dei paesaggi, rafforzamento della capacità del patrimonio forestale di concorrere efficacemente alle politiche di contrasto, mitigazione, adattamento al cambiamento climatico e alla promozione e diffusione dell'economia circolare.
Il confronto tra le azioni del Piano Forestale Generale e gli obiettivi e dei principali piani e programmi settoriali che compongono il quadro programmatico ai diversi livelli evidenzia pertanto l'assenza di punti di incoerenza o contrasto.
All'opposto, l'analisi di coerenza con i diversi piani contribuisce a definire la funzione di servizio, integrativa e sinergica svolta dal Piano Forestale generale nell'assicurare, attraverso la Gestione Forestale Sostenibile del patrimonio forestale regionale, considerato nel suo insieme come infrastruttura verde multifunzionale, fornitrice di servizi ecosistemici essenziali, il perseguimento degli obiettivi di sostenibilità, conservazione delle risorse di base, tutela della biodiversità e contrasto e adattamento al cambiamento climatico fissati dal quadro programmatico vigente a livello internazionale, comunitario, nazionale e regionale.

Piano regionale per la tutela della qualità dell'aria	Risanamento e mantenimento della qualità dell'aria.	**Piena coerenza**
Il Quadro di Azioni Prioritarie per la programmazione 2021-2027 (Prioritized Action Framework, PAF)	Rafforzamento e tutela della biodiversità nei siti Natura 2000 della Regione Campania.	**Piena coerenza**

fonte: http://burc.regione.campania.it

Analisi di coerenza con la strategia nazionale e regionale di sviluppo sostenibile

L’analisi di coerenza esterna ha riguardato anche la valutazione ed esplicitazione del contributo del Piano al raggiungimento degli obiettivi di sostenibilità ambientale discendenti dalle Strategie nazionali e regionali di sviluppo sostenibile. I risultati della valutazione sono riassunti nella seguente matrice di correlazione, nella quale si sintetizzano gli obiettivi e azioni di Piano che contribuiscono al raggiungimento delle Strategie nazionale e regionale di sviluppo sostenibile della Campania.

Tab. 11.4. Analisi di coerenza delle azioni di piano con la strategia nazionale e regionale di sviluppo sostenibile

Tema		SNSvS 2022	SRSvS		PFG
Tema	**Aspetto tematico**	**Obiettivi strategici (OSN)**	**Obiettivi specifici a valenza ambientale (OsR)**	**Codifica Obiettivi specifici**	**Azioni del Piano Forestale Generale che contribuiscono positivamente al conseguimento degli obiettivi**
Acqua	Qualità delle acque e risorse idriche	Minimizzare i carichi inquinanti nei suoli, nei corpi idrici e nelle falde acquifere, tenendo in considerazione i livelli di buono stato ecologico e stato chimico dei sistemi naturali	Prevenire il deterioramento qualitativo e quantitativo delle acque sotterranee e superficiali	Ob.4.4.2	B3. Incrementare la capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica del territorio e tutela delle acque
Acqua	Qualità delle acque e risorse idriche	Attuare la gestione integrata delle risorse idriche a tutti i livelli di pianificazione	Potenziare la capacità di depurazione	Ob.4.4.4	B3. Incrementare la capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica del territorio e tutela delle acque
Acqua	Qualità delle acque e risorse idriche	Mantenere la vitalità dei mari e prevenire gli impatti sull'ambiente marino e costiero	Assicurare la tutela e lo sviluppo del sistema costiero, delle spiagge e delle foci promuovere la gestione integrata delle acque marine e di balneazione contrastare l'inquinamento	Ob.4.8.1	B3. Incrementare la capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica del territorio e tutela delle acque
Aria	Qualità dell'aria	Diminuire l'esposizione della popolazione ai fattori di rischio ambientale ed antropico	Ridurre l'esposizione ai rischi per la salute delle persone più fragili	Ob.4.2.5	B2. Gestione attiva dei boschi di protezione.
Biodiversità	Aree naturali protette ed ecosistemi	Integrare il valore del capitale naturale (degli ecosistemi e della biodiversità) nei piani, nelle politiche e nei sistemi di contabilità	Preservare gli ecosistemi, contenere l'uso delle risorse naturali e minimizzare i livelli di inquinamento.	Ob.2.1.3	B. Rafforzare il capitale naturale, assicurare i servizi ecologici essenziali, prevenire i rischi
Biodiversità	Aree naturali protette ed ecosistemi	Conservare e valorizzare il patrimonio culturale e promuoverne la fruizione sostenibile	Promuovere lo sviluppo sostenibile dei territori rurali e delle aree interne e periferiche della regione	Ob.3.1.1	A2. Estendere la superficie dei beni silvo-pastorali di proprietà pubblica, privata e collettiva della Campania dotati di piani di gestione forestale
Biodiversità	Aree naturali protette ed ecosistemi	Garantire il ripristino e la deframmentazione degli ecosistemi e favorire le connessioni ecologiche urbano-rurali	Promuovere lo sviluppo sostenibile delle città e dei centri minori, intervenendo in modo integrato e coordinato sull' ambiente urbano, il cambiamento climatico	Ob.3.2.1	C2. Valorizzare in chiave multifunzionale le foreste urbane e periurbane
Biodiversità	Aree naturali protette ed ecosistemi	Aumentare la superficie protetta terrestre e marina e assicurare l'efficacia della gestione	Proteggere e valorizzare i beni paesaggistici e naturali e arrestare la perdita di biodiversità animale e vegetale proteggendo e ripristinando gli habitat e i sistemi naturale	Ob.4.6.1	B1. Conservazione e miglioramento della biodiversità forestale nella rete regionale di aree protette
Biodiversità	Aree naturali protette ed ecosistemi	Salvaguardare e migliorare lo stato di conservazione di specie e habitat di interesse comunitario	Contrastare il mutamento dei cicli biologici responsabili della riduzione delle specie	Ob.4.6.2	B1. Conservazione e miglioramento della biodiversità forestale nella rete regionale di aree protette

fonte: http://burc.regione.campania.it

Tema		SNSvS 2022	SRSvS		PFG
Biodiversità	Aree naturali protette ed ecosistemi	Garantire il ripristino e la deframmentazione degli ecosistemi e favorire le connessioni ecologiche urbano-rurali	Migliorare la funzionalità degli ecosistemi, promuovendo la multifunzionalità del territorio rurale legata non solo alla produzione primaria, ma anche e soprattutto al riciclo ed alla ricostituzione delle risorse di base (aria, acqua, suolo)	Ob.4.6.3	A2. Estendere la superficie dei beni silvo-pastorali di proprietà pubblica, privata e collettiva della Campania dotati di piani di gestione forestale
Biodiversità	Aree naturali protette ed ecosistemi	Integrare il valore del capitale naturale (degli ecosistemi e della biodiversità) nei piani, nelle politiche e nei sistemi di contabilità	Azioni di mantenimento degli ecosistemi, della biodiversità e del paesaggio	Ob.4.6.4	A2. Estendere la superficie dei beni silvo-pastorali di proprietà pubblica, privata e collettiva della Campania dotati di piani di gestione forestale
Clima	Emissioni di gas a effetto serra	Incrementare la produzione di energia da fonte rinnovabile evitando o limitando gli impatti sui beni culturali e il paesaggio	Favorire la trasformazione ecologica dei cicli di produzione, distribuzione e consumo	Ob.2.1.1	D. Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare
Clima	Cambiamenti climatici	Promuovere il presidio e la manutenzione del territorio e rafforzare le capacità di resilienza di comunità e territori anche in riferimento agli impatti dei cambiamenti climatici	Migliorare la capacità di adattamento ai cambiamenti climatici delle aree interne e dei territori rurali	Ob.3.1.2	D3. Riconoscere e remunerare i servizi di interesse pubblico, ambientale e sociale forniti dalle aree forestali (foreste e pascoli) e mantenuti ed accresciuti dalla GFS
Clima	Emissioni di gas a effetto serra	Incrementare la produzione di energia da fonte rinnovabile evitando o limitando gli impatti sui beni culturali e il paesaggio	Accelerare la transizione verso modelli energetici basati sulla produzione ed il consumo di energia da fonti rinnovabili	Ob.4.1.1	D. Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare
Clima	Emissioni di gas a effetto serra	Ridurre i consumi e incrementare l'efficienza energetica	Aumentare l'efficienza energetica degli edifici	Ob.4.1.2	D. Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare
Clima	Cambiamenti climatici	Sviluppare modelli e strumenti di valutazione della sostenibilità delle politiche a supporto della programmazione e pianificazione integrata multilivello, adottando una visione di lungo termine e previsionale ricompresi nel ricompresi nel Vettore	Integrare, nella programmazione e pianificazione settoriale e territoriale, gli interventi di mitigazione e adattamento ai cambiamenti climatici e di mitigazione del rischio	Ob.4.2.1	D3. Riconoscere e remunerare i servizi di interesse pubblico, ambientale e sociale forniti dalle aree forestali (foreste e pascoli) e mantenuti ed accresciuti dalla GFS
Clima	Emissioni di gas a effetto serra	Abbattere le emissioni climalteranti	Limitare le concentrazioni di gas serra	Ob.4.2.3	B3. Incrementare la capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica del territorio e tutela delle acque
Clima	Cambiamenti climatici	Promuovere il presidio e la manutenzione del territorio e rafforz. la capacità di resilienza di comunità e territori anche in rif. to agli impatti dei cambiamenti climatici	Ridurre la vulnerabilità ai rischi naturali dei territori e dei settori produttivi	Ob.4.2.6	B2. Gestione attiva dei boschi di protezione.

Tema		SNSvS 2022	SRSvS		PFG
Clima	Caratteristiche meteoclimatiche	Promuovere il presidio e la manutenzione del territorio e rafforzare la capacità di resilienza di comunità e territori anche in riferimento agli impatti dei cambiamenti climatici	prevenire e attenuare i rischi idraulici e idrogeologici e accrescere l'adattamento climatico ai cambiamenti climatici	Ob.4.7.2	B3. Incrementare la capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica del territorio e tutela delle acque
Clima	Cambiamenti climatici	Promuovere il presidio e la manutenzione del territorio e rafforzare le capacità di resilienza di comunità e territori anche in riferimento agli impatti dei cambiamenti climatici	Contrastare i fenomeni di erosione e gli effetti dei cambiamenti climatici	Ob.4.8.3	B3. Incrementare la capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica del territorio e tutela delle acque
Energia	Energia	Incrementare la produzione di energia da fonte rinnovabile evitando o limitando gli impatti sui beni culturali e il paesaggio	Favorire la trasformazione ecologica dei cicli di produzione, distribuzione e consumo	Ob.2.1.1	D5. Adesione al Cluster legno-foresta italiano e costituzione del Cluster legno foresta della Campania
Energia	Energia	Incrementare la produzione di energia da fonte rinnovabile evitando o limitando gli impatti sui beni culturali e il paesaggio	Accelerare la transizione verso modelli energetici basati sulla produzione ed il consumo di energia da fonti rinnovabili	Ob.4.1.1	D. Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare
Energia	Energia	Ridurre i consumi e incrementare l'efficienza energetica	Aumentare l'efficienza energetica degli edifici	Ob.4.1.2	D. Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare
Energia	Energia	Ridurre i consumi e incrementare l'efficienza energetica	Migliorare la sicurezza dell'approvvigionamento	Ob.4.1.4	D5. Adesione al Cluster legno-foresta italiano e costituzione del Cluster legno foresta della Campania
Energia	Energia	Ridurre i consumi e incrementare l'efficienza energetica	Favorire la riduzione dei consumi di energia ed emissioni	Ob.5.2.1	D. Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare
Paesaggio e beni culturali	Paesaggio e beni culturali	Assicurare lo sviluppo del potenziale, la gestione sostenibile e la custodia dei paesaggi	Ottimizzare l'uso e la gestione del patrimonio ambientale e paesaggistico	Ob.4.2.2	A2. Estendere la superficie dei beni silvo-pastorali di proprietà pubblica, privata e collettiva della Campania dotati di piani di gestione forestale
Paesaggio e beni culturali	Paesaggio e beni culturali	Conservare e valorizzare il patrimonio culturale e promuoverne la fruizione sostenibile	Conservare e valorizzare le aree di pregio naturalistico, ambientale e culturale e sostenere l'economia dei litorali mantenendo le condizioni di stabilità fisica e dei valori naturalistici	Ob.4.8.2	B1. Conservazione e miglioramento della biodiversità forestale nella rete regionale di aree protette
Popolazione	Caratteristiche demografiche	Promuovere la responsabilità sociale, ambientale e dei diritti umani nelle amministrazioni e nelle imprese, anche attraverso la finanza sostenibile	Sostenere la transizione ecologica ed energetica	Ob.2.2.1	D. Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare

fonte: http://burc.regione.campania.it

Popolazione	Caratteristiche demografiche	Conservare e valorizzare il patrimonio culturale e promuoverne la fruizione sostenibile	Promuovere lo sviluppo sostenibile dei territori rurali e delle aree interne e periferiche della regione	Ob.3.1.1	A2. Estendere la superficie dei beni silvo-pastorali di proprietà pubblica, privata e collettiva della Campania dotati di piani di gestione forestale
Popolazione	Caratteristiche demografiche	Conservare e valorizzare il patrimonio culturale e promuoverne la fruizione sostenibile	Conservare e valorizzare le aree di pregio naturalistico, ambientale e culturale e sostenere l'economia dei litorali mantenendo le condizioni di stabilità fisica e dei valori naturalistici	Ob.4.8.2	B1. Conservazione e miglioramento della biodiversità forestale nella rete regionale di aree protette
Popolazione	Caratteristiche socioeconomiche	Attuare l'agenda digitale e potenziare la diffusione delle reti intelligenti	Sostenere la domanda pubblica di prodotti e servizi innovativi orientati allo sviluppo sostenibile	Ob.7.4.2	D. Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare
Rifiuti	Rifiuti	Dematerializzare l'economia, abbattere la produzione di rifiuti e promuovere l'economia circolare	Promuovere forme di economica circolare	Ob.4.5.1	D. Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare
Rifiuti	Rifiuti	Dematerializzare l'economia, abbattere la produzione di rifiuti e promuovere l'economia circolare	Sostenere la gestione dei rifiuti dei cicli di consumo e produzione fondata sulle raccolte differenziate e favorire l'utilizzo di materie prime secondarie	Ob.4.5.2	D. Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare
Rifiuti	Rifiuti	Dematerializzare l'economia, abbattere la produzione di rifiuti e promuovere l'economia circolare	favorire la restituzione al consumo dei prodotti a fine vita, rigenerati e ricondizionati così da ridurre il prelievo di risorse naturali	Ob.4.5.3	D. Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare
Rifiuti	Rifiuti	Dematerializzare l'economia, abbattere la produzione di rifiuti e promuovere l'economia circolare	Contenere la produzione di scarti e Limitare la dipendenza da nuovi materiali	Ob.4.5.4	D. Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare
Rifiuti	Rifiuti	Dematerializzare l'economia, abbattere la produzione di rifiuti e promuovere l'economia circolare	Assicurare nella realizzazione di nuove opere l'uso di materiali e tecniche costruttive che assicurino l'adattamento al cambiamento climatico	Ob.5.3.1	D. Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare
Rischi naturali e antropici	Rischio idrogeologico	Promuovere il presidio e la manutenzione del territorio e rafforzare le capacità di resilienza di comunità e territori anche in riferimento agli impatti dei cambiamenti climatici	Migliorare la capacità di adattamento ai cambiamenti climatici delle aree interne e dei territori rurali	Ob.3.1.2	D3. Riconoscere e remunerare i servizi di interesse pubblico, ambientale e sociale forniti dalle aree forestali (foreste e pascoli) e mantenuti ed accresciuti dalla GFS
Rischi naturali e antropici	Rischio idrogeologico	Promuovere il presidio e la manutenzione del territorio e rafforzare la capacità di resilienza di comunità e territori anche in riferimento agli impatti dei cambiamenti climatici	Ridurre la vulnerabilità ai rischi naturali dei territori e dei settori produttivi	Ob.4.2.6	B2. Gestione attiva dei boschi di protezione.

Analisi di coerenza interna

La valutazione della coerenza interna ha lo scopo di esplicitare, dal punto di vista della sostenibilità generale e dell'efficacia del Piano, il legame e le relazioni fra le azioni attuabili da questo definite, e gli obiettivi specifici di tutela e gestione del patrimonio forestale, così come delineati dagli strumenti programmatici e normativi di settore, rappresentati in questo caso dal Regolamento regionale 28 settembre 2017, n. 3 "Regolamento di tutela e gestione sostenibile del patrimonio forestale regionale", così come modificato dai Regolamenti regionali 24 settembre 2018, n. 8, e 21 febbraio 2020, n. 2.
Il Titolo 1 del Regolamento definisce infatti i principi generali di tutela e gestione sostenibile del patrimonio forestale regionale cui le politiche e le strategie regionali devono tendere.
Come ricordato in precedenza, , definisce ulteriormente all'art. 5 i contenuti del Piano Forestale Generale che:

- descrive le caratteristiche ecologiche, strutturali ed evolutive del patrimonio forestale regionale;

- definisce le strategie generali di tutela e gestione sostenibile del patrimonio forestale regionale ed individua gli obiettivi da conseguire e le azioni prioritarie di miglioramento delle foreste pubbliche e private, tenendo conto degli obiettivi della tutela ambientale e dello sviluppo socio-economico delle popolazioni interessate e costituendo il quadro di riferimento per la pianificazione forestale a livello territoriale e locale;

- si coordina con la pianificazione specialistica vigente, con espresso riferimento al piano paesaggistico di cui all'articolo 135 del D.Lgs. 22 gennaio 2004, n. 42 (Codice dei beni culturali e del paesaggio); ai piani di bacino di cui all'articolo 66 del D.Lgs. 3 aprile 2006, n. 152 (Norme in materia ambientale); ai piani di gestione della Rete Natura 2000 di cui al D.P.R 8 settembre 1997, n. 357 (Regolamento recante attuazione della direttiva 92/43/CEE relativa alla conservazione degli habitat naturali e seminaturali, nonché della flora e della fauna selvatiche).

Il Regolamento definisce inoltre i principali obiettivi specifici da perseguire:

- Valorizzazione degli aspetti di multifunzionalità del patrimonio forestale regionale. Riconoscimento del ruolo di interesse pubblico delle attività selvicolturali svolte secondo i principi della gestione forestale sostenibile e finalizzate al mantenimento della multifunzionalità delle foreste;

- Promozione e definizione del quadro di riferimento per la pianificazione forestale ai diversi livelli (Piano Forestale Regionale, Piani Forestali di Indirizzo Territoriale, Piani di Gestione Forestale);

- Realizzazione della carta forestale regionale e dell'inventario forestale regionale, in quanto parte del Sistema informativo regionale delle foreste, a sua volta, ricompreso nel Sistema informativo territoriale - S.I.T. - regionale di cui all'articolo 17 della L. R. 22 dicembre 2004, n. 16 (Norme sul governo del territorio), ed all'articolo 9 della L. R. 13

fonte: http://burc.regione.campania.it

ottobre 2008, n. 13 (Piano Territoriale Regionale).

- Redazione dei Piani Forestali di Indirizzo Territoriale di cui all'articolo 6, comma 3, del decreto legislativo 3 aprile 2018, n. 34, con riferimento a comprensori territoriali, anche interprovinciali, omogenei per caratteristiche ambientali, paesaggistiche, sociali, economico-produttive o amministrative, individuati dal Piano Forestale Generale.

- Formazione professionale e aggiornamento tecnico degli addetti idraulico-forestali;

- Promozione delle filiere forestali attraverso la certificazione dei boschi regionali e la creazione di consorzi e reti di imprese o di altre forme di gestione associata;

- Gestione attiva del patrimonio silvo-pastorale regionale attraverso modelli di gestione delle foreste regionali demaniali come ambito privilegiato per l'attuazione delle strategie e degli interventi di tutela e valorizzazione multifunzionale sostenibile della foresta;

- Promozione di politiche di tutela e gestione multifunzionale sostenibile dei boschi regionali e di cura e manutenzione del territorio montano mediante azioni di: tutela e miglioramento dei pascoli e delle praterie; gestione e manutenzione dei boschi di neoformazione compresi quelli insediatisi sui terreni incolti o abbandonati ai sensi della normativa nazionale in materia di foreste e filiere forestali; realizzazione, manutenzione e gestione di sentieri, di itinerari escursionistici e di strutture ricreative e di ristoro per la fruizione turistica del bosco; cura e manutenzione delle foreste urbane, dei boschi vetusti, degli alberi monumentali; interventi di forestazione a fini di fitorisanamento e recupero dei suoli agricoli contaminati, di creazione di buffer ecoligici e creazione di fasce forestali filtro, con funzione di cuscinetto ecologico nell'intorno di discariche, siti contaminati ed aree vaste, restauro ecologico e paesaggistico di cave inattive, abbandonate e di altre tipologie di aree degradate;

- Digitalizzazione delle procedure autorizzative, di controllo e monitoraggio attraverso al realizzazione di una piattaforma informatica di integrazione tra gli Sportelli Unici per le Attività Forestali (SUAF) istituiti presso gli uffici provinciale e gli enti delegati, che consente lo scambio di dati, di informazioni e l'estrazione di report nonché la trasmissione delle richieste, delle comunicazioni e delle istanze relative ai procedimenti normati dal presente Regolamento tra gli stessi Sportelli e tra questi e gli altri soggetti pubblici e privati.

Il DEPF 2024/26 è attuativo della strategia delineata nel Piano forestale generale della Campania (PFG). Il PFG, secondo quanto stabilito dall'art. 5 del Regolamento regionale 3/2017:

a. descrive le caratteristiche ecologiche, strutturali ed evolutive del patrimonio forestale regionale;

fonte: http://burc.regione.campania.it

b. definisce le strategie generali di tutela e gestione sostenibile del patrimonio forestale regionale ed individua gli obiettivi da conseguire e le azioni prioritarie di miglioramento delle foreste pubbliche e private, tenendo conto degli obiettivi della tutela ambientale e dello sviluppo socio-economico delle popolazioni interessate e costituendo il quadro di riferimento per la pianificazione forestale a livello territoriale e locale;

c. si coordinina con la pianificazione specialistica vigente, con espresso riferimento al piano paesaggistico di cui all'articolo 135 del D.Lgs. 22 gennaio 2004, n. 42 (Codice dei beni culturali e del paesaggio); ai piani di bacino di cui all'articolo 66 del D.Lgs. 3 aprile 2006, n. 152 (Norme in materia ambientale); ai piani di gestione della Rete Natura 2000 di cui al D.P.R 8 settembre 1997, n. 357 (Regolamento recante attuazione della direttiva 92/43/CEE relativa alla conservazione degli habitat naturali e seminaturali, nonché della flora e della fauna selvatiche).

Altri obiettivi rilevanti delle politiche forestali regionali sono richiamati nel Documento Esecutivo di Programmazione 2024-2026 (DEPF), redatto ai sensi dell'art. 6 del Regolamento con il compito di programmare l'utilizzo dei fondi di finanziamento degli interventi forestali attuati dagli Enti delegati in materia.
L'obiettivo complessivo degli itnerventi, secondo il DEPF, è quello di **rafforzare il capitale naturale** costituito dai boschi e dai pascoli della Campania, assicurando **la fornitura dei servizi ecologici essenziali** che tali risorse forniscono alla collettività, e orientandone la gestione in chiave di prevenzione dei rischi locali e globali.
L'esigenza prioritaria è quella di promuovere, a partire dal sistema regionale di aree protette, la diffusione di **modelli di gestione forestale sostenibile** in grado di assicurare la tutela e il **rafforzamento della diversità biologica degli ecosistemi forestali** della Campania, in coerenza con i Piani dei parchi, i Piani di gestione dei siti della Rete natura 2000 della Campania e il PAF (Prioritized Action Framework).
Ai fini della non procrastinabile attività preventiva, il Piano forestale regionale deve anche promuovere **l'identificazione dettagliata, a scala regionale dei boschi di protezione**, sarebbe a dire le aree forestali che presentano l'insieme di caratteri predisponenti i fenomeni di instabilità avanti descritti, **promuovendo la diffusione di disciplinari di gestione attiva funzionali al contenimento del rischio e al rafforzamento della capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica**.
Le azioni del Piano forestale devono anche contribuire al rafforzamento della necessaria **integrazione e cooperazione fra le diverse competenze in materia di prevenzione e lotta attiva agli incendi**, a partire dal *Piano regionale per la programmazione delle attività di previsione, prevenzione e lotta attiva contro gli incendi boschivi* redatto dall'Assessorato ai Lavori Pubblici e Protezione Civile Regione Campania, nella convinzione che la gestione forestale sostenibile, la cura e **la tutela attiva e capillare del patrimonio boschivo regionale rappresenti la necessaria precondizione per una effettiva messa in sicurezza dei territori**.
Le foreste e i suoli forestali sono il più importante "pozzo di assorbimento" di anidride carbonica a scala regionale, con una capacità valutata in 60 milioni di tonnellate di CO2 per anno. Il rafforzamento di questa funzione strategica, attraverso una gestione accorta e lungimirante, può contribuire in misura determinante al conseguimento, da parte del sistema economico-ambientale regionale nel suo complesso, degli impegni e degli obiettivi definiti dalle convenzioni internazionali e dalle direttive comunitarie in materia di cambiamento climatico

fonte: http://burc.regione.campania.it

globale. Di qui la centralità nel Piano forestale regionale, delle azioni per favorire la **mitigazione e l'adattamento dei sistemi forestali della Campania ai cambiamenti climatici**.
In conclusione, il confronto tra le azioni del Piano Forestale Regionale così come descritte in precedenza, e i diversi obiettivi fissati dal Regolamento e dal DEPF, avanti menzionati, evidenzia la piena coerenza del nuovo Piano forestale con le strategie di valorizzazione e tutela del patrimonio boschivo della Campania così come declinate nei diversi strumenti programmtici di settore.

Rapporti con il precedente Piano forestale generale 2009-2013

Il nuovo Piano forestale generale della Campania risponde, come evidenziato nei paragrafi precedenti, all'esigenza di aggiornare e adeguare la programmazione regionale in materia di foreste, al nuovo quadro programmatico e giuridico comunitario e nazionale, così come definito in primo luogo dalla nuova legge forestale nazionale – il Decreto Legislativo 3 aprile 2018, n. 34 ("Testo unico in materia forestale e di filiere forestali", TUFF) e dalla Strategia forestale Nazionale elaborata secondo quanto previsto dall'art. 6, comma 1 del TUFF.
Sia il TUFF che la strategia forestale Nazionale, sono a loro volta coerenti con la Nuova strategia dell'UE per le foreste per il 2030 — Gestione sostenibile delle foreste in Europa, che è uno dei pilastri del Green deal europeo e sono profondamente interrelati con la Strategia dell'UE sulla biodiversità per il 2030.
Un altro importante elemento di novità con il quale il Piano forestale ha dovuto confrontarsi è il Regolamento forestale regionale 3/2017, così come successivamente modificato nel 2022.
Il Piano forestale generale della Campania 2009-2013 era chiamato quindi a conformarsi con un quadro normativo e programmatico che è profondamente mutato, così come è mutato il quadro di sostegno al settore agroforestale, con l'entrata in vigore della nuova PAC dopo il 2020.
Ne consegue che la parte strategica del nuovo Piano forestale generale 2025-2035 ha contenuti e struttura molto diversi dal piano precedente, dettati in buona misura dai nuovi approcci introdotti dalla Strategia forestale nazionale, dal nuovo Piano strategico nazionale della PAC 2023-2027, dal Complemento di sviluppo rurale della Campania 2023-2027.
Elementi maggiori di continuità caratterizzano le parti del piano dedicate alle analisi di contesto, quali ad esempio il cap. 5 (Il patrimonio forestale della Campania: un profilo sintetico), il cap. 6 (Le formazioni forestali), il cap. 7. (Avversità biotiche e abiotiche). Il cap. 8 (Indirizzi di gestione forestale sostenibile), il cap. 10 (Indirizzi per gli interventi di sistemazione idraulico-forestale), il cap. 11 (Indirizzi per la gestione della viabilità silvo-pastorale), con i necessari aggiornamenti, presentano anch'essi aspetti di continuità con il piano precedente.
Il nuovo piano è dotato di una cartografia forestale di riferimento (cap. 4) che mancava in quello precedente.
L'attuazione del Piano forestale generale 2009-2013 presenta risultati positivi su molti importanti fronti. La pianificazione dei boschi pubblici si è notevolmente estesa, riguardando all'attualità l'80% circa della superficie forestale pubblica. Il coordinamento dell'attività degli Enti delegati in materia forestale ai sensi della legge regionale 11/96 è stato sufficientemente assicurato. Il contributo del Piano all'impiego delle risorse delle misure forestali del PSR 2007-2013 è stato positivo. Risultati meno soddisfacenti sono stati conseguiti nella promozione della pianificazione forestale dei boschi privati, nel contrasto alle dinamiche di abbandono, e nella creazione di una governance forestale basata sulla cooperazione istituzionale delle competenze

fonte: http://burc.regione.campania.it

paesaggistiche, ambientali e produttive, tutti obiettivi che il nuovo piano affronta adattando alle specificità regionali gli approcci definiti dalla nuova programmazione e legislazione nazionale ed europea.

fonte: http://burc.regione.campania.it

12. Analisi degli impatti delle azioni di piano sulle matrici ambientali considerate

La struttura della matrice di interazione degli impatti ambientali impiegata è stata costruita correlando gli effetti sulle componenti ambientali considerate (acqua, suolo, aria, biodiversità, paesaggio, salute umana) di ciascuna delle 26 diverse azioni elementari normate dal Piano forestale generale.

Le componenti ambientali considerate sono le seguenti:

Aria	Qualità dell'aria
Clima	Mitigazione climatica
	Bilancio dei gas serra
Suolo	Proprietà fisiche
	Proprietà bio-chimiche
	Consumo di suolo (Soil sealing)
Acqua	Stato qualitativo
	Stato quantitativo Portate, regimi
Biodiversità	Diversità e integrità habitat
Rischi ambientali	Mitigazione rischio idrogeologico
Produzione servizi ecosistemici	Servizi di supporto
	Servizi di regolazione
	Servizi di approvvigionamento
	Servizi socio-culturali
Paesaggio	Qualità paesaggistica

Accanto alle matrici ambientali considerate nelle analisi di impatto, la check list comprende anche, sotto un profilo funzionale, le diverse tipologie di servizi ecosistemici. Nell'ultimo ventennio è cresciuta l'attenzione delle attività di ricerca e di pianificazione intorno al tema dei servizi ecosistemici, intendendo con questo termine la vasta gamma di benefici (beni, servizi immateriali) che le popolazioni umane traggono dalle terre e dagli ecosistemi per il soddisfacimento dei loro molteplici bisogni. Il principale quadro di riferimento è il programma "Millenniun Assessment" delle Nazioni Unite, avviato nel 2001, in collaborazione con gli Stati membri, Istituti di ricerca, nonché Enti e Associazioni espressione della società civile. Obiettivo del programma è quello di "valutare le conseguenze del cambiamento degli ecosistemi a scala locale e globale sul benessere umano, e di fornire le basi scientifiche per le azioni necessarie a rafforzare la conservazione e l'uso sostenibile degli ecosistemi."
I servizi ecosistemici vengono classificati in:

fonte: http://burc.regione.campania.it

- Servizi di supporto: servizi fondamentali, necessari per la produzione di tutti gli altri servizi (di approvvigionamento, regolazione e culturali). Riguardano tra l'altro la formazione dei suoli, il ciclo dei nutrienti, la produzione di biomassa primaria, il mantenimento della biodiversità.

- Servizi di regolazione: servizi legati alle funzioni di regolazione del clima, e immagazzinamento dei gas climalteranti, di regolazione e depurazione delle acque, di autodepurazione dell'aria, di controllo dei patogeni, di impollinazione ecc.

- Servizi di approvvigionamento: servizi che garantiscono la produzione dei beni necessari per la vita degli uomini: acqua, cibo, fibre, legna, molecole e principi attivi, risorse genetiche (varietà di piante e animali utili all'uomo).

- Servizi culturali: servizi legati alle attività spirituali, ricreative, culturali, sociali, scientifiche, formative ed educative basate sul rapporto tra gli uomini e gli ecosistemi.

Gli impatti potenziali di ciascuna azione elementare disciplinata nel Piano forestale generale sono stati individuati e valutati con riferimento alla seguente legenda:

- Impatti molto positivi
- Impatti positivi
- Possibili interazioni negative su specifiche matrici ambientali che è possibile attivamente prevenire attraverso il pieno rispetto delle condizioni e buone pratiche indicate dal piano
- Impatti negativi che non possono essere prevenuti e mitigati con il ricorso ad apposite pratiche accessorie
- Interazioni non rilevanti

Classificazione degli impatti	
Impatti molto positivi	
Impatti positivi	
Possibili interazioni negative su specifiche matrici ambientali che è possibile attivamente prevenire attraverso il pieno rispetto delle condizioni e buone pratiche indicate dal piano	
Impatti negativi che non possono essere prevenuti e mitigati con il ricorso ad apposite pratiche accessorie	
Interazioni non rilevanti	

Di seguito viene riportata la matrice di interazione compilata, impiegando la legenda di classificazione degli impatti in precedenza descritta.

Matrici e componenti ambientali	Aria	Clima		Suolo			Acqua		Biodiversità	Rischi ambientali	Produzione servizi ecosistemici				Paesaggio
AZIONI DEL PIANO FORESTALE GENERALE	Qualità dell'aria	Mitigazione climatica	Bilancio dei gas serra	Proprietà fisiche	Proprietà bio-chimiche	Consumo di suolo (Soil sealing)	Stato qualitativo	Stato quantitativo Portate, regimi	Diversità e integrità habitat	Mitigazione rischio idrogeologico	Servizi di supporto	Servizi di regolazione	Servizi di approvvigionamento	Servizi socio-culturali	Qualità paesaggistica
A1. Promuovere una governance forestale in Campania basata sulla cooperazione istituzionale, l'integrazione di strumenti e politiche, la partecipazione e condivisione degli obiettivi di Gestione Forestale Sostenibile (GFS)															
A2. Estendere la superficie dei beni silvo-pastorali di proprietà pubblica, privata e collettiva della Campania dotati di piani di gestione forestale															
A3. Promuovere la pianificazione forestale di area vasta (Piani Forestali di Indirizzo Territoriale)															
B1. Conservazione e miglioramento della biodiversità forestale nella rete regionale di aree protette															
B2. Gestione attiva dei boschi di protezione.															
B3. Incrementare la capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica del territorio e tutela delle acque															
B4. Prevenzione attiva dei rischi naturali o antropici, incendi, calamità naturali ed eventi catastrofici															
C1. Curare i rimboschimenti storici della Campania															
C2. Valorizzare in chiave multifunzionale le foreste urbane e periurbane															
C3. Curare e proteggere i boschi planiziali della Campania															
C4. Tutela e valorizzazione dei castagneti da frutto della Campania															
C5. Tutelare i boschi vetusti e gli alberi monumentali															
C6. Promuovere la gestione sostenibile dei prati e pascoli permanenti															
C7. Promuovere e valorizzare i sistemi agroforestali															
D1. Rafforzare la capacità operativa delle imprese boschive. Promuovere la qualificazione degli operatori forestali															
D2. Promuovere la certificazione delle foreste del territorio regionale e la tracciabilità lungo tutta la filiera, dal tronco al mobile finito															
D3. Riconoscere e remunerare i servizi di interesse pubblico, ambientale e sociale forniti dalle aree forestali (foreste e pascoli) e mantenuti ed accresciuti dalla GFS															
D4. Promozione delle produzioni forestali non legnose in una prospettiva di filiera															
D5. Adesione al Cluster legno-foresta italiano e costituzione del Cluster legno foresta della Campania															
E1. Valorizzare le 10 foreste regionali come "laboratori verdi multifunzionali" e centri di diffusione permanente della GFS in Campania															
E2. Valorizzazione multifunzionale della viabilità forestale e silvo-pastorale e della sentieristica in Campania															
F1. Promuovere un programma integrato di monitoraggio e cartografia delle risorse forestali della Campania															
F2. Implementazione dello Sportello unico regionale per le attività forestali (SUAF)															
F3. Promozione di iniziative e programmi divulgativi per rafforzare la consapevolezza pubblica dell'importanza e il ruolo ecologico del patrimonio forestale della Campania															
G1 Valorizzare e potenziare i vivai forestali; estendere la superficie dei boschi da seme; valorizzare le risorse genetiche; potenziare la produzione di materiale di propagazione forestale															
G2 Promozione di tecniche forestali per il recupero dei siti degradati in Campania															

La matrice di interazione impiegata per l'analisi degli impatti sulle matrici ambientali considerate

fonte: http://burc.regione.campania.it

In sede di commento preliminare dei risultati della valutazione bisogna innanzitutto sottolineare come il Piano Forestale generale persegue, quale obiettivo prioritario, la definizione di criteri e indicazioni finalizzati a garantire la gestione sostenibile, in chiave multifunzionale, del patrimonio forestale regionale, applicando al territorio campano le misure, le buone pratiche e gli approcci operativi indicati dal Testo unico in materia di foreste e filiere forestali e dal Regolamento forestale regionale, come declinati dalla Strategia Forestale Nazionale, e debitamente adattati alle specifiche condizioni degli ecosistemi forestali della Campania, con la finalità di garantire e assicurare la gestione forestale sostenibile delle foreste regionali.
Il Piano Forestale Generale della Campania costituisce quindi uno strumento complessivo di tutela del sistema forestale regionale, finalizzato alla sua conservazione e miglioramento, sotto il profilo strutturale, funzionale ed evolutivo.
Il Piano Forestale Generale, in altre parole, è uno strumento che definisce misure, criteri e condizioni operative di tutela, salvaguardia e gestione attiva e sostenibile del patrimonio forestale, orientando in tal modo le diverse attività di progettazione, autorizzazione, attuazione, gestione, controllo e monitoraggio degli interventi e delle pratiche gestionali e conservative, come anche dello stato complessivo della risorsa.
L'analisi di impatto delle diverse azioni del PFG non ha pertanto evidenziato impatti negativi sulle matrici o comparti ambientali considerati. All'opposto, le azioni di piano, in quanto attuative al territorio campano delle misure di tutela e gestione sostenibile, in accordo con la strategia forestale europea e nazionale, sono in grado di generare impatti positivi, di diversa intensità, sulla qualità ambientale dei diversi bersagli considerati.
La valutazione condotta ha consentito di individuare un gruppo di azioni di piano caratterizzate dal fatto di generare impatti fortemente positivi su tutte le componenti e matrici ambientali e i servizi ecosistemici considerati:

- A1. Promuovere una governance forestale in Campania basata sulla cooperazione istituzionale, l'integrazione di strumenti e politiche, la partecipazione e condivisione degli obiettivi di Gestione Forestale Sostenibile (GFS)
- A2. Estendere la superficie dei beni silvo-pastorali di proprietà pubblica, privata e collettiva della Campania dotati di piani di gestione forestale
- A3. Promuovere la pianificazione forestale di area vasta (Piani Forestali di Indirizzo Territoriale)
- C6. Promuovere la gestione sostenibile dei prati e pascoli permanenti
- D2. Promuovere la certificazione delle foreste del territorio regionale e la tracciabilità lungo tutta la filiera
- D3. Riconoscere e remunerare i servizi di interesse pubblico, ambientale e sociale forniti dalle aree forestali (foreste e pascoli) e mantenuti ed accresciuti dalla Gestione Forestale Sostenibile.
- F1. Promuovere un programma integrato di monitoraggio e cartografia delle risorse forestali della Campania

Queste azioni definiscono nel loro insieme una strategia istituzionale precisa di pianificazione, tutela e gestione sostenibile delle foreste regionali, che è a sua volta in grado di supportare e favorire il perseguimento degli obiettivi di tutela e rafforzamento della qualità ambientale perseguiti dalle altre azioni di piano.
In altre parole, le tutele "strutturali" e "procedurali", di base, garantite da questo gruppo fondamentale di corsi di azione, preparano il campo e conferiscono operatività, concretezza, coerenza e strumenti operativi agli altri corsi d'azione definiti nel Piano forestale generale.

fonte: http://burc.regione.campania.it

- D1. Rafforzare la capacità operativa delle imprese boschive. Promuovere la qualificazione degli operatori forestali

In attuazione della Strategia forestale nazionale, la gestione sostenibile delle foreste della Campania necessita di azioni di sostegno alle imprese boschive finalizzate alla formazione degli addetti e all'adeguamento tecnologico, per assicurare la conduzione delle pratiche colturali in condizioni di efficienza, economicità e sostenibilità. Il rafforzamento della base di imprese boschive regionali perseguito dal PFG con l'azione D1 è necessario per recuperare ad una gestione attiva e sostenibile la vasta superficie di boschi sotto-utilizzati o abbandonati presenti nel territorio regionale, nel rispetto ovviamente dei regimi di tutela vigenti nei territori protetti. Il rispetto dei tassi di prelievo e delle modalità di esecuzione delle pratiche colturali definiti dal Piano forestale generale e dal Regolamento forestale generale, in coerenza con le indicazioni fornite dalla Strategia forestale nazionale, garantiscono la conservazione della qualità dei suoli, della funzionalità delle opere di sistemazione idraulico-forestale e degli equilibri ecologici e idrogeologici. Il rispetto di tutte queste condizioni assicura la prevenzione di ogni impatto significativo sulle caratteristiche strutturali, funzionali e dinamiche delle foreste e sulla integrità delle specie e degli habitat. La sostenibilità del prelievo legnoso è rafforzata e garantita dalle azioni di piano finalizzate alla certificazione delle foreste; all'aumento della superficie dei boschi pubblici e privati dotati di piano di gestione forestale; alla redazione dei Piani forestali di indirizzo territoriale, per i quali il Piano forestale generale definisce gli ambiti territoriali di riferimento, in modo da consentirne nel tempo la formazione.
Riguardo all'azione D4, la promozione delle produzioni forestali non legnose in una prospettiva di filiera (funghi, tartufi, prodotti del sottobosco, miele) è sostenuta nel rispetto rigoroso delle norme vigenti a salvaguardia degli aspetti di sostenibilità ecologica e di tutela della biodiversità, con uno strutturato sistema autorizzativo e di controllo.
Il potenziamento in chiave multifunzionale e il mantenimento in efficienza della viabilità forestale è uno degli obiettivi più rilevanti, ma anche più delicati del piano. La presenza di una viabilità forestale efficiente e funzionale è il prerequisito per la gestione sostenibile e l'utilizzo produttivo e ricreativo dei boschi. La viabilità forestale è uno strumento fondamentale per la prevenzione e il monitoraggio dei rischi, come anche per gli interventi di lotta attiva agli incendi, per la realizzazione e il mantenimento in efficienza delle opere di sistemazione idraulica-forestale. D'altro canto, è anche vero che una viabilità forestale non correttamente concepita, progettata e manutenuta è essa stessa un fattore predisponente le dinamiche di dissesto idrogeologico e di erosione accelerata dei suoli. Il Piano forestale affronta tutti questi aspetti con l'azione E2, definendo i criteri razionali per il rafforzamento e il mantenimento in efficienza in chiave multifunzionale della rete regionale di viabilità forestale, declinando per il territorio regionale i principi e la classificazione della viabilità forestale definiti nel decreto attuativo del Testo unico in materia di foreste e filiere forestali.
Un impatto fortemente positivo sulla qualità dei suoli e delle acque è stimato per le azioni di piano specificatamente indirizzate a questi aspetti:

- B2. Gestione attiva dei boschi di protezione.
- B3. Incrementare la capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica del territorio e tutela delle acque
- B4. Prevenzione attiva dei rischi naturali o antropici, incendi, calamità naturali ed eventi catastrofici

fonte: http://burc.regione.campania.it

In particolare l'individuazione operata dal Piano forestale generale dei boschi di protezione attiva della Campania consente l'applicazione a questi ecosistemi forestali particolarmente vulnerabili dei protocolli di messa in sicurezza e gestione attiva messi a punto dal Dipartimento di Agraria dell'Università Federico II di Napoli (Azione B2), che il Piano forestale generale adotta a fa propri, promuovendone l'applicazione a scala regionale, e prevedendo l'attivazione di una specifica azione di sostegno nel quadro della programmazione agricola 2023-2027.
Impatti fortemente positivi sugli aspetti naturalistici e di biodiversità (diversità e integrità degli habitat) contraddistinguono misure specifiche del piano:

- B1. Conservazione e miglioramento della biodiversità forestale nella rete regionale di aree protette
- C2. Valorizzare in chiave multifunzionale le foreste urbane e periurbane
- C3. Curare e proteggere i boschi planiziali della Campania
- C4. Tutela e valorizzazione dei castagneti da frutto della Campania
- C5. Tutelare i boschi vetusti e gli alberi monumentali
- C6. Promuovere la gestione sostenibile dei prati e pascoli permanenti
- C7. Promuovere e valorizzare i sistemi agroforestali
- E1. Valorizzare le 10 foreste regionali come "laboratori verdi multifunzionali" e centri di diffusione permanente della GFS in Campania

Si noti come gli impatti positivi sulla biodiversità riguardino sia i territori regionali ricadenti nella rete regionale di aree protette (Azione B1), nei quali l'obiettivo è innanzitutto quello di tutelare il patrimonio attuale di valori in gioco; sia territori nei quali l'obiettivo è quello di un recupero, ricostituzione, rispristino di aspetti importanti di biodiversità, o comunque di tutela in contesti caratterizzati da forti pressioni d'uso, come nel caso delle foreste urbane (Azione C2) o le pianure a prevalente utilizzo agricolo (Azione C3).
Di particolare rilievo sono infine le azioni di piano particolarmente rivolte alla mitigazione/adattamento del cambiamento climatico e all'immagazzinamento dei gas serra ad opera degli ecosistemi forestali e pascolativi:

- D2. Promuovere la certificazione delle foreste del territorio regionale e la tracciabilità lungo tutta la filiera, dal tronco al mobile finito
- D3. Riconoscere e remunerare i servizi di interesse pubblico, ambientale e sociale forniti dalle aree forestali (foreste e pascoli) e mantenuti ed accresciuti dalla GFS

Impatti transitori negativi transitori sulla qualità dell'aria, legata a emissioni nella fase di realizzazione degli interventi, che è possibile attivamente prevenire attraverso il pieno rispetto delle condizioni e buone pratiche indicate dal piano, potrebbero essere generati dalle seguenti azioni:

B2. Gestione attiva dei boschi di protezione.
B3. Incrementare la capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica del territorio e tutela delle acque
C2. Valorizzare in chiave multifunzionale le foreste urbane e periurbane
E2. Valorizzazione multifunzionale della viabilità forestale e silvo-pastorale e della sentieristica in Campania

Gli impatti sulla qualità dell'aria che possono essere prodotti dalle azioni citate sono legati a due aspetti:

1. la temporanea diminuzione di biomassa aerea legata ai tagli di gestione o produzione dei soprassuoli;

fonte: http://burc.regione.campania.it

2. le operazioni per la realizzazione, adeguamento, manutenzione e gestione delle infrastrutture forestali (viabilità, sentieristica) e delle opere di difesa idrogeologica.

Per quanto riguarda gli impatti potenziali di cui al punto 1. le buone pratiche indicate dal piano per la prevenzione dei possibili impatti sulla qualità dell'aria consistono (vedi paragrafo 12 del PFG "Indirizzi di gestione forestale sostenibile"):

- nella regolazione e limitazione dei tagli gestionali o produttivi entro soglie che garantiscono la permanenza di una biomassa forestale aerea in grado di garantire le funzioni di autodepurazione e regolazione termica migliorative della qualità dell'aria; ovvero, nel caso della ceduazione periodica, la definizione di soglie dimensionali e di pattern delle particelle ceduate che garantiscono il mantenimento di un livello di funzionalità ecologica soddisfacente dell'unità produttiva complessivamente interessata dal piano di gestione forestale, nonché i tempi più brevi di ricostituzione della bionassa aerea delle particelle ceduate. Queste misure previste dal PFG sono dettagliatamente e operativamente codificate nel Regolamento forestale vigente, e il loro rispetto è obbligatorio ai fini dell'autorizzazione degli interventi.

Per quanto riguarda gli impatti potenziali di cui al punto 2., il PFG dispone, in accordo con il Decreto attuativo del Testo unico in materia di viabilità forestale e con il Regolamento forestale regionale (vedi paragrafo 10 del PFG "Indirizzi per gli interventi di sistemazione idraulico-forestale"):

- che la progettazione degli interventi sulla viabilità forestale e silvo-pastorale permanente debba prevedere modalità di realizzazione o adeguamento tali da seguire ordinariamente l'andamento naturale del terreno evitando al massimo il movimento terra, adottando scelte progettuali idonee a garantire la stabilità dei versanti e delle coperture pedologiche e la corretta regimazione idraulica dell'opera. e, dove possibile, tali da operare il recupero di tracciati preesistenti;
- l'utilizzo di materiali compatibili con la componente ambientale e paesaggistica locale;

la gestione della manutenzione funzionale nel tempo, ispirandosi a principi generali di efficienza, efficacia e sostenibilità degli interventi dal punto di vista ambientale, economico e della durata.
La messa in sicurezza dei boschi di protezione potrebbe generare impatti transitori negativi transitori sul paesaggio, anch'essi mitigabili dalle condizioni e buone pratiche indicate dal piano (limite rigoroso della superficie delle parcelle forestali ceduate, non contiguità delle parcelle).

fonte: http://burc.regione.campania.it

Misure previste per impedire, ridurre e compensare nel modo più completo possibile gli eventuali impatti negativi significativi sull'ambiente dell'attuazione del piano, come indicato all' Allegato VI, lettera g) del D.Lgs 152/2006.

In attuazione di quanto previsto all'art. 6 del TUFF, il Piano forestale generale è chiamato a definire strategie, obiettivi, criteri e indicazioni di gestione e utilizzo in chiave multifunzionale dei boschi regionali, finalizzati a garantire la tutela e la permanenza degli ecosistemi forestali, con riferimento agli aspetti strutturali, funzionali, evolutivi, di biodiversità e di valore paesaggistico, culturale e sociale.
Il Piano forestale generale della Campania si configura quindi, in ossequio al TUFF, come strumento strategico di tutela e gestione sostenibile del patrimonio forestale regionale. In quanto tale, esso non prevede o dispone specifici interventi o trasformazioni, ma piuttosto definisce le condizioni di sostenibilità e ammissibilità degli interventi, in accordo con il Regolamento forestale regionale, indirizzando in tal senso i contenuti della pianificazione sotto-ordinata di livello operativo (PFIT, PGF), la cui approvazione è legata al rispetto e alla coerenza col Piano forestale generale.
Il Piano forestale regionale, così come definito dal TUFF, si configura nella sua totalità come strumento per la definizione delle misure previste per impedire, ridurre e compensare nel modo più completo possibile gli eventuali impatti negativi significativi sull'ambiente.

Sintesi delle ragioni della scelta delle alternative individuate come richiesto all' Allegato VI, lettera h) del D.Lgs 152/2006.

Come evidenziato in precedenza, in attuazione di quanto previsto all'art. 6 del TUFF, il Piano forestale generale è attuativo per il territorio della Campania della Strategia forestale nazionale.
In sede di redazione del piano, le alternative possibili che il PFG aveva di fronte erano quindi quella del "non intervento", che avrebbe comportato il disattendimento del TUFF, ovvero quella prevista dal testo unico, di procedere all'applicazione al territorio della Campania delle diverse azioni e sotto-azioni della Strategia forestale nazionale, previa modulazione e adattamento locale, come recita il TUFF, in funzione delle specifiche esigenze socio-economiche, ambientali e paesaggistiche, nonché alle necessità di prevenzione del rischio idrogeologico, di mitigazione e di adattamento al cambiamento climatico.
E' possibile concludere quindi che la proposta di PFG recepisce, modula e adatta le misure e sotto-misure della Strategia forestale nazionale ritenute funzionali alla tutela e gestione sostenibile del patrimonio forestale, sulla base delle specifiche condizioni, esigenze e fabbisogni che caratterizzano il territorio della Campania.

fonte: http://burc.regione.campania.it

13. Monitoraggio e controllo ambientale del piano

Il presente paragrafo descrive l'insieme delle attività previste per il monitoraggio degli effetti ambientali significativi del Piano Forestale Generale della Campania secondo quanto previsto dall'art. 9, comma 1 lett. c) e dall'art. 10 della Direttiva Comunitaria 2001/42/CE concernente la valutazione degli effetti di determinati piani e programmi sull'ambiente, recepita a livello nazionale dal D. Lgs 152 del 2006 e s.m.i. e a livello regionale dalla DGR 203 del 2010.
In particolare, il paragrafo si sviluppa sulla base delle disposizioni contenute negli "Indirizzi operativi per il monitoraggio ambientale di piani e programmi" (art. 18 del D.Lgs. 152/2006), con l'intento di stabilire un sistema di monitoraggio che consenta di seguire l'andamento del Piano e di verificare l'efficacia delle misure adottate.
Gli articoli avanti richiamati della Direttiva 2001/42/CE dispongono che per i piani o programmi sottoposti a valutazione ambientale siano adottate specifiche misure di monitoraggio ambientale dirette al controllo degli effetti ambientali significativi e alla verifica del raggiungimento degli obiettivi di sostenibilità ambientale prefissati, al fine di individuare ed adottare eventuali misure correttive ritenute opportune, in fase di attuazione del piano o programma. Scopo del monitoraggio ambientale è, oltre a verificare la corrispondenza degli interventi con gli obiettivi di sostenibilità ambientale, intercettare eventuali impatti negativi sull'ambiente derivanti dall'attuazione del piano, individuarne le cause, per adottare opportune misure di aggiustamento e di descriverne e quantificarne gli effetti positivi, al fine di potenziarne ulteriormente le azioni.
L'art. 18 del D.Lgs. 152 del 2006 e s.m.i. individua il soggetto responsabile del monitoraggio ambientale nell'Autorità procedente (Direzione generale politiche agricole e forestali) che, "in collaborazione con l'Autorità competente, anche avvalendosi del sistema delle Agenzie ambientali e dell'Istituto Superiore per la Protezione e la Ricerca Ambientale", assicura il monitoraggio ambientale del piano.
A livello regionale, gli "Indirizzi operativi e procedurali per lo svolgimento della VAS in regione Campania" (approvati con la DGR 203 del 2010) forniscono indicazioni operative sottolineando che "*sulla base di quanto proposto nel rapporto ambientale e delle indicazioni eventualmente contenute nel parere di compatibilità ambientale, contestualmente all'approvazione del piano o programma, deve, quindi, essere approvato, come parte integrante del piano,* un **programma di misure di monitoraggio ambientale**, nel quale siano specificate le modalità di controllo degli effetti ambientali e di verifica del raggiungimento degli obiettivi ambientali stabiliti dal piano o programma, anche attraverso l'utilizzo di specifici indicatori opportunamente selezionati allo scopo, nonché adeguati alla scala di dettaglio e al livello attuale delle conoscenze".
Di seguito si riportano le principali metodologie e strumenti a disposizione dell'Autorità procedente (Direzione generale politiche agricole e forestali) e degli altri soggetti istituzionali potenzialmente coinvolti nel processo di valutazione ambientale (ARPAC, Autorità Ambientale e Autorità competente e Soggetti con Competenza Ambientale) per l'attuazione di adeguate misure di monitoraggio ambientale del piano Forestale generale della Campania.
La Direzione generale politiche agricole – Settore 207 03 00 "Ambiente, sviluppo locale, sistema della conoscenza", al fine di meglio integrare la verifica del raggiungimento degli obiettivi di sostenibilità ambientale con quella degli obiettivi generali del piano e di analizzare l'interazione degli effetti ambientali e degli effetti territoriali, sociali ed economici,

fonte: http://burc.regione.campania.it

anche con gli effetti derivanti dall'attuazione di altri piani e programmi di settore, forestali, ha messo a punto un Data Base Cartografico Forestale che contiene in forma coordinata e interoperabile i layer tematici forestali e territoriali attualmente in possesso dell'Amministrazione regionale (Tab 13.3).

La Direzione generale politiche agricole – Settore 207 03 00 "Ambiente, sviluppo locale, sistema della conoscenza" sta inoltre implementando, nell'ambito del progetto "Digital forest" in corso di attuazione con risorse del fondo nazionale FOSMIT (Fondo per lo sviluppo delle montagne italiane), un sistema di monitoraggio da telerilevamento satellitare del patrimonio forestale regionale, in grado di generare periodicamente ad una scala di estremo dettaglio indicatori specifici e mirati sull'evoluzione e lo stato di salute delle cenosi forestali.

Le attività di coordinamento e monitoraggio dei procedimenti autorizzativi e di controllo delle attività forestali sono condotte dalla Direzione generale mediante il SUAF (Sportello Unico per le Attività Forestali), istituito ai sensi dell'articolo 10, comma 9, del Regolamento Regionale n. 3 del 18 dicembre 2017, recante "Disposizioni di attuazione della legge regionale 7 maggio 1996, n. 11 – Disciplina della raccolta, coltivazione e commercializzazione dei prodotti del sottobosco e della tutela del patrimonio forestale".

Il SUAF svolge la funzione di portale unico di accesso per la presentazione, la gestione e l'istruttoria delle istanze relative agli interventi forestali sul territorio regionale.

Attraverso la piattaforma SUAF, le istanze e le autorizzazioni vengono digitalizzate, archiviate e georeferenziate, consentendo la costituzione di una banca dati forestale regionale costantemente aggiornata. Il SUAF consente quindi il tracciamento degli interventi selvicolturali autorizzati supportando in questo modo le attività di monitoraggio e valutazione degli impatti sull'assetto idrogeologico, sulla biodiversità e sulla resilienza degli ecosistemi forestali ai cambiamenti climatici.

Le attività di monitoraggio del patrimonio forestale svolte dalla Direzione generale agricoltura, che potranno fare ricorso al Data Base, ai dati prodotti con il progetto Digital Forest, oltre che alla banca dati SUAF sui procedimenti autorizzativi e pianificatori costituiranno, in sinergia con le basi ufficiali di indicatori fornite da ARPAC e dagli altri Enti con competenze istituzionali in tema di monitoraggio e controllo dell'ambiente, due importanti fonti settoriali per il popolamento periodico degli indicatori di contesto e di process, ai fini del monitoraggio ambientale del Piano Forestale generale della Campania.

I soggetti istituzionali che saranno coinvolti nella implementazione delle attività di monitoraggio del Piano forestale generale della Campania sono:

- La Direzione generale politiche agricole e forestali – 207 03 00 - Settore "Ambiente, sviluppo locale, sistema della conoscenza e difesa delle colture" con specifiche competenze nella nella programmazione e controllo delle risorse forestali, integrazione di strumenti digitali e sistemi di monitoraggio remoto delle risorse agroforestali, gestione dati tramite piattaforme digitale e la gestione del data-base cartografico per l'agricoltura e le foreste.

- l'Agenzia Regionale Protezione Ambientale della Campania (**ARPAC**) responsabile dell'aggiornamento periodico degli indicatori ambientali e fornitore dei dati e delle informazioni ambientali di contesto relative alle componenti e agli obiettivi di sostenibilità ambientale definiti nel Rapporto Ambientale;

fonte: http://burc.regione.campania.it

- Gli enti di ricerca applicata con i quali la Direzione generale agricoltura sta collaborando per l'implementazione del progetto Digital Forest (Università campane, CREA).

Le attività di monitoraggio ambientale si svilupperanno attraverso l'impiego di due diverse tipologie di indicatori:

1. **indicatori di contesto**: sono parametri che descrivono lo stato del sistema ambientale e delle sue diverse componenti. Essi forniscono il riferimento necessario per valutare l'impatto delle misure del Piano forestale generale e per misurarne l'efficacia rispetto agli obiettivi di sostenibilità.

2. **indicatori di processo**: Gli indicatori di processo misurano l'efficacia e l'andamento delle azioni attuate all'interno del Piano Forestale. Essi sono direttamente correlati agli obiettivi e alle attività previste nel piano, e forniscono informazioni sulla progressione del piano stesso..

Gli indicatori di contesto e di processo suggeriti sono riportati nelle Tab. 13.1 e 13.2, con l'indicazione delle fonti ufficiali di reperimento e degli enti responsabili della produzione del dato.

Le attività di monitoraggio condurranno alla redazione con cadenza triennale di un Rapporto di monitoraggio ambientale delle foreste della Campania. Il Rapporto conterrà una sintesi esaustiva dei risultati delle attività di monitoraggio, evidenziando le variazioni osservate dello stato delle risorse forestali regionali e delle componenti ambientali che con esse interagiscono, in relazione all'attuazione delle diverse misure del Piano forestale generale, e agli obiettivi di sostenibilità ipotizzati.
Le informazioni contenute nei Rapporto di monitoraggio consentiranno di valutare gli eventuali adattamenti e di attivare meccanismi di retroazione in grado di rivedere e modificare quegli aspetti dell'attuazione dei piani che, alla luce dei risultati del monitoraggio appaiono non coerenti con obiettivi di sostenibilità ambientale.
Il Rapporto di monitoraggio ambientale del Piano forestale generale avrà valore e funzione, oltre che di formale adempimento per il rispetto della procedura di valutazione ambientale, di strumento di comunicazione interna e esterna a supporto di una gestione integrata e condivisa del Piano forestale generale.
Il processo di comunicazione rappresenta una componente rilevante delle attività di monitoraggio ambientale, nonché un'attività strategica per una corretta gestione in chiave multifunzionale del patrimonio forestale regionale. Il Rapporto di monitoraggio, unitamente alle basi cartografiche e iconografiche, saranno pubblicate tramite le risorse web già attivate dall'amministrazione regionale per favorirne la condivisione e assicurare una adeguata divulgazione delle realizzazioni e dei risultati.
Le attività di monitoraggio avanti descritte saranno condotte con risorse del bilancio regionale e a risorse FOSMIT (Fondo per lo sviluppo della montagna italiana) in dotazione alla UOS Ambiente e foreste.

1. Introduzione

In accordo con il "Testo unico in materia di foreste e filiere forestali" (TUFF, D.lgs. 3 aprile 2018, n. 34) e con la legislazione regionale vigente, il Piano forestale generale della Campania[1] definisce gli obiettivi e le azioni per la tutela e la gestione attiva del patrimonio forestale regionale.
Secondo quanto previsto dall'art. 6 del Testo unico, il Piano forestale generale della Campania si inserisce nel complessivo quadro programmatico nazionale, che si articola in 4 livelli:

- La **Strategia Forestale Nazionale** che definisce gli indirizzi nazionali per la tutela, la valorizzazione e la gestione attiva del patrimonio forestale nazionale e per lo sviluppo del settore e delle sue filiere produttive, ambientali e socio-culturali;

- Il **Programma forestale regionale**, che definisce gli obiettivi e le relative linee d'azione, coerenti con la Strategia Forestale Nazionale in relazione alle specifiche esigenze socio-economiche, ambientali e paesaggistiche, nonché alle necessita' di prevenzione del rischio idrogeologico, di mitigazione e di adattamento al cambiamento climatico;

- I **Piani forestali di indirizzo territoriale**, che possono essere predisposti dalle regioni con riferimento a comprensori territoriali omogenei per caratteristiche ambientali, paesaggistiche, economico-produttive o amministrative, finalizzati all'individuazione, al mantenimento e alla valorizzazione delle risorse silvo-pastorali e al coordinamento delle attivita' necessarie alla loro tutela e gestione attiva, nonche' al coordinamento degli strumenti di pianificazione forestale;

- I **Piani di gestione forestale**, redatti per le proprietà pubbliche e private, riferiti ad un ambito aziendale o sovraziendale di livello locale, quali strumenti indispensabili a garantire la tutela, la valorizzazione e la gestione attiva delle risorse forestali, attuativi dei Programmi forestali regionali e coordinati con i Piani forestali di indirizzo territoriale.

Compito del Piano forestale generale è quello di attuare nel territorio della regione Campania, in considerazione delle specifiche caratteristiche ed esigenze, gli obiettivi e le azioni della Strategia Forestale Nazionale, che a sua volta recepisce per il territorio nazionale i contenuti degli accordi internazionali e della legislazione e programmazione comunitaria in materia di risorse forestali e ambientali, biodiversità, lotta al cambiamento climatico, tutela del paesaggio.
Al centro del modello di programmazione forestale definito dal Testo unico rimane il concetto-guida di *Gestione Forestale Sostenibile* (GFS) o *gestione attiva* del patrimonio forestale.

[1] La denominazione dello strumento di programmazione forestale di livello regionale è differente nelle disposizioni di legge ai diversi livelli: il TUFF lo definisce "Programma forestale regionale"; il Regolamento 3/2017 della Regione Campania di tutela e gestione sostenibile del patrimonio forestale regionale lo definisce "Piano forestale generale"; la precedente legge forestale della Campania L.R. 11/96 "Piano forestale regionale". Per comodità, nel presente documento è adottata la dizione "Piano forestale generale".

fonte: http://burc.regione.campania.it

A livello regionale, in piena coerenza con il Testo unico, il Regolamento 3/2017 della Regione Campania di tutela e gestione sostenibile del patrimonio forestale regionale, definisce ulteriormente all'art. 5 i contenuti del Piano Forestale Generale che:

a. descrive le caratteristiche ecologiche, strutturali ed evolutive del patrimonio forestale regionale;

b. definisce le strategie generali di tutela e gestione sostenibile del patrimonio forestale regionale ed individua gli obiettivi da conseguire e le azioni prioritarie di miglioramento delle foreste pubbliche e private, tenendo conto degli obiettivi della tutela ambientale e dello sviluppo socio-economico delle popolazioni interessate e costituendo il quadro di riferimento per la pianificazione forestale a livello territoriale e locale;

c. si coordina con la pianificazione specialistica vigente, con espresso riferimento al piano paesaggistico di cui all'articolo 135 del D.Lgs. 22 gennaio 2004, n. 42 (Codice dei beni culturali e del paesaggio); ai piani di bacino di cui all'articolo 66 del D.Lgs. 3 aprile 2006, n. 152 (Norme in materia ambientale); ai piani di gestione della Rete Natura 2000 di cui al D.P.R 8 settembre 1997, n. 357 (Regolamento recante attuazione della direttiva 92/43/CEE relativa alla conservazione degli habitat naturali e seminaturali, nonché della flora e della fauna selvatiche).

Ai fini della caratterizzazione del patrimonio boschivo regionale il Piano forestale generale fa riferimento alla **Carta delle risorse forestali della Campania**, redatta contestualmente ad esso.

fonte: http://burc.regione.campania.it

2. Gli obiettivi e le azioni del Piano forestale regionale

Come illustrato in precedenza, il Piano forestale generale della Campania è chiamato a definire gli obiettivi e le relative linee d'azione, coerenti con la Strategia Forestale Nazionale, in relazione alle specifiche esigenze socio-economiche, ambientali e paesaggistiche, nonché alle necessità di prevenzione del rischio idrogeologico, di mitigazione e di adattamento al cambiamento climatico.

Alla luce delle indagini e delle elaborazioni svolte, il Piano forestale regionale della Campania individua 7 differenti obiettivi prioritari articolati in 26 differenti azioni, descritte nei seguenti paragrafi. Lo schema degli obiettivi e delle azioni di piano è riportato nella tabella alla pagina seguente.

Le azioni individuate dal Piano forestale generale trovano preciso riferimento in quelle indicate nella Strategia Forestale Nazionale, oltre che nella legislazione nazionale e regionale vigente (vedi cap. 10 e 13).

B5. Mitigazione e adattamento dei sistemi forestali della Campania ai cambiamenti climatici

Il Piano forestale generale della Campania persegue il rafforzamento della capacità di mitigazione e adattamento dei sistemi forestali della Campania ai cambiamenti climatici in maniera trasversale, attraverso l'implementazione combinata delle diverse azioni di piano finalizzate:

- all'incremento della superficie boschiva regionale pubblica e privata interessata da pianificazione forestale alle diverse scale (aziendale, territoriale) e da gestione attiva, in grado di assicurarne l'integrità fisica e funzionale, nel rispetto delle dinamiche ecologico-evolutive, degli aspetti di biodiversità, della capacità di fornire in maniera sostenibile il pool di servizi ecosistemici di supporto e regolazione;
-
- alla diffusione di Disciplinari di gestione forestale sostenibile, per le diverse categorie forestali e tipi colturali, finalizzati all'aumento della resistenza/resilienza del bosco nei confronti del rischio climatico e ambientale;
-
- Alla capacità di "governare l'abbandono", promuovendo e incentivando la cura e la gestione attiva dei boschi abbandonati e/o silenti, dei boschi di neoformazione, degli arbusteti mediterranei e temperati di ricolonizzazione dei coltivi eroici abbandonati.

fonte: http://burc.regione.campania.it

A. Una nuova governance per le foreste in Campania

A1. Promuovere una governance forestale in Campania basata sulla cooperazione istituzionale, l'integrazione di strumenti e politiche, la partecipazione e condivisione degli obiettivi di Gestione Forestale Sostenibile (GFS)

A2. Estendere la superficie dei beni silvo-pastorali di proprietà pubblica, privata e collettiva della Campania dotati di piani di gestione forestale

A3. Promuovere la pianificazione forestale di area vasta (Piani Forestali di Indirizzo Territoriale)

B. Rafforzare il capitale naturale, assicurare i servizi ecologici essenziali, prevenire i rischi

B1. Conservazione e miglioramento della biodiversità forestale nella rete regionale di aree protette

B2. Gestione attiva dei boschi di protezione.

B3. Incrementare la capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica del territorio e tutela delle acque

B4. Prevenzione attiva dei rischi naturali o antropici, incendi, calamità naturali ed eventi catastrofici

C. Curare e gestire le risorse forestali della Campania

C1. Curare i rimboschimenti storici della Campania

C2. Valorizzare in chiave multifunzionale le foreste urbane e periurbane

C3. Curare e proteggere i boschi planiziali della Campania

C4. Tutela e valorizzazione dei castagneti da frutto della Campania

C5. Tutelare i boschi vetusti e gli alberi monumentali

C6. Promuovere la gestione sostenibile dei prati e pascoli permanenti

C7. Promuovere e valorizzare i sistemi agroforestali

D.Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare

D1. Rafforzare la capacità operativa delle imprese boschive. Promuovere la qualificazione degli operatori forestali

D2. Promuovere la certificazione delle foreste del territorio regionale e la tracciabilità lungo tutta la filiera, dal tronco al mobile finito

D3. Riconoscere e remunerare i servizi di interesse pubblico, ambientale e sociale forniti dalle aree forestali (foreste e pascoli) e mantenuti ed accresciuti dalla GFS

D4. Promozione delle produzioni forestali non legnose in una prospettiva di filiera

D5. Adesione al Cluster legno-foresta italiano e costituzione del Cluster legno foresta della Campania

E. Vivere le foreste della Campania

E1. Valorizzare le 10 foreste regionali come "laboratori verdi multifunzionali" e centri di diffusione permanente della GFS in Campania

E2. Valorizzazione multifunzionale della viabilità forestale e silvo-pastorale e della sentieristica in Campania

F. Conoscere le foreste della Campania

F1. Promuovere un programma integrato di monitoraggio e cartografia delle risorse forestali della Campania

F2. Implementazione dello Sportello unico regionale per le attività forestali (SUAF)

F3. Promozione di iniziative e programmi divulgativi per rafforzare la consapevolezza pubblica dell'importanza e il ruolo ecologico del patrimonio forestale della Campania

G. Le nuove foreste della Campania

G1 Valorizzare e potenziare i vivai forestali; estendere la superficie dei boschi da seme; valorizzare le risorse genetiche; potenziare la produzione di materiale di propagazione forestale

G2 Promozione di tecniche forestali per il recupero dei siti degradati in Campania

Tab. 1 Il Piano Forestale Generale della Campania identifica 7 obiettivi e 26 azioni operative

fonte: http://burc.regione.campania.it

Rapporti con il precedente Piano forestale generale 2009-2013

Il nuovo Piano forestale generale della Campania risponde, come evidenziato nei paragrafi precedenti, all'esigenza di aggiornare e adeguare la programmazione regionale in materia di foreste, al nuovo quadro programmatico e giuridico comunitario e nazionale, così come definito in primo luogo dalla nuova legge forestale nazionale – il Decreto Legislativo 3 aprile 2018, n. 34 ("Testo unico in materia forestale e di filiere forestali", TUFF) e dalla Strategia forestale Nazionale elaborata secondo quanto previsto dall'art. 6, comma 1 del TUFF.

Sia il TUFF che la strategia forestale Nazionale, sono a loro volta coerenti con la Nuova strategia dell'UE per le foreste per il 2030 — Gestione sostenibile delle foreste in Europa, che è uno dei pilastri del Green deal europeo e sono profondamente interrelati con la Strategia dell'UE sulla biodiversità per il 2030.

Un altro importante elemento di novità con il quale il Piano forestale ha dovuto confrontarsi è il Regolamento forestale regionale 3/2017, così come successivamente modificato nel 2022.

Il Piano forestale generale della Campania 2009-2013 era chiamato quindi a conformarsi con un quadro normativo e programmatico che è profondamente mutato, così come è mutato il quadro di sostegno al settore agroforestale, con l'entrata in vigore della nuova PAC dopo il 2020.

Ne consegue che la parte strategica del nuovo Piano forestale generale 2025-2035 ha contenuti e struttura molto diversi dal piano precedente, dettati in buona misura dai nuovi approcci introdotti dalla Strategia forestale nazionale, dal nuovo Piano strategico nazionale della PAC 2023-2027, dal Complemento di sviluppo rurale della Campania 2023-2027.

Elementi maggiori di continuità caratterizzano le parti del piano dedicate alle analisi di contesto, quali ad esempio il cap. 5 (Il patrimonio forestale della Campania: un profilo sintetico), il cap. 6 (Le formazioni forestali), il cap. 7. (Avversità biotiche e abiotiche). Il cap. 8 (Indirizzi di gestione forestale sostenibile), il cap. 10 (Indirizzi per gli interventi di sistemazione idraulico-forestale), il cap. 11 (Indirizzi per la gestione della viabilità silvo-pastorale), con i necessari aggiornamenti, presentano anch'essi aspetti di continuità con il piano precedente.

Il nuovo piano è dotato di una cartografia forestale di riferimento (cap. 4) che mancava in quello precedente.

L'attuazione del Piano forestale generale 2009-2013 presenta risultati positivi su molti importanti fronti. La pianificazione dei boschi pubblici si è notevolmente estesa, riguardando all'attualità l'80% circa della superficie forestale pubblica. Il coordinamento dell'attività degli Enti delegati in materia forestale ai sensi della legge regionale 11/96 è stato sufficientemente assicurato. Il contributo del Piano all'impiego delle risorse delle misure forestali del PSR 2007-2013 è stato positivo. Risultati meno soddisfacenti sono stati conseguiti nella promozione della pianificazione forestale dei boschi privati, nel contrasto alle dinamiche di abbandono, e nella creazione di una governance forestale basata sulla cooperazione istituzionale delle competenze paesaggistiche, ambientali e produttive, tutti obiettivi che il nuovo piano affronta adattando alle specificità regionali gli approcci definiti dalla nuova programmazione e legislazione nazionale ed europea.

3. La procedura di VAS: riferimenti normativi e metodologici

Riferimenti normativi

La procedura di valutazione ambientale dei piani e programmi o Valutazione Ambientale Strategica (VAS) è stata introdotta a livello comunitario dalla Direttiva 2001/42/CE del 27 giugno 2001 "Direttiva del Parlamento Europeo e del Consiglio concernente la valutazione degli effetti di determinati piani e programmi sull'ambiente" e recepita a livello nazionale dal D.Lgs. 152/2006 e s.m.i.. Nello specificare gli ambiti di applicazione, la direttiva include i piani e i programmi elaborati per i settori agricolo, forestale, della pesca, energetico, industriale, dei trasporti, della gestione dei rifiuti e delle acque, delle telecomunicazioni, turistico, della pianificazione territoriale o della destinazione dei suoli, e che definiscono il quadro di riferimento per l'autorizzazione dei progetti elencati negli allegati I e II della direttiva 85/337/CEE (VIA) o per i quali, in considerazione dei possibili effetti sui siti, si ritiene necessaria una valutazione di incidenza ai sensi degli articoli 6 e 7 della direttiva 92/43/CEE (Habitat).
La Direttiva 2001/42/CE ha introdotto la VAS con "l'obiettivo di garantire un elevato livello di protezione dell'ambiente e di contribuire all'integrazione di considerazioni ambientali all'atto dell'elaborazione e dell'adozione di determinati piani e programmi che possono avere un impatto significativo sull'ambiente" (art.1 della Direttiva). Sulla base di quanto disciplinato dall'art. 6 della Direttiva elemento di peculiarità della VAS è costituito dalla consultazione del pubblico e dei soggetti con competenza ambientale, che è prevista prima dell'adozione del piano o programma o dell'avvio della relativa procedura legislativa. La VAS costituisce parte integrante del procedimento di adozione e approvazione dei piani e dei programmi che vi sono sottoposti.
Secondo la normativa vigente, la VAS si applica a:

- I piani che riguardano i settori agricolo-forestale, della pesca, della pianificazione territoriale e della destinazione dei suoli;
- i piani contenenti "la definizione del quadro di riferimento per l'approvazione, l'autorizzazione, l'area di localizzazione o comunque la realizzazione di progetti sottoposti a valutazione di impatto ambientale o verifica di assoggettabilità a VIA in base alla normativa vigente";
- i piani e i programmi concernenti i siti designati come zone di protezione speciale per la conservazione degli uccelli selvatici e quelli classificati come siti di importanza comunitaria per la protezione degli habitat naturali e della flora e della fauna selvatica.

La VAS riguarda, inoltre, i Programmi cofinanziati dall'Unione europea, al fine di migliorare la qualità decisionale complessiva delle attività di programmazione e orientare alla sostenibilità la scelta delle azioni da finanziare.
A livello nazionale la VAS è stata recepita dal Decreto Legislativo 152/2006 "Norme in materia ambientale", che: ha definito gli aspetti procedurali (ad es. i tempi per le consultazioni); ha specificato la necessità di produrre un Rapporto Preliminare sul quale avviare la consultazione con i soggetti aventi competenza in materia ambientale e un Rapporto Ambientale che accompagni la proposta di piano o programma; ha introdotto la necessità del parere motivato di

fonte: http://burc.regione.campania.it

VAS; ha individuato i ruoli dell'Autorità procedente (responsabile per l'elaborazione del piano o programma soggetto a VAS) e dell'Autorità competente (responsabile dell'espressione del parere motivato di VAS).
Il Decreto Legislativo 04/2008 ha corretto e integrato quando disposto precedentemente nel Decreto Legislativo 152/06 estendendo il processo di VAS agli impatti sull'ambiente e sul patrimonio culturale e introducendo tra i principi di riferimento quelli inerenti allo sviluppo sostenibile intergenerazionale. Inoltre, ha confermato la centralità dell'accesso del pubblico agli atti del percorso di pianificazione e alla VAS, inquadrando, anche normativamente, tale accesso.
Il fine della valutazione è preservare la salute umana, la salubrità dell'ambiente, la capacità di riproduzione degli ecosistemi e la qualità della vita; nella VAS sono valutati gli impatti diretti e indiretti del piano sui seguenti fattori:

- l'uomo, la fauna e la flora;
- il suolo, l'acqua, l'aria e il clima;
- i beni materiali e il patrimonio culturale;
- l'interazione dei fattori sopraindicati.

Il Decreto Legislativo 128/2010 ha introdotto alcune ulteriori specifiche, ad esempio in merito alla verifica di assoggettabilità e alla necessità di dare conto, nel Rapporto ambientale, delle consultazioni svolte e delle modalità con cui sono state recepite le osservazioni pervenute.
Non da ultimo, la disciplina è stata ulteriormente modificata dall'art. 28, comma 1, lettera a), del Decreto Legge n. 77 del 2021 (Decreto Semplificazioni-bis), convertito con modificazioni dalla legge n. 108 del 29 luglio 2021 (pubblicata sulla Gazzetta Ufficiale n.181 del 30 luglio 2021).
In base alla normativa sopra riportata il Piano forestale generale della Campania (PFG) rientra pienamente nell'ambito di applicazione della normativa in materia di valutazione ambientale strategica.

L'iter procedurale

L'applicazione delle disposizioni in materia di VAS ad un qualsiasi piano o programma prevede una serie di tappe procedurali che devono essere inserite organicamente nell'iter ordinario della programmazione nelle diverse fasi di redazione, adozione ed approvazione.
La VAS deve essere avviata durante la preparazione del Programma e deve essere "completata" prima della sua adozione e presentazione alla Commissione.
In particolare la VAS appare caratterizzata dalle seguenti fasi e attività:

- **Scoping:** il termine identifica un'analisi preliminare con finalità di definire i riferimenti concettuali e operativi attraverso i quali si procederà poi alla fase di valutazione ambientale. In particolare durante la fase di scoping viene valutato quali siano le fonti di informazioni e dati per la realizzazione del rapporto ambientale. Inoltre in questa fase si procede alla definizione delle autorità da coinvolgere che abbiano specifiche competenze in materia ambientale, e del pubblico che subisce o può subire gli effetti delle procedure decisionali o che ha un interesse in tali procedure.
- **Consultazioni preliminari:** le consultazioni preliminari hanno lo scopo di consentire l'acquisizione di elementi informativi, contributi, prime valutazioni e riferimenti ambientali, utili a definire la portata ed il livello di dettaglio delle informazioni da

fonte: http://burc.regione.campania.it

includere nel rapporto ambientale.

- **Elaborazione del rapporto ambientale e della proposta di programma**: il Rapporto Ambientale è il documento attraverso il quale debbono essere individuati, descritti e valutati gli effetti significativi che l'attuazione del Programma può determinare sull'ambiente, nonché le ragionevoli alternative che possono adottarsi in considerazione degli obiettivi e dell'ambito territoriale interessato dal Programma stesso. Nello specifico le analisi da svolgere sono finalizzate a:
  - definizione del contesto ambientale di riferimento
  - analisi di coerenza del Programma
  - proposta di possibili alternative
  - analisi dettagliata degli effetti diretti e indiretti del Programma sull'ambiente regionale e globale
  - definizione delle misure correttive da introdurre per limitare o eliminare gli effetti negativi del Programma sull'ambiente
  - definizione delle misure di monitoraggio previste in fase di attuazione del programma
  - una sintesi non tecnica delle attività realizzate e dei principali risultati conseguiti.
- **Svolgimento delle consultazioni del pubblico**: la consultazione è una fase importante della procedura VAS. Il suo obiettivo è duplice: da un lato informare il pubblico sugli effetti ambientali del Programma e, dall'altro raccogliere, presso un pubblico più ampio, eventuali elementi metodologici aggiuntivi e/o suggerimenti di modifiche del Programma in modo da ottimizzare l'impatto ambientale del Programma stesso.
- **Valutazione della proposta di programma, del Rapporto ambientale e della Sintesi non tecnica** attraverso l'espressione del parere motivato dell'autorità competente: in tale fase l'autorità competente, ricevute le osservazioni e i contributi da parte dell'autorità procedente, pervenuti durante la fase della consultazione pubblica, esprime il parere motivato.
- **Decisione**: in tale fase l'autorità procedente provvede a trasmettere all'organo competente, per l'adozione o l'approvazione, il Programma, il parere motivato e tutta la documentazione acquisita nell'ambito della consultazione. L'organo competente, con apposito atto, adotta/approva il programma.
- **Informazione sulla decisione**: in tale fase l'atto di adozione/approvazione del nuovo Programma viene pubblicato sugli strumenti ufficiali di comunicazione dell'Amministrazione affinché il pubblico possa prendere visione del Programma e di tutta la documentazione oggetto dell'istruttoria.
- **Monitoraggio**: il monitoraggio ha lo scopo di assicurare il controllo degli impatti significativi sull'ambiente derivanti dall'attuazione del Programma nonché la verifica del raggiungimento degli obiettivi di sostenibilità prefissati, così da individuare tempestivamente gli impatti negativi imprevisti e adottare le opportune misure correttive. Le attività di monitoraggio previste costituiscono parte integrante del Rapporto Ambientale. Esse comprendono il controllo degli indicatori preventivamente selezionati, con riferimento specifico sia agli obiettivi del Programma ed alle azioni in esso previste, sia agli impatti significativi ed alle situazioni di criticità ambientale individuate nel Rapporto Ambientale. E' opportuno precisare che la corretta applicazione delle disposizioni normative precedentemente esaminate richiede la

fonte: http://burc.regione.campania.it

presenza di alcuni elementi fondamentali, trasversali a tutte le fasi procedurali, quali: la trasparenza delle decisioni, la ripercorribilità del processo e la disponibilità di una base di conoscenza comune condivisa ed accessibile da parte di chiunque.

La procedura di VAS integrata alla VINCA del Piano forestale generale della Campania

Avvio della procedura

La Direzione Generale per le Politiche Agricole, Alimentari e Forestali - UOD 50.07.18 - Ambiente Foreste e Clima (ora denominata 207 03 02 - UOS Ambiente e Foreste) con comunicazione del 9 febbraio 2024 ha presentato all' All'Ufficio Speciale Valutazioni ambientali istanza di Valutazione Ambientale Strategica integrata con la VIncA per il Piano Forestale generale della Campania, rientrando il suddetto piano nelle tipologie previste dall'articolo 6 comma 2 lett. b del D.Lgs. 152/2006.

Fase di scoping

L'Ufficio Valutazioni Ambientali con comunicazione del 07/03/2024 PG/2024/0122262 ha dato avvio alla fase di scoping della VAS integrata con la VIncA per il piano "Piano Forestale Generale della Campania", rendendo disponibili e scaricabili sul sito tematico viavas.regione.campania.it nella sezione Area VAS i seguenti documenti:

- Preliminare di Piano;
- Rapporto Preliminare Ambientale
- N. 4 cartografie di analisi.

Nella comunicazione l'Ufficio Valutazioni Ambientali ha individuato:

- l'Ufficio Compatibilità Ambientale, quale Autorità Competente;
- la UOD 50.07.18 -Ambiente Foreste e Clima (ora denominata 207 03 02 - UOS Ambiente e Foreste), quale Autorità Procedente/Proponente.

La predetta comunicazione riportava in allegato il seguente l'elenco dei Soggetti con competenza ambientale:

- MINISTERO DELL'AMBIENTE E DELLA SICUREZZA ENERGETICA
- Direzione generale per il patrimonio naturalistico e mare (PNM)
- Direzione generale per la crescita sostenibile e la qualità dello sviluppo (CreSS) – Divisione V Sistemi di Valutazione Ambientale
- MINISTERO della POLITICHE, AGRICOLE, ALIMENTARI E FORESTALI (MASAF)
- Dipartimento delle politiche europee e internazionali e dello sviluppo rurale Direzione generale dello sviluppo rurale
- Soprintendenza Archeologia, Belle Arti e Paesaggio per il Comune di Napoli
- Soprintendenza Archeologia, Belle Arti e Paesaggio per l'Area Metropolitana di Napoli
- Soprintendenza Archeologia, Belle Arti e Paesaggio per le Province di Caserta e Benevento
- Soprintendenza Archeologia, Belle Arti e Paesaggio per le Province di Salerno e Avellino

Infine, con comunicazione del 17/04/2024, l'Ufficio Speciale Valutazioni Ambientali comunicava gli esiti della procedura di scoping con la specifica delle osservazioni pervenute da parte dei seguenti SCA:

- Ente Riserve Naturali Regionali Foce Sele Tanagro e Monti Eremita-Marzano, nella quale si comunicava che la Commissione consultiva dell'Ente ha esaminato la richiesta non ritenendo in questa fase di fornire contributi, rimandando alle prossime fasi l'espressione del parere di competenza;

- ARPA Campania, che impiegando il questionario allegato al Rapporto preliminare ha prodotto una serie motivata di osservazioni/raccomandazioni che vengono riassunte di seguito, assieme alle modifiche/integrazioni apportate alla proposta di piano ovvero al presente rapporto.

Nel documento di osservazioni dell'ARPA Campania si raccomandava inoltre di considerare adeguatamente le relazioni delle azioni di piano con:

- le attività agricole, con riferimento ad esempio all'agroselvicoltura, ai sistemi agroforestali, alla salvaguardia degli habitat faunistici; alla tutela e valorizzazione dei castagneti da frutto della Campania.
- il turismo, con riferimento ad aspetti quali la promozione e valorizzazione dei servizi socioculturali delle foreste in Campania; la - Valorizzazione multifunzionale della viabilità forestale e silvo- pastorale e della sentieristica in Campania

Nel documento di osservazioni si raccomanda di:

- evidenziare il riferimento al documento dell'ONU "l'Agenda 2030 per lo Sviluppo Sostenibile", alla "Strategia Nazionale per lo Sviluppo Sostenibile", alla "Strategia Regionale per lo Sviluppo Sostenibile"
- Evidenziare nella descrizione dei contenuti e delle azioni di Piano, come si sia tenuto conto delle criticità e peculiarità che caratterizzano il territorio regionale.
- Nell'ambito dell'analisi di coerenza, descrivere come il Piano proposto si relaziona a quello precedente e attualmente vigente, evidenziando eventuali elementi di continuità e/o differenze oltre gli esiti delle previste attività di monitoraggio relative al Piano vigente.
- Produrre una attenta analisi del contesto territoriale ed ambientale di riferimento in cui evidenziare peculiarità e criticità del territorio regionale rispetto a cui relazionare e valutare le azioni specifiche del piano; le componenti da descrivere nell'analisi di contesto dovranno essere quelle presumibilmente interessate dalle azioni del Piano.
- Individuare, nell'ambito di un piano di monitoraggio, un set di indicatori che, in coerenza con la scelta delle componenti ambientali/territoriali considerate in fase di

fonte: http://burc.regione.campania.it

analisi e valutazione degli impatti, cosi come precedentemente proposto, siano idonei a: verificare l'attuazione e l'efficacia delle azioni proposte; descrivere qualitativamente e quantitativamente gli effetti delle azioni del Piano sui sistemi ambientali e territoriali interessati e di monitorare la sommatoria degli effetti a livello di area vasta/provinciale. Per agevolare il processo di valutazione si segnala l'opportunità di utilizzare gli stessi indicatori nella descrizione del contesto e nel piano di monitoraggio. Il piano di monitoraggio dovrà altresì contenere indicazioni in merito a:" le modalità di raccolta dei dati e di elaborazione degli indicatori necessari alla valutazione degli impatti, la periodicità della produzione di un rapporto illustrante i risultati della valutazione degli impatti e le misure correttive da adottare".

Nel documento di osservazioni si raccomanda inoltre di predisporre un apposito capitolo (relazione o studio d'incidenza), redatto da idonei professionisti, secondo le indicazioni riportate nell'allegato "G" del DPR 357/1997 e s.m.i. e nelle LL GG finalizzato ad analizzare e valutare gli effetti, diretti ed indiretti, che l'attuazione del Piano potrà potenzialmente indurre in particolare sui siti della rete Natura 2000 e sul relativo sistema ecologico ad essi funzionalmente connesso.
In particolare si suggerisce, una volta definiti i fattori di pressione e le minacce su ciascun elemento della Rete Natura 2000, di delineare un quadro previsionale delle possibili interferenze in termini di: 1) perdita di superficie, frammentazione e deterioramento di habitat e habitat di specie; 2) rarefazione e frammentazione delle popolazioni di specie di interesse comunitario. Lo Studio verificherà altresì la coerenza delle azioni pianificatorie con le misure di conservazione vigenti per i Siti della Rete Natura 2000 del territorio campano, come definite dal D.G.R. n. 2295 del 29/12/2007 e dal D.G.R. 795 del 19/12/2017.
Le osservazioni/raccomandazioni fatte da ARPA Campania sono state tutte pienamente condivise in sede di redazione del Rapporto ambientale e lo Studio di incidenza, come sintetizzato nella tabella riepilogativa riportata di seguito.

Tab. 2. Sintesi dell'analisi e valutazione delle osservazioni ricevute da ARPA Campania

Osservazioni prodotte da ARPA Campania	**Analisi e valutazione delle osservazioni ed eventuali modifiche, integrazioni, controdeduzioni** **Indicazione dei punti della proposta di piano o del rapporto ambientale eventualmente modificati**
4.1 Ulteriori componenti che si propone di considerare *Agricoltura* - Agroselvicoltura, sistemi agroforestali, salvaguardia degli habitat faunistici - Tutela e valorizzazione dei castagneti da frutto della Campania *Turismo* - Promuovere e valorizzare i servizi socioculturali delle foreste in Campania - Valorizzazione multifunzionale della viabilità forestale e silvo-pastorale e della sentieristica in Campania	Richiesta accolta e integrata. Le tematiche sono state incluse come Obiettivi/Azioni specifici nel PFG (Capitolo 15): Agricoltura/Agroselvicoltura: Azioni C4 (Tutela dei castagneti da frutto) e C7 (Promuovere i sistemi agroforestali). Turismo/Servizi Socioculturali: Azioni E1 (Valorizzare le foreste regionali come laboratori) e E2 (Valorizzazione della viabilità e sentieristica). Inoltre, la Matrice di Impatto (RA Cap. 12) valuta esplicitamente i Servizi Ecosistemici (inclusi socio-culturali e di approvvigionamento), recependo la richiesta.

fonte: http://burc.regione.campania.it

Tab. 2. Sintesi dell'analisi e valutazione delle osservazioni ricevute da ARPA Campania

Osservazioni prodotte da ARPA Campania	**Analisi e valutazione delle osservazioni ed eventuali modifiche, integrazioni, controdeduzioni** **Indicazione dei punti della proposta di piano o del rapporto ambientale eventualmente modificati**
Si riscontra inoltre la mancata corrispondenza tra le componenti ambientali considerate nel tab. 5 del Rapporto di scoping e quanto riportato nella tabella precedente.	Richiesta accolta e integrata. Il Rapporto Ambientale definitivo ha rettificato questa discrepanza, adottando una matrice di valutazione degli impatti (Capitolo 12) coerente e ampliata rispetto al solo elenco iniziale.
4.2. Nel rapporto di scoping, la descrizione del contesto è limitata a: - Le aree protette della Campania - Aree Natura 2000 - Il patrimonio forestale della Campania	Richiesta accolta e integrata. La Caratterizzazione delle Matrici Ambientali (RA Cap. 9) è stata ampliata per includere l'analisi di: geomorfologia, idrogeologia, clima, aria, acqua, e biodiversità/paesaggio, superando i limiti del documento preliminare.
5.1. Si segnala l'opportunità di far riferimento prevalentemente al documento dell'ONU "l'Agenda 2030 per lo Sviluppo Sostenibile", alla "Strategia Nazionale per lo Sviluppo Sostenibile", alla "Strategia Regionale per lo Sviluppo Sostenibile"	Richiesta accolta e integrata. Il Rapporto Ambientale (Capitolo 8) elenca e analizza in dettaglio la coerenza con tutte le strategie citate, come base obbligatoria per la definizione degli obiettivi di sostenibilità del Piano.
7.1 Si riscontra la mancata corrispondenza tra le componenti ambientali considerate nel tab. 5 del Rapporto di scoping e quelle indicate al precedente punto 4.1.	Richiesta accolta e integrata. Il **Rapporto Ambientale definitivo** ha rettificato questa discrepanza, adottando una matrice di valutazione degli impatti (Capitolo 12) coerente e ampliata rispetto al solo elenco iniziale.
8.1. Evidenziare nella descrizione dei contenuti e delle azioni di Piano, come si sia tenuto conto delle criticità e peculiarità che caratterizzano il territorio regionale	Richiesta accolta e integrata. La Caratterizzazione delle Matrici Ambientali (RA Cap. 9: geomorfologia, idrogeologia, clima, aria, acqua, e biodiversità/paesaggio) considera i principali aspetti di criticità e peculiarità.
Nell'ambito dell'analisi di coerenza, descrivere come il Piano proposto si relaziona a quello precedente e attualmente vigente, evidenziando eventuali elementi di continuità e/o differenze oltre gli esiti delle previste attività di monitoraggio relative al Piano vigente.	Richiesta accolta e integrata Il **Rapporto Ambientale (Capitolo 11)** include l'analisi dello stato di attuazione e dei risultati del PFG 2009-2013 per giustificare gli obiettivi del nuovo Piano.
Produrre una attenta analisi del contesto territoriale ed ambientale di riferimento in cui evidenziare peculiarità e criticità del territorio regionale rispetto a cui relazionare e valutare le azioni specifiche del piano; le componenti da descrivere nell'analisi di contesto dovranno essere quelle presumibilmente interessate dalle azioni del Piano.	Richiesta accolta e integrata. La proposta di Piano forestale generale analizza nei capitoli da 5 a 11 le principali peculiarità e criticità territoriali che sono influenzate e interagiscono con la gestione del patrimonio forestale.

Tab. 2. Sintesi dell'analisi e valutazione delle osservazioni ricevute da ARPA Campania

Osservazioni prodotte da ARPA Campania	**Analisi e valutazione delle osservazioni ed eventuali modifiche, integrazioni, controdeduzioni** **Indicazione dei punti della proposta di piano o del rapporto ambientale eventualmente modificati**
Individuare, nell'ambito di un piano di monitoraggio, un set di indicatori che, in coerenza con la scelta delle componenti ambientali/territoriali considerate in fase di analisi e valutazione degli impatti, cosi come precedentemente proposto, siano idonei a: - verificare l'attuazione e l'efficacia delle azioni proposte; - descrivere qualitativamente e quantitativamente gli effetti delle azioni del Piano sui sistemi ambientali e territoriali interessati e di monitorare la sommatoria degli effetti a livello di area vasta/provinciale. Per agevolare il processo di valutazione si segnala l'opportunità di utilizzare gli stessi indicatori nella descrizione del contesto e nel piano di monitoraggio. Il piano di monitoraggio dovrà altresì contenere indicazioni in merito a:" le modalità di raccolta dei dati e di elaborazione degli indicatori necessari alla valutazione degli impatti, la periodicità della produzione di un rapporto illustrante i risultati della valutazione degli impatti e le misure correttive da adottare".	Richiesta accolta e integrata. In relazione al programma di monitoraggio si è proceduto all'integrazione del paragrafo 13 del RA alla luce delle indicazioni contenute negli "Indirizzi operativi per il monitoraggio ambientale di piani e programmi (art.18 del Dlgs 152/2006)" a cura del progetto CreiamoPA del MASE, ampliando la lista di indicatori, e mettendo in relazione gli indicatori con le azioni di Piano previste, evidenziando le responsabilità per la realizzazione e gestione del piano di monitoraggio e i tempi previsti. (Vedi anche oss. 17 dell'Ufficio VIA VAS)
Predisporre un apposito capitolo (relazione o studio d'incidenza), redatto da idonei professionisti, secondo le indicazioni riportate nell'allegato G del DPR 357/1997 e s.m.i. e nelle LL GG finalizzato ad analizzare e valutare gli effetti, diretti ed indiretti, che l'attuazione del Piano potrà potenzialmente indurre in particolare sui siti della rete Natura 2000 e sul relativo sistema ecologico ad essi funzionalmente connesso. In particolare si suggerisce, una volta definiti i fattori di pressione e le minacce su ciascun elemento della Rete Natura 2000, di delineare un quadro previsionale delle possibili interferenze in termini di: 1) perdita di superficie, frammentazione e deterioramento di habitat e habitat di specie; 2) rarefazione e frammentazione delle popolazioni di	Richiesta accolta. La **Valutazione di Incidenza Ambientale (RA Cap. 14)** è stata integrata per fornire un'analisi dettagliata degli effetti potenziali delle azioni del PFG sugli habitat e sulle specie di interesse comunitario, verificando la coerenza con le misure di conservazione regionali (D.G.R. 795/2017).

fonte: http://burc.regione.campania.it

specie di interesse comunitario. Lo Studio verificherà altresì la coerenza delle azioni pianificatorie con le misure di conservazione vigenti per i Siti della Rete Natura 2000 del territorio campano, come definite dal D.G.R. n. 2295 del 29/12/2007 e dal D.G.R. 795 del 19/12/2017.	

fonte: http://burc.regione.campania.it

Fase di consultazione pubblica

Per l'effettuazione della fase di consultazione pubblica ex art. 14 del Dlgs 152/2006, l'UOD Ambiente, Foreste e Clima (ora 207 03 02 UOS Ambiente e Foreste) ha provveduto a trasmettere all'Autorità competente con nota del 4.2.2025 la seguente documentazione:

- Piano Forestale Generale Regionale
- Rapporto Ambientale
- Studio di Incidenza ambientale
- Sintesi non tecnica

L'Ufficio Speciale Valutazioni Ambientali ha quindi potuto dare avvio alla fase di consultazione pubblica con nota del 24/2/2026 nella quale si comunicava:

- l'avvenuta pubblicazione in data 19/02/2024 dell'avviso al pubblico di cui all'articolo 13, comma 5, lettera e) del D. lgs. 152/2006 relativo al Piano in parola;
- l'avvenuta pubblicazione della documentazione per la consultazione pubblica sia sul sito dell'Autorità competente che su quello dell'Autorità procedente/proponente;
- la richiesta ai soggetti gestori dei siti della Rete Natura 2000 di trasmettere i " sentito" entro i 45 giorni della consultazione.

Nel corso della fase di consultazione, che si è conclusa dopo 45 giorni dalla pubblicazione, in data 5 aprile 2024, sono pervenute le seguenti osservazioni:

- in data 20.03.2025 Confagricoltura Campania;
- in data 25.03.2025 AFI Associazione Forestale Italiana
- in data 27.03.2025 Cluster SPRING Cluster Italiano della Bioeconomia Circolare
- in data 31.03.2025 ARPAC
- in data 02.04.2025 ARPA Puglia
- l'Ordine dei Dottori Agronomi e Forestali della Provincia di Salerno

Le osservazioni pervenute sono state pubblicate e rese consultabili sul sito web all'indirizzo: Area VAS – Consultazione fascicoli – Valutazione Ambientale Strategica e consultando la cartella relativa al CUP 9858.
Con nota prot. 245588 del 16.5.2025 l'Ufficio Speciale Valutazioni Ambientali ha trasmesso all'Autorità procedente una richiesta di chiarimenti e integrazioni. Con nota prot. 0681871 del 04.12.2025 l'Autorità Procedente ha riscontrato tale richiesta.
Come sintetizzato nelle tabelle seguenti, l'Autorità procedente ha dato puntuale riscontro alla richiesta di integrazioni e alle osservazioni pervenute, analizzando ciascuna di esse e valutando il loro accoglimento o respingimento, adducendo le appropriate motivazioni, e specificando dettagliatamente i punti del Piano, del Rapporto Ambientale o dello Studio di Incidenza che hanno subito modifiche a seguito dell'eventuale accoglimento delle osservazioni pervenute.

fonte: http://burc.regione.campania.it

Tab. 3. Osservazioni dell'Ufficio VIA VAS relative alla proposta di Piano Forestale Generale della Campania (PFG).

Osservazioni	**Analisi e valutazione delle osservazioni ed eventuali modifiche, integrazioni, controdeduzioni Indicazione dei punti della proposta di piano eventualmente modificati**
1. Si osserva che il Piano dovrebbe fotografare la situazione più recente possibile e non limitarsi a valutare (a circa dieci anni di distanza) le variazioni delle superfici forestali, intervenute, nei suoi vari aspetti, tra il 2005 e il 2015. È evidente che il Piano dovrebbe partire da una disamina dello stato di fatto che sia la più puntuale possibile per poter correttamente identificare obiettivi e programmare le azioni tese al raggiungimento degli obiettivi stessi. Si chiede di motivare la scelta e specificare se esistono dati più recenti cui riferirsi	Richiesta accolta e integrata. Analogamente a quanto avviene per il Censimento generale dell'agricoltura effettuato a cadenza decennale da ISTAT, i dati dell'Inventario Forestale Nazionale hanno valore di dato ufficiale, a livello comunitario e internazionale, per quanto riguarda la definizione di direttive, regolamenti, convenzioni in campo forestale; a scala nazionale, per quanto riguarda la definizione delle politiche settoriali interne. I dati dell'Inventario Forestale Nazionale sono stati resi pubblici a partire dal 2022, e conservano il valore di dato ufficiale sino alla pubblicazione dei dati del prossimo Inventario. Tali dati consentono anche un confronto diretto con quelli del precedente Inventario forestale effettuato nel 2005. E' importante sottolineare come i dati dell'Inventario forestale sono pubblicati in forma esclusivamente tabellare, non essendo reso disponibile il dato cartografico di qualsiasi formato (immagine o vettoriale). Fermo restando il fatto che la proposta di Piano forestale generale della Campania (PFG) non può prescindere, per le ragioni suddette, dal considerare i dati ufficiali dell'Inventario 2015, la necessità di disporre di dati "in progress" – opportunamente evidenziata nell'osservazione -, disponibili in forma cartografica digitale per le analisi e interpretazioni in ambiente GIS necessarie per la formazione del piano, è stata considerata procedendo, come descritto nel paragrafo 4, alla realizzazione della Carta forestale regionale che accompagna la proposta di PFG, che rappresenta la sintesi delle conoscenze cartografiche più aggiornate disponibili al momento di redazione della proposta (vedi Par. 4 della proposta di PFG). I dati della Carta forestale sono coerenti – per gli scopi di pianificazione generale che il Piano si propone - con quelli dell'Inventario forestale, con le inevitabili differenze dovute alla diversa metodologia di realizzazione e finalità delle due basi di dati. Così, ad esempio, la superficie forestale desumibile dalla Carta forestale che accompagna la proposta di Piano è di 488.567 ettari, contro i 491.260 stimati dall'Inventario forestale. La differenza di 2.693 a favore dell'Inventario è dell'ordine dello 0,5% della superficie complessiva. Un ulteriore aggiornamento del dato si è reso disponibile dopo la pubblicazione della proposta di PFG, con la condivisione, da parte del CREA, dello stralcio relativo al territorio della Campania, della Carta forestale nazionale, che il CREA ha realizzato a scala nazionale a partire da ortofoto 2020. La Carta forestale nazionale costituirà in progresso di tempo, insieme all'Inventario forestale nazionale, la base di dati ufficiale e il riferimento anche per la definizione delle politiche regionali. I dati della Carta forestale nazionale CREA relativi al territorio della Campania risultano anch'essi fortemente coerenti – per gli scopi di pianificazione generale che il Piano si propone - con quelli dell'Inventario forestale nazionale, e con quelli della Carta forestale regionale che è stata realizzata contestualmente alla proposta di PFG. La superficie forestale della Campania stimata dalla Carta forestale nazionale CREA aggiornata al 2020,

fonte: http://burc.regione.campania.it

	realizzata sulla base della definizione di "bosco" dettata dal TUFF, è di 492.125 ettari, un dato fortemente allineato come si vede a quelli delle altre due basi di dati considerate dal Piano. Alla luce dell'osservazione formulata si è ritenuto utile inserire tali specificazioni nella proposta di Piano, nel paragrafo conclusivo del Par. 5 dal titolo "Considerazioni generali sulle basi di dati forestali impiegate dal Piano forestale generale della Campania", a pag. 28.
2. In relazione ai descritti obiettivi e tipologie di azioni di Piano (lettere da A a G del paragrafo 15) si chiede di descrivere sinteticamente le principali modalità con le quali si intende dare seguito alle stesse, al fine di consentire una più realistica valutazione di quanto verrà effettivamente realizzato sul territorio e potrà generare impatti su di esso	Richiesta accolta e integrata. In accordo con quanto disposto dall'art. 6 del testo unico in materia forestale e di filiere forestali (TUFF), il Piano forestale generale redatto dalla Regione non ha un'efficacia diretta nè prevede interventi diretti: la sua funzione è quella strategica, di definizione degli " obiettivi e delle relative linee d'azione" cui i piani sotto- ordinati (Piani territoriali di indirizzo forestale, Piani di gestione forestale) sono chiamati a conformarsi per l'approvazione, con le modalità più appropriate, in funzione delle specifiche condizioni ecologiche e gestionali locali. Compito del Piano forestale generale è quello di favorire la formazione di Piani territoriali di indirizzo territoriale per l'area vasta, e di Piani di gestione forestale delle singole proprietà, coerenti la strategia, gli obiettivi e le linee di azione descritte nel PFG, in attuazione della Strategia Forestale Nazionale. In accordo con l'osservazione formulata si è proceduto a una più chiara esplicazione di questi rilevanti aspetti integrando la specificazione inel capitolo 15 del PFG, pag. 114.
3. Nel capitolo "Indirizzi di gestione forestale sostenibile" si afferma "Infine, è necessario porre in essere quegli aggiustamenti e accorgimenti relativi alla distribuzione nel tempo e nello spazio delle tagliate, nonché la ceduazione fuori dal periodo consentito dalle Prescrizioni di Massima e di Polizia Forestale (CIANCIO et al., 1998).	Richiesta accolta e integrata. Si tratta di un refuso per il quale si è proceduto alla eliminazione dell'intero capoverso (vedi pag. 64).
4. Si osserva che in relazione al Regolamento forestale regionale n. 3/2017 e ss.mm.ii. che ha subito un aggiornamento nel 2022, con il Reg. reg. n. 4 del 20/06/2022, tutti i Decreti ministeriali o interministeriali attuativi del TUFF. Si chiede di integrare	Richiesta accolta e integrata. In accordo con l'osservazione formulata, si è proceduto all'integrazione richiesta, con un richiamo esplicito all'adeguamento del Regolamento forestale ai Decreti ministeriali attuativi del TUFF (vedi pag. 15).
5. Si osserva che al capitolo 9 "Linee guida di gestione dei boschi di protezione diretta" il piano recepisce e propone per il trattamento dei boschi di protezione diretta l'approccio operativo messo a punto dal Dipartimento di Agraria dell'Università Federico II di Napoli	Richiesta accolta e integrata. In accordo con l'osservazione formulata si è proceduto a una più chiara formulazione degli obiettivi e delle metodologia impiegata per la definizione delle "Linee guida di gestione dei boschi di protezione diretta" di cui al cap. 9 della proposta di PFG, facendo diretto riferimento all'art. 8 del TUFF ("Disciplina della trasformazione del bosco"), che dispone al comma 7 che il PFG individui e riconosca i boschi aventi funzione di protezione diretta definiti secondo la lettera r) del comma 2 art. 3 del TUFF.

fonte: http://burc.regione.campania.it

per la redazione del "Piano di gestione forestale del bosco di protezione diretta del versante nord del Monte Epomeo (Casamicciola, Ischia) su incarico del Commissario delegato della Presidenza del Consiglio dei Ministri per gli eventi meteorologici eccezionali verificatisi nei territori dell'Isola di Ischia il 26 novembre 2022 ex OCDPC 948/2022". Al riguardo si ritiene che le linee guida non dovrebbero far riferimento a circostanze eccezionali, ma dovrebbero prevenire il verificarsi di analoghe situazioni. Non è chiaro sulla base di quali considerazioni un piano commissariale, che si configura come piano di protezione civile in caso di pericolo per l'incolumità pubblica, riguardante interventi urgenti per la sicurezza e la mitigazione del rischio idrogeologico e relativo a situazioni del tutto specifiche e peculiari possa essere assunto quale modello per la gestione dei boschi di protezione diretta. Si chiede di motivare e di apportare, se del caso, adeguate modifiche, anche in relazione a quanto previsto all'obiettivo B2;	L'identificazione dei boschi di protezione diretta condotta nella proposta di PFG adempie alle indicazioni di legge, attraverso l'identificazione dei parametri morfologici, pedologici e vegetazionali predisponenti che caratterizzano a scala regionale gli ambienti forestali campani, relativi alla pendenza dei versanti, alla natura dei substrati e dei suoli e alla condizione dei soprassuoli. Su tale base si è proceduto a cartografare le aree forestali interessate dai fattori predisponenti suddetti. Per tali aree - identificate dalla proposta di Pfg come "boschi di protezione diretta" – il PFG indica le più appropriate misure gestionali di prevenzione e mitigazione del rischio, di portata regionale, in accordo con quanto previsto al paragrafo B2. In accordo con l'osservazione il paragrafo "Linee guida di gestione dei boschi di protezione diretta" (pag. 81-83) è stato riscritto.
6. Si chiede di chiarire la presenza dell'Azione C4. Tutela e valorizzazione dei castagneti da frutto della Campania, in quanto i castagneti da frutto rientrano tra le aree escluse dalla definizione di bosco ai sensi dell'art. 5 del TUFF;	Osservazione accolta e integrata Si è ritenuto di inserire nella proposta di PFG l'azione C4 sulla base di quanto specificatamente previsto nella Strategia Forestale Nazionale (SFN) di cui all'art. 6 del TUFF, in considerazione della particolare rilevanza che la castanicoltura da frutto storicamente riveste nel territorio e nei paesaggi della Campania. La SFN, preso atto della richiamata esclusione dei castagneti da frutto dalla definizione giuridica di bosco ai sensi dell'art. 5 del TUFF, nell'ambito della Sotto-Azione A.4.3 promuove al punto A.4.3 d) il "mantenimento e il recupero dei castagneti da frutto e la castanicoltura tradizionale quale componente storica del paesaggio rurale, collinare e montano". La previsione nel Piano dell'azione C4 risponde anche alla richiesta formulata da ARPAC in fase di scoping (vedi osservazione 4.1). Le motivazioni dell'azione C4 "Tutela e valorizzazione dei castagneti da frutto della Campania" sono state specificate nell'integrazione ad inizio della descrizione dell'azione, a pag. 138

fonte: http://burc.regione.campania.it

7. Nell'Azione A2 si fa riferimento all'istituzione del Cluster legno Campania. Appare necessario tenere conto prioritariamente dei lavori del Tavolo regionale per la tutela, la gestione e la valorizzazione del patrimonio forestale regionale e per lo sviluppo delle diverse componenti della filiera foresta – legno e foresta – energia in Campania, istituito con D.D.R. n. 101 del 03/03/2023 della D.G. 50.07.00, in attuazione dell' art. 14, comma 3 del T.U.F.F, che, dati gli obiettivi, rappresenta uno strumento fondamentale per sviluppare l'Azione D. del PFG "Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare";	Richiesta accolta e integrata. Si è proceduto all'integrazione richiesta. Il preliminare di PFG è stato approfonditamente discusso dal Tavolo regionale per la tutela, la gestione e la valorizzazione del patrimonio forestale regionale nella seduta del 15/06/2023. Il riferimento al Tavolo regionale, presentato come esperienza già in corso di ascolto e coinvolgimento di tutti gli attori della filiera foresta-legno-prodotto trasformato, è stato inserito sia nella descrizione dell'azione A2 (pag. 120), che dell'azione D5 (pag. 161).
8. Nell'Azione D2, non è precisata quale procedura è stata applicata per l'adesione della Regione Campania allo schema di certificazione PECF;	Richiesta accolta e integrata. La decisione dell'Amministrazione regionale di fare richiesta di adesione allo schema di certificazione PEFC è stata formalizzata con Delibera di Giunta Regionale n.744 del 21/12/2024, cui ha fatto seguito l'istanza di adesione prodotta dalla Direzione generale politiche agricole, cui è seguita la ratifica dell'adesione da parte di PECF. L'integrazione è stata inserita sia nella descrizione dell'azione D2 "Promuovere la certificazione delle foreste del territorio regionale e la tracciabilità lungo tutta la filiera, dal tronco al mobile finito" (pag. 157).
9. Si segnala, inoltre, che: - nel Par. "Boschi di nuova formazione", le macroaree citate non sono più vigenti in quanto rimodulate nel successivo PSR 2014-2020 e andrebbero aggiornate rispetto al CSR 2023 - 2027, laddove individuate. - andrebbe eliminato il riferimento all'Allegato C della L. R. n. 11/96 (abrogato con la pubblicazione del Regolamento forestale regionale n. 3 / 2017); - Nel Cap. 13. sembrerebbe più corretto sostituire il termine "piani di assestamento forestale" con "piani di gestione forestale" (il termine "assestamento non è mai inserito nel TUFF, in cui si parla solo di piani di gestione forestale)	Richiesta accolta e integrata. Si è proceduto a effettuare le correzioni evidenziate nella osservazione (vedi pag. 69 e 110 del Piano).

fonte: http://burc.regione.campania.it

Tab. 4. Osservazioni dell'Ufficio VIA VAS relative al Rapporto Ambientale della proposta di Piano Forestale Generale della Campania (PFG).

Osservazioni	**Analisi e valutazione delle osservazioni ed eventuali modifiche, integrazioni, controdeduzioni Indicazione dei punti della proposta di piano eventualmente modificati**
10. Ai sensi dell'art. 13 comma 4 del D.Lgs. 152/06, il Rapporto ambientale deve dare atto della consultazione di cui alla Fase di scoping ed evidenziare come sono state presi in considerazione i contributi pervenuti. Nel paragrafo 7 "La procedura di VAS: riferimenti normativi e metodologici" sono elencati i contributi pervenuti dagli SCA durante la fase di scoping. Si afferma che "Le osservazioni/raccomandazioni fatte da ARPA Campania sono state tutte pienamente condivise in sede di redazione del Rapporto ambientale, come è possibile puntualmente verificare, anche per gli aspetti riguardanti la VIncA.". Esplicitare, anche eventualmente in forma tabellare, in che modo e in quale documento (Piano, Rapporto ambientale o Studio di Incidenza) si è tenuto conto dei citati contributi.	Richiesta accolta e integrata. Sono state esplicitati le modalità di accoglimento, i punti specifici del documento di piano, del rapporto ambientale e dello studio di incidenza interessati e le eventuali ai tre documenti (vedi pag. 34-35 del Rapporto ambientale)
11. In data 5 aprile 2024 si è conclusa la fase di consultazione pubblica prevista dall'art. 14 del D.Lgs 152/2006 e ss.mm.ii. Le osservazioni pervenute sono pubblicate sul sito web e consultabili all'indirizzo: Area VAS – Consultazione fascicoli – Valutazione Ambientale Strategica e consultando la cartella relativa al CUP 9858. In particolare, sono pervenute osservazioni da parte dei seguenti soggetti: ARPA Campania ARPA Puglia Confagricoltura Campania Associazione Forestale Italiana – AFI SPRING, Custer Italiano della Bioeconomia	Richiesta accolta e integrata. Le osservazioni degli SCA alla proposta di Piano sono state esaminate producendo le motivazioni di accoglimento, le eventuali controdeduzioni e i punti del Piano, del Rapporto Ambientale e dello Studio di Incidenza modificati.

fonte: http://burc.regione.campania.it

Circolare Ordine dei Dottori Agronomi e Forestali della Provincia di Salerno L'Autorità procedente dovrà dare riscontro alle stesse, producendo e trasmettendo un documento di sintesi nel quale siano analizzate le suddette osservazioni e sia valutato il loro accoglimento o respingimento con le necessarie motivazioni. Inoltre, sarà necessario indicare i punti del Piano, del Rapporto Ambientale o dello Studio di Incidenza che subiranno modifiche a seguito dell'eventuale accoglimento delle osservazioni pervenute.	
12. In relazione all'analisi di coerenza esterna, al paragrafo 11 si affronta il tema della coerenza esterna delle azioni del Piano con gli obiettivi di sostenibilità complessivamente emergenti dal quadro programmatico di riferimento sintetizzato nel capitolo 8. Si evidenzia che: - non sono esplicitati i citati obiettivi di sostenibilità emergenti dal quadro programmatico di riferimento. A tal proposito si chiede di esplicitarli e chiarire quali sono stati utilizzati nella definizione degli obiettivi e delle azioni di Piano; - l'analisi di coerenza esterna si limita a enunciare che "Il confronto tra le azioni del Piano Forestale Generale e gli obiettivi e dei principali piani e programmi settoriali che compongono il quadro programmatico ai diversi livelli evidenzia pertanto l'assenza di punti di incoerenza o contrasto" senza tuttavia approfondire queste conclusioni. Esplicitare I profili di coerenza con i piani e programmi di riferimento.	Richiesta accolta e integrata. Si è provveduto a inserire nel paragrafo 11 (Coerenza esterna, pag. 121-125) in forma tabellare una sintesi degli obiettivi emergenti dal complessivo quadro programmatico con evidenziazione della coerenza della Proposta di Piano forestale regionale.

fonte: http://burc.regione.campania.it

13. Come evidenziato in premessa non è esplicitato nel Rapporto ambientale il contributo del Piano al raggiungimento degli obiettivi di sostenibilità ambientale discendenti dalle Strategie nazionali e regionali di sviluppo sostenibile. Esplicitare, attraverso una matrice di correlazione, laddove presenti, obiettivi e azioni di Piano che contribuiscono al raggiungimento della Strategia regionale di sviluppo sostenibile della Campania	Richiesta accolta e integrata.Si è provveduto a integrare il Rapporto ambientale una matrice di interazione sintetica che evidenzia il contributo delle azioni di piano al conseguimento degli obiettivi delle Strategie nazionali e regionali di sviluppo sostenibile (pag. 126-132)
14. Al paragrafo 12 "Analisi degli impatti delle azioni di piano sulle matrici ambientali considerate", nella matrice di interazione riportata a pagina 126, sono individuati possibili interazioni negative per la componente "Qualità dell'aria" in merito alle Azioni B2, B3, B4, C1, C2, E2. Spiegare, coerentemente a quanto indicato in legenda, quali sono *le condizioni e le buone pratiche indicate dal Piano* atte a prevenire tali impatti ambientali. B2. Gestione attiva dei boschi di protezione. B3. Incrementare la capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica del territorio e tutela delle acque B4. Prevenzione attiva dei rischi naturali o antropici, incendi, calamità naturali ed eventi catastrofici C1. Curare i rimboschimenti storici della Campania C2. Valorizzare in chiave multifunzionale le foreste urbane e periurbane E2. Valorizzazione multifunzionale della viabilità forestale e silvo-pastorale e della sentieristica in Campania	Richiesta accolta e integrata. Gli impatti sulla qualità dell'aria che possono essere prodotti dalle azioni citate sono legati a due aspetti: 1. la temporanea diminuzione di biomassa aerea legata ai tagli di gestione o produzione dei soprassuoli; 2. le operazioni per la realizzazione, adeguamento, manutenzione e gestione delle infrastrutture forestali (viabilità, sentieristica) e delle opere di difesa idrogeologica. Per quanto riguarda gli impatti potenziali di cui al punto 1. le buone pratiche indicate dal piano per la prevenzione dei possibili impatti sulla qualità dell'aria consistono (vedi paragrafo 12 del PFG "Indirizzi di gestione forestale sostenibile"): - nella regolazione e limitazione dei tagli gestionali o produttivi entro soglie che garantiscono la permanenza di una biomassa forestale aerea in grado di garantire le funzioni di autodepurazione e regolazione termica migliorative della qualità dell'aria; ovvero, nel caso della ceduazione periodica, la definizione di soglie dimensionali e di pattern delle particelle ceduate che garantiscono il mantenimento di un livello di funzionalità ecologica soddisfacente dell'unità produttiva complessivamente interessata dal piano di gestione forestale, nonché i tempi più brevi di ricostituzione della bionassa aerea delle particelle ceduate. Queste misure previste dal PFG sono dettagliatamente e operativamente codificate nel Regolamento forestale vigente, e il loro rispetto è obbligatorio ai fini dell'autorizzazione degli interventi. Per quanto riguarda gli impatti potenziali di cui al punto 2., il PFG dispone, in accordo con il Decreto attuativo del Testo unico in materia di viabilità forestale e con il Regolamento forestale regionale (vedi paragrafo 10 del PFG "Indirizzi per gli interventi di sistemazione idraulico-forestale"): - che la progettazione degli interventi sulla viabilità forestale e silvo-pastorale permanente debba prevedere modalità di realizzazione o adeguamento tali da seguire ordinariamente l'andamento naturale del terreno evitando al massimo il movimento terra, adottando scelte progettuali idonee a garantire la stabilità dei versanti e delle coperture pedologiche e la corretta regimazione idraulica dell'opera. e, dove possibile, tali da operare il recupero di tracciati preesistenti;

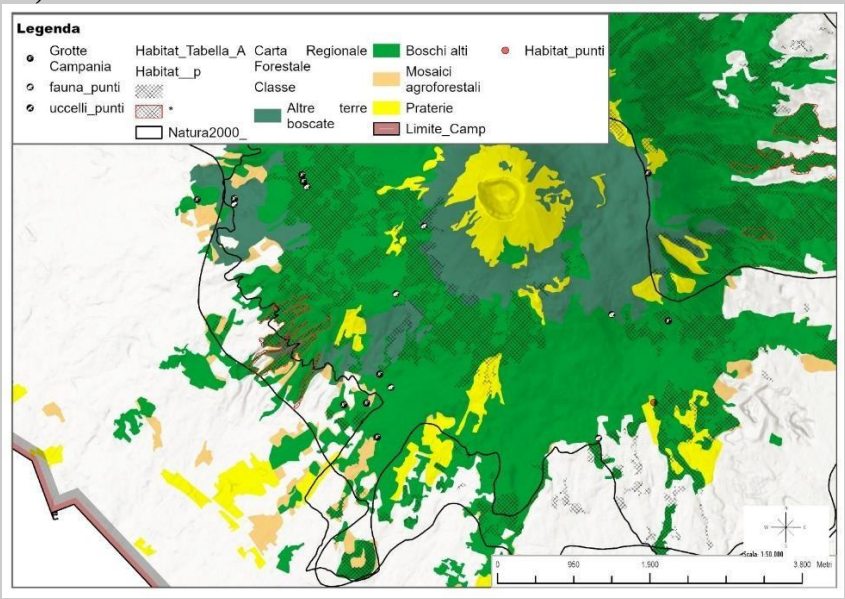
fonte: http://burc.regione.campania.it

	- l'utilizzo di materiali compatibili con la componente ambientale e paesaggistica locale; - la gestione della manutenzione funzionale nel tempo, ispirandosi a principi generali di efficienza, efficacia e sostenibilità degli interventi dal punto di vista ambientale, economico e della durata. Le integrazioni sono a pag. 144.
15. In relazione ai potenziali impatti rilevati nel Rapporto ambientale sembrerebbero non essere definite le misure previste per *impedire, ridurre e compensare nel modo più completo possibile gli eventuali impatti negativi significativi sull'ambiente dell'attuazione del piano*, come indicato all' Allegato VI, lettera g) del D.Lgs 152/2006. Motivare l'assenza di tali misure in relazione ad impatti rilevati e descrivere eventuali misure di mitigazione previste, se del caso.	Richiesta accolta e integrata. Nell'integrazione a pag. 145 si è proceduto a specificare come, in attuazione di quanto previsto all'art. 6 del TUFF, il Piano forestale generale è chiamato a definire strategie, obiettivi, criteri e indicazioni di gestione e utilizzo in chiave multifunzionale dei boschi regionali, finalizzati a garantire la tutela e la permanenza degli ecosistemi forestali, con riferimento agli aspetti strutturali, funzionali, evolutivi, di biodiversità e di valore paesaggistico, culturale e sociale. Il Piano forestale generale della Campania si configura quindi, in ossequio al TUFF, come strumento strategico di tutela e gestione sostenibile del patrimonio forestale regionale. In quanto tale, esso non prevede o dispone specifici interventi o trasformazioni, ma piuttosto definisce le condizioni di sostenibilità e ammissibilità degli interventi, in accordo con il Regolamento forestale regionale, indirizzando in tal senso i contenuti della pianificazione sotto-ordinata di livello operativo (PFIT, PGF), la cui approvazione è legata al rispetto e alla coerenza col Piano forestale generale. Il Piano forestale regionale, così come definito dal TUFF, si configura nella sua totalità come strumento per la definizione delle misure previste per impedire, ridurre e compensare nel modo più completo possibile gli eventuali impatti negativi significativi sull'ambiente.
16. Nel Rapporto ambientale non è esplicitamente dedicato un paragrafo alla *sintesi delle ragioni della scelta delle alternative individuate* come richiesto all' Allegato VI, lettera h) del D.Lgs 152/2006. Fornire la sintesi delle ragioni della scelta delle alternative individuate e di come è stata fatta la valutazione.	Richiesta accolta e integrata. Nell'integrazione a pag. 145 si è proceduto a specificare come, in attuazione di quanto previsto all'art. 6 del TUFF, il Piano forestale generale è attuativo per il territorio della Campania della Strategia forestale nazionale. In sede di redazione del piano, le alternative possibili per la redazione del PFG – escludendo ovviamente l'ipotesi di "non intervento", o di non adeguamento alle succitate indicazioni di legge - erano quindi quelle definite dalle diverse azioni e sotto-azioni della Strategia forestale nazionale, previa modulazione e adattamento locale, come recita il TUFF, in funzione delle specifiche esigenze socio- economiche, ambientali e paesaggistiche, nonché alle necessità di prevenzione del rischio idrogeologico, di mitigazione e di adattamento al cambiamento climatico. E' possibile concludere quindi che la proposta di PFG recepisce, modula e adatta le misure e sotto- misure della Strategia forestale nazionale ritenute funzionali alla tutela e gestione sostenibile del patrimonio forestale, sulla base delle specifiche condizioni, esigenze e fabbisogni che caratterizzano il territorio della Campania.
17. In relazione al programma di monitoraggio (paragrafo 13 del RA) si rileva che quanto	Richiesta accolta e integrata. In relazione al programma di monitoraggio è proceduto alla riformulazione del paragrafo 13 del RA (pag. 146-

fonte: http://burc.regione.campania.it

rappresentato non fornisce risposta a quanto previsto dalla normativa ossia, ai sensi dell'art. 18 comma 1 del Dlgs 152/2006, il monitoraggio deve assicurare il controllo sugli impatti significativi sull'ambiente derivanti dall'attuazione dei piani approvati e la verifica del raggiungimento degli obiettivi di sostenibilità prefissati, così da individuare tempestivamente gli impatti negativi imprevisti e adottare le opportune misure correttive. Nel suddetto paragrafo si fa riferimento ad "indicazioni". Si chiede, pertanto, di redigere un piano di monitoraggio rispettoso delle indicazioni degli "Indirizzi operativi per il monitoraggio ambientale di piani e programmi (art.18 del Dlgs 152/2006)" a cura del progetto CreiamoPA del MASE. Si chiede, altresì, di mettere in relazione gli indicatori individuati (o ulteriori indicatori derivanti dall'approfondimento richiesto) con le azioni di Piano previste. Si ricorda, infine, che ai sensi del citato art. 18, comma 2, il piano o programma deve individuare anche le responsabilità e la sussistenza delle risorse necessarie per la realizzazione e gestione del piano di monitoraggio.	155) alla luce delle indicazioni contenute negli "Indirizzi operativi per il monitoraggio ambientale di piani e programmi (art.18 del Dlgs 152/2006)" a cura del progetto CreiamoPA del MASE, ampliando la lista di indicatori, e mettendo in relazione gli indicatori con le azioni di Piano previste, evidenziando le responsabilità per la realizzazione e gestione del piano di monitoraggio e i tempi pervisti.

fonte: http://burc.regione.campania.it



Tab. 5. Osservazioni dell'Ufficio VIA VAS relative alla VINCA

18.al paragrafo "Le caratteristiche della valutazione d'incidenza ambientale" a pag. 4 – terzo capoverso, il documento riporta *"….e dai Sti di importanza Comunitaria (SIC, in seguito ZSC), provvisti dalla direttiva "Habitat", attualmente proposti alla Commissione europea, e che al termine dell'iter istitutivo saranno designati come ZSC (Zone Speciali di Conservazione)"* Al riguardo si osserva che attualmente non vi è alcuna proposta all'attenzione della Commissione atteso che tutti i SIC campani sono stati designati come ZSC. Si chiede pertanto di aggiornare il periodo;	come richiesto è stato adeguato il paragrafo armonizzando la situazione attuale dello stato dei siti in Campania, e nei confronti della Commissione, riportando correttamente la presenza di sole ZSC e ZPS attualmente già designate. Pag. 4|106
19.al paragrafo "*Normativa nazionale*" si fa riferimento, in modo non pertinente, all'allegato IV alla parte seconda del D. Lgs. 152/06 e al DM 30 marzo 2015 che definiscono, nell'ambito della Valutazione di impatto ambientale, quali sono i progetti da sottoporre a Verifica di assoggettabilità di competenza delle regioni e delle province autonome di Trento e Bolzano;	per poter presentare in mondo adeguato la struttura gerarchica della Normativa attuale, è stato riscritto il paragrafo "Riferimenti Normativi", con una introduzione e poi il Quadro riepilogativo. Rimuovendo i riferimenti al DLgs 152/2006 e concentrandosi sulla Normativa VIncA pag. 8|106
20.si chiede di verificare ed aggiornare l'elenco delle fonti normative riportate al paragrafo "Normativa di riferimento per la VAS e VINCA", in quanto si osserva che non sono richiamate norme di riferimento rilevanti quali le Linee Guida Nazionali, pubblicate sulla Gazzetta Ufficiale n. 303 del 28/12/2019, i decreti ministeriali che designano le ZSC campane, e la Delibera di Giunta Regionale n. 617 del 14/11/2024, recentemente pubblicata sul B.U.R. Campania n. 83 del 02/12/2024	È stato verificato ed aggiornato il quadro riepilogativo normativo, inserendo adeguatamente il riferimento alle Linee Guida Nazionali Pag. 9|106
21.si osserva che il capitolo "ambito di riferimento" è una riproposizione del paragrafo "*la rete ecologica della Regione Campania*" presente all'interno del Rapporto ambientale. Tale paragrafo che coerentemente è inserito all'interno del rapporto ambientale non appare, viceversa, pertinente con lo studio di incidenza dove l'ambito di riferimento è ben definito ed è rappresentato dai siti Natura 2000.	Capitolo "Seconda parte" dell'ambito di riferimento è stato corretto, riproponendo il concetto di "Rete ecologica della Regione Campania" in chiave di lettura adeguata e diversa dal Rapporto Ambientale, con l'obiettivo di spiegare che per "Rete" si intende tutto il sistema fisico delle superfici boscate oggetto di riferimento. Inoltre, come giustamente osservato, è stato dato il giusto spazio alla RN 2000 quale Ambito di riferimento insieme ella Rete Ecologica. Pag. 11 □ 14 |106

fonte: http://burc.regione.campania.it

22.analogamente a quanto riportato al punto precedente si ritiene che l'inquadramento territoriale ambientale di riferimento sia sviluppato in modo non pertinente alla valutazione di incidenza, in quanto non vi è alcun riferimento ai siti Natura 2000;	Nella "Terza parte" oltre al capitolo introduttivo della "Natura in Campania" è stato correttamente inserito il capitolo "Rete Natura 2000 in Campania", allegando anche una cartografia sufficientemente chiara che rappresenta la visione di insieme dell' "Inquadramento territoriale". Pag. 15 □ 17|106
23.lo studio al capitolo "*Quarta parte - La rete Natura 2000"* evidenzia come quasi 195.000 ettari di superficie ricadono in Siti Natura 2000, ma non vi è alcuna analisi rispetto agli habitat di interesse forestale, di cui alcuni prioritari, ed ai siti interessati da tali habitat;	è stata effettuata in ambiente GIS una interpretazione dello shapefile degli habitat fornito in fase di pubblicazione della DGR 617/2024 dove da una prima selezione dei soli habitat con caratteristiche forestali, sono stati raggruppati poi per forma prioritaria o meno, e ne è stata così determinata la statistica in termini di superfici, riportandola nel paragrafo. Pag. 38|88
24.la quinta parte è denominata il progetto. Si osserva che trattasi di un piano e non di un progetto e quindi sarebbe opportuno rinominare la quinta parte	Correttamente sostituito con "piano" e con P.F.G. Pag. 50|106
25.si osserva che con DGR 617/24 sono state adottate le Misure di Conservazione e i Piani di Gestione comprensivi di cartografia relativi a n. 57 Siti della Rete Natura 2000. Si rende, pertanto, necessario far riferimento anche alle disposizioni ivi contenute, separando i Siti Natura 2000 tra quelli dotati di Piani di Gestione e quelli per cui valgono ancora le Misure di Conservazione di cui alla DGR n. 795/17. In entrambi i casi occorre effettuare, in forma tabellare, una verifica di coerenza tra le azioni previste dal Piano Forestale Generale (Capitolo 15 della Relazione Generale) e le Misure previste;	dalla "Sesta parte" in poi, tutto lo studio di incidenza, a partire dal I livello di screening e poi anche al successivo II livello appropriato, è stato re impostato sulla base di 2 flussi, separando la valutazione puntuale in 2 flussi, quello che segue la vecchia DGR 795/2017 e quello che fa riferimento ai singoli documenti pubblicati con la nuova DGR 617/2024. Pag. 62|106 Pag. 63 □ 74|106
26. Si evidenzia che la tabella "screening su misure di conservazione" è stato effettuato solo rispetto ai divieti previsti dalle misure di conservazione e non anche rispetto alle pressioni e minacce individuate per ogni sito. Le superfici forestali campane, oltre a ricadere per la maggior parte in siti Natura 2000, spesso costituiscono habitat prioritari e le azioni previste dal piano potrebbero avere effetti diversi a	nel nuovo capitolo introdotto, "Materiali e metodi", viene spiegato come adesso sono state estrapolate tutte le pressioni e minacce sito specifiche dalla DGR 795/2017 e le stesse nuove pressioni e minacce da tutti i PDG della 617/2024; creando un database in Excel suddiviso per Sito RN2000 di riferimento, e per Habitat di riferimento a cui corrisponde la relativa pressione o minaccia. Successivamente è stato possibile filtrare i soli habitat forestali (da EUNIS 5130 a 92D0), ponendo una maggiore attenzione a quelli con forma prioritaria: 6210; 6220; 7210; 7220; 91AA; 91E0; 9210.

fonte: http://burc.regione.campania.it

seconda del sito e dell'habitat interessato (ad es. la pressione antropica conseguente alla realizzazione della sentieristica avrà incidenza diversa a seconda dell'habitat interessato). Si ritiene che lo studio di incidenza debba riportare, almeno per gli habitat forestali prioritari, una valutazione più puntuale;	
27. Sempre in relazione alle previsioni della DGR n. 617/24 occorre riportare nel Piano la cartografia degli habitat allegata alla suddetta Delibera e verificare se le azioni di Piano possono avere ricadute significative sugli habitat tutelati (con particolare riferimento agli ambienti boschivi);	per rispondere a questo punto è stata allegata una Cartografia di sovrapposizione della Carta degli Habitat di cui alla Tabella A con le aree oggetto di Pianificazione. Per una corretta valutazione a scala regionale, ma al contempo anche sito specifica ed habitat specifica, è stato creato in ambiente GIS un database cartografico contenente: le aree oggetto di pianificazione mediante la Cartografia delle aree boscate Regionali (poligoni in verde, giallo ed arancio) • i siti della Rete Natura 2000 della Regione Campania (poligoni vuoti con bordure nere) • i poligoni degli habitat di cui alla Tabella A elaborati in fase di redazione dei nuovi P.d.G. di sole categoria/classi forestali (poligoni in grigliato nero senza bordure) • estratto dei suddetti poligoni per i soli Habitat con forma prioritaria (poligoni grigliato nero con contorno rosso) 

fonte: http://burc.regione.campania.it

28. Nell'analisi di coerenza con le misure di cui alle DGR n. 2295/2007 e n. 803/2006, nel ricordare che esse sono di applicazione solo per i Siti per le quali non ne è stata disposta l'abrogazione, vengono rilevate alcune pertinenze ma non è indicato se il Piano contrasta o meno con le misure relative. Fornire in un'ulteriore colonna un'analisi dell'influenza delle azioni di Piano sulle misure considerate pertinenti, analogamente a quanto effettuato in relazione alla DGR n. 795/2017, che, si ribadisce, è stata abrogata per i 57 siti per cui è di applicazione la DGR 617/24.	In merito al punto 28 è stata debitamente aggiunta una colonna descrittiva che riporta il dettaglio di ogni analisi rivelatasi "coerente" con il PFG. Pag. 54 □ 59|106
29. Nella Tabella relativa alla coerenza con la DGR 795/2017 vengono rilevate delle misure in contrasto con le azioni del Piano. Si chiede di evidenziare in che maniera il Piano risponde a tali incoerenze e che misure di mitigazione si è pensato di utilizzare per ridurre o eliminare tali incoerenze;	Chiarimenti sulla Terminologia Utilizzata per la Valutazione delle Azioni di Piano. Relativamente al punto 29, si ritiene opportuno fornire un approfondimento sulla scelta terminologica adottata nella valutazione delle azioni di Piano in rapporto agli obiettivi conservazionistici della Rete Natura 2000. In fase di revisione, la precedente dicitura "non coerenza" è stata rivalutata e sostituita con le espressioni "pertinenza" e "non pertinenza". Motivazioni della Scelta Terminologica Il termine "non coerenza" si è rivelato inadeguato e potenzialmente fuorviante, poiché non rifletteva in modo preciso la natura delle relazioni tra le azioni di Piano e gli obiettivi conservazionistici. Dall'analisi condotta, nessuna delle azioni previste dal Piano risulta effettivamente in contrasto o non coerente con gli obiettivi di conservazione della RN 2000. In alcuni casi, si è riscontrato semplicemente una mancanza di pertinenza fra taluni aspetti, senza alcuna incompatibilità o conflitto sostanziale. Definizione di "Pertinenza" e "Non Pertinenza" La nuova distinzione proposta consente di rappresentare in modo più puntuale le relazioni tra le misure previste dal Piano e gli obiettivi della Rete Natura 2000: Pertinenza: indica che l'azione di Piano è direttamente collegata e rilevante rispetto agli obiettivi conservazionistici. Non pertinenza: evidenzia la mancanza di una connessione diretta, senza che ciò implichi un contrasto o una incoerenza con gli obiettivi stessi.
30.A pag. 89 del documento è riportato il paragrafo "paesaggio" che fa riferimento ad un progetto, non meglio identificato, che prevede principalmente gabbionate riferito ai Monti Lattari. Il paragrafo appare non pertinente.	Capitolo interamente riscritto Pag. 93 □ 94|106
31.la matrice degli impatti presente nello Studio riporta in forma tabellare le interferenze tra le azioni di Piano e gli habitat e le specie tutelati ma la valutazione non è sito – specifica, non sono spiegati i	In merito a questo punto num. 31 è stato riproposto il metodo di analisi elaborando un nuovo capitolo che, da Materiali e metodi, a Effetti del Piano sulle Misure di Conservazione (da pag. 59 □ a pag. 63|88) sono state effettuate le valutazioni sito specifiche, sito per sito, le stesse valutazioni effettuate habitat per habitat e per ogni singola specie estrapolate da ogni singola scheda degli

fonte: http://burc.regione.campania.it

motivi di interferenza negativa o positiva, non è chiaro come sia stato possibile fare una valutazione unica per macro aggregati complessi (uccelli, mammiferi, flora, ecc…). La tabella dovrebbe essere accompagnata da paragrafi esplicativi e in linea generale rispettare i dettami delle Linee Guida nazionali e regionali.	Standard Data Form per ogni sito della RN 2000. In questo modo, oltre alla tabella aggregata che riporta un prospetto generale di "incidenza" sulle componenti biotiche ed abiotiche" è stata effettuata anche in modo puntuale. Inoltre, è stata giustamente adeguata ai dettami delle Linee Guida nazionali e regionali la "Sesta parte" dello studio, inserendo la "Metodologia di valutazione della significatività dell'incidenza" da pag. 67 □ a 78|88 sostituendo termini come "+" ; "-" che effettivamente potevano risultare essere forvianti, con quanto previsto dalle linee guida, ovvero: (D) diretto / (I) indiretto (B) breve / (L) lungo termine (U) durevole / (R) reversibile (0) nullo.
32. Analogamente la *Tabella riepilogativa delle Incidenze delle Azioni del Piano* non è accompagnata da un paragrafo che espliciti come sono state valutate le interferenze. Non è chiaro, poi, in che relazione sia tale tabella con la matrice degli impatti di cui al punto precedente. Fornire chiarimenti in merito	In merito al punto 32 è stata effettuata la "Considerazione" descrittiva della suddetta tabella Pag. 97|106
33. In relazione alle misure di mitigazione individuate non è chiaro in che maniera esse rispondano alle incoerenze con le misure di conservazione rilevate. Inoltre, le misure di mitigazione non sempre appaiono sufficienti a mitigare gli effetti indicati. Si chiede di integrare e chiarire, inoltre, in che maniera si intende imporre il rispetto di tali misure di mitigazione di tipo progettuale e operativo.	In merito al punto 33 si chiarisce che, alla luce delle rivalutazioni e riconsiderazioni effettuate " a monte della valutazione, ovvero nel livelli I di screening, non sussistono più condizioni di incoerenza ne aspetti "contrastanti" tali da dover valutare misure di mitigazioni ulteriori a quelle già previste.
34. Il paragrafo "Piani, Progetti e Interventi che possono interagire (impatti e incidenze cumulative)", elenca e descrive sommariamente i Piani regionali con i quali il nuovo Piano Forestale Generale della Campania maggiormente interagisce. Tra questi, oltre ai Piani di Gestione dei Siti Natura 2000, è opportuno valutare anche il Piano Territoriale Regionale di cui alla L.R. 13/2008, nell'ambito del quale è identificata, tra le altre cose, la Rete Ecologica Regionale nonché i singoli PTCP;	in ottemperanza al punto 34, è stato rivalutato ed adeguato il paragrafo relativo apportando le opportune integrazioni ed approfondimento. Pag. 94 □ 96|106
35. Sia dato seguito alle richieste di integrazioni presenti in alcuni dei Sentito già pervenuti e pubblicati alla pagina dedicata alla procedura.	In merito al punto 35 sono stati considerati tutti I SENTITI dandone debito riscontro.

fonte: http://burc.regione.campania.it

Tab. 6. Osservazioni prodotte dall'ARPA Campania alla proposta di Piano Forestale Generale della Campania (PFG), al Rapporto ambientale e alla VINCA

Osservazioni	Analisi e valutazione delle osservazioni ed eventuali modifiche, integrazioni, controdeduzioni Indicazione dei punti della proposta di piano eventualmente modificati
1. Con riferimento alla fase di scoping, è riportato l'elenco dei Soggetti competenti in materia ambientale che sono stati consultati, evidenziando che solo l'ARPAC ha formulato osservazioni. Si evidenzia che, relativamente alle osservazioni ARPAC, non si evince il puntuale riscontro/recepimento delle stesse;	Richiesta accolta e integrata. Sono state esplicitati le modalità di accoglimento, i punti specifici del documento di piano, del rapporto ambientale e dello studio di incidenza interessati e le eventuali ai tre documenti (vedi pag. 34-35 del Rapporto ambientale)
2. L'analisi di "coerenza esterna" non evidenzia la relazione tra obiettivi del piano e obiettivi dei piani considerati;	Richiesta accolta e integrata. Si è provveduto a integrare il Rapporto ambientale una matrice di interazione sintetica che evidenzia il contributo delle azioni di piano al conseguimento degli obiettivi delle Strategie nazionali e regionali di sviluppo sostenibile (pag. 126-132)
3. Non si evince il confronto con il Piano vigente cosi come richiesto in fase di scoping;	Richiesta accolta e integrata Il **Rapporto Ambientale (Capitolo 11)** include l'analisi dello stato di attuazione e dei risultati del PFG 2009-2013 come presupposto per la definizione degli obiettivi del nuovo Piano ("Rapporti con il precedente Piano forestale generale 2009-2013", pag. 136)
4. In riferimento all'analisi di contesto, la caratterizzazione delle matrici ambientali contiene parziali informazioni relative a: inquadramento territoriale, aspetti climatici, aspetti fisiografici e pedo- morfologici, geomorfologia ed idrogeologia, assetto idrogeologico della Campania, aria, acqua, la rete ecologica, biodiversità e paesaggio. A differenza di quanto indicato nell'introduzione del capitolo 9, non si evince che "l'analisi di contesto verrà trattata dal punto di vista ambientale, territoriale e socio- economico, prendendo in considerazione tutte le componenti che interagiscono con il Piano", mancando la trattazione delle componenti ambientali/territoriali considerate nell'analisi degli strumenti di pianificazione di cui al punto	Richiesta non accoglibile. La proposta di Piano forestale generale analizza diffusamente nei capitoli da 5 a 11 le principali peculiarità e criticità territoriali che sono influenzate e interagiscono con la gestione del patrimonio forestale.

fonte: http://burc.regione.campania.it

precedente;	
5. Il documento non contiene una idonea selezione di "*obiettivi di protezione ambientale stabiliti a livello internazionale, comunitario o degli Stati membri, pertinenti al piano o al programma, e il modo in cui, durante la sua preparazione, si è tenuto conto di detti obiettivi e di ogni considerazione ambientale*" così come previsto dall'all.VI del D.lgs. 152/2006 ss.mm.ii;	Richiesta accolta e integrata. Nel capitolo 11 del Rapporto ambientale dedicato all'analisi di coerenza esterna, sono stati specificati gli obiettivi ambientali salienti che emergono dal quadro programmatico descritto, predisponendo un'apposita matrice che evidenzia la coerenza del Piano forestale generale con i suddetti obiettivi (pag. 122-125).
6. L'analisi degli impatti mette in relazione le 26 azioni di Piano con alcune componenti ambientali (Aria, Clima, Suolo, Acqua, Biodiversità, Rischi ambientali, Produzione servizi ecosistemici, Paesaggio) non corrispondenti a quelle considerate nelle precedenti sezioni del documento; per ciascuna componente vengono specificati diversi ambiti non trattati/descritti nell'analisi di contesto.	Richiesta parzialmente accoglibile. Le 26 azioni di piano sono valutate rispetto alle componenti ambientali che interagiscono con le coperture forestali regionali, così come descritto nei capitoli 5-11 del Piano forestale generale. Alla luce dell'osservazione fatta si è proceduto a evidenziare tali relazioni in uno specifico paragrafo finale del Capitolo 9 del Rapporto ambientale ("Caratterizzazione delle matrici ambientali").
7. Riguardo al monitoraggio, il documento contiene un "sistema di indicatori" utili per la verifica di efficacia del Piano ma non relazionati alle componenti ambientali considerate in fase di valutazione degli impatti e pertanto non sufficienti a monitorare gli effetti, connessi all'attuazione del Piano, sulle componenti ambientali considerate; la scelta degli indicatori non risulta coerente con quanto indicato nel paragrafo 13 "….I principali indicatori a sostegno del monitoraggio dovrebbero informare sia sui determinanti socio-economici sia su emissioni inquinanti, consumi energetici o utilizzo di risorse naturali";	Richiesta accolta e integrata. In relazione al programma di monitoraggio è proceduto alla riformulazione del paragrafo 13 del RA (pag. 146- 155) alla luce delle indicazioni contenute negli "Indirizzi operativi per il monitoraggio ambientale di piani e programmi (art.18 del Dlgs 152/2006)" a cura del progetto CreiamoPA del MASE, ampliando la lista di indicatori, e mettendo in relazione gli indicatori con le azioni di Piano previste, evidenziando le responsabilità per la realizzazione e gestione del piano di monitoraggio e i tempi pervisti.

fonte: http://burc.regione.campania.it

8. Dall'esame del documento "Studio di Incidenza Ambientale" presentato si evince per valutare le possibili incidenze si fa riferimento ad una matrice di impatti che mette in relazione le 26 azioni di piano con alcune componenti ecologiche (*habitat della Z.S.C.*), con le componenti biotiche e abiotiche; si suggerisce, coerentemente con le LL GG e quanto previsto nell'Allegato G del DPR 357/1997 e s.m.i. di far riferimento con evidenza a tutti i Siti Natura 2000 potenzialmente interessati, comprese le ZPS presenti nel territorio regionale; ancora in merito alla analisi e valutazione dei possibili impatti, non si evince con chiarezza quali sono i criteri per individuare la sussistenza e la maggiore o minore significatività dell'incidenza e qual è l'approccio metodologico prescelto; non risultano indicazioni riguardo il piano di monitoraggio ed un'analisi di eventuali situazioni alternative per raggiungere gli obiettivi del piano.	Richiesta accolta e integrata. SI è provveduto a integrare lo Studio di incidenza ambientale per gli aspetti evidenziati nelle osservazioni.

fonte: http://burc.regione.campania.it

Tab. 7. Osservazioni dall'ARPA Puglia alla proposta di Piano Forestale Generale della Campania (PFG), al Rapporto ambientale e alla VINCA

Osservazioni	Analisi e valutazione delle osservazioni ed eventuali modifiche, integrazioni, controdeduzioni Indicazione dei punti della proposta di piano eventualmente modificati
Osservazioni al punto 1 1.1. Considerato che alcune tipologie forestali sono localizzate negli ambiti di riferimento per la redazione dei Piani forestali di indirizzo territoriale (PFIT) "Colline dell'Alto Tammaro e Fortore" e "Colline dell'Ufita" che sono confinanti con la Regione Puglia, si ritiene opportuno che l'analisi di coerenza debba essere estesa anche alla Programmazione e Pianificazione forestale della Regione Puglia.	Richiesta accolta. L'identificazione degli ambiti di redazione dei PFIT è stata fatta in accordo con le disposizioni dell'art. 3 del decreto di attuazione del TUFF 28 ottobre 2021 "Disposizioni per la definizione dei criteri minimi nazionali per l'elaborazione dei piani forestali di indirizzo territoriale e dei piani di gestione forestale". L'art. 1 comma 1 del decreto dispone che il PFIT definisce i criteri di perimetrazione degli ambiti interessati dalla redazione dei PFIT, stabilendo che il PFIT "puo' essere predisposto dalle regioni nell'ambito di comprensori territoriali omogenei per caratteristiche ambientali, paesaggistiche, economico-produttive e/o amministrative; ove possibile, i limiti geografici seguono i confini amministrativi dei comuni interessati". Secondo il comma 3 del medesimo articolo " Il PFIT ha lo scopo di fornire indirizzi per la gestione nel medio e lungo periodo delle risorse forestali e silvo-pastorali di proprieta' pubblica, privata e collettiva e definisce i propri obiettivi e le proprie finalita' in attuazione della politica forestale regionale, compatibilmente e in correlazione con gli altri strumenti pianificatori presenti, sia ambientali sia paesaggistici, permettendo di evidenziare e valorizzare le vocazioni di ambiti territoriali relativamente omogenei. Le regioni assicurano il coinvolgimento degli enti e dei portatori di interessi locali nella predisposizione dei PFIT secondo quanto disposto all'art. 14 del decreto legislativo 3 aprile 2006, n. 152". Il comma 6 del medesimo articolo prevede che "Il PFIT e' assoggettato alla disciplina di valutazione ambientale strategica ai sensi dall'art. 6 del decreto legislativo del 3 aprile 2006, n. 152". Il quadro programmatico della Regione Puglia (ci riferiamo in particolare alla Legge regionale 21 marzo 2023, n. 1 "Legge in materia di foreste e filiere forestali e disposizioni diverse", e alla Proposta di Programma forestale regionale – obiettivi ed indirizzi) è fortemente orientata all'applicazione al territorio pugliese dei principi di gestione forestale sostenibile contenuti nella Strategia forestale nazionale, in accordo con il Testo unico in materia forestale e di filiere forestali (D. L.vo 03/04/2018 n. 34). Gli ambiti di riferimento per la redazione dei Piani forestali di indirizzo territoriale (PFIT) "Colline dell'Alto Tammaro e Fortore" e "Colline dell'Ufita", confinanti con la Regione Puglia, sono in continuità, come evidenziato nello Studio del Piano forestale regionale dell'Università degli Studi di Bari "Aldo Moro" e nelle vigenti Linee guida di Programmazione Forestale, sono in continuità con i boschi dell'Appennino Dauno, costituti in prevalenza da boschi a prevalenza di cerro (Quercus cerris) e roverella (Quercus pubescens). Questi boschi caratterizzano l'ambiente submontano e collinare interno dell'Appennino Dauno e sono storicamente gestiti a ceduo. Lo studio evidenzia un problema di sotto-utilizzazione o abbandono colturale. Questa inerzia gestionale, in particolare nei cedui invecchiati, comporta un'instabilità strutturale dei soprassuoli e una perdita

fonte: http://burc.regione.campania.it

	della loro funzionalità produttiva. Di conseguenza, gli indirizzi per l'Appennino Dauno sono orientati a promuovere la Gestione Forestale Sostenibile (GFS), rafforzando la funzione protettiva dei boschi e la prevenzione del rischio idrogeologico; contrastare il rischio incendi attraverso la gestione attiva della vegetazione e la riduzione del materiale combustibile; incentivare la riattivazione della gestione dei cedui, anche attraverso l'ammodernamento delle imprese boschive e lo sviluppo della filiera legno-energia/legno-costruzione. Gli obiettivi definiti dal Piano forestale generale della Campania per gli ambiti di riferimento per la redazione dei Piani forestali di indirizzo territoriale (PFIT), compresi quelli "Colline dell'Alto Tammaro e Fortore" e "Colline dell'Ufita" sono pienamente coerenti con quelli emergenti dal quadro programmatico della regione Puglia.
1.2. Inoltre, in considerazione dei possibili impatti sui siti Rete Natura 2000 localizzati in Puglia e confinanti con la Regione Campania, ovvero la ZSC IT9110003 "Monte Cornacchia— Bosco Faeto" e la ZSC IT9110032 "Valle del Cervaro, Bosco dell'Incoronata", si ritiene opportuno verificare la coerenza anche con gli obiettivi e le misure di conservazione contenuti nella DGR 1083/2010 e nel R.R. 28/08 (per la ZSC IT9110003) e nei R.R. 6/2016 modificato dal R.R. 12/2017 e R.R. 28/08 (per la ZSC IT9110032).	Il Piano forestale generale sono finalizzate a promuovere la Gestione forestale sostenibile in attuazione della Strategia Forestale Nazionale, nel rispetto degli obiettivi e delle misure di conservazione definite dei piani di gestione dei siti della Rete Natura 2000. L'analisi di coerenza non evidenzia interferenze negative delle azioni di piano con gli obiettivi e le misure di conservazione definite per i due siti attenzionati. **Misure di conservazione del sito IT9110003 "Monte Cornacchia - Bosco Faeto", Misure Regolamentari Generali (Valide su tutto il Sito)** • Divieto di cambio di destinazione d'uso: È vietato trasformare le superfici a bosco o a pascolo permanente in altre forme di uso del suolo (es. agricolo intensivo o seminativo). **NON PERTINENTE** • Divieto di spietramento (dissodamento): È vietato effettuare il dissodamento delle pietre e la loro macinazione nelle aree coperte da vegetazione naturale e seminaturale (inclusi i pascoli dell'habitat 6210). **NON PERTINENTE** • Tutela degli elementi del paesaggio: È vietata l'eliminazione di muretti a secco, terrazzamenti, fontanili, stagni e abbeveratoi, che rappresentano rifugi per la fauna minore (rettili e anfibi). **NON PERTINENTE** • Prodotti chimici: Divieto assoluto di utilizzare diserbanti o pirodiserbo per il controllo della vegetazione nei canali, fossati e nelle aree marginali. **NON PERTINENTE** **Misure Specifiche per Habitat Forestali** • Periodi di divieto: Per tutelare la nidificazione dell'avifauna, è vietato effettuare tagli della vegetazione arborea e arbustiva nel periodo compreso tra il 15 marzo e il 15 luglio. **PERTINENTE/COERENTE** • Habitat 9210 (Faggeti con Taxus e Ilex) e 91M0: • Sebbene le misure generali prevedano la gestione sostenibile, la presenza di Taxus baccata e Ilex aquifolium (specie protette) impone di non danneggiare il sottobosco dove queste specie sono presenti. **PERTINENTE/COERENTE** • È necessario mantenere una struttura del bosco che garantisca ombreggiamento e umidità costanti. **NON PERTINENTE** • Habitat Ripariali (91F0, 92A0): • È vietato tagliare o danneggiare la vegetazione riparia e igrofila (erbacea, arbustiva e arborea) lungo i corsi d'acqua, salvo specifiche deroghe per comprovati motivi idraulici autorizzati dall'ente gestore. **PERTINENTE/COERENTE** • Nelle fasce di rispetto dei corpi idrici (10 metri dal ciglio), è vietato l'uso di prodotti fitosanitari. **NON PERTINENTE** **3. Misure per Habitat di Prateria (6210*, 6220)** • Divieto di trasformazione: Non è consentito arare o convertire queste aree a coltura, né utilizzarle per l'imposto di legname o il transito pesante che compatterebbe il suolo. **NON PERTINENTE** • Gestione del pascolo: Il carico di pascolo deve essere controllato (massimo 0,5 UBA/ha in alcune zone sensibili o secondo quanto stabilito dal Regolamento n. 5/2015 per aree vincolate) per evitare sia il sovrapascolo che

fonte: http://burc.regione.campania.it

	l'abbandono. **PERTINENTE/COERENTE** **Misure di conservazione ZSC IT9110032 "Valle del Cervaro, Bosco dell'Incoronata" Habitat Fluviali e Ripariali (Criticità Alta)** Il sito è caratterizzato dal corso del Torrente Cervaro. Gli habitat coinvolti sono 3280 (Fiumi mediterranei), 92A0 (Gallerie di *Salix* e *Populus*) e 91F0 (Foreste miste riparie). • Fascia di Rispetto Idraulica e della vegetazione spondale **PERTINENTE/COERENTE** • Divieto di Transito in Alveo **NON PERTINENTE** • Tutela della vegetazione igrofila **PERTINENTE/COERENTE** **Habitat di Prateria e Steppici** Gli habitat 6210* (Formazioni erbose secche con orchidee) e 6220* (Percorsi substeppici) sono molto vulnerabili al "cambio di destinazione" o al passaggio dei mezzi. • Divieto di Imboschimento. **NON PERTINENTE** • Divieto di Imposto. **NON PERTINENTE** • Mantenimento del pascolo estensivo (carico controllato). **PERTINENTE/COERENTE** **Misure Forestali Generali (Regolamento Reg. 6/2016)** Poiché l'area è un Parco Regionale e sito ZSC, valgono queste regole per tutti gli interventi selvicolturali: • Periodo di Divieto degli interventi selvicolturali (taglio, esbosco) **PERTINENTE/COERENTE** • Divieto di abbruciamento dei Residui di Taglio **PERTINENTE/COERENTE** • Rilascio Bio-gruppi piante "habitat" (grandi vecchi alberi, alberi con cavità). **PERTINENTE/COERENTE** • Divieto di Nuova Viabilità. **NON PERTINENTE**
Osservazioni al punto 4 Questa Agenzia condivide la metodologia e la lista di indicatori definita in via preliminare per il monitoraggio del Piano forestale Generale della Campania, ritenendo tuttavia utile definire maggiori indicatori di risultato (indicatori di processo) per misurare l'attuazione e l'efficacia delle azioni di Piano. In particolare il Piano di monitoraggio e la sua implementazione può dare evidenza della correlazione tra obiettivi di sostenibilità di cui all'Agenda 2030 per lo Sviluppo Sostenibile, alla Strategia Nazionale di Sviluppo Sostenibile o alla Strategia Regionale di Sviluppo Sostenibile della Regione Campania approvata con DGR n.104 del 7/03/2023, obiettivi e azioni di Piano e indicatori al fine di seguire l'intero ciclo di vita del Piano Forestale Generale. Sarebbe pertanto utile relazionare gli indicatori di contesto direttamente alle componenti ambientali di riferimento al fine di descrivere lo stato attuale e l'evoluzione del	Richiesta accolta e integrata. In relazione al programma di monitoraggio è proceduto alla riformulazione del paragrafo 13 del RA (pag. 146- 155) alla luce delle indicazioni contenute negli "Indirizzi operativi per il monitoraggio ambientale di piani e programmi (art.18 del Dlgs 152/2006)" a cura del progetto CreiamoPA del MASE, ampliando la lista di indicatori, e mettendo in relazione gli indicatori con le azioni di Piano previste, evidenziando le responsabilità per la realizzazione e gestione del piano di monitoraggio e i tempi pervisti.

fonte: http://burc.regione.campania.it

contesto; gli indicatori di processo direttamente agli obiettivi di Piano al fine di valutarne il raggiungimento tramite l'attuazione delle azioni e gli indicatori di contributo per valutare gli effetti del Piano al contesto. Nella Tabella seguente è riportato un esempio, proposto da questa Agenzia, della possibile correlazione tra alcuni indicatori di contesto, di processo, di contributo, obiettivi e azioni del Piano e obiettivi di sostenibilità, prendendo come riferimento le informazioni riportate nel RA.

Tab. 9. Osservazioni dall'ODAF (Ordine dei dottori agronomi e forestali della provincia di Salerno) relative alla proposta di Piano Forestale Generale della Campania (PFG)

Osservazioni	Analisi e valutazione delle osservazioni ed eventuali modifiche, integrazioni, controdeduzioni Indicazione dei punti della proposta di piano eventualmente modificati
c) Nella propria esperienza quotidiana gli iscritti a questo ordine sperimentano le difficoltà connesse ai molteplici adempimenti autorizzativi previsti, e ai tempi non brevi che essi richiedono. Questa situazione concorre, unitamente alle debolezze strutturali del settore forestale regionale, ben individuate nella Proposta di Piano, non facilità l'attività gestionale, rendendo più difficile il conseguimento degli obiettivi di incrementare la superficie forestale regionale interessata da gestione forestale attiva, di contrastare le dinamiche di abbandono, di sostenere le comunità locali nelle aree interne della regione; d) Tali difficoltà sono tanto più gravose tenuto conto della rilevante superficie forestale che, nella provincia di Salerno, ma più generale in Regione Campania, ricade nei diversi regimi di protezione (aree Parco, Riserve, siti della Rete Natura 2000 ecc.); e) La richiesta pressante avanzata da questo Ordine è quella di una auspicabile armonizzazione dei diversi adempimenti previsti dalla legislazione e regolamentazione vigente, all'interno di procedure autorizzative e di controllo che garantiscano agli operatori tempi e oneri certi e sostenibili; f) L'ODAF ribadisce la necessità che la Proposta di Piano promuova la definizione di tutte le forme previste dalla legislazione corrente per il coordinamento dei procedimenti e adempimenti	Richiesta accolta. Le osservazioni sono pienamente recepite nella proposta di Piano forestale generale della Campania, con preciso riferimento all'azione A1 "Promuovere una governance forestale in Campania basata sulla cooperazione istituzionale, l'integrazione di strumenti e politiche, la partecipazione e condivisione degli obiettivi di Gestione Forestale Sostenibile (GFS)".

pianificatori e autorizzativi. In particolare ci riferiamo alle rilevanti novità introdotte con i nuovi Piani di Gestione dei Siti della rete Natura 2000 della Campania, e alla revisione in corso dei Piani di importanti aree protette della nostra Regione, per le quali dovranno essere adeguatamente approfondite le relazioni con gli altri strumenti disciplinari, a partire dal Regolamento forestale regionale, e con i disciplinari forestali di gestione e governo sostenibile pure richiamati nella Proposta di Piano.

Tab. 10. Osservazioni prodotte da Confagricoltura Campania alla proposta di Piano Forestale Generale della Campania (PFG)

Osservazioni	Analisi e valutazione delle osservazioni ed eventuali modifiche, integrazioni, controdeduzioni Indicazione dei punti della proposta di piano eventualmente modificati
1. L'obiettivo D della Proposta di piano *"Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare",* comprende un gruppo di azioni del Piano forestale generale finalizzate a promuovere e rafforzare in un'ottica di bioeconomia le filiere forestali in Campania in accordo con gli indirizzi della Strategia forestale nazionale. In particolare, avvertiamo la necessità di sviluppare ulteriormente le traiettorie operative che la Proposta di Piano propone per l'implementazione nei diversi sistemi forestali della regione, di obiettivi prioritari quali: - **l'ammodernamento** e il **rafforzamento della capacità operativa delle imprese boschive** della Campania (azione D1); - la **certificazione** delle foreste del territorio regionale e la **tracciabilità** lungo tutta la filiera, dal tronco al mobile finito (azione D2); - la valorizzane in chiave economica delle pratiche di **carbon farming** (azione D3).	Si concorda con l'osservazione, che riguarda aspetti già presenti nella proposta di Piano forestale generale della Campania, con preciso riferimento alle azioni: A1. "Promuovere una governance forestale in Campania basata sulla cooperazione istituzionale, l'integrazione di strumenti e politiche, la partecipazione e condivisione degli obiettivi di Gestione Forestale Sostenibile (GFS)" D2. "Promuovere la certificazione delle foreste del territorio regionale e la tracciabilità lungo tutta la filiera, dal tronco al mobile finito" D3. Riconoscere e remunerare i servizi di interesse pubblico, ambientale e sociale forniti dalle aree forestali (foreste e pascoli) e mantenuti ed accresciuti dalla GFS.

Tab. 11. Osservazioni prodotte da Spring (Cluster Italiano della Bioeconomia Circolare) alla proposta di Piano Forestale Generale della Campania (PFG)

Osservazioni	Valutazione delle osservazioni e controdeduzioni
Sviluppo di hub e distretti agroindustriali per la bioeconomia (Spring Oss. 2) 1. Nell'azione D5 "Adesione al Cluster legno-foresta italiano e costituzione del Cluster legno foresta della Campania" creazione di hub o distretti con una visione integrata sull'impiego avanzato delle biomasse, attraverso l'utilizzo a cascata. **Incentivazione di start-up e spin-off (Spring Oss. 3)** È opportuno prevedere misure di sostegno per la nascita e lo sviluppo di start-up e spin-off nel settore della bioeconomia forestale, facilitando l'innovazione e l'imprenditorialità. **Valorizzazione delle bioraffinerie di piccola scala (Spring Oss. 4)** Si suggerisce di integrare all'interno dell'azione D1 la necessità di incentivi specifici per la realizzazione e il potenziamento di bioraffinerie di piccola scala, per lo sviluppo innovativo e la diversificazione economica nelle aree rurali. **Mappatura della domanda di biomassa nei settori industriali (Spring Oss. 5)** Mappatura delle esigenze di biomassa, in termini quantitativi e qualitativi, dei comparti industriali prioritari (es. carta, arredo, tessile, automotive), favorendo l'integrazione tra offerta e domanda. **Sostenibilità 4.0 (Spring Oss. 6).** Si suggerisce di integrare all'interno dell'azione D1 un aggiornamento tecnologico che permetta di ottenere	Le osservazioni prodotte da Spring (Cluster Italiano della Bioeconomia Circolare) e dall'Associazione forestale italiana (Associazione per lo studio e la promozione delle foreste e dell'industria del legno) vertono sui diversi aspetti scientifici, tecnici, finanziari, progettuali legati alla promozione della filiera foresta legno, in chiave di bioeconomia, economia circolare, bioedilizia. I diversi aspetti affrontati trovano già sostanziale e preciso riferimento, seppur in forma necessariamente sintetica, nella proposta di Piano forestale regionale della Campania, e specificamente: - nel Capitolo 2 "La strategia forestale nazionale", - nel Capitolo 15 "Le azioni del Piano forestale regionale", vedi in particolare le azioni D1, D2, D3, D5, E1 - nel Capitolo 16 "Le misure del CSR Campania 2023-2027 di interesse forestale" per quanto concerne le fonti di finanziamento legate alla PAC. Allo scopo di illustrare in forma unitaria in che modo il Piano forestale Regionale recepisce e affronta gli aspetti relativi alla bioeconomia, all'economia circolare e alla bioedilizia, si è ritenuto utile introdurre un paragrafo introduttivo al gruppo di azioni di piano D "Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare" che sintetizza organicamente la strategia del Piano forestale regionale, all'interno della quale proposte dettagliate quali quelle presentate nell'osservazione potranno essere definite e attuate (vedi pag. 145-147 del Piano),

fonte: http://burc.regione.campania.it

sistemi di produzione automatizzati per ottimizzare la trasformazione delle risorse agrarie e forestali. **Integrazione tra proprietari e costruttori (AFI Oss. 1.2):** Introdurre strumenti o incentivi specifici per creare sinergie tra i proprietari forestali, gli operatori della trasformazione del legno e i costruttori. Un modello di governance che favorisca una maggiore tracciabilità e certificazione della filiera legno per accrescere la competitività del settore. **Sviluppo di una strategia specifica per la filiera legno (AFI Oss. 3.1):** Integrare nel piano misure per incentivare la cooperazione tra istituzioni locali, imprese di trasformazione del legno e operatori del settore delle costruzioni. Promuovere programmi di formazione e certificazione che aumentino la competitività e la qualità del legno locale. **Incentivi economici e strumenti normativi (AFI Oss. 3.2):** Adottare incentivi fiscali e finanziari che agevolino la scelta del legno locale, in modo da compensare eventuali differenze di costo lungo il ciclo di vita rispetto ad acciaio e cemento.	
Crediti di carbonio (Spring. Oss. 7) Si suggerisce di evidenziare più compiutamente le potenzialità della valorizzazione del patrimonio forestale attraverso il servizio ecosistemico (crediti di carbonio).	Osservazione accoglibile. L'azione D3 è stata aggiornata (vedi pag. 157-158 del Piano) alla luce del recente decreto del MIPAF di approvazione delle "Linee Guida per i Crediti di Carbonio Volontari nel Settore Agricolo e Forestale". Le Linee guida definiscono i criteri per la generazione, contabilizzazione, certificazione, riconoscimento e commercializzazione dei crediti di carbonio prodotti su base volontaria dal Settore agricolo e forestale nazionale. Il decreto istituisce il Registro nazionale dei crediti di carbonio volontario (VCC), istituito presso il CREA (Centro di Ricerca per la Selvicoltura) , le procedure operative e i Documenti di Progetto (DDP) per il rilascio della conformità dei crediti generati e la verifica degli audit di certificazione effettuati dagli organismi esterni (OCE).

fonte: http://burc.regione.campania.it

Indicatori di sostenibilità (AFI Oss.1) All'interno dell'azione D2 si suggerisce di integrare l'adozione di strumenti di valutazione della sostenibilità, come l'Analisi del Ciclo di Vita (LCA), per monitorare gli impatti ambientali delle filiere forestali e bioeconomiche.	Osservazione accoglibile. Si è proceduto ad integrare la descrizione dell'azione D2, proponendo anche l'Analisi del Ciclo di Vita (LCA) come strumento di valutazione degli impatti ambientali delle filiere forestali e bioeconomiche. (vedi pag. 145 del Piano)
Aspetti tecnici e normativi (AFI Oss. 1.1): Nel piano non sono presenti riferimenti specifici ad applicazioni avanzate, come la progettazione per il disassemblaggio e il riuso dei materiali, fondamentali in ottica di economia circolare e di riduzione delle emissioni di CO_2.	Osservazione accoglibile. Si è proceduto ad integrare la descrizione generale del gruppo di azioni D aggiungendo il principio di promuovere il riuso e il disassemblaggio dei materiali nella filiera delle costruzioni (vedi pag. 145 del Piano)
Impatto sociale e territoriale (AFI Oss. 3.3): Collegare le politiche forestali a strategie di sviluppo rurale che possano contrastare lo spopolamento, promuovendo il trasferimento di competenze, la valorizzazione dei territori interni e il rafforzamento delle reti socio-economiche locali.	Si condivide il merito dell'osservazione. Le potenzialità delle politiche forestali nel favorire lo sviluppo delle aree interne, già evidenziate in sede di descrizione dell'azione D5 "Adesione al Cluster legno-foresta italiano e costituzione del Cluster legno foresta della Campania", sono state rafforzate evidenziando la necessità di stretta integrazione con la SNAI (Strategia nazionale aree interne). (vedi pag. 119 del Piano).

fonte: http://burc.regione.campania.it

4. Analisi degli impatti delle azioni di piano sulle matrici ambientali considerate

L'identificazione dei possibili impatti del Piano sulle diverse componenti ambientali è stata condotta impiegando una matrice di interazione costruita correlando gli effetti sulle componenti ambientali considerate (acqua, suolo, aria, biodiversità, paesaggio, salute umana) su ciascuna delle 26 diverse azioni elementari normate dal Piano forestale generale.

Le componenti ambientali considerate sono le seguenti:

Aria	Qualità dell'aria
Clima	Mitigazione climatica
	Bilancio dei gas serra
Suolo	Proprietà fisiche
	Proprietà bio-chimiche
	Consumo di suolo (Soil sealing)
Acqua	Stato qualitativo
	Stato quantitativo Portate, regimi
Biodiversità	Diversità e integrità habitat
Rischi ambientali	Mitigazione rischio idrogeologico
Produzione servizi ecosistemici	Servizi di supporto
	Servizi di regolazione
	Servizi di approvvigionamento
	Servizi socio-culturali
Paesaggio	Qualità paesaggistica

Accanto alle matrici ambientali considerate nelle analisi di impatto, la check list comprende anche, sotto un profilo funzionale, le diverse tipologie di servizi ecosistemici. Nell'ultimo ventennio è cresciuta l'attenzione delle attività di ricerca e di pianificazione intorno al tema dei servizi ecosistemici, intendendo con questo termine la vasta gamma di benefici (beni, servizi immateriali) che le popolazioni umane traggono dalle terre e dagli ecosistemi per il soddisfacimento dei loro molteplici bisogni. Il principale quadro di riferimento è il programma "Millenniun Assessment" delle Nazioni Unite, avviato nel 2001, in collaborazione con gli Stati membri, Istituti di ricerca, nonché Enti e Associazioni espressione della società civile. Obiettivo del programma è quello di "valutare le conseguenze del cambiamento degli ecosistemi a scala locale e globale sul benessere umano, e di fornire le basi scientifiche per le azioni necessarie a rafforzare la conservazione e l'uso sostenibile degli ecosistemi."
I servizi ecosistemici vengono classificati in:

- Servizi di supporto: servizi fondamentali, necessari per la produzione di tutti gli altri servizi (di approvvigionamento, regolazione e culturali). Riguardano tra l'altro la

fonte: http://burc.regione.campania.it

formazione dei suoli, il ciclo dei nutrienti, la produzione di biomassa primaria, il mantenimento della biodiversità.

- Servizi di regolazione: servizi legati alle funzioni di regolazione del clima, e immagazzinamento dei gas climalteranti, di regolazione e depurazione delle acque, di autodepurazione dell'aria, di controllo dei patogeni, di impollinazione ecc.

- Servizi di approvvigionamento: servizi che garantiscono la produzione dei beni necessari per la vita degli uomini: acqua, cibo, fibre, legna, molecole e principi attivi, risorse genetiche (varietà di piante e animali utili all'uomo).

- Servizi culturali: servizi legati alle attività spirituali, ricreative, culturali, sociali, scientifiche, formative ed educative basate sul rapporto tra gli uomini e gli ecosistemi.

Gli impatti potenziali di ciascuna azione elementare disciplinata nel Piano forestale generale sono stati individuati e valutati con riferimento alla seguente legenda:

- Impatti molto positivi
- Impatti positivi
- Possibili interazioni negative su specifiche matrici ambientali che è possibile attivamente prevenire attraverso il pieno rispetto delle condizioni e buone pratiche indicate dal piano
- Impatti negativi che non possono essere prevenuti e mitigati con il ricorso ad apposite pratiche accessorie
- Interazioni non rilevanti

Classificazione degli impatti	
Impatti molto positivi	
Impatti positivi	
Possibili interazioni negative su specifiche matrici ambientali che è possibile attivamente prevenire attraverso il pieno rispetto delle condizioni e buone pratiche indicate dal piano	
Impatti negativi che non possono essere prevenuti e mitigati con il ricorso ad apposite pratiche accessorie	
Interazioni non rilevanti	

In sede di commento preliminare dei risultati della valutazione bisogna innanzitutto sottolineare come il Piano Forestale generale persegue, quale obiettivo prioritario, la definizione di criteri e indicazioni finalizzati a garantire la gestione sostenibile, in chiave multifunzionale, del patrimonio forestale regionale, applicando al territorio campano le misure, le buone pratiche e

fonte: http://burc.regione.campania.it

gli approcci operativi indicati dal Testo unico in materia di foreste e filiere forestali e dal Regolamento forestale regionale, come declinati dalla Strategia Forestale Nazionale, e debitamente adattati alle specifiche condizioni degli ecosistemi forestali della Campania, con la finalità di garantire e assicurare la gestione forestale sostenibile delle foreste regionali.
Il Piano Forestale Generale della Campania costituisce quindi uno strumento complessivo di tutela del sistema forestale regionale, finalizzato alla sua conservazione e miglioramento, sotto il profilo strutturale, funzionale ed evolutivo.
Il Piano Forestale Generale, in altre parole, è uno strumento che definisce misure, criteri e condizioni operative di tutela, salvaguardia e gestione attiva e sostenibile del patrimonio forestale, orientando in tal modo le diverse attività di progettazione, autorizzazione, attuazione, gestione, controllo e monitoraggio degli interventi e delle pratiche gestionali e conservative, come anche dello stato complessivo della risorsa.
L'analisi di impatto delle diverse azioni del PFG non ha pertanto evidenziato impatti negativi sulle matrici o comparti ambientali considerati. All'opposto, le azioni di piano, in quanto attuative al territorio campano delle misure di tutela e gestione sostenibile, in accordo con la strategia forestale europea e nazionale, sono in grado di generare impatti positivi, di diversa intensità, sulla qualità ambientale dei diversi bersagli considerati.
La valutazione condotta ha consentito di individuare un gruppo di azioni di piano caratterizzate dal fatto di generare impatti fortemente positivi su tutte le componenti e matrici ambientali e i servizi ecosistemici considerati:

- A1. Promuovere una governance forestale in Campania basata sulla cooperazione istituzionale, l'integrazione di strumenti e politiche, la partecipazione e condivisione degli obiettivi di Gestione Forestale Sostenibile (GFS)
- A2. Estendere la superficie dei beni silvo-pastorali di proprietà pubblica, privata e collettiva della Campania dotati di piani di gestione forestale
- A3. Promuovere la pianificazione forestale di area vasta (Piani Forestali di Indirizzo Territoriale)
- C6. Promuovere la gestione sostenibile dei prati e pascoli permanenti
- D2. Promuovere la certificazione delle foreste del territorio regionale e la tracciabilità lungo tutta la filiera
- D3. Riconoscere e remunerare i servizi di interesse pubblico, ambientale e sociale forniti dalle aree forestali (foreste e pascoli) e mantenuti ed accresciuti dalla Gestione Forestale Sostenibile.
- F1. Promuovere un programma integrato di monitoraggio e cartografia delle risorse forestali della Campania

Queste azioni definiscono nel loro insieme una strategia istituzionale precisa di pianificazione, tutela e gestione sostenibile delle foreste regionali, che è a sua volta in grado di supportare e favorire il perseguimento degli obiettivi di tutela e rafforzamento della qualità ambientale perseguiti dalle altre azioni di piano.
In altre parole, le tutele "strutturali" e "procedurali", di base, garantite da questo gruppo fondamentale di corsi di azione, preparano il campo e conferiscono operatività, concretezza, coerenza e strumenti operativi agli altri corsi d'azione definiti nel Piano forestale generale.

- D1. Rafforzare la capacità operativa delle imprese boschive. Promuovere la qualificazione degli operatori forestali

In attuazione della Strategia forestale nazionale, la gestione sostenibile delle foreste della Campania necessita di azioni di sostegno alle imprese boschive finalizzate alla formazione degli

fonte: http://burc.regione.campania.it

addetti e all'adeguamento tecnologico, per assicurare la conduzione delle pratiche colturali in condizioni di efficienza, economicità e sostenibilità. Il rafforzamento della base di imprese boschive regionali perseguito dal PFG con l'azione D1 è necessario per recuperare ad una gestione attiva e sostenibile la vasta superficie di boschi sotto-utilizzati o abbandonati presenti nel territorio regionale, nel rispetto ovviamente dei regimi di tutela vigenti nei territori protetti. Il rispetto dei tassi di prelievo e delle modalità di esecuzione delle pratiche colturali definiti dal Piano forestale generale e dal Regolamento forestale generale, in coerenza con le indicazioni fornite dalla Strategia forestale nazionale, garantiscono la conservazione della qualità dei suoli, della funzionalità delle opere di sistemazione idraulico-forestale e degli equilibri ecologici e idrogeologici. Il rispetto di tutte queste condizioni assicura la prevenzione di ogni impatto significativo sulle caratteristiche strutturali, funzionali e dinamiche delle foreste e sulla integrità delle specie e degli habitat. La sostenibilità del prelievo legnoso è rafforzata e garantita dalle azioni di piano finalizzate alla certificazione delle foreste; all'aumento della superficie dei boschi pubblici e privati dotati di piano di gestione forestale; alla redazione dei Piani forestali di indirizzo territoriale, per i quali il Piano forestale generale definisce gli ambiti territoriali di riferimento, in modo da consentirne nel tempo la formazione.
Riguardo all'azione D4, la promozione delle produzioni forestali non legnose in una prospettiva di filiera (funghi, tartufi, prodotti del sottobosco, miele) è sostenuta nel rispetto rigoroso delle norme vigenti a salvaguardia degli aspetti di sostenibilità ecologica e di tutela della biodiversità, con uno strutturato sistema autorizzativo e di controllo.
Il potenziamento in chiave multifunzionale e il mantenimento in efficienza della viabilità forestale è uno degli obiettivi più rilevanti, ma anche più delicati del piano. La presenza di una viabilità forestale efficiente e funzionale è il prerequisito per la gestione sostenibile e l'utilizzo produttivo e ricreativo dei boschi. La viabilità forestale è uno strumento fondamentale per la prevenzione e il monitoraggio dei rischi, come anche per gli interventi di lotta attiva agli incendi, per la realizzazione e il mantenimento in efficienza delle opere di sistemazione idraulica-forestale. D'altro canto, è anche vero che una viabilità forestale non correttamente concepita, progettata e manutenuta è essa stessa un fattore predisponente le dinamiche di dissesto idrogeologico e di erosione accelerata dei suoli. Il Piano forestale affronta tutti questi aspetti con l'azione E2, definendo i criteri razionali per il rafforzamento e il mantenimento in efficienza in chiave multifunzionale della rete regionale di viabilità forestale, declinando per il territorio regionale i principi e la classificazione della viabilità forestale definiti nel decreto attuativo del Testo unico in materia di foreste e filiere forestali.
Un impatto fortemente positivo sulla qualità dei suoli e delle acque è stimato per le azioni di piano specificatamente indirizzate a questi aspetti:

- B2. Gestione attiva dei boschi di protezione.
- B3. Incrementare la capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica del territorio e tutela delle acque
- B4. Prevenzione attiva dei rischi naturali o antropici, incendi, calamità naturali ed eventi catastrofici

In particolare l'individuazione operata dal Piano forestale generale dei boschi di protezione attiva della Campania consente l'applicazione a questi ecosistemi forestali particolarmente vulnerabili dei protocolli di messa in sicurezza e gestione attiva messi a punto dal Dipartimento di Agraria dell'Università Federico II di Napoli (Azione B2), che il Piano forestale generale

fonte: http://burc.regione.campania.it

adotta a fa propri, promuovendone l'applicazione a scala regionale, e prevedendo l'attivazione di una specifica azione di sostegno nel quadro della programmazione agricola 2023-2027.
Impatti fortemente positivi sugli aspetti naturalistici e di biodiversità (diversità e integrità degli habitat) contraddistinguono misure specifiche del piano:

- B1. Conservazione e miglioramento della biodiversità forestale nella rete regionale di aree protette
- C2. Valorizzare in chiave multifunzionale le foreste urbane e periurbane
- C3. Curare e proteggere i boschi planiziali della Campania
- C4. Tutela e valorizzazione dei castagneti da frutto della Campania
- C5. Tutelare i boschi vetusti e gli alberi monumentali
- C6. Promuovere la gestione sostenibile dei prati e pascoli permanenti
- C7. Promuovere e valorizzare i sistemi agroforestali
- E1. Valorizzare le 10 foreste regionali come "laboratori verdi multifunzionali" e centri di diffusione permanente della GFS in Campania

Si noti come gli impatti positivi sulla biodiversità riguardino sia i territori regionali ricadenti nella rete regionale di aree protette (Azione B1), nei quali l'obiettivo è innanzitutto quello di tutelare il patrimonio attuale di valori in gioco; sia territori nei quali l'obiettivo è quello di un recupero, ricostituzione, rispristino di aspetti importanti di biodiversità, o comunque di tutela in contesti caratterizzati da forti pressioni d'uso, come nel caso delle foreste urbane (Azione C2) o le pianure a prevalente utilizzo agricolo (Azione C3).
Di particolare rilievo sono infine le azioni di piano particolarmente rivolte alla mitigazione/adattamento del cambiamento climatico e all'immagazzinamento dei gas serra ad opera degli ecosistemi forestali e pascolativi:

- D2. Promuovere la certificazione delle foreste del territorio regionale e la tracciabilità lungo tutta la filiera, dal tronco al mobile finito
- D3. Riconoscere e remunerare i servizi di interesse pubblico, ambientale e sociale forniti dalle aree forestali (foreste e pascoli) e mantenuti ed accresciuti dalla GFS

Impatti transitori negativi transitori sulla qualità dell'aria, legata a emissioni nella fase di realizzazione degli interventi, che è possibile attivamente prevenire attraverso il pieno rispetto delle condizioni e buone pratiche indicate dal piano, potrebbero essere generati dalle seguenti azioni:

B2. Gestione attiva dei boschi di protezione.
B3. Incrementare la capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica del territorio e tutela delle acque
C2. Valorizzare in chiave multifunzionale le foreste urbane e periurbane
E2. Valorizzazione multifunzionale della viabilità forestale e silvo-pastorale e della sentieristica in Campania

Gli impatti sulla qualità dell'aria che possono essere prodotti dalle azioni citate sono legati a due aspetti:

1. la temporanea diminuzione di biomassa aerea legata ai tagli di gestione o produzione dei soprassuoli;
2. le operazioni per la realizzazione, adeguamento, manutenzione e gestione delle infrastrutture forestali (viabilità, sentieristica) e delle opere di difesa idrogeologica.

fonte: http://burc.regione.campania.it

Per quanto riguarda gli impatti potenziali di cui al punto 1. le buone pratiche indicate dal piano per la prevenzione dei possibili impatti sulla qualità dell'aria consistono (vedi paragrafo 12 del PFG "Indirizzi di gestione forestale sostenibile"):

- nella regolazione e limitazione dei tagli gestionali o produttivi entro soglie che garantiscono la permanenza di una biomassa forestale aerea in grado di garantire le funzioni di autodepurazione e regolazione termica migliorative della qualità dell'aria; ovvero, nel caso della ceduazione periodica, la definizione di soglie dimensionali e di pattern delle particelle ceduate che garantiscono il mantenimento di un livello di funzionalità ecologica soddisfacente dell'unità produttiva complessivamente interessata dal piano di gestione forestale, nonché i tempi più brevi di ricostituzione della biomassa aerea delle particelle ceduate. Queste misure previste dal PFG sono dettagliatamente e operativamente codificate nel Regolamento forestale vigente, e il loro rispetto è obbligatorio ai fini dell'autorizzazione degli interventi.

Per quanto riguarda gli impatti potenziali di cui al punto 2., il PFG dispone, in accordo con il Decreto attuativo del Testo unico in materia di viabilità forestale e con il Regolamento forestale regionale (vedi paragrafo 10 del PFG "Indirizzi per gli interventi di sistemazione idraulico-forestale"):

- che la progettazione degli interventi sulla viabilità forestale e silvo-pastorale permanente debba prevedere modalità di realizzazione o adeguamento tali da seguire ordinariamente l'andamento naturale del terreno evitando al massimo il movimento terra, adottando scelte progettuali idonee a garantire la stabilità dei versanti e delle coperture pedologiche e la corretta regimazione idraulica dell'opera. e, dove possibile, tali da operare il recupero di tracciati preesistenti;
- l'utilizzo di materiali compatibili con la componente ambientale e paesaggistica locale;

la gestione della manutenzione funzionale nel tempo, ispirandosi a principi generali di efficienza, efficacia e sostenibilità degli interventi dal punto di vista ambientale, economico e della durata.
La messa in sicurezza dei boschi di protezione potrebbe generare impatti transitori negativi sul paesaggio, anch'essi mitigabili dalle condizioni e buone pratiche indicate dal piano (limite rigoroso della superficie delle parcelle forestali ceduate, non contiguità delle parcelle).

5. Studio di incidenza

Lo Studio per la Valutazione di Incidenza è così strutturato:

- Prima parte: quadro di riferimento normativo ed ambientale
- Seconda parte: ambito di riferimento
- Terza parte: Inquadramento territoriale ambientale di riferimento
- Quarta parte: La Rete Natura 2000
- Quinta parte: il P.F.G.
- Settima parte: II Livello II: Valutazione Appropriata
- Ottava parte: Conclusioni

La metodologia adottata per la Valutazione di Incidenza Ambientale (VIncA) del Piano Forestale Generale della Regione Campania (PFG) è stata sviluppata in conformità all'art. 6 della Direttiva 92/43/CEE "Habitat", alle Linee Guida nazionali VIncA (MATTM, 2019) e al quadro regolamentare regionale (Reg. Reg. n. 1/2010; DGR 795/2017; DGR 617/2024).
Lo Studio per la Valutazione di Incidenza è stato rivisto sulla base delle richieste di integrazioni dell'Autorità competente, delle osservazioni pervenute dagli SCA e dei Sentito pervenuti adeguandolo ai contenuti richiesti dalle Linee Guida Nazionali e dalla DGR 617/2024.
La natura regionale del Piano, che interviene sull'intero sistema forestale campano, ha richiesto l'elaborazione di una metodologia ampia, sistemica e pienamente coerente con la scala ecologica dei processi che caratterizzano la Rete Natura 2000 regionale. Di seguito si descrive in modo unitario, armonizzato e strutturato l'intero percorso metodologico sviluppato.
Impostazione generale e quadro concettuale della metodologia
L'approccio è stato costruito assumendo la necessità di:

1. considerare tutti i siti Natura 2000 della Campania (108 ZSC e 31 ZPS);
2. analizzare tutte le componenti ecologiche rilevanti (habitat e specie degli Allegati);
3. distinguere tra i due regimi vigenti di misure di conservazione:
    - DGR 795/2017 (misure sito-specifiche "storiche"),
    - DGR 617/2024 (nuovi Piani di Gestione e misure aggiornate per 57 siti);
4. confrontare azioni e indirizzi del PFG con:
    - misure di conservazione vigenti,
    - pressioni e minacce identificate nei siti;
5. verificare le possibili incidenze dirette, indirette e cumulative attraverso una matrice valutativa.

fonte: http://burc.regione.campania.it

Effetti del Piano sulle Misure di Conservazione

L'analisi di sintesi relativa alla coerenza tra le Azioni del Piano Forestale Generale (PFG) e le Misure di Conservazione applicabili ai siti della Rete Natura 2000 della DGR in oggetto evidenzia un quadro valutativo complessivamente favorevole e pienamente coerente con gli obiettivi di tutela previsti dalla Direttiva 92/43/CEE e dal quadro regolamentare regionale vigente.
In primo luogo, l'analisi dimostra una coerenza strutturale delle Azioni del PFG con i divieti, le prescrizioni e gli obiettivi di conservazione definiti nei differenti livelli normativi. Per la quasi totalità delle misure di conservazione analizzate, il PFG risulta infatti "coerente", senza che emergano elementi di contrasto o incompatibilità. Tale risultato riflette la natura stessa del Piano, che orienta la gestione forestale regionale verso criteri di sostenibilità, tutela degli habitat forestali, prevenzione degli incendi, conservazione della biodiversità, miglioramento della funzionalità ecologica e contenimento delle pressioni antropiche.
Le misure classificate come "non pertinenti" riguardano prevalentemente disposizioni riferite a componenti o contesti ecologici estranei al dominio operativo del Piano (ad esempio pozze temporanee, divieti di estrazione in alveo o misure specifiche delle ZPS). La loro non pertinenza conferma che il PFG non genera pressioni indirette o effetti collaterali indesiderati sulle componenti non forestali, mantenendo un profilo di neutralità rispetto a tali misure.
Particolarmente rilevante è il fatto che numerose Azioni del PFG evidenzino una coerenza positiva, ossia contribuiscano attivamente al perseguimento di specifiche misure di conservazione. In tale categoria ricadono gli indirizzi relativi alla gestione selvicolturale sostenibile, agli interventi di prevenzione incendi, alla tutela delle aree ripariali, alla conservazione della necromassa e delle strutture forestali microhabitat, al miglioramento della continuità ecologica e alla regolamentazione della viabilità forestale. In questi casi, il Piano non si limita a essere compatibile con le misure di conservazione, ma rappresenta uno strumento operativo funzionale alla loro concreta attuazione.
Nel complesso, dall'analisi dei risultati tabellari emerge che:

- non sono presenti misure classificate come "non coerenti";
- nessuna Azione del PFG determina incidenze negative non mitigabili sulle Misure di Conservazione;
- la maggior parte delle relazioni tra Azioni del PFG e Misure di Conservazione assume carattere sinergico, con effetti favorevoli sul mantenimento dell'integrità degli habitat, sulla conservazione delle specie e sul rafforzamento della rete ecologica regionale.

Alla luce di tali evidenze, l'analisi evidenzia come il PFG sia uno strumento integrato nel quadro delle Misure di Conservazione della Rete Natura 2000. Il livello di coerenza registrato supporta la conclusione secondo cui il Piano, nell'assetto definito e alle condizioni richiamate nella presente Valutazione, si pone in continuità funzionale con il sistema di tutela dei siti Natura 2000, concorrendo attivamente alla salvaguardia e al miglioramento del loro stato di conservazione.

fonte: http://burc.regione.campania.it

6. Misure previste per impedire, ridurre e compensare nel modo più completo possibile gli eventuali impatti negativi significativi sull'ambiente dell'attuazione del piano, come indicato all' Allegato VI, lettera g) del D.Lgs 152/2006.

In attuazione di quanto previsto all'art. 6 del TUFF, il Piano forestale generale è chiamato a definire strategie, obiettivi, criteri e indicazioni di gestione e utilizzo in chiave multifunzionale dei boschi regionali, finalizzati a garantire la tutela e la permanenza degli ecosistemi forestali, con riferimento agli aspetti strutturali, funzionali, evolutivi, di biodiversità e di valore paesaggistico, culturale e sociale.
Il Piano forestale generale della Campania si configura quindi, in ossequio al TUFF, come strumento strategico di tutela e gestione sostenibile del patrimonio forestale regionale. In quanto tale, esso non prevede o dispone specifici interventi o trasformazioni, ma piuttosto definisce le condizioni di sostenibilità e ammissibilità degli interventi, in accordo con il Regolamento forestale regionale, indirizzando in tal senso i contenuti della pianificazione sotto-ordinata di livello operativo (PFIT, PGF), la cui approvazione è legata al rispetto e alla coerenza col Piano forestale generale.
Il Piano forestale regionale, così come definito dal TUFF, si configura nella sua totalità come strumento per la definizione delle misure previste per impedire, ridurre e compensare nel modo più completo possibile gli eventuali impatti negativi significativi sull'ambiente.
Come evidenziato nei precedenti capitoli, la proposta di Piano forestale generale, il Rapporto ambientale e lo studio di VIncA sono stati puntualmente modificati/integrati in accoglimento delle osservazioni fatte dall'Autorità competente e dai soggetti che hanno preso parte alle fasi di scoping e di consultazione pubblica, al fine di assicurare:

- la prevenzione, riduzione e mitigazione dei possibili impatti sulle componenti ambientali e delle incidenze negative non mitigabili sull'integrità degli habitat e la conservazione delle specie sulle Misure di Conservazione;
- la coerenza delle azioni di Piano con le Misure di Conservazione.

In attuazione della specifica prescrizione riportata del Decreto dirigenziale 56 27/02/2026 con il quale l'Autorità competente ha espresso parere favorevole di Valutazione Ambientale Strategica integrata con la Valutazione di Incidenza Appropriata del "Piano Generale Forestale della Campania", su conforme parere della Commissione V.I.A. - V.A.S. - V.I., l'attuazione del Piano sarà condotta garantendo:

- il rispetto integrale delle misure di conservazione generali e sito-specifiche approvate con DGR 617/2024;
- il rispetto integrale delle misure di conservazione sito-specifiche approvate con DGR 795/2017;
- l'adozione in fase attuativa degli interventi delle misure di mitigazione previste nello Studio di incidenza.

fonte: http://burc.regione.campania.it

Sintesi delle ragioni della scelta delle alternative individuate come richiesto all' Allegato VI, lettera h) del D.Lgs 152/2006.

Come evidenziato in precedenza, in attuazione di quanto previsto all'art. 6 del TUFF, il Piano forestale generale è attuativo per il territorio della Campania della Strategia forestale nazionale.
In sede di redazione del piano, le alternative possibili che il PFG aveva di fronte erano quindi quella del "non intervento", che avrebbe comportato il disattendimento del TUFF, ovvero quella prevista dal testo unico, di procedere all'applicazione al territorio della Campania delle diverse azioni e sotto-azioni della Strategia forestale nazionale, previa modulazione e adattamento locale, come recita il TUFF, in funzione delle specifiche esigenze socio-economiche, ambientali e paesaggistiche, nonché alle necessità di prevenzione del rischio idrogeologico, di mitigazione e di adattamento al cambiamento climatico.
E' possibile concludere quindi che la proposta di PFG recepisce, modula e adatta le misure e sotto-misure della Strategia forestale nazionale ritenute funzionali alla tutela e gestione sostenibile del patrimonio forestale, sulla base delle specifiche condizioni, esigenze e fabbisogni che caratterizzano il territorio della Campania.

fonte: http://burc.regione.campania.it

7. Monitoraggio e controllo ambientale del piano

In attuazione della specifica prescrizione riportata del Decreto dirigenziale 56 27/02/2026 con il quale l'Autorità competente ha espresso parere favorevole di Valutazione Ambientale Strategica integrata con la Valutazione di Incidenza Appropriata del "Piano Generale Forestale della Campania", su conforme parere della Commissione V.I.A. - V.A.S. - V.I., il presente paragrafo definisce l'insieme delle attività previste per il monitoraggio degli effetti ambientali significativi del Piano Forestale Generale della Campania secondo quanto previsto dall'art. 9, comma 1 lett. c) e dall'art. 10 della Direttiva Comunitaria 2001/42/CE concernente la valutazione degli effetti di determinati piani e programmi sull'ambiente, recepita a livello nazionale dal D. Lgs 152 del 2006 e s.m.i. e a livello regionale dalla DGR 203 del 2010.
In particolare, il paragrafo si sviluppa sulla base delle disposizioni contenute negli "Indirizzi operativi per il monitoraggio ambientale di piani e programmi" (art. 18 del D.Lgs. 152/2006), con l'intento di stabilire un sistema di monitoraggio che consenta di seguire l'andamento del Piano e di verificare l'efficacia delle misure adottate.
Gli articoli avanti richiamati della Direttiva 2001/42/CE dispongono che per i piani o programmi sottoposti a valutazione ambientale siano adottate specifiche misure di monitoraggio ambientale dirette al controllo degli effetti ambientali significativi e alla verifica del raggiungimento degli obiettivi di sostenibilità ambientale prefissati, al fine di individuare ed adottare eventuali misure correttive ritenute opportune, in fase di attuazione del piano o programma. Scopo del monitoraggio ambientale è, oltre a verificare la corrispondenza degli interventi con gli obiettivi di sostenibilità ambientale, intercettare eventuali impatti negativi sull'ambiente derivanti dall'attuazione del piano, individuarne le cause, per adottare opportune misure di aggiustamento e di descriverne e quantificarne gli effetti positivi, al fine di potenziarne ulteriormente le azioni.
L'art. 18 del D.Lgs. 152 del 2006 e s.m.i. individua il soggetto responsabile del monitoraggio ambientale nell'Autorità procedente (Direzione generale politiche agricole e forestali) che, "in collaborazione con l'Autorità competente, anche avvalendosi del sistema delle Agenzie ambientali e dell'Istituto Superiore per la Protezione e la Ricerca Ambientale", assicura il monitoraggio ambientale del piano.
A livello regionale, gli "Indirizzi operativi e procedurali per lo svolgimento della VAS in regione Campania" (approvati con la DGR 203 del 2010) forniscono indicazioni operative sottolineando che "*sulla base di quanto proposto nel rapporto ambientale e delle indicazioni eventualmente contenute nel parere di compatibilità ambientale, contestualmente all'approvazione del piano o programma, deve, quindi, essere approvato, come parte integrante del piano,* un **programma di misure di monitoraggio ambientale**, nel quale siano specificate le modalità di controllo degli effetti ambientali e di verifica del raggiungimento degli obiettivi ambientali stabiliti dal piano o programma, anche attraverso l'utilizzo di specifici indicatori opportunamente selezionati allo scopo, nonché adeguati alla scala di dettaglio e al livello attuale delle conoscenze".
Di seguito si riportano le principali metodologie e strumenti a disposizione dell'Autorità procedente (Direzione generale politiche agricole e forestali) e degli altri soggetti istituzionali potenzialmente coinvolti nel processo di valutazione ambientale (ARPAC, Autorità Ambientale e Autorità competente e Soggetti con Competenza Ambientale) per l'attuazione di adeguate misure di monitoraggio ambientale del piano Forestale generale della Campania.

fonte: http://burc.regione.campania.it

La Direzione generale politiche agricole – Settore 207 03 00 "Ambiente, sviluppo locale, sistema della conoscenza", al fine di meglio integrare la verifica del raggiungimento degli obiettivi di sostenibilità ambientale con quella degli obiettivi generali del piano e di analizzare l'interazione degli effetti ambientali e degli effetti territoriali, sociali ed economici, anche con gli effetti derivanti dall'attuazione di altri piani e programmi di settore, forestali, ha messo a punto un Data Base Cartografico Forestale che contiene in forma coordinata e interoperabile i layer tematici forestali e territoriali attualmente in possesso dell'Amministrazione regionale (Tab 13.3).

La Direzione generale politiche agricole – Settore 207 03 00 "Ambiente, sviluppo locale, sistema della conoscenza" sta inoltre implementando, nell'ambito del progetto "Digital forest" in corso di attuazione con risorse del fondo nazionale FOSMIT (Fondo per lo sviluppo delle montagne italiane), un sistema di monitoraggio da telerilevamento satellitare del patrimonio forestale regionale, in grado di generare periodicamente ad una scala di estremo dettaglio indicatori specifici e mirati sull'evoluzione e lo stato di salute delle cenosi forestali.

Le attività di coordinamento e monitoraggio dei procedimenti autorizzativi e di controllo delle attività forestali sono condotte dalla Direzione generale mediante il SUAF (Sportello Unico per le Attività Forestali), istituito ai sensi dell'articolo 10, comma 9, del Regolamento Regionale n. 3 del 18 dicembre 2017, recante "Disposizioni di attuazione della legge regionale 7 maggio 1996, n. 11 – Disciplina della raccolta, coltivazione e commercializzazione dei prodotti del sottobosco e della tutela del patrimonio forestale".

Il SUAF svolge la funzione di portale unico di accesso per la presentazione, la gestione e l'istruttoria delle istanze relative agli interventi forestali sul territorio regionale.

Attraverso la piattaforma SUAF, le istanze e le autorizzazioni vengono digitalizzate, archiviate e georeferenziate, consentendo la costituzione di una banca dati forestale regionale costantemente aggiornata. Il SUAF consente quindi il tracciamento degli interventi selvicolturali autorizzati supportando in questo modo le attività di monitoraggio e valutazione degli impatti sull'assetto idrogeologico, sulla biodiversità e sulla resilienza degli ecosistemi forestali ai cambiamenti climatici.

Le attività di monitoraggio del patrimonio forestale svolte dalla Direzione generale agricoltura, che potranno fare ricorso al Data Base, ai dati prodotti con il progetto Digital Forest, oltre che alla banca dati SUAF sui procedimenti autorizzativi e pianificatori costituiranno, in sinergia con le basi ufficiali di indicatori fornite da ARPAC e dagli altri Enti con competenze istituzionali in tema di monitoraggio e controllo dell'ambiente, due importanti fonti settoriali per il popolamento periodico degli indicatori di contesto e di process, ai fini del monitoraggio ambientale del Piano Forestale generale della Campania.

I soggetti istituzionali che saranno coinvolti nella implementazione delle attività di monitoraggio del Piano forestale generale della Campania sono:

- La Direzione generale politiche agricole e forestali – 207 03 00 - Settore "Ambiente, sviluppo locale, sistema della conoscenza e difesa delle colture" con specifiche competenze nella nella programmazione e controllo delle risorse forestali, integrazione di strumenti digitali e sistemi di monitoraggio remoto delle risorse agroforestali, gestione dati tramite piattaforme digitale e la gestione del data-base cartografico per l'agricoltura e le foreste.

fonte: http://burc.regione.campania.it

- l’Agenzia Regionale Protezione Ambientale della Campania (**ARPAC**) responsabile dell’aggiornamento periodico degli indicatori ambientali e fornitore dei dati e delle informazioni ambientali di contesto relative alle componenti e agli obiettivi di sostenibilità ambientale definiti nel Rapporto Ambientale;

- Gli enti di ricerca applicata con i quali la Direzione generale agricoltura sta collaborando per l’implementazione del progetto Digital Forest (Università campane, CREA).

Le attività di monitoraggio ambientale si svilupperanno attraverso l’impiego di due diverse tipologie di indicatori:

1. **indicatori di contesto**: sono parametri che descrivono lo stato del sistema ambientale e delle sue diverse componenti. Essi forniscono il riferimento necessario per valutare l'impatto delle misure del Piano forestale generale e per misurarne l'efficacia rispetto agli obiettivi di sostenibilità.

2. **indicatori di processo**: Gli indicatori di processo misurano l'efficacia e l'andamento delle azioni attuate all’interno del Piano Forestale. Essi sono direttamente correlati agli obiettivi e alle attività previste nel piano, e forniscono informazioni sulla progressione del piano stesso..

Gli indicatori di contesto e di processo suggeriti sono riportati nelle Tab. 13.1 e 13.2, con l’indicazione delle fonti ufficiali di reperimento e degli enti responsabili della produzione del dato.

Le attività di monitoraggio condurranno alla redazione con cadenza triennale di un Rapporto di monitoraggio ambientale delle foreste della Campania. Il Rapporto conterrà una sintesi esaustiva dei risultati delle attività di monitoraggio, evidenziando le variazioni osservate dello stato delle risorse forestali regionali e delle componenti ambientali che con esse interagiscono, in relazione all’attuazione delle diverse misure del Piano forestale generale, e agli obiettivi di sostenibilità ipotizzati.
Le informazioni contenute nei Rapporto di monitoraggio consentiranno di valutare gli eventuali adattamenti e di attivare meccanismi di retroazione in grado di rivedere e modificare quegli aspetti dell’attuazione dei piani che, alla luce dei risultati del monitoraggio appaiono non coerenti con obiettivi di sostenibilità ambientale.
Il Rapporto di monitoraggio ambientale del Piano forestale generale avrà valore e funzione, oltre che di formale adempimento per il rispetto della procedura di valutazione ambientale, di strumento di comunicazione interna e esterna a supporto di una gestione integrata e condivisa del Piano forestale generale.
Il processo di comunicazione rappresenta una componente rilevante delle attività di monitoraggio ambientale, nonché un’attività strategica per una corretta gestione in chiave multifunzionale del patrimonio forestale regionale. Il Rapporto di monitoraggio, unitamente alle basi cartografiche e iconografiche, saranno pubblicate tramite le risorse web già attivate dall’amministrazione regionale per favorirne la condivisione e assicurare una adeguata divulgazione delle realizzazioni e dei risultati.

fonte: http://burc.regione.campania.it

Le attività di monitoraggio avanti descritte saranno condotte con risorse del bilancio regionale e a risorse FOSMIT (Fondo per lo sviluppo della montagna italiana) in dotazione alla UOS Ambiente e foreste.

Le caratteristiche della Valutazione d'Incidenza Ambientale (Art.6 Direttiva Habitat")

L'area interessata dall'intervento di Pianificazione Generale Forestale ricade totalmente all'interno della Rete Natura 2000 della Regione Campania, presente nell'elenco del decreto del Ministero dell'Ambiente del 25/03/2005, pubblicato sulla G.U. n. 157 dell'08/07/2005 dei proposti siti di importanza comunitaria per la regione biogeografia mediterranea, ai sensi della direttiva 92/43/CEE.

Tali siti, quindi, entrano a far parte della rete Natura 2000, istituita ai sensi dell'art. 3 della direttiva 92/43/CEE, denominata direttiva "Habitat", recepita in Italia dal D.P.R. n.357/1997, così come modificato dal D.P.R. 12/03/2003, n. 120.

Natura 2000 è una rete di aree intesa come sistema coordinato e coerente individuato in ossequio alla Direttiva Habitat e alla Direttiva Uccelli per la conservazione della diversità biologica presente nel territorio dell'Unione Europea. Questa rete è composta da due tipi di aree: Zone di Protezione Speciale (ZPS), previste dalla Direttiva "Uccelli", e dai Siti di importanza Comunitaria (SIC, in seguito ZSC) provvisti dalla direttiva "Habitat", proposti alla Commissione europea, e successivamente oggi designati come ZSC (Zone Speciali di Conservazione). La loro designazione delle ZSC ha avuto lo scopo di garantire la presenza, il mantenimento e/o il ripristino di habitat e di specie peculiari del continente europeo, particolarmente minacciati da frammentazione ed esenzione.

I criteri di selezione dei siti della Rete Natura 2000 che sono stati proposti dagli Stati membri, descritti oggi come ZSC e ZPS nei rispettivi allegati della direttiva Habitat, hanno delineato il percorso metodologico che ha dato forma alla Rete Europea denominata Natura 2000.

Elemento di carattere innovativo e l'attenzione rivolta dalla direttiva alla valorizzazione della funzionalità degli habitat e dei sistemi naturali. Si valuta infatti non solo la qualità attuale del sito ma anche la potenzialità che hanno gli habitat di raggiungere un livello di maggiore complessità. La direttiva prende in considerazione anche siti attualmente degradati in cui tuttavia gli habitat abbiano conservato l'efficienza limitandone che pertanto possano ritornare verso forme più evolute mediante l'eliminazione delle ragioni di degrado.

Ogni sito Natura 2000, a prescindere dallo Stato membro di appartenenza, deve essere parte integrante del sistema di aree individuate per garantire a livello europeo la presenza e la distribuzione degli habitat e delle specie considerate di particolare valore conservazionistico. Il concetto di rete Natura 2000 raccoglie cose in modo sinergico la conoscenza scientifica, l'uso del territorio e le capacità gestionali, finalizzate al mantenimento della biodiversità a livello di specie, di habitat e di paesaggio.

Ai sensi dell'art. 5 del D.P.R. 357/1997 e ss.mm.ii. (commi 2 e 3), tutti i piani e/o interventi non direttamente connessi e necessari al mantenimento in uno stato di conservazione soddisfacente delle specie e degli habitat presenti nel sito ma che possono avere incidenze significative sullo stesso, singolarmente o congiuntamente ad

fonte: http://burc.regione.campania.it

altri interventi, devono essere oggetto di uno studio volto ad individuare e valutare, secondo gli indirizzi espressi nell'Allegato G, i principali effetti che dagli interventi possono avere presupposto siti di importanza comunitaria, sul sito di importanza comunitaria o sulla zona speciale di conservazione. Tenuto conto degli obiettivi di conservazione dei medesimi. la VIA e, quindi, il procedimento di carattere preventivo quale è necessario sottoporre qualsiasi Piano o progetto che possa avere incidenze significative su un sito o su di un proposto sito della rete Natura 2000, singolarmente o congiuntamente ad altri piani e progetti, tenuto conto degli obiettivi di conservazione del sito stesso va sottolineato che la valutazione d'incidenza si applica sia agli interventi che ricadono all'interno delle aree Natura 2000 (o in siti proposti per inventario), sia a quelli che pur sviluppandosi all'esterno, possono comportare ripercussioni sullo stato di conservazione del valori naturali tutelati nel sito.

Per quanto la disciplina introdotta dal DPR 357/97 costituisca materia relativamente recente nell'ambito del comparto più ampio e oramai consolidato della valutazione ambientale, gli attuali indirizzi della comunità Tecnico-scientifica si esprimono univocamente vero una distinzione netta tra gli obiettivi propri della valutazione di incidenza rispetto a quelli di uno studio di impatto ambientale. Per una valutazione d'incidenza, infatti, non può essere considerato compiuto ed esaustivo uno studio che si limiti a rappresentare le aree protette in quanto Sito e non in quanto sede di processi ed equilibri dinamici tra le varie componenti ambientali, con particolare riferimento alle componenti biotiche.

Ciò dovrebbe costituire la base per qualsiasi tentativo di valutare adeguatamente l'incidenza sugli habitat e sulle specie animali e vegetali circa i possibili effetti che le azioni di progetto possono avere sui bersagli citati dalle due direttive comunitarie e sui loro cicli vitali (anche nel susseguirsi delle stagioni) e non generalmente sulle componenti ambientali del sito individuato come ZSC.

Gli habitat naturali e le specie animali e vegetali delle **ZSC** sono individuati negli allegati I, II e IV della direttiva "Habitat", e nell'allegato I della direttiva "Uccelli".

Nello Studio per la Valutazione di Incidenza saranno considerate:

- le norme di conservazione "generale" e "specifiche" riferite alle **ZSC** - e riportate nella DGR della Campania n. 2295 del 29.12.2007, pubblicate sul BURC n.13 del 31.3.2008 riportanti *"Ulteriori Misure di Conservazione per le zone di Protezione Speciale (ZPS) e le Zone Speciali di Conservazione (ZSC) della Regione Campania;*
- le norme riportate nella DGR della Campania n.795 del 19.12.2017, pubblicate sul BURC n.5 del 16.01.2018 riportanti l'"Approvazione Misure di Conservazione dei SIC (Siti ***di Importanza Comunitaria) per la designazione ZSC (Zone Speciali di Conservazione) della Rete Natura 2000 della Regione Campania;***
- gli obblighi e i divieti indicati e definiti dalle "misure generali di conservazione" per la tutela delle specie faunistiche e vegetali del DPR n.357/97 e ss.mm.ii. Agli art. 8, 9, 10 e 11 e quelli *richiamati nelle* Misure di Conservazione dei SIC *per la designazione ZSC della Rete Natura 2000 della Regione Campania e*

fonte: http://burc.regione.campania.it

vigenti su tutto territorio ZSC, ovvero (vedi paragrafo "*Screening Misure di Conservazione*")

Tutto quanto premesso verrà espletato secondo i criteri previsti dalle ***Nuove Linee Guida approvate dalla Regione Campania con DELIBERA DELLA GIUNTA REGIONALE DIP 50 17 N.280 DEL 30/06/2021***.

La Direttiva Habitat

La Direttiva "Habitat" è stata recepita in Italia dal DPR 357/97, successivamente modificato dal DPR n. 120 del 12 marzo 2003, "Regolamento recante modifiche ed integrazioni al decreto del Presidente della Repubblica 8 settembre 1997, n. 357, concernente attuazione della direttiva 92/43/CEE relativa alla conservazione degli habitat naturali e seminaturali, nonché della flora e della fauna selvatiche", il quale, all'art. 5 comma 2 stabilisce che I proponenti, presentano una relazione di valutazione di incidenza contenente tutti gli elementi di cui all'allegato G) del D.P.R. n. 357 del 1997, volta a individuare e valutare gli effetti diretti o indiretti sui siti rispetto agli obiettivi di conservazione e in relazione alla struttura e funzionalità degli stessi". I contenuti individuati dall'Allegato G del D.P.R. 357/97 e s.m.i. sono di seguito elencati:

- Caratteristiche dei piani e progetti

Le caratteristiche dei piani e progetti debbono essere descritte con riferimento, in particolare:

- alle tipologie delle azioni e/o opere;
- alle dimensioni e/o Ambito di riferimento;
- alla complementarità con altri piani e/o progetti;
- all'uso delle risorse naturali;
- alla produzione di rifiuti;
- all'inquinamento e disturbi ambientali;
- al rischio di incidenti per quanto riguarda, le sostanze e le tecnologie utilizzate.

- Area vasta di influenza dei piani e progetti - interferenze con il sistema ambientale:

Le interferenze di piani e progetti debbono essere descritte con riferimento al sistema ambientale considerando:

- Componenti abiotiche;
- Componenti biotiche;
- Connessioni ecologiche.

L'elaborazione dello studio di incidenza costituisce un'applicazione della normativa esistente riferita alla conservazione degli habitat e delle specie di flora e di fauna presenti nei SIC/ZSC e/o nelle ZPS e al mantenimento e alla coerenza delle funzioni ecologiche. Lo studio rappresenta uno strumento di valutazione a carattere preventivo rispetto agli effetti che l'oggetto di studio potrebbe avere sul territorio, tenuto conto degli effetti quali/quantitativi indotti da esso, delle attività e opere connesse nonché quelli cumulativi derivanti dalla sommatoria di altre iniziative presenti al fine di tutelare e conservare gli habitat e le specie di flora e di fauna di

fonte: http://burc.regione.campania.it

interesse comunitario, nazionale e regionale presenti.

La procedura della valutazione di incidenza deve fornire una documentazione utile ad individuare e valutare i principali effetti che il piano/progetto (o intervento) può avere sul sito Natura 2000, tenuto conto degli obiettivi di conservazione del medesimo. Infatti, "la valutazione è un passaggio che precede altri passaggi, cui fornisce una base: in particolare, l'autorizzazione o il rifiuto del piano o progetto. La valutazione va quindi considerata come un documento che comprende soltanto quanto figura nella documentazione delle precedenti analisi". Il percorso logico della valutazione di incidenza è delineato nella guida metodologica "Assessment of plans and projects significantly affecing Natura 2000 sites. Methodological guidance on the provisions of Article 6 (3) and (4) of the Habitats Directive 92/43/EEC" redatto dalla Oxford Brookes University per conto della Commissione Europea DG Ambiente3. La metodologia procedurale proposta nella guida della Commissione è un percorso di analisi e valutazione progressiva che si compone di quattro fasi principali:

a) **FASE 1**: verifica - processo che identifica la possibile incidenza significativa su un sito della rete Natura 2000 di un piano o un progetto, singolarmente o congiuntamente ad altri piani o progetti, e che porta all'effettuazione di una valutazione d'incidenza completa qualora l'incidenza risulti significativa;
b) **FASE 2**: valutazione "appropriata" - analisi dell'incidenza del piano o del progetto sull'integrità del sito, singolarmente o congiuntamente ad altri piani o progetti, nel rispetto della struttura e della funzionalità del sito e dei suoi obiettivi di conservazione, e individuazione delle misure di mitigazione eventualmente necessarie;
c) **FASE 3**: analisi di soluzioni alternative - individuazione e analisi di eventuali situazioni alternative per raggiungere gli obiettivi del progetto o del piano, evitando incidenze negative sull'integrità del sito;
d) **FASE 4:** definizione di misure di mitigazione e/o compensazione - individuazione di azioni, anche preventive, in grado di bilanciare le incidenze previste, nei casi in cui non esistono soluzioni alternative o le ipotesi proponibili presentino comunque aspetti con incidenza negativa, ma per motivi imperativi di rilevante interesse pubblico sia necessario che il progetto o il piano venga comunque realizzato.

Si intende sottolineare che l'iter delineato non corrisponde necessariamente a un protocollo procedurale, molti passaggi possono essere infatti seguiti "implicitamente" ed esso deve, comunque, essere calato nelle varie procedure già, o che potranno essere previste, dalle Regioni e Province Autonome.

Occorre inoltre sottolineare che i passaggi successivi fra le varie fasi non sono obbligatori, sono invece consequenziali alle informazioni e ai risultati ottenuti; ad esempio, se le conclusioni alla fine della fase di verifica indicano chiaramente che non ci potranno essere effetti con incidenza significativa sul sito, non occorre procedere alla fase successiva. Nello svolgere il procedimento della valutazione d'incidenza si potrà fare riferimento all'adozione di matrici descrittive che rappresentino, per ciascuna fase, una griglia utile all'organizzazione standardizzata di dati e informazioni, oltre che alla motivazione delle decisioni prese nel corso della procedura di valutazione.

Riferimenti Normativi

Introduzione

Quadro normativo di riferimento per le misure di conservazione delle ZSC in Campania

Il sistema delle Misure di Conservazione delle Zone Speciali di Conservazione (ZSC) trova il suo fondamento giuridico nella **Direttiva 92/43/CEE "Habitat"**, che, unitamente alla Direttiva 2009/147/CE "Uccelli", istituisce la **Rete Natura 2000** con l'obiettivo di garantire il mantenimento o il ripristino in uno stato di conservazione soddisfacente degli habitat naturali e delle specie di interesse comunitario. L'articolo 6 della Direttiva Habitat costituisce il fulcro dell'intero sistema, stabilendo che per ogni ZSC gli Stati membri adottino le **misure di conservazione necessarie**, comprensive di piani di gestione specifici o integrati ad altri strumenti di pianificazione, nonché di misure regolamentari, amministrative o contrattuali adeguate.

In Italia, la Direttiva è stata recepita con il **D.P.R. 357/1997** e s.m.i. (**D.P.R. 120/2003**), che attribuisce alle Regioni la competenza per l'individuazione, la designazione e la gestione dei siti, nonché per l'attuazione delle relative misure di conservazione. A livello metodologico, la **Legge 296/2006** (comma 1226) ha imposto alle Regioni l'obbligo di definire tali misure sulla base di criteri minimi uniformi, recepiti successivamente nelle **Linee Guida Nazionali per la Valutazione di Incidenza (MATTM, 2019)**, le quali integrano il sistema delle misure di conservazione con le procedure di VIncA, secondo i principi di precauzione e coerenza ecologica.

Per la Regione Campania, il percorso di attuazione si è articolato in più fasi: una prima approvazione delle misure generali con **D.G.R. n. 795/2017**, successivamente aggiornate e ampliate con la **D.G.R. n. 617/2024**, che ha adottato i nuovi **Piani di Gestione e Regolamenti delle ZSC** regionali,. Questi documenti definiscono in modo sito-specifico gli obiettivi di conservazione, le misure attive e regolamentari, e i programmi di monitoraggio, conformemente ai criteri dell'art. 6 della Direttiva e alle prescrizioni del **D.P.R. 357/1997**.

In sintesi, la disciplina delle misure di conservazione in Campania si fonda su un quadro multilivello – **europeo, nazionale e regionale** – che mira a garantire la tutela integrata di habitat e specie, la coerenza ecologica della Rete Natura 2000 e la compatibilità delle attività antropiche e di gestione territoriale con gli obiettivi di conservazione dei siti.

Quadro riepilogativo

La *Normativa Comunitaria (UE)*

La base giuridica è la **Direttiva Habitat 92/43/CEE** e la **Direttiva Uccelli 2009/147/CE**, che istituiscono la Rete Natura 2000:

- **Dir. 92/43/CEE (Habitat)** → artt. 3, 4 e 6 disciplinano l'istituzione delle ZSC e le misure di conservazione.
- **Dir. 2009/147/CE (Uccelli)** → tutela delle ZPS, strettamente connesse alle ZSC.

fonte: http://burc.regione.campania.it

- **Decisioni della Commissione UE** → atti di designazione delle ZSC italiane (in particolare la Decisione 2015/72/UE che aggiorna l'elenco dei siti).
- **Regolamento (UE) n. 1143/2014** → specie invasive, strettamente collegato alle misure di gestione nei siti Natura 2000.

Normativa Nazionale

Recepimento e strumenti di attuazione:

- **D.P.R. 357/1997** e s.m.i. (recepimento Direttiva Habitat in Italia) → artt. 4 e 6 disciplinano la designazione delle ZSC, la Valutazione di Incidenza e le **misure di conservazione**.
- **D.P.R. 120/2003** → modifiche al DPR 357/1997.
- **D.Lgs. 152/2006 (Codice dell'Ambiente)** → Parte II, art. 5 e 6 (VAS, VIA e VIncA, principio di precauzione, piani e progetti nei siti Natura 2000).
- **Linee Guida Nazionali per la Valutazione di Incidenza (MATTM 2019)** → applicazione uniforme delle misure di conservazione e della procedura di VIncA: Intesa del 28.11.2019 (Rep. atti n. 195/CSR 28.11.2019), ai sensi ai sensi dell'articolo 8, comma 6, della legge 5 giugno 2003, n. 131, tra il Governo, le regioni e le Province autonome di Trento e Bolzano - Direttiva 92/43/CEE "HABITAT" articolo 6, paragrafi 3 e 4, pubblicate sulla Gazzetta Ufficiale della Repubblica italiana n. 303 del 28.12.2019 (19A07968) (GU Serie Generale n.303 del 28-12-2019).
- **Decreti Ministeriali di designazione delle ZSC** → esempio: DM 21 luglio 2015 siti campani.
- **Legge n. 394/1991** (Legge quadro sulle aree protette) → principi di tutela della biodiversità e coordinamento con Rete Natura 2000.

Normativa Regionale Campania

La Regione Campania ha adottato atti specifici per le misure di conservazione:

- **L.R. 33/1993** (Norme per la tutela della fauna selvatica e disciplina dell'attività venatoria) - connessa a gestione habitat/specie.
- **L.R. 8/2008** (Parchi e riserve naturali regionali) - integra tutela Natura 2000.
- **Regolamento Regionale n. 1/2010** → disciplina procedure di Valutazione di Incidenza.
- **D.G.R. Campania n. 182/2014** → prime misure di conservazione sito-specifiche.
- **D.G.R. Campania n. 572/2017** → approvazione misure di conservazione sito-specifiche per i SIC/ZSC della Rete Natura 2000 campana.
- **D.G.R. Campania n. 617 del 27/12/2024** → ultimo aggiornamento e approvazione dei **nuovi Piani di Gestione e Misure di Conservazione** delle ZSC/ZPS.
- **Regolamenti specifici delle singole ZSC** (es. Regolamento ZSC IT8030008 approvato nel 2024).

La procedura di VAS con VIncA integrata

fonte: http://burc.regione.campania.it

In considerazione dei possibili impatti sulla Rete Natura 2000 si ritiene necessario integrare la VAS con la Valutazione di Incidenza Ambientale ai sensi dell'art. 5 del Decreto del Presidente della Repubblica 8 settembre 1997, n. 357 predisponendo uno studio per individuare e valutare gli effetti che il piano può avere sui siti Natura 2000, redatto secondo l'allegato G al d.p.r. 120/2003.

Articolazione della VAS con VIncA integrata

Le fasi principali della procedura di VAS con VIncA integrata del PFVR della Campania 2024-2029 possono essere così riassunte:

A.1 redazione di un documento di Piano preliminare;

A.2 l'elaborazione del rapporto ambientale preliminare (scoping);

A.3 compilazione del format di screening della VIncA;

A.4 lo svolgimento di consultazioni preliminari con i SCA;

B.1 l'elaborazione del rapporto ambientale;

B.2 aggiornamento del Piano preliminare;

B.3 svolgimento di consultazioni col pubblico;

C. la valutazione del rapporto ambientale e degli esiti delle consultazioni;

D. la decisione;

E. l'informazione sulla decisione;

F. il monitoraggio.

Nel caso del **P.F.G.** non si realizza la fase di verifica di assoggettabilità prevista in altri casi, ma viene direttamente avviata la procedura di VAS.

fonte: http://burc.regione.campania.it

Seconda parte: ambito di riferimento

L'elaborazione dell'ambito di riferimento di una Valutazione di Incidenza relativa a un **Piano Forestale Generale (PFG)** assume una dimensione del tutto peculiare, perché si colloca su una scala regionale e ha come oggetto di pianificazione **l'intero patrimonio forestale**, inteso come sistema ecologico esteso, dinamico e interconnesso. Non si tratta, dunque, di circoscrivere un'area di progetto o un perimetro fisico delimitabile, bensì di definire e descrivere lo **spazio ecologico complessivo** entro il quale il Piano dispiega i suoi effetti - e che la normativa comunitaria impone di considerare nella sua totalità, includendo **tutti i siti Natura 2000** e le relazioni funzionali che li connettono.

Per questo tipo di piano, l'ambito di riferimento non è un semplice "intorno geografico": è un **orizzonte ecologico**, un tessuto continuo di foreste, arbusteti, pascoli, connettori ecologici e matrici rurali, nel quale gli habitat e le specie degli Allegati della Direttiva Habitat sono distribuiti secondo gradienti fisiografici, reti di continuità e sistemi funzionali complessi.

In parole semplici: **l'ambito di riferimento coincide con l'intero sistema forestale regionale**, letto attraverso la lente della rete Natura 2000.

Nelle valutazioni di piani territoriali di larga scala, le Linee Guida nazionali VIncA (MATTM, 2019) richiamano la necessità di definire l'ambito di riferimento come l'insieme dei sistemi ecologici che il Piano può modificare anche indirettamente, compresi gli habitat, le specie e i processi che caratterizzano i siti Natura 2000. Questo principio è particolarmente rilevante per un PFG regionale. Infatti il Piano opera ovunque vi sia una risorsa forestale, quindi su superfici che si estendono sui rilievi montani, collinari, vulcanici, planiziali e costieri della Regione Campania; non esiste un "fuori" dal Piano: ogni bosco, ogni arbusteto, ogni pascolo naturale è potenzialmente interessato dagli indirizzi del PFG; le misure gestionali forestali possono influire sulla struttura, sulla funzionalità e sulla resilienza degli habitat tutelati; gli effetti possono essere diretti, indiretti, cumulativi o sinergici, secondo lo spirito dell'art. 6 della Direttiva Habitat.

L'ambito di riferimento, quindi, deve coincidere con l'insieme delle superfici boscate, cespugliate e pascolive della Regione Campania, intese come elementi costitutivi della rete ecologica regionale, e allo stesso tempo e l'insieme dei Siti Natura 2000 (ZSC, ZPS), sia come aree che come sistemi ecologici funzionali che ospitano habitat e specie potenzialmente influenzabili dalle strategie forestali.

La rete ecologica regionale come "scena ecologica" del Piano Forestale

Il documento "Generalità" del Rapporto Ambientale della VAS descrive la rete ecologica come un sistema interconnesso di habitat naturali e seminaturali, che supera la logica delle "isole protette" e valorizza un mosaico continuo di elementi naturali, seminaturali e agricoli .

fonte: http://burc.regione.campania.it

Questa descrizione è perfettamente compatibile con la prospettiva della VIncA applicata a un PFG regionale. Le superfici forestali e agroforestali della Campania - faggete, castagneti, querceti mediterranei, macchie alte, arbusteti, praterie montane, valloni umidi, mosaici collinari - rappresentano le matrici naturali fondamentali della rete ecologica regionale, in quanto:

- costituiscono le aree centrali del sistema (core areas);
- formano corridoi di connessione tra i principali complessi montani;
- sostengono la mobilità e il ciclo vitale delle specie forestali e della fauna dei siti Natura 2000;
- regolano i processi ecologici essenziali (acqua, suolo, carbonio, energia);
- fungono da filtro ecologico rispetto alle pressioni antropiche.

In quest'ottica, quando un Piano Forestale opera sulla totalità dei boschi regionali, esso interviene - per definizione - su tutta la rete ecologica regionale, la quale a sua volta è perfettamente sovrapponibile, in larga parte, ai habitat naturali riconducibili agli Allegati della Direttiva Habitat.

Pertanto:

L'oggetto della pianificazione (le foreste regionali) coincide in larga misura con l'infrastruttura ecologica principale della Regione Campania, e l'ambito di riferimento della VIncA deve rappresentare questa corrispondenza.

L'ambito di riferimento della VIncA come "unità del mosaico ecosistemico regionale"

L'approccio della rete ecologica come mosaico ecosistemico polivalente (PTR Campania, 2008) descrive la regione come un insieme di:

- Aree forestali dei rilievi montani (A1)
- Praterie montane (A2)
- Mosaici agricoli-agroforestali montani (A3)
- Aree forestali dei rilievi collinari (B1)
- Praterie collinari (B2)
- Aree forestali vulcaniche (C1)
- Aree forestali della pianura (D1)
- Aree forestali costiere e sistemi psammofili
- Aree agricole complesse
- Corridoi idrici e vallivi

Queste categorie ecologiche, tutte dettagliate nel documento "Generalità", rappresentano il mosaico strutturale della Campania, e sono anche i serbatoi principali di biodiversità, nonché i contesti prevalenti degli habitat Natura 2000. Ne consegue che l'ambito di riferimento della VIncA deve essere articolato come un quadro unitario, composto da:

fonte: http://burc.regione.campania.it

• Matrici forestali principali (boschi montani, collinari, vulcanici, planiziali)
• Habitat aperti naturali (praterie, garighe, cespuglieti)
• Sistemi agricoli ad alta naturalità e complessità (terrazzamenti, muretti, arboreti tradizionali)
• Corridoi ecologici lineari (valloni, reticoli idrici, dorsali montuose)
• Cluster di alta naturalità (core areas dei siti Natura 2000)
Tutti elementi che interagiscono con il Piano Forestale.

Il ruolo della rete Natura 2000 nell'ambito di riferimento

Secondo le Linee Guida Nazionali VIncA (Cap. 1 e 2) l'ambito di riferimento deve contenere tutti gli habitat e specie potenzialmente interessati; l'analisi deve includere l'intera rete Natura 2000, anche per Piani che non prevedono localizzazioni specifiche; non è possibile selezionare "siti maggiormente interessati" la scala regionale impone di considerare tutti i siti.
In Campania sono presenti 108 ZSC (Direttiva Habitat) e 31 ZPS (Direttiva Uccelli), ognuno di questi siti contiene, o è ecologicamente connesso a habitat forestali prioritari e non prioritari (9180*, 9260, 9210, 9340, 91AA, ecc.), habitat aperti e di transizione (5330, 6220*, 6210, 6110), habitat umidi, vallivi e sorgivi (3240, 3290, 92A0) e logicamente da popolazioni di specie forestali di rilievo (chirotteri, rapaci, coleotteri saproxilici, anfibi appenninici) che "vivono" in questi habitat.
Poiché qualunque indirizzo forestale del PFG può potenzialmente influire su uno di questi elementi, l'ambito di riferimento della VIncA deve assumere:
la totalità della rete Natura 2000 campana, considerata non solo nella sua estensione geografica, ma anche nella sua funzionalità ecologica e nei processi che la sostengono.

Superfici forestali regionali e ambito di riferimento

Le superfici forestali regionali, cuore del Piano, coincidono in larga misura con, questa "sovrapposizione" è fondamentale per interpretare correttamente l'ambito di riferimento nel modo più completo, ovvero :

- le "aree centrali" della rete ecologica (A1, B1, C1)
- i principali corridoi di connessione intermontana
- i sistemi vallivi ad alta complessità biologica
- i margini agricoli tradizionali ad elevata naturalità
- gli habitat prioritari della Direttiva Habitat.

Questo significa che l'ambito di riferimento della VIncA è costituito dallo stesso oggetto della pianificazione: il bosco. Ma letto non come entità gestionale, bensì come entità ecologica, integrata nei processi di:

- connettività faunistica,
- rigenerazione naturale,

fonte: http://burc.regione.campania.it

- funzionalità idrogeologica,
- cicli dei nutrienti,
- dinamiche del disturbo,
- resilienza climatica.

La rete ecologica fornisce dunque la cornice concettuale per interpretare le foreste non come "comparti", ma come nodi funzionali in un sistema complesso.

L'ambito di riferimento come "campo di incidenza potenziale" della pianificazione forestale della VIncA non è determinato da dove il Piano "interviene", ma da dove il Piano "può produrre effetti". Per un PFG regionale, questo campo coincide con tutti i boschi (pubblici, privati, demaniali, montani, collinari, costieri, vulcanici) tutti gli habitat forestali e di margine riconducibili agli Allegati della Dir. 92/43/CEE tutti i siti ZSC/ZPS e le loro buffered ecological zones (aree contigue funzionalmente rilevanti) tutti i sistemi agro-forestali adiacenti che influenzano cicli, connessioni e regimi ecologici il complesso dei corridoi di scala regionale (dorsali montuose, valloni, reticoli idrici, crinali, praterie sommitali) i processi ecologici connessi alla gestione forestale:

- disponibilità di necromassa
- rinnovazione
- continuità degli habitat
- diversità strutturale
- resilienza al cambiamento climatico
- processi di successione/ecoevoluzione
- dinamiche del suolo e dell'acqua.

In sintesi, l'ambito della VIncA del PFG l'intero sistema bosco-habitat-specie-corridoi che compone la Rete Ecologica Regionale e la Rete Natura 2000. L'ambito di riferimento non coincide con un perimetro geografico, ma con un sistema vivente, composto da matrici forestali habitat naturali e seminaturali connettori ecologici, corridoi di dispersione situazioni di margine ecologico, componenti del paesaggio rurale tradizionale e soprattutto da tutti i siti Natura 2000 e le loro interrelazioni. Letto nella prospettiva della VIncA, esso rappresenta **la totalità delle condizioni ecologiche su cui il Piano può incidere**, e dunque richiede un'analisi che consideri:

la **scala regionale**,

la **variabilità ecologica dei sistemi forestali**,

la **continuità ecosistemica oltre i perimetri dei siti**,

la **coerenza con gli obiettivi di conservazione di habitat e specie**,

gli **effetti cumulativi** con altri piani e strumenti regolatori.

Terza parte: Inquadramento territoriale ambientale di riferimento

Natura in Campania

La Regione Campania è custode di un immenso patrimonio naturale protetto composto da:

- 139 Siti della Rete Natura 2000
- 2 Parchi Nazionali
- 5 Riserve Naturali Nazionali
- 5 Aree Marine Protette
- 1 Parco archeologico sommerso
- 12 Parchi e Riserve Naturali Regionali
- 2 Riserve MAB Unesco
- 2 Zone Ramsar di interesse internazionale per la migrazione degli uccelli
- 1 Geoparco Unesco

La varietà naturale è frutto dell'articolato sistema climatico e geologico che genera un'elevata diversità vegetazionale, dal mare ai monti, in relazione alla quale si sviluppa una ricca biodiversità.

In Campania, paesaggio naturale e quello antropico non possono essere considerate due entità diverse o contrapposte ed è difficile pensare a territori, ad esempio la costiera Amalfitana, separando uomo e natura. Infatti, in Campania, il patrimonio naturale è intimamente legato alla storia dell'uomo. Basti pensare al ruolo dei vulcani, come fonte di sviluppo agricolo, ma anche elemento di distruzione, così come, viceversa, agli ambienti arbustivi e di prateria, creati e mantenuti dalle attività pastorali.

Il capitale naturale della Campania fornisce quotidianamente servizi ecosistemici dei quali fruiamo ogni giorno, spesso inconsapevolmente: dall'acqua che beviamo, all'aria che respiriamo, alla terra che attraversiamo.

È grazie alla sua natura che in Campania si producono eccellenze agro-alimentari conosciute in tutto il mondo. Per questo, la natura in Campania è diventata un'importante risorsa anche per lo sviluppo economico sostenibile.

Rete Natura 2000 in Campania

La Campania ospita una delle più articolate e preziose reti Natura 2000 dell'intero territorio nazionale, caratterizzata da un'elevatissima diversità ambientale, bioclimatica e paesaggistica. La struttura geografica della regione, che alterna sistemi montani carbonatici, rilievi vulcanici, pianure alluvionali, litorali sabbiosi, valloni profondi e dorsali costiere, ha favorito nel tempo la formazione di un mosaico ecologico complesso, nel quale si rispecchia il valore naturalistico dei siti di interesse comunitario.

fonte: http://burc.regione.campania.it

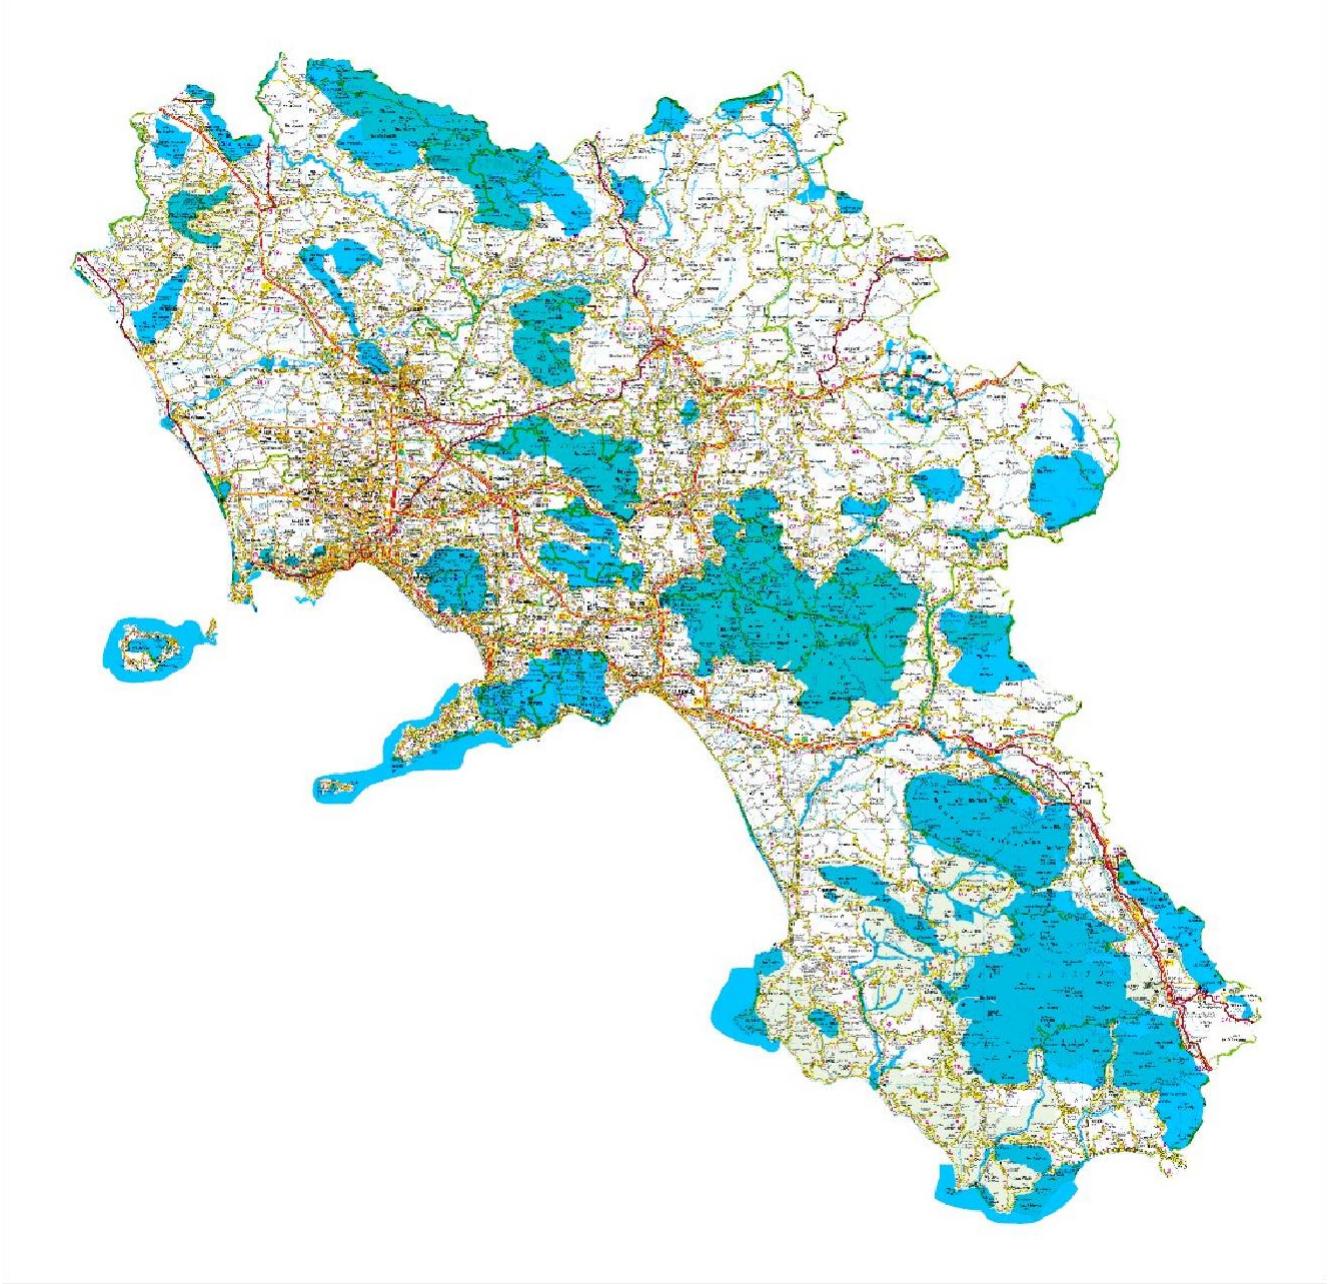
Nel territorio regionale si contano 108 Zone Speciali di Conservazione (ZSC) designate ai sensi della Direttiva Habitat e 31 Zone di Protezione Speciale (ZPS) istituite ai sensi della Direttiva Uccelli, per un totale di 139 siti che coprono una porzione molto significativa della superficie regionale, con una forte concentrazione nelle aree montane interne, nella dorsale appenninica e lungo la fascia costiera del Cilento e della Costiera Amalfitana.

La rete Natura 2000 campana riflette fedelmente la complessità ecologica descritta dal PTR e dalla Carta delle Risorse naturalistiche e agroforestali: i siti si distribuiscono infatti all'interno delle principali unità fisiografiche - montane, collinari, vulcaniche, vallive e costiere - delimitando un insieme di habitat, specie e processi naturali di rilevanza continentale. L'elevata estensione dei sistemi forestali, associata alla ricchezza di microhabitat legati alla complessità geomorfologica (forre, versanti ripidi, impluvi, altopiani sommitali, sistemi sorgivi), rende la regione particolarmente rilevante per la conservazione di habitat forestali prioritari e non prioritari, tra cui castagneti, faggete appenniniche, querceti caducifogli, leccete, boschi misti di latifoglie, valloni mesofili e habitat ripariali.

Nei siti Natura 2000 campani sono presenti alcuni dei più significativi habitat dell'Allegato I della Direttiva Habitat, come l'*habitat prioritario 9180 (Foreste di Tilio-Acerion)**, caratteristico dei valloni appenninici ombrosi, e l'habitat 9210 (Leccete sempreverdi), diffuso sulle fasce collinari e costiere della provincia di Salerno e nella Penisola Sorrentina. Particolarmente rappresentativo è anche l'habitat 9260 (Castagneti), che ricopre vaste superfici dei Monti Lattari, del Partenio, del Taburno e dei Monti Picentini, rappresentando uno dei poli ecologici e culturali più rilevanti della regione.

La presenza diffusa di rilievi forestali di origine vulcanica - Somma-Vesuvio, Campi Flegrei, Roccamonfina - determina un ulteriore elemento di diversità, mostrando habitat pionieri, vegetazioni termofile e sistemi boschivi di grande interesse biogeografico, spesso integrati all'interno dei siti di interesse comunitario.

Le ZPS rafforzano ulteriormente la rilevanza ecologica della regione, tutelando ampi territori dedicati alla conservazione dell'avifauna, in particolare lungo le rotte migratorie tirreniche e nelle aree umide costiere, retrodunali e lacustri. La fascia costiera meridionale, le zone di transito della Piana del Sele, i rilievi appenninici dei Picentini e i sistemi costieri del Golfo di Napoli rappresentano aree chiave per la sosta, la riproduzione e l'alimentazione di numerose specie di rapaci, passeriformi, limicoli e uccelli marini.



Gli ecosistemi forestali, ampiamente rappresentati nei siti ZSC e nelle aree ecotonali delle ZPS, svolgono un ruolo centrale nel garantire la funzionalità ecologica dell'intera rete Natura 2000. Essi assicurano supporto alla connettività, regolano i processi idro-ecologici, mantengono microclimi e gradienti altitudinali idonei a specie di interesse comunitario (chirotteri forestali, coleotteri saproxilici, anfibi appenninici, rapaci forestali), e contribuiscono a sostenere la diversità genetica e specifica del territorio.

Nel complesso, la Rete Natura 2000 della Campania costituisce un sistema ecologico complesso e altamente interconnesso, dove elementi di alta naturalità, aree seminaturali e matrici agro-forestali tradizionali concorrono

fonte: http://burc.regione.campania.it

insieme al mantenimento della biodiversità, della funzionalità ambientale e del paesaggio regionale. Essa rappresenta quindi il quadro territoriale di riferimento per ogni attività di pianificazione forestale regionale, costituendo anche la cornice funzionale nella quale si valutano gli effetti potenziali del Piano Forestale Generale e la sua coerenza con gli obiettivi di conservazione definiti a livello comunitario e regionale.

Per i dettagli sulla Rete Natura 2000, vista l'importanza centrale di questo dettaglio dell'inquadramento territoriale ai fini della VIncA, verrà trattata una sezione a parte più dettagliata nei successivi capitoli (vedi "*Quarta parte*").

Mappa generale della distribuzione della Rete Natura 2000 della Regione Campania

fonte: http://burc.regione.campania.it

Il patrimonio forestale della Campania

Superfici forestali e loro dinamica

Secondo l'Inventario Nazionale delle Foreste e dei Serbatoi forestali di Carbonio 2015, la superficie forestale complessiva della Regione Campania è attualmente di 491.259 ettari.

Nel decennio intercorso tra i due Inventari Forestali Nazionali (2005-2015), la superficie forestale regionale è aumentata di 45.983 ettari (+10,3%), rispetto alla superficie 2005, che era di 442.037 ettari.

La superficie forestale 2015 copre ora il 35,9% del territorio della Campania (32,6% nel 2005).

La superficie dei boschi è aumentata di 19.530 ettari (+5,1%), con spiccate differenze tra i diversi tipi forestali: le faggete aumentano dell'1,9%, i castagneti del 5,2%, le cerrete del 9,7%, i boschi a roverella dell'11,1%, mentre i boschi igrofili e ripariali diminuiscono del 6,2%.

TIPOLOGIE DI BOSCO	SUPERFICIE 2015 (HA)	SUPERFICIE 2005 (HA)	DIFFERENZA 2005-2015 (HA)	DIFFERENZA 2005-2015 (%)
Pinete di pino nero	5.524	6.260	-736	-11,8
Pinete di pini mediterranei	9.146	7.734	1.412	18,3
Altri boschi di conifere, pure o miste	864	1.105	-241	-21,8

Totale boschi alti	**400.764**	**380.003**	**20.761**	**120,2**
Impianti di arboricoltura da legno	3.163	1.156	2.007	173,6
Totale boschi	**403.927**	**383.240**	**19.530**	**5,1**
Boschi bassi	5.156	5.156	0	0
Boschi radi	9.389	5.892	3.497	59,4
Boscaglie	1.473	1.473	0	0
Arbusteti	50.397	28.348	22.049	77,8
Aree boscate inaccessibili o non classificate	20.918	20.010	908	4,5
Totale Altre terre boscate	***87.333***	***60.879***	***26.453***	***43,5***
TOTALE	**491.260**	**444.119**	**45.983**	**10,4**

La superficie delle tipologie di bosco del territorio regionale della Campania negli Inventari forestali nazionali del 2005 e del 2015

La superficie delle Altre terre boscate (boschi bassi, boschi radi, boscaglie, arbusteti) passa da 60.879 ettari nel 2005, a 87.332 ettari del 2015, con un incremento di 26.453 ettari (+43,5%), legato in particolar modo all'espansione rilevante degli arbusteti (22.049 ettari, +77,8%).

Queste variazioni rappresentano il saldo netto di dinamiche differenziate: le persistenze forestali, sarebbe a dire le aree forestali rilevate nel 2005 che non hanno subito variazioni d'uso hanno estensione di 440.049 ettari. I processi di forestazione di aree che al 2005 erano agricole, pascolative, o comunque non forestali, che sono

fonte: http://burc.regione.campania.it

diventate bosco al 2015, hanno interessato una superficie di 50.210 ettari. I diboscamenti, le aree forestali al 2005 e che hanno subito una variazione ad usi non forestali nel 2015, hanno interessato una superficie di 4.301 ettari.

Tipo colturale, proprietà

Secondo INFC 2015, il 43,7% dei boschi della Campania è governato a ceduo (175.324 ettari), il 27,2% a fustaia (109.293 ettari), il 5% (20.372 ettari) con forme di governo speciali (castagneti da frutto in attualità di coltura, noceti ecc.), il 23,8% (95.775 ettari) con forme di governo non definite o non classificate.

CATEGORIE FORESTALI	TIPO COLTURALE			SUPERFICIE TOTALE (HA)
	FUSTAIA	CEDUO	NON DEFINITO	
Pinete di pino nero	4.603	-	921	5.524
Pinete di pini mediterranei	8.287	-	859	9.146
Altri boschi di conifere	496	-	368	864
Faggete	51.612	3.198	1.434	56.244
Boschi di roverella	8.084	16.961	35.889	60.934
Boschi di cerro	18.766	41.482	14.396	74.644
Castagneti	-	29.718	26.268	55.986
Ostrieti, carpineti	1.768	47.727	3.535	53.030
Boschi igrofili	3.663	20	7.365	11.048
Altri boschi caducifogli	9.942	2.853	21.591	34.386
Leccete	2.046	33.393	2.046	37.485
Totale	**109.267**	**175.352**	**114.672**	**399.291**

I tipi colturali censiti dall'Inventario forestale nazionale 2015 per le diverse categorie forestali (ettari)

Il 54,9% dei boschi della Campania è di proprietà privata, il restante 45,1% di proprietà pubblica. La proprietà delle altre terre boscate (boschi bassi, boschi radi, boscaglie, arbusteti) è per il 41,9% privata, per il 26,0% pubblica, per il restante 32,0% non determinata. Nel complesso la proprietà delle aree forestali della Campania (boschi + altre terre boscate) è pubblica per il 52,6% della superficie forestale complessiva; privata per il 41,3%, con un restante 6,1% che risulta non classificato.

Disaggregando il dato della proprietà comunale, emerge che i comuni proprietari di bosco sono in totale 479, di questi:

- 108 comuni con superficie boscata < 50 ettari
- 70 comuni con superficie boscata compresa tra 50 e 100 ettari
- 169 comuni con superficie boscata compresa tra 100 e 500 ettari
- 79 comuni con superficie boscata compresa tra 500 e 1000 ettari
- 53 comuni con superficie boscata > 1.000 ettari

Tredici comuni hanno una superficie boscata compresa tra 2.000 e 3.000 ettari e solo sette comuni hanno una superficie superiore a 3.000 ettari.

CATEGORIE FORESTALI	PROPRIETÀ PRIVATA (HA)	PROPRIETÀ PUBBLICA (HA)	PROPRIETÀ PRIVATA (%)	PROPRIETÀ PUBBLICA (%)

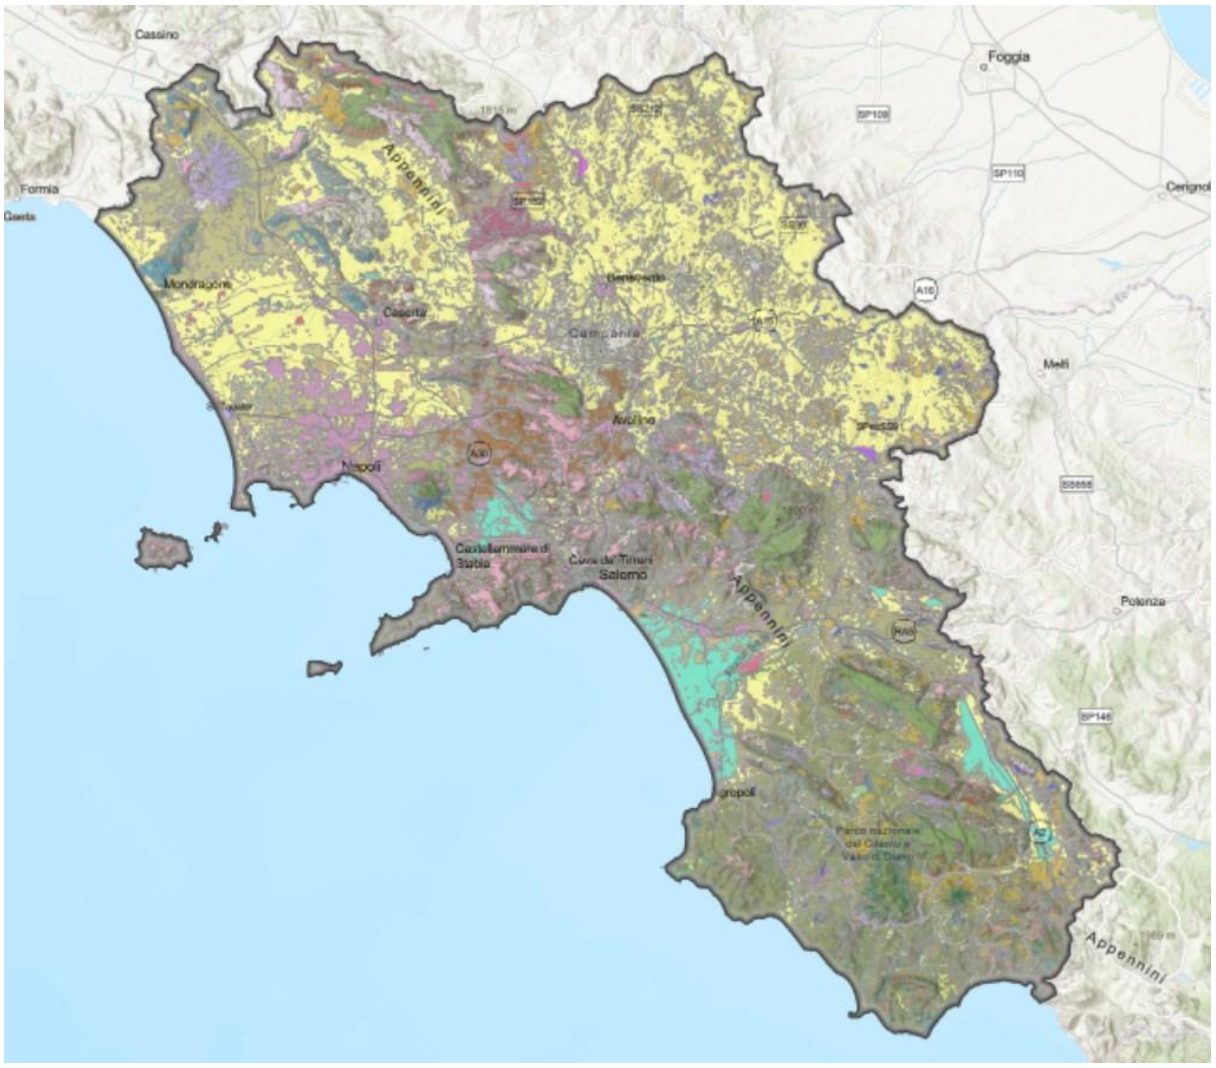
Leccete	17.967	19.518	47,9	52,1
Totale	**218.082**	**179.799**	**54,8**	**45,2**

I tipi di proprietà delle diverse categorie forestali secondo l'Inventario forestale nazionale 2015

Incrociando per le diverse categorie forestali i dati relativi alla proprietà, con quelli relativi al tipo colturale, è possibile rilevare come il patrimonio forestale pubblico e quello privato presentino spiccate differenze e specificità, rappresentando in qualche misura mondi notevolmente diversi.

I boschi di proprietà pubblica della Campania coprono una superficie di 179.800 ettari, pari al 45% della superficie boschiva regionale. Essi sono costituiti per la metà circa da fustaie, con il faggio specie prevalente (47%), seguita dal cerro (17%), dai boschi misti di latifoglie (9%), dalle pinete di pini mediterranei (7%).



La superficie dei boschi cedui di proprietà pubblica copre una superficie di 70.000 ettari circa, con le categorie forestali prevalenti rappresentate dagli ostrieti carpineti (36%), dal leccio (22%), dagli altri boschi di latifoglie (18%), dai castagneti (10%), dalla roverella (9%).

I boschi di proprietà privata della Campania coprono una superficie di 218.082 ettari, pari al 55% della superficie boschiva regionale. Essi sono costituiti per oltre l'85% da cedui, con le categorie forestali maggiormente rappresentate che sono roverella (24%), cerro (22%), castagno (21%), ostrieti-carpineti (10%), leccio (8%).

Aspetti Ambientali – Carta della Natura

Le analisi ambientali sono state effettuate su scala regionale al netto delle Aree Protette utilizzando la Carta della Natura della regione Campania e Corine Land Cover v. 2018. Per una scala di dettaglio si rimanda alle tavole cartografiche.

fonte: http://burc.regione.campania.it

Mappa generale della Carta della Natura e degli Habitat della Regione Campamnia

Carta della Natura

Il progetto Carta della Natura è nato con la Legge 6 dicembre 1991, n. 394 Legge quadro sulle aree protette, che stabilisce come sua finalità la realizzazione di uno strumento di conoscenza che "[…] individua lo stato dell'ambiente naturale in Italia, evidenziando i valori naturali ed i profili di vulnerabilità territoriale".

Negli intenti della Legge la Carta della Natura si configura quindi come un sistema organizzato per raccogliere, studiare e analizzare l'informazione territoriale ecologico- ambientale e metterla a disposizione dei vari centri decisionali del Paese, in primo luogo per contribuire alla individuazione di aree da tutelare.

Carta della Natura inizialmente è stata pensata per individuare e delimitare le aree protette, ma oggi i suoi prodotti vengono utilizzati anche in molti altri ambiti, quali: pianificazione, valutazioni ambientali, individuazione e disegno delle reti ecologiche, reporting ambientale, analisi di scenari evolutivi territoriali ed altro ancora.

Nel territorio campano sono stati rilevati 105 tipi di habitat, cartografati utilizzando come riferimento il Manuale e Linee Guida ISPRA n.49/2009 "Gli habitat in Carta della Natura", che prevede una legenda basata sulla struttura della classificazione europea CORINE Biotopes-Palaearctic. In accordo con la revisione della legenda

fonte: http://burc.regione.campania.it

nazionale in corso d'opera presso ISPRA, tutti tipi di habitat selezionati per la Campania sono stati revisionati, effettuando integrazioni, aggiustamenti ed adattamenti della nomenclatura di riferimento sia nelle denominazioni che nelle descrizioni".

Sono stati estrapolati quattro indici di Valutazione ecologico-ambientale definiti sulla base dei biotopi della Carta della Natura:

- Carta del Valore Ecologico (VE);
- Carta della Sensibilità Ecologica (SE);
- Carta della Pressione antropica (PA);
- Carta della Fragilità Ambientale (FA).

La superficie regionale non valutabile (NV) dagli indici è di 11.195 ha pari all'8,19 % del territorio regionale con differenze tra le varie province, in particolare Napoli che raggiunge il 35%. Si tratta di aree abitate, siti produttivi archeologici o canali.

Provincia	Sup. (ha)	%
AV	12362	4,43
BN	7901	3,82
CE	22383	8,48
NA	40781	34,81
SA	27769	5,65
Totale	111.195	8,19

Superfici e percentuali non valutate (NV) dagli indici della Carta della Natura

Valore Ecologico (VE)

Questo indice rappresenta la misura della qualità di ciascuna unità fisiografica di paesaggio dal punto di vista ecologico-ambientale. L'indice è da intendersi come indice di pregio naturalistico.

Gli indicatori che concorrono alla valutazione del valore ecologico sono:

- naturalità;
- molteplicità ecologica;
- rarità ecosistemica;
- rarità del tipo di paesaggio (a livello nazionale);
- presenza di aree protette nel territorio dell'unità.

Per definire la naturalità e la rarità ecosistemica è stata utilizzata la cartografia dei sistemi ecologici, mentre per la molteplicità ecologica il riferimento è stata la cartografia degli Habitat alla scala 1: 50.000. Gli indicatori del

fonte: http://burc.regione.campania.it

Valore ecologico prendono in considerazione essenzialmente la composizione dell'unità.

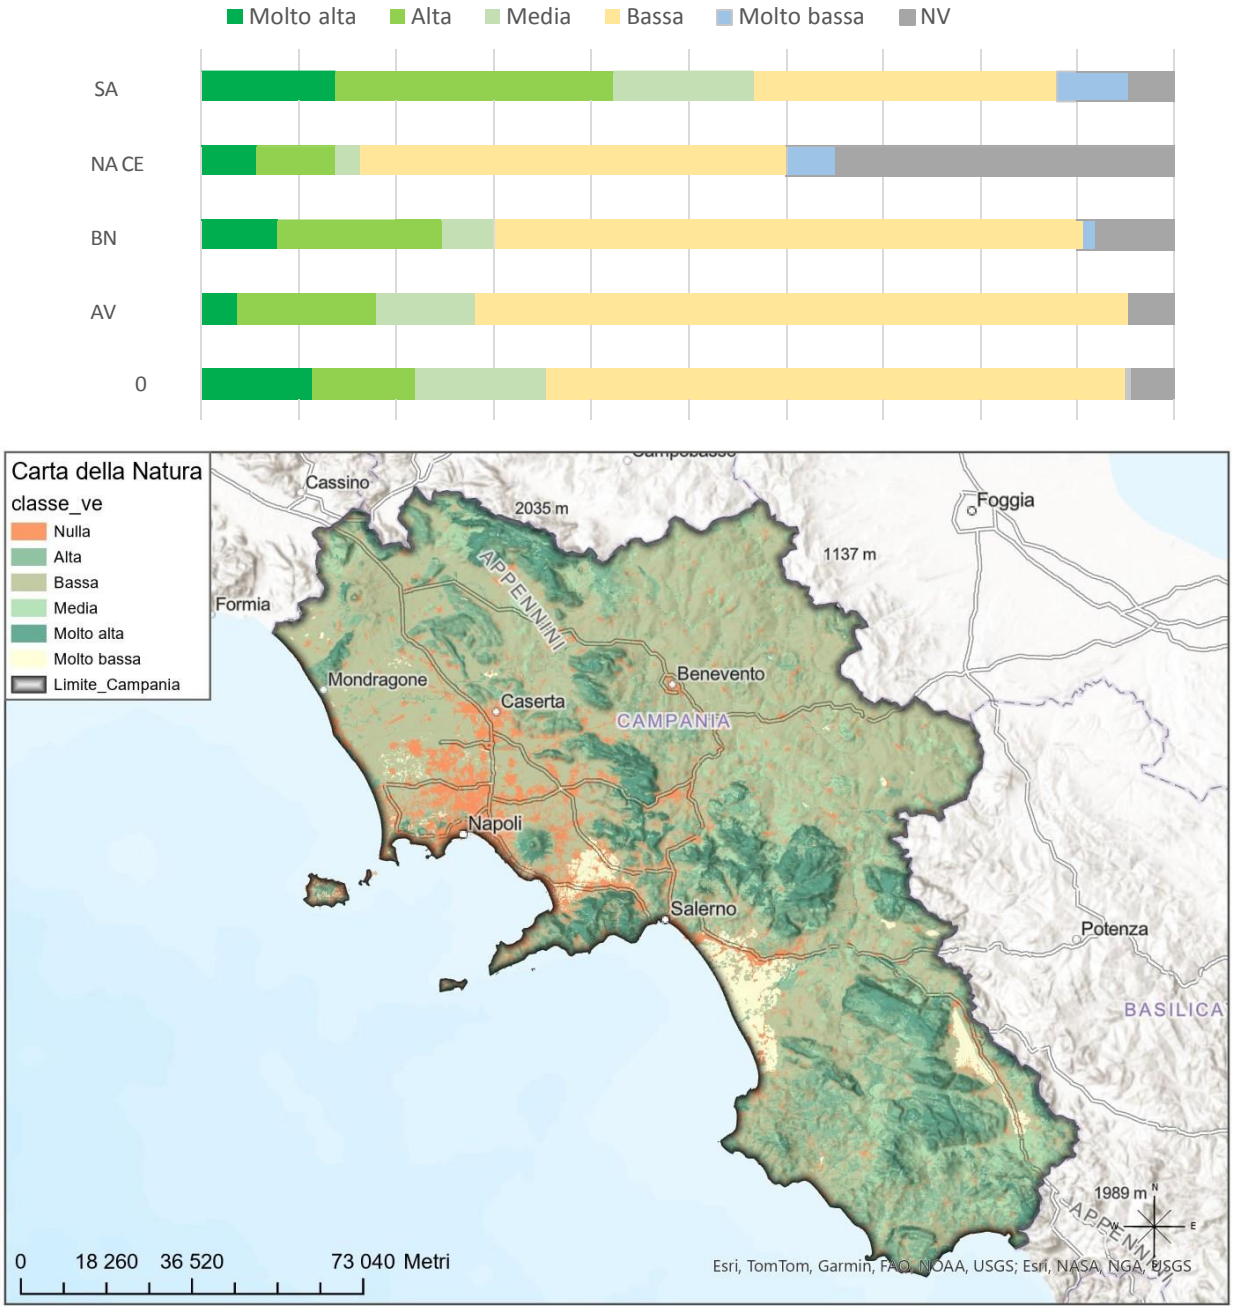


Figura Mappa del Valore ecologico.

Sommando le categorie "Molto alta" e "alta", la provincia di Salerno supera la percentuale del 42% in virtù anche dell'ampia superficie protetta, al contrario Napoli non raggiunge il 15%. Valori tra il 18% ed il 25 per le altre province, con una media regionale del 28,56%.

Sensibilità ecologica (SE)

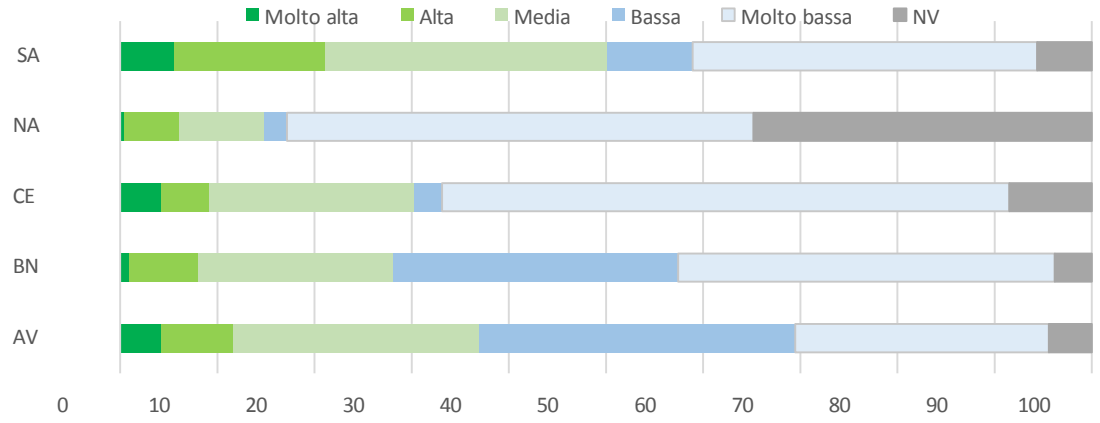
L'indicatore della Sensibilità Ecologica prende in considerazione essenzialmente la struttura dell'unità. È un indice di predisposizione al degrado ecologico-ambientale ed è calcolato con l'indice di frammentazione di

fonte: http://burc.regione.campania.it

Jaeger (Landscape Division Index).

Per il calcolo della sensibilità ecologica si procede in due fasi operative:

- utilizzando la carta dei sistemi ecologici, si accorpano e si fondono i sistemi ecologici in base al loro valore di naturalità;
- si calcola l'indice di frammentazione dei sistemi ecologici ad elevata naturalità.



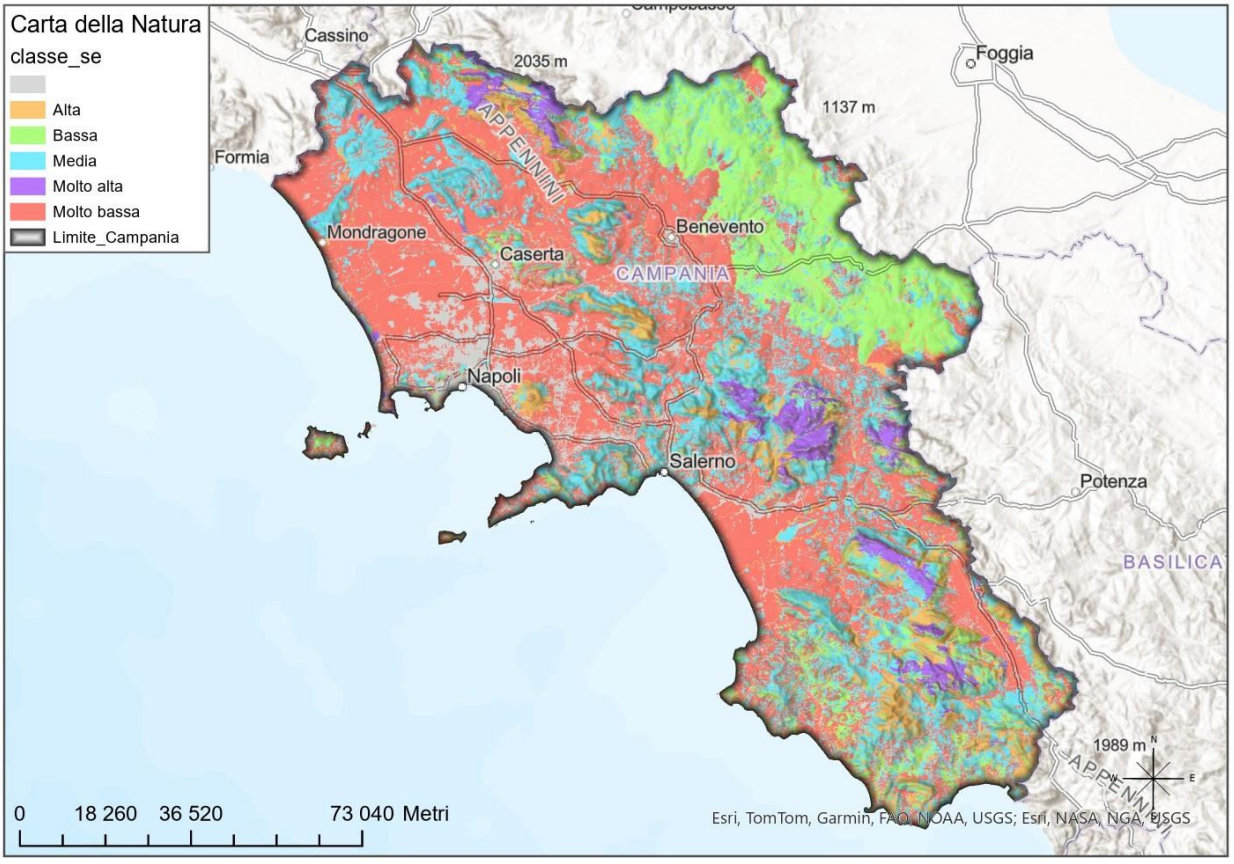


Figura – Distribuzione percentuale provinciale della Sensibilità Ecologica

L'indice dei valori "Molto alta e alta" ha un valore medio regionale del 13,54% con punte per la provincia di Salerno (21%) e Napoli 6% rispecchiando il Valore Ecologico.

Figura– Mappa della Sensibilità Ecologico. Per i dettagli si rimanda alla Tavola di riferimento

fonte: http://burc.regione.campania.it

Pressione antropica (PA)

L'indice rappresenta il disturbo complessivo di origine antropica potenzialmente negativo. Gli indicatori che concorrono alla valutazione della pressione antropica sono:

5.1 carico inquinante complessivo calcolato mediante il metodo degli abitanti equivalenti;

5.2 impatto delle attività agricole;

5.3 impatto delle infrastrutture di trasporto (stradale e ferroviario);

5.4 sottrazione di territorio dovuto alla presenza di aree costruite;

5.5 presenza di aree protette, inteso come detrattore di pressione antropica.

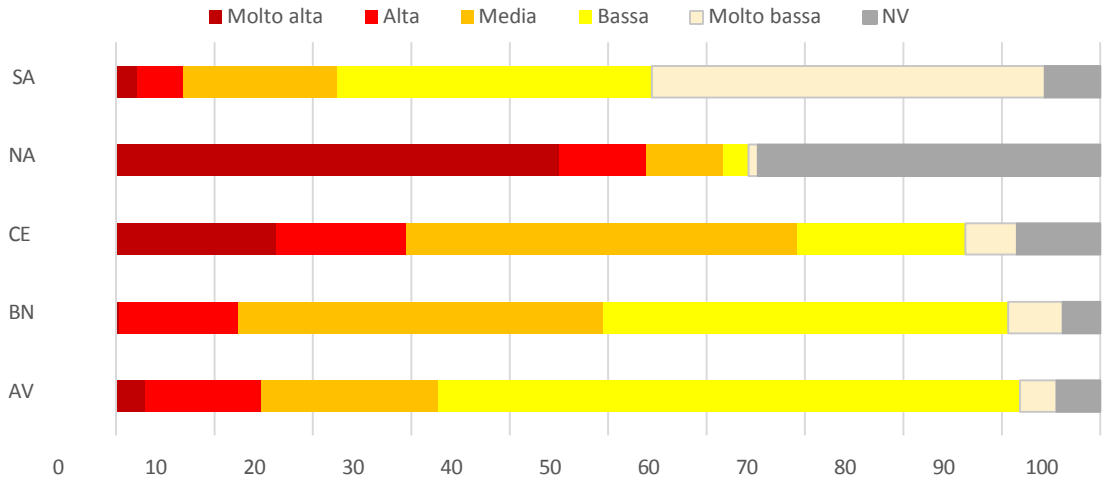

Figura – Distribuzione percentuale provinciale della Pressione Antropica

Al contrario degli indici precedenti, qui i valori "Molto alti e alti" sono da considerare negativi, la media regionale è del 17,76% con Napoli che sfiora il 54%, seguito da Caserta al 29%, Avellino 15%, Benevento 12% e infine Salerno al 7%.

fonte: http://burc.regione.campania.it

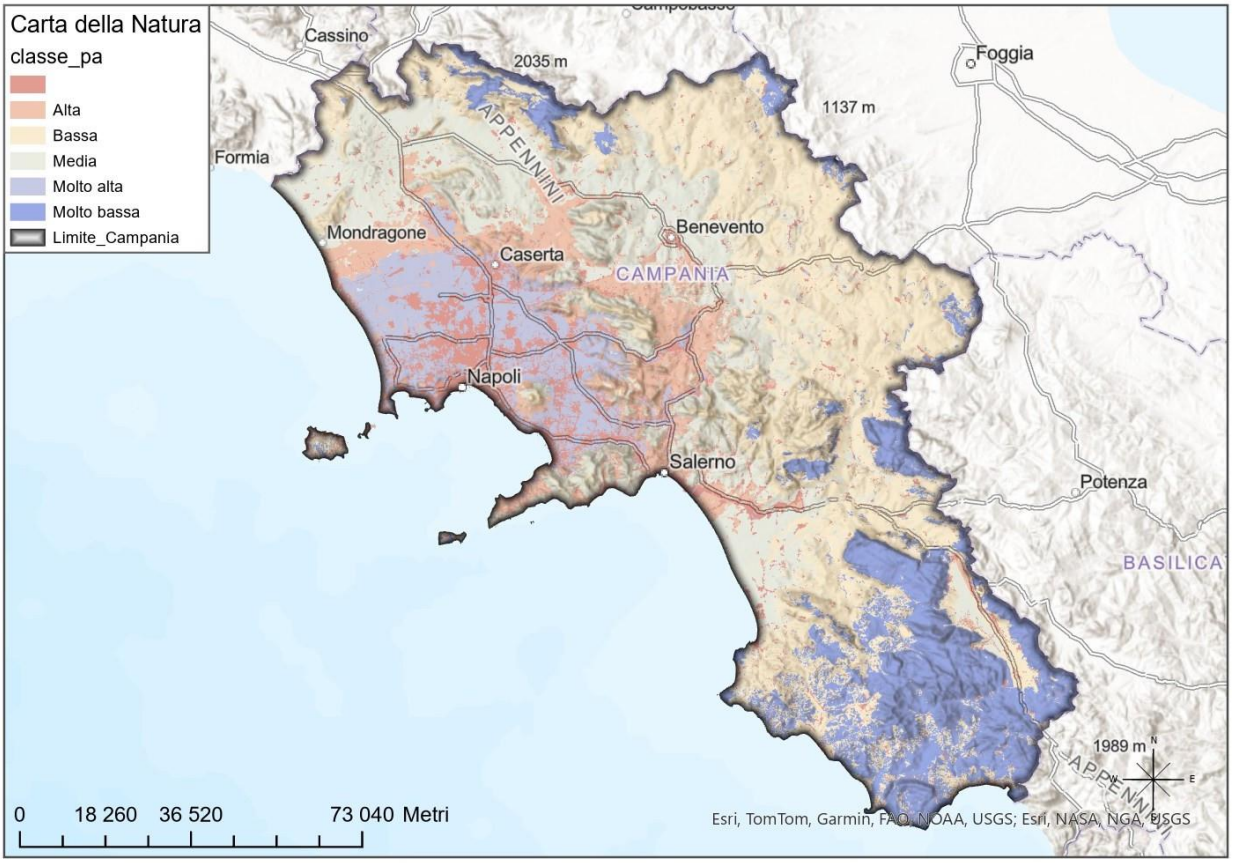

Figura 6 – Mappa della Pressione Antropica. Per i dettagli si rimanda alla Tavola di riferimento

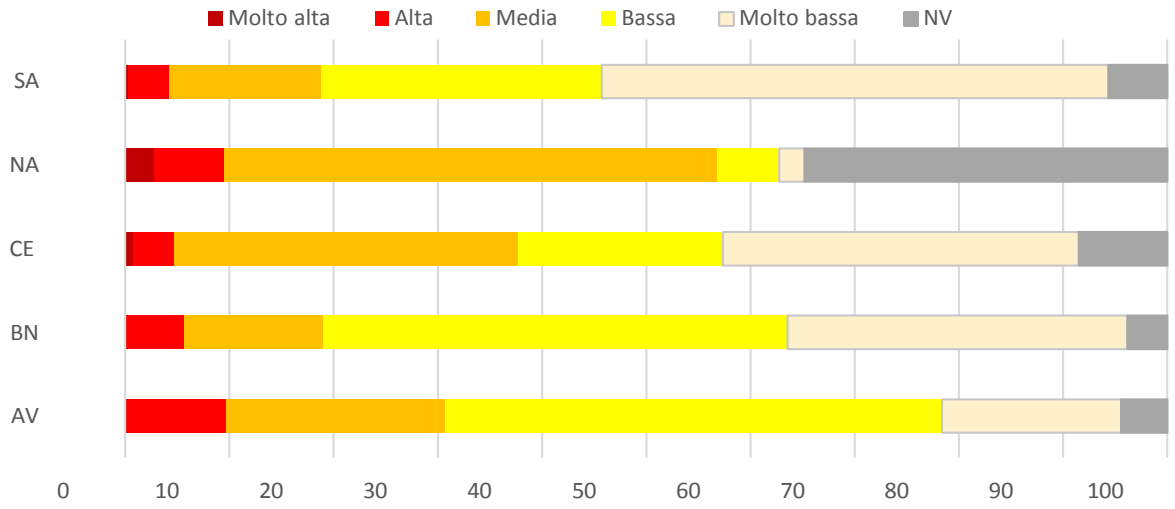
fonte: http://burc.regione.campania.it

Fragilità ambientale (FA)

Si tratta di un indice complessivo che è il risultato della combinazione dei primi tre, chiamato “Profilo Ambientale“ ed evidenzia il livello di rischio di degrado ecologico- ambientale.

La fragilità è direttamente connessa alla pressione antropica.



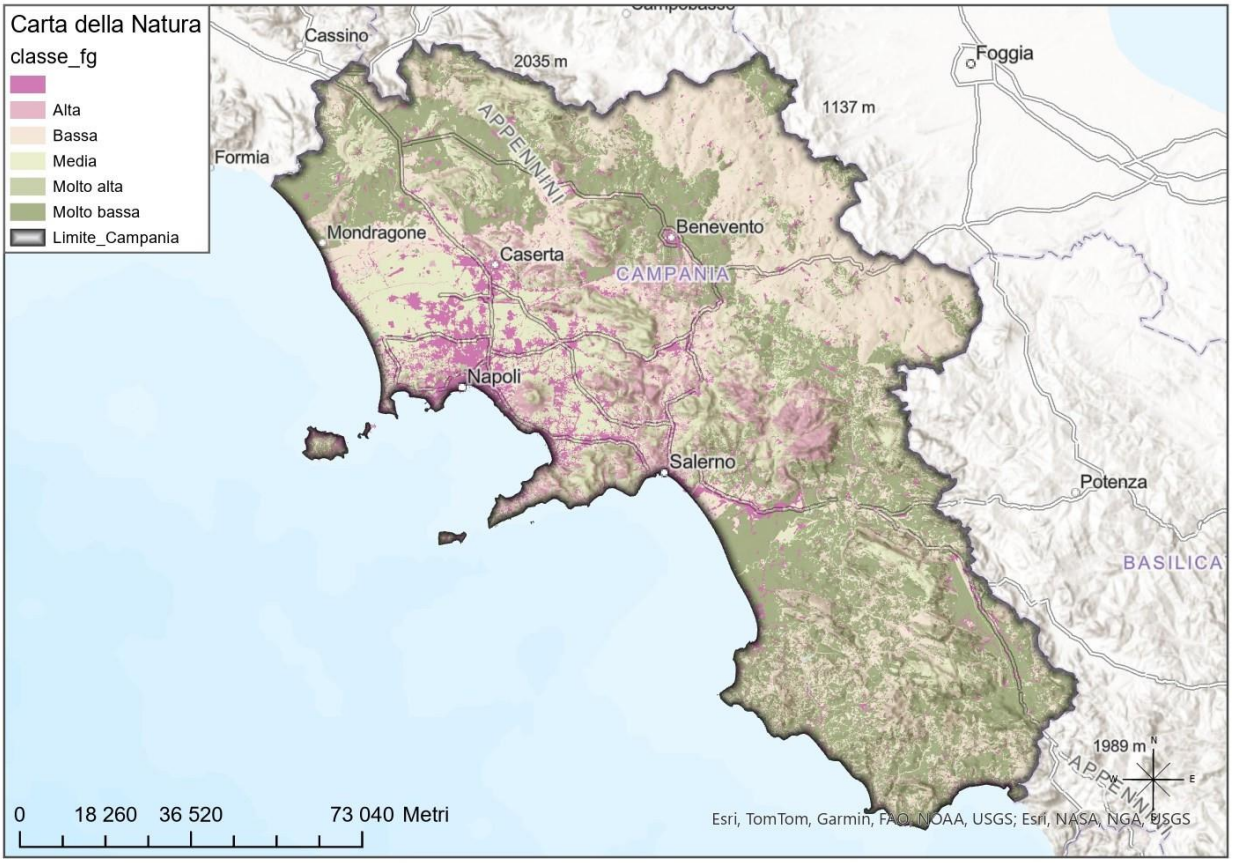


Figura – Distribuzione percentuale provinciale della Fragilità Ambientale

La Fragilità, considerando sempre le due categorie più alte, ha una media regionale del 6% con punte estreme per Napoli (9,5%) e Salerno (4,24%).

fonte: http://burc.regione.campania.it

Figura 8 – Mappa della Fragilità Ambientale. Per i dettagli si rimanda alla Tavola di riferimento

Dal confronto degli indici tra le varie province emergono prime differenze utili anche a pianificare le aree idonee alle diverse specie e valutare l'adozione di specifiche misure gestionali. Ad esempio la provincia di Salerno ha la più alta valenza ecologica e sensibilità ecologica con valori ben oltre la media regionale, non raggiunti da nessuna delle altre quattro province. Come era prevedibile la provincia di Napoli registra la più forte pressione antropica seguita da Caserta con le altre province a valori decisamente più bassi.
Al contrario degli altri tre indici la Fragilità ambientale presenta valori più vicini alla media pur essendo una risultante degli altri indici e fortemente in relazione alla pressione antropica.

	Valenza Ecologica	**Sensibilità Ecologica**	**Pressione Antropica**	**Fragilità Ambientale**
AV	22,02	7,38	14,77	9,77
BN	17,95	7,16	12,44	5,65
CE	24,66	4,94	29,47	4,68
NA	14,15	5,61	53,91	9,50
SA	42,25	15,61	6,80	4,24
Reg.	28,56	9,70	17,76	6,13

Tabella8 – Superfici e percentuali non valutate dagli indici della Carta della Natura

Uso del suolo – Corine Land Cover

L'uso del suolo è stato estratto dal *Corine Land Cover 2018*. Per la regione Campania sono riportate 54 categorie che sono state raggruppate 11 classi semplificandole.

Codice CLC	**Legenda CLC**	**Categoria semplificate**
111	Zone residenziali a tessuto continuo	Aree urbanizzate
112	Zone residenziali a tessuto discontinuo e rado	
121	Aree industriali, commerciali e dei servizi pubblici e privati	
1211	Aree industriali o artigianali	
122	Reti stradali, ferroviarie e infrastrutture tecniche	
123	Aree portuali	
124	Aeroporti	
131	Aree estrattive	

fonte: http://burc.regione.campania.it

132	Discariche	
133	Cantieri	
141	Aree verdi urbane	
142	Aree ricreative e sportive	
2111	Colture intensive a prevalenza di attività meccanizzate, con uso di fertilizzanti, serre e orti	Colture intensive
2112	Colture estensive (seminativi in aree con pendenze superiori al 15%)	Colture estensive
212	Seminativi in aree irrigue	Seminativi irrigui
221	Vigneti	Coltivi arborati
222	Frutteti e frutti minori	
223	Oliveti	
224	Altre colture permanenti	Colture eterogenee
241	Colture temporanee associate a colture permanenti	
242	Sistemi colturali e particellari complessi	
243	Aree preval. occupate da colture agrarie con presenza di spazi naturali importanti	
244	Aree agroforestali	
231	Prati stabili (foraggere permanenti)	Prati stabili
3111	Boschi a prev. di querce e alte lat. sempreverdi	Aree boscate
3112	Boschi a prev. di querce caducifoglie	
3113	Boschi misti a prev. di altre latifoglie autoctone	
3114	Boschi a prevalenza di castagno	
3115	Boschi a prevalenza di faggio	
3116	Boschi a prevalenza di specie igrofile	Aree boscate
3117	Boschi ed ex-piantagioni a prev. di latifoglie esotiche	
3121	Boschi a prev. di pini mediterranei e cipressi	
3122	Boschi a prevalenza di pini oro- mediterranei e montani	
3124	Boschi a prevalenza di larice e/o pino cembro	
3125	Boschi ed ex-piantagioni a prevalenza di conifere esotiche	
3131	Boschi misti a prevalenza di latifoglie	
3132	Boschi misti a prevalenza di conifere	
3211	Boschi a prev. di querce e alte lat. semp.	
3212	Boschi a prev. di querce caducifoglie	
323	Vegetazione sclerofila	

fonte: http://burc.regione.campania.it

3231	Macchia alta	Arbusti e vegetazione rada
3232	Macchia bassa e garighe	
324	Area a veg. boschiva e arbustiva in evoluzione	
3241	Aree a ricolonizzazione naturale	
333	Aree con vegetazione rada	
334	Aree percorse da incendi	
331	Spiagge, dune e sabbie	Spiagge e rocce nude
332	Rocce nude, falesie, rupi e affioramenti	
411	Paludi interne	Aree umide
421	Paludi salmastre	
511	Corsi d'acqua, canali e idrovie	
512	Bacini d'acqua	
521	Lagune	
523	Mari e oceani	

Tabella – Categorie del CLC18 e semplificate

fonte: http://burc.regione.campania.it

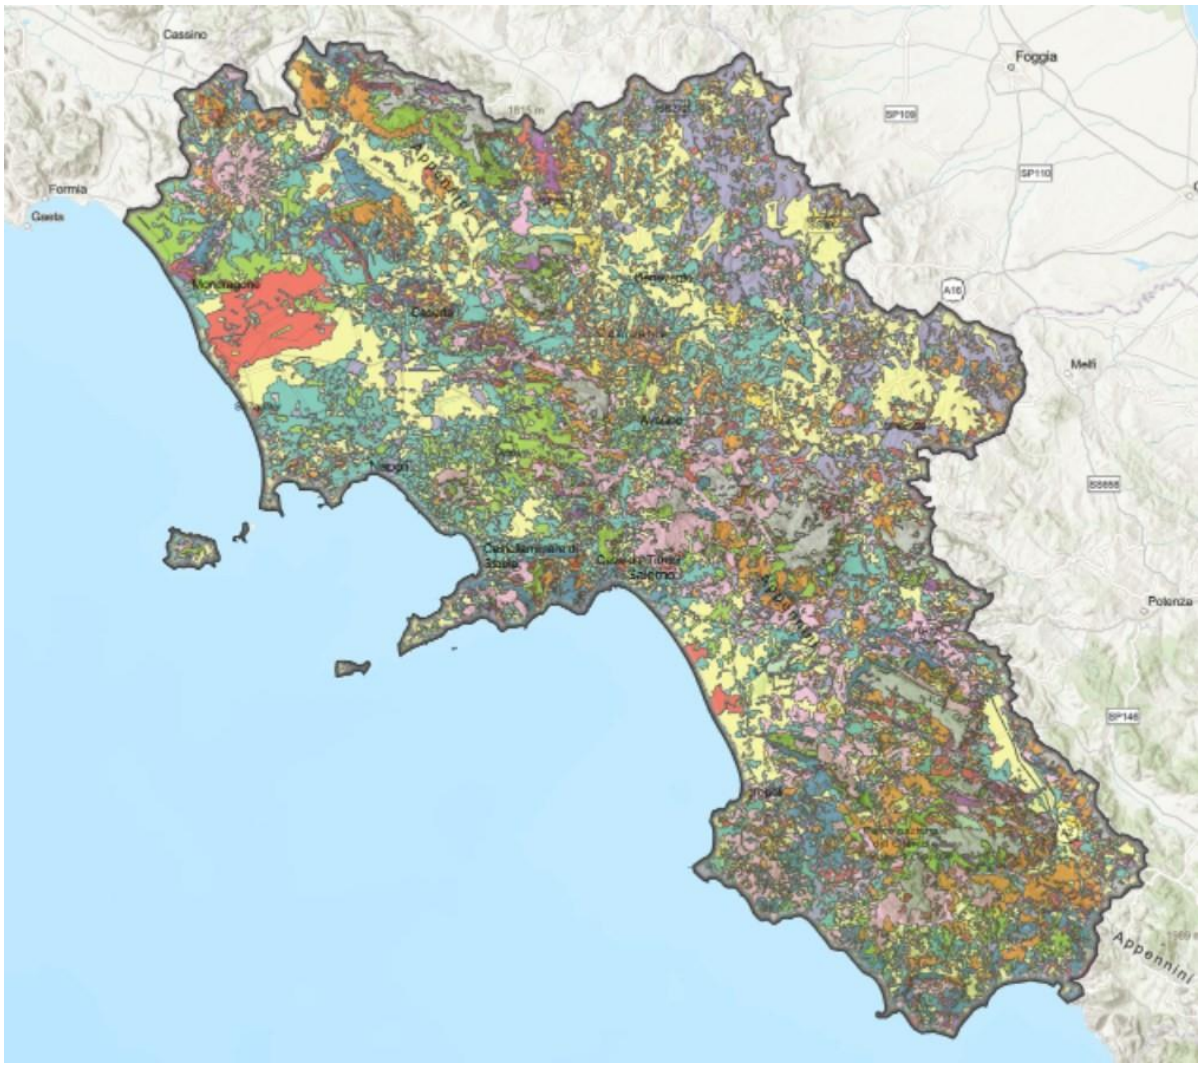

Figura – Mappa dell'uso del suolo con le classi Corine Land Cover 2018 semplificate

	Aree urbanizz.	Colture intensive	Colture estens.	Sem. irrigui	Coltivi arborati	Colture eter.	Prati stabili	Aree boscate	Spiagge e Rocce nude	Arbusti e veg. rada	Aree umide
AV	124,3	496,4	407,3	-	178,3	645,1	25,6	790,0	0,2	114,7	4,9
BN	77,9	432,1	293,5	-	76,5	636,4	24,7	460,9	3,3	56,4	5,7
CE	212,7	511,5	17,7	226,6	271,5	548,4	26,1	710,5	5,0	94,3	12,1
NA	392,4	120,9	2,2	-	149,6	312,7	1,2	123,7	6,4	57,3	4,9

Reg.	1.015,9	1.975,5	850,8	256,0	1.187,9	3.081,2	122,9	4.296,7	31,0	727,1	34,4

Tabella 20 – Distribuzione provinciale delle Categorie del CLC18 semplificate (kmq)

fonte: http://burc.regione.campania.it

A livello regionale la categoria maggiormente rappresentata è costituta dalle aree boscate che raggiungono il 31,64%, analoga percentuale (31,44) è raggiunta dalle aree coltivate sommando Coltivi (frutteti, vigneti e oliveti) con la macroclasse delle colture eterogenee. In totale considerando tutte le aree coltivate abbiamo circa il 55% del territorio regionale utilizzato in agricoltura da parte dell'uomo. Le aree urbanizzate non raggiungono il 10% e spiagge e aree umide sommate, meno dello 0.5%.

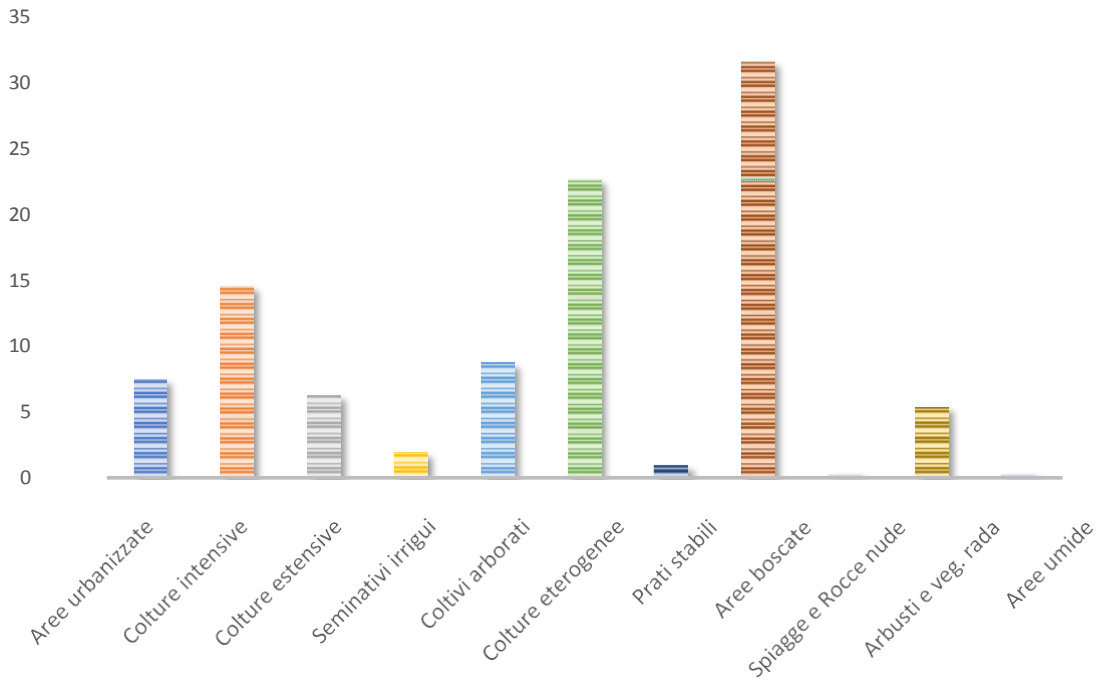

Figura – Mappa dell'uso del suolo con le classi Corine Land Cover 2018 semplificate

La distribuzione delle varie categorie nelle diverse province è molto diversificata. Come era prevedibile le aree urbanizzate si concentrano in provincia di Napoli, le aree boscate, arbusti, spiagge, coltivi e colture eterogenee in provincia di Salerno, mentre i seminativi irrigui quasi interamente in provincia di Caserta. Avellino presenta la maggiore concentrazione di colture estensive, mentre le colture intensive sono distribuite in maniera quasi omogenea nelle diverse province ad eccezione di Napoli.

fonte: http://burc.regione.campania.it

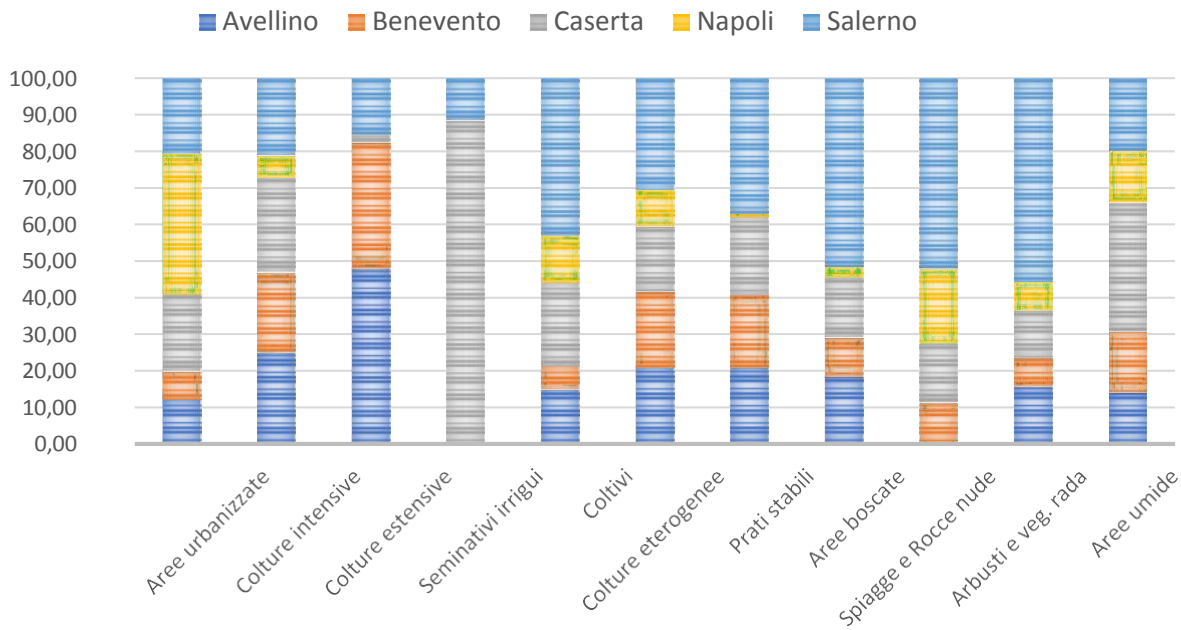

Figura – Distribuzione percentuale delle categorie semplificate dell'uso del suolo nelle diverse province.

A livello provinciale emergono differenze importanti tra le varie province caratterizzandone il territorio. Le aree urbanizzate rappresentano poco meno del 40% della superfice della provincia di Napoli. Salerno si contraddistingue per l'alta percentuale di territorio occupato da aree boscate e da arbusti, per lo più comprese in aree protette. I territori di Caserta e Benevento presentano un'alta percentuale di colture eterogenee.

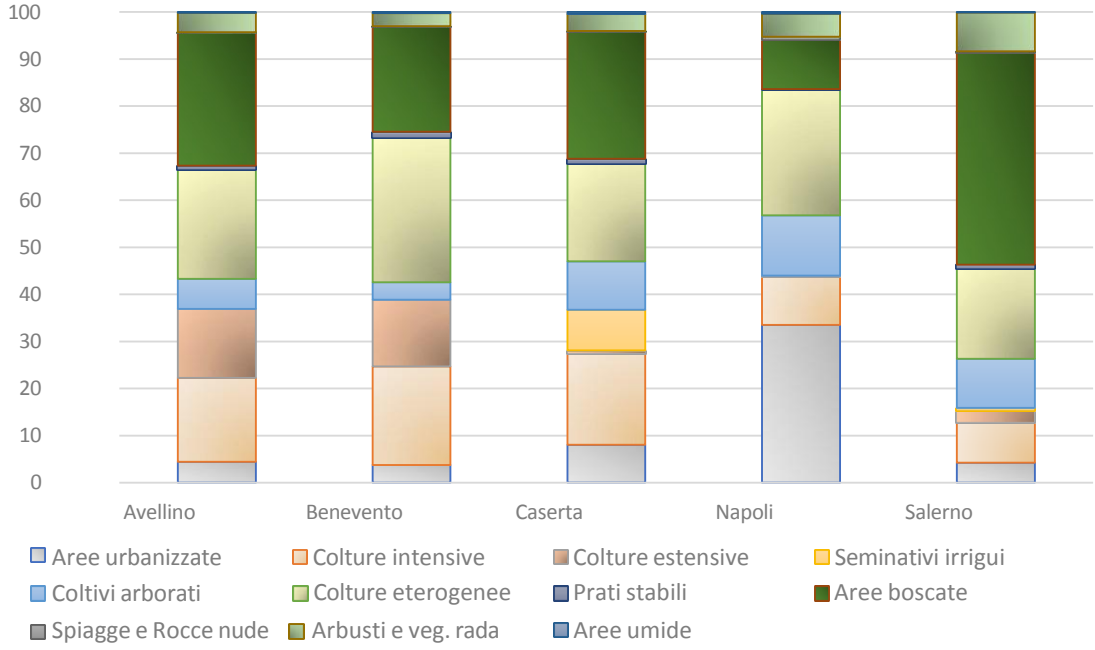

Figura – Composizione percentuale dell'uso del suolo nelle diverse province

fonte: http://burc.regione.campania.it

Quarta parte: La Rete Natura 2000

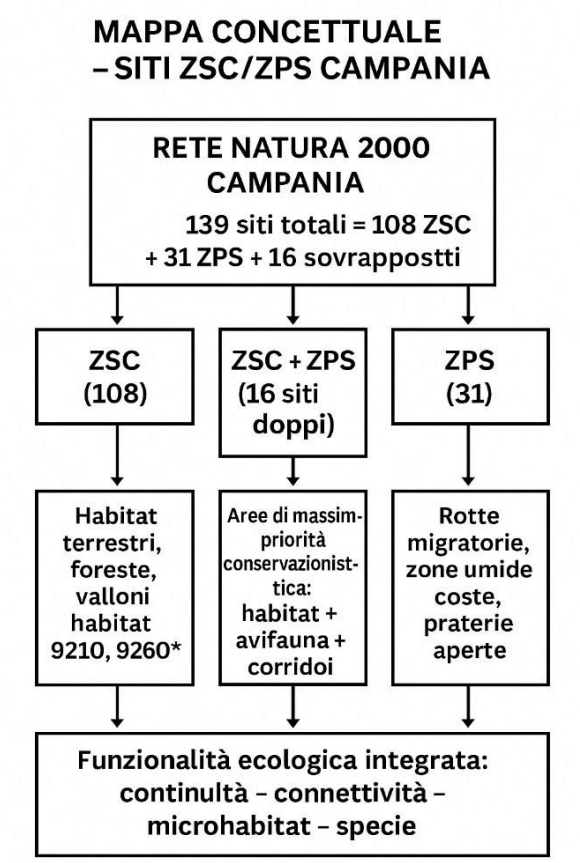
Natura 2000 è il principale strumento della politica dell'Unione Europea per la conservazione della biodiversità. Si tratta di una rete ecologica diffusa su tutto il territorio dell'Unione, istituita ai sensi della Direttiva 92/43/CEE "Habitat" per garantire il mantenimento a lungo termine degli habitat naturali e delle specie di flora e fauna minacciati o rari a livello comunitario.

D.G. Difesa del Suolo e Ecosistema
U.O.D. Gestione delle risorse naturali protette - Tutela e salvaguardia dell'habitat marino e costiero – Parchi e riserve naturali

La Rete Natura 2000 è costituita da Zone Speciali di Conservazione (ZSC) istituite dagli Stati Membri secondo quanto stabilito dalla Direttiva Habitat, e comprende anche le Zone di Protezione Speciale (ZPS) istituite ai sensi della Direttiva 79/409/CEE "Uccelli".

In Campania sono istituite 108 ZSC e 31 ZPS.

Le aree che compongono la rete Natura 2000 non sono riserve rigidamente protette dove le attività umane sono escluse; la Direttiva Habitat intende garantire la protezione della natura tenendo anche "conto delle esigenze economiche, sociali e culturali, nonché delle particolarità regionali e locali" (Art. 2).



Soggetti privati possono essere proprietari dei siti Natura 2000, assicurandone una gestione sostenibile sia dal punto di vista ecologico che economico.

La Direttiva riconosce il valore di tutte quelle aree nelle quali la secolare presenza dell'uomo e delle sue attività tradizionali ha permesso il mantenimento di un equilibrio tra attività antropiche e natura. Alle aree agricole, per esempio, sono legate numerose specie animali e vegetali ormai rare e minacciate per la cui sopravvivenza è necessaria la prosecuzione e la valorizzazione delle attività tradizionali, come il pascolo o l'agricoltura non intensiva. Nello stesso titolo della Direttiva viene specificato l'obiettivo di conservare non solo gli habitat naturali ma anche quelli seminaturali (come le aree ad agricoltura tradizionale, i boschi utilizzati, i pascoli, ecc.).

Un altro elemento innovativo è il riconoscimento dell'importanza di alcuni elementi del paesaggio che svolgono un ruolo di connessione per la flora e la fauna selvatiche (art. 10). Gli Stati membri sono invitati a mantenere o all'occorrenza sviluppare tali elementi per migliorare la coerenza ecologica della rete Natura 2000.

Ogni sito Natura 2000 è descritto da un formulario che ne riassume le caratteristiche principali oltre a elencarne le specie e gli habitat di importanza comunitaria.

fonte: http://burc.regione.campania.it

Elenco dei Siti della Rete Natura 2000 della Regione Campania

In Campania la Rete Natura 2000 è composta da 139 Siti così caratterizzati: 108 ZSC e 31 ZPS, di cui 16 siti presentano designazione doppia ZSC + ZPS.

La gestione dei 139 siti della rete è tuttavia affidata a più soggetti, compresa la stessa Regione. Infatti, la D.G.R. n. 684/2019, in attuazione al D.M. 17/10/2007, affida la gestione dei siti come segue:

- 44 siti alle Aree protette nazionali (Enti Parco, Riserve Naturali Statali e Aree Marine Protette), di cui 1 cogestito tra Ente Parco Nazionale del Vesuvio e Carabinieri, quali gestori della R.N. Statale Tirone Vesuvio;
- 52 siti agli Enti Parco e Riserve Regionali, di cui 2 cogestiti con i Carabinieri, quali gestori delle R.N. Statali della Valle delle Ferriere e di Castel Volturno.
- 27 siti alla Regione Campania.

Secondo l'Inventario Nazionale delle Foreste e dei Serbatoi forestali di Carbonio 2015, la superficie forestale complessiva della Regione Campania è attualmente di 491.259 ettari.

Secondo INFC 2015 la superficie dei boschi ricadenti in aree a tutela naturalistica (parchi nazionali e regionali, riserve statali e regionali, siti della rete Natura 2000) è di 261.918 ettari, corrispondente al 64,8% della superficie regionale complessiva dei boschi. Di questa superficie:

- 194.369 ettari ricadono contemporaneamente in area parco e in Rete Natura 2000;

fonte: http://burc.regione.campania.it

- 67.713 ettari ricadono esclusivamente in rete Natura 2000.

Inoltre, dalle analisi in GIS di sovrapposizione tra Carta delle risorse forestali della Campania (le aree di piano) con gli shapefiles dei Siti Rete Natura 2000 e degli Habitat di cui alla tabella A, è stato possibile estrapolare la seguente statistica:

- -aree forestali che ricadono nella Rete Natura 2000: 261918 ha;
- Habitat che incrociano le aree di Piano: 155852 ha;
- Habitat di interesse forestale che incrociano il Piano: 154644 ha:
    - di cui **prioritari di interesse forestale: 82.338 ha, il 53%** degli habitat di interesse forestale, rappresentati principalmente dall'Habitat 9210 (56970 ha, 69%) e degli Habitat 6210/6220 (20244 ha, 25%).

La superficie delle altre terre boscate ricadenti in aree a tutela naturalistica (parchi nazionali e regionali, riserve statali e regionali, siti della rete Natura 2000) è di 59.986 ettari, corrispondente al 64,7% della superficie regionale complessiva delle altre terre boscate.

Di seguito si riportano le analisi delle elaborazioni in GIS che hanno creato il quadro riepilogativo delle aree oggetto di intervento (oggetto di pianificazione) con i parametri principali per una analisi di Studio di Incidenza, ovvero: aree parco (nazionale e regionale); aree natura 2000; ed Habitat forestali.

L'incrocio tematico in ambiente GIS tra lo strato informativo "Carta delle risorse forestali" e quello relativo alla perimetrazione e zonizzazione dei parchi nazionali e regionali ha consentito una stima delle superfici delle diverse categorie forestali ricadenti nelle zone a diverso grado di tutela. I dati in tabella mostrano come, dei 194.369 ettari di boschi ricadenti in parchi e riserve, 34.248 ettari ricadono all'interno della zona "A" di riserva integrale, i restanti 159.957 ettari in zone di parco o riserva diverse dalla zona A.

Categoria forestale	Superficie in Zona A (ha)	Superficie in Zona B (ha)	Superficie in Zona C (ha)	Superficie in Zona D (ha)	Superficie totale in area parco (ha)	Superf. totale in area parco (%)

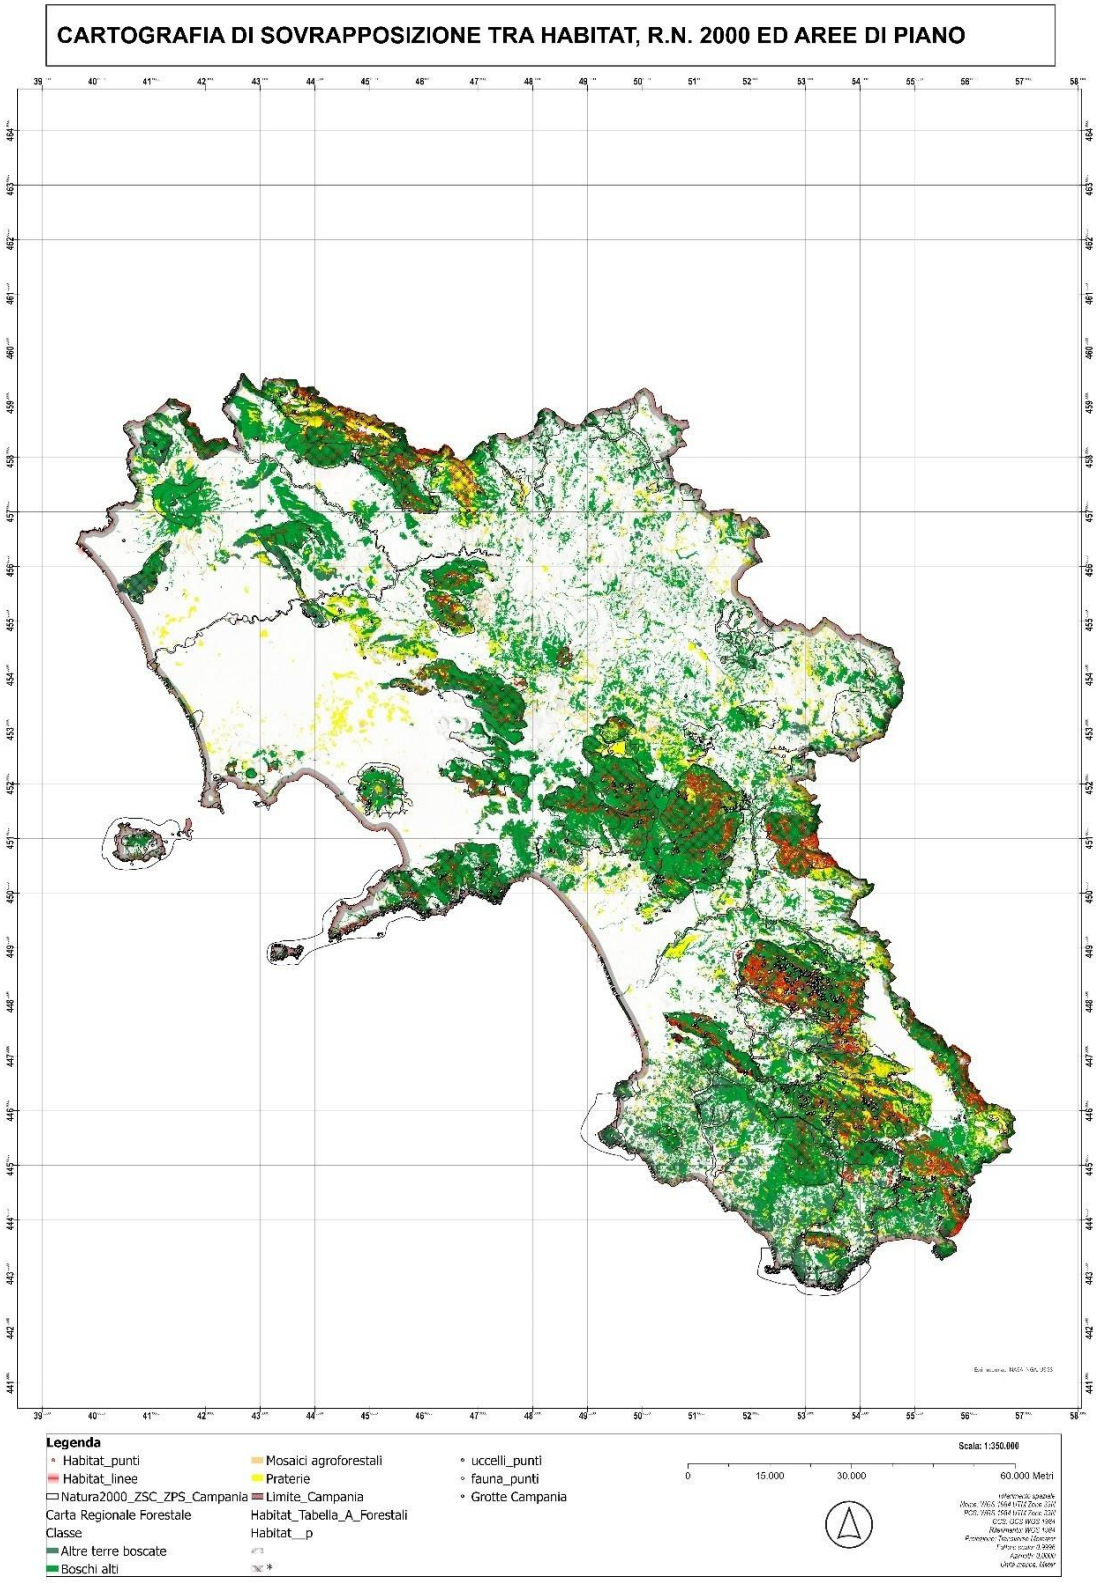
Habitat di interesse comunitario nel ZSC

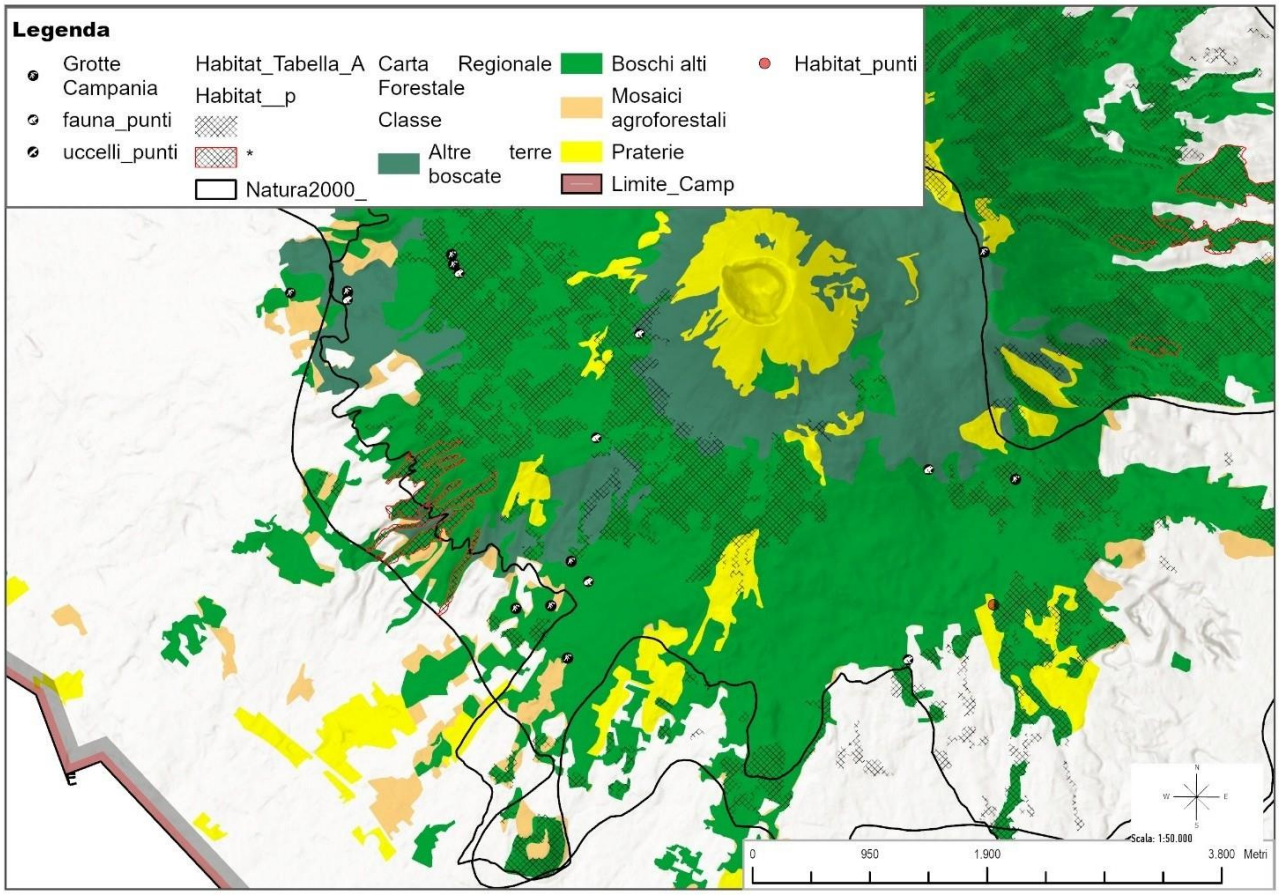
Nella ZSC sono presenti habitat d'interesse comunitario, alcuni dei quali **prioritari**, citati dall'Allegato I della Dir. 92/43/CEE. Come noto, la Dir. 92/43/CEE sulla conservazione degli habitat e delle specie animali si propone di salvaguardare gli habitat naturali e seminaturali e della flora e della fauna selvatiche. A tal proposito, negli Allegati I e II, vengono individuati tutti gli habitat e le specie presenti nella Comunità europea la cui conservazione richiede la designazione di zone speciali di conservazione. Tale Direttiva rappresenta un importante punto di riferimento riguardo agli obiettivi della conservazione della natura in Europa (RETE NATURA 2000). Infatti, in essa è ribadito esplicitamente il concetto fondamentale della necessità di salvaguardare la biodiversità ambientale attraverso un approccio di tipo "ecosistemico", in maniera da tutelare l'habitat nella sua interezza, per poter garantire al suo interno la conservazione delle singole componenti biotiche, cioè delle specie vegetali e animali presenti. Tale Direttiva, negli allegati. indica sia le specie sia gli habitat che devono essere oggetto di specifica salvaguardia da parte della UE. Il criterio di individuazione del tipo di habitat è principalmente di tipo fitosociologico, mentre il valore conservazionistico è definito su base biogeografica, di tutela di tipi di vegetazione rari, esclusivi del territorio comunitario. Gli Habitat vengono suddivisi in due categorie:



fonte: http://burc.regione.campania.it

- **Habitat prioritari,** che in estensione occupano meno del 5% del territorio comunitario e che risultano ad elevato rischio di alterazione, per loro fragilità intrinseca e per la collocazione territoriale in aree soggette ad elevato rischio di alterazione antropica;
- **Habitat di interesse comunitario**, meno rari ed a minor rischio dei precedenti, ma comunque molto rappresentativi della regione biogeografica di appartenenza e la cui conservazione risulta di elevata importanza per il mantenimento della biodiversità.

I Formulari Standard del Ministero dell'Ambiente descrivono le Z.S.C. e nel dettaglio gli habitat censiti nell'*Allegato I della direttiva 92/43 CEE* con le caratteristiche specificate (**valutazione globale "A-B-C"**).



La descrizione degli Habitat vegetazionali delle ZSC tiene conto del formulario standard NATURA 2000 per zone di protezione speciale (ZPS) per zone proponibili per una identificazione come siti d'importanza comunitaria (ZSC) e per zone speciali di conservazione (ZSC) aggiornato al mese di luglio dell'anno 2009.

*Cartografia di **sovrapposizione della Carta degli Habitat** di cui alla Tabella A con le aree oggetto di Pianificazione.*

fonte: http://burc.regione.campania.it

*(STRALCIO ESEMPIO): Cartografia di **sovrapposizione della Carta degli Habitat** di cui alla Tabella A con le aree oggetto di Pianificazione.*

Per una corretta valutazione a scala regionale, ma al contempo anche sito specifica ed habitat specifica, è stato creato in ambiente **GIS un database cartografico** contenente:

- le aree oggetto di pianificazione mediante la Cartografia delle aree boscate Regionali (poligoni in verde, giallo ed arancio)
- i siti della Rete Natura 2000 della Regione Campania (poligoni vuoti con bordure nere)
- i poligoni degli habitat di cui alla Tabella A elaborati in fase di redazione dei nuovi P.d.G. di sole categoria/classi forestali (poligoni in grigliato nero senza bordure)
- estratto dei suddetti poligoni per i soli Habitat con forma prioritaria (poligoni grigliato nero con contorno rosso)

Fauna

La diversità di ambienti, che spaziano dal mare alle montagne, ha determinato una notevole varietà di associazioni faunistiche.

Il mare ospita comunità molto diversificate da quelle dei fondali sabbiosi a quelle rocciose, con vaste estensioni di popolazioni legate alle praterie di Posidonia.

fonte: http://burc.regione.campania.it

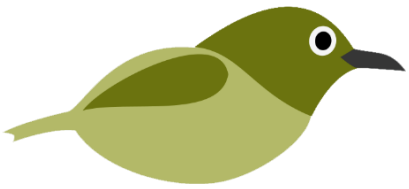
Lungo la costa, la diffusa urbanizzazione, determina comunità faunistiche fortemente legate alle città e alla presenza umana, ma restano importanti spazi naturali, dove vivono popolazioni faunistiche legate alle coste rocciose e agli ambienti costieri dunali.
La costa è anche molto importante per la migrazione degli uccelli. Le aree collinari sono caratterizzate da comunità che si insediano tra i mosaici di aree a vegetazione naturale e agricole, sfruttando anche i pascoli e i campi agricoli abbandonati.
Più in montagna le estese foreste sono l'habitat per comunità di grande interesse naturalistico legate a queste formazioni vegetazionali, mentre le praterie di altitudine, mantenute dall'attività della pastorizia e del pascolo bovino, ospitano una biodiversità particolarmente elevata.
Anche se il mezzogiorno d'Italia non è caratterizzato da elevati livelli di specie endemiche, la Campania ospita diversi endemiti dell'appennino, così come esclusivi di questa regione.

Descrizione generale

(**da Progetto Natura Campania https://www.naturacampania.it/index.asp?dir=fauna_menu.htm**)
Sono poche e frammentate le conoscenze sugli invertebrati.
Ciò nonostante, sono state scoperte diverse specie endemiche della Regione, come i coleotteri Lampyrys vesuvius vesuvius, Dienerella sp., Epuraea sp. sul Vesuvio, gli efemerotteri Choroterpes borbonica e Electrogena calabra, in Cilento.
Diverse sono anche le specie di importanza comunitaria incluse nella Direttiva Habitat, come il gambero di fiume (Austropotamobius pallipes), la farfalla Melanargia di Arge (Melanargia arge). Quest'ultima, fa parte del folto elenco delle specie di insetti legate alle attività tradizionali di pascolo del bestiame allo stato brado.
La fauna ittica di acqua dolce è fortemente condizionata dalle immissioni effettuate a scopo di pesca sportiva, che hanno portato nei nostri fiumi la presenza di numerose specie aliene. Ciò nonostante, si descrivono specie di particolare interesse come la Rovella (Rutilius rubilio) e l'Alborella meridionale (Alburnus albidus). Presente anche la lampreda di ruscello (Lampetra planeri) inclusa nella direttiva Habitat.
La fauna di anfibi non comprende molte specie, ma sono presenti tutte quelle caratteristiche della nostra regione biogeografica. Si segnalano il Rospo smeraldino (Bufo viridis), l'Ululone dal ventre giallo (Bombina pachypus), le due specie di Salamandrina dagli occhiali (Salamandrina terdigidata e S. perpicillata), endemiche della penisola italiana, la Raganella italiana (Hyla intermedia).
Anche i rettili contano alcune decine di specie. Da segnalare il transito regolare nei mari prospicienti le coste campane della Tartaruga marina (Caretta caretta), che sporadicamente nidifica. Rarissima e ridotta a poche popolazioni isolate la Testuggine comune (Testudo hermanni). Più diffusa invece la Testuggine palustre (Emys orbicularis). Delle almeno sette specie di serpenti note per la Campania vanno segnalate le presenze del Cervone (Elaphe quatuorlineata) e del Colubro liscio (Coronella austriaca). Non molto comune, infine, la

fonte: http://burc.regione.campania.it

Luscengola (Chalcides chalcides).



La classe degli uccelli è la meglio studiata e conosciuta della Campania. A partire dalla fine degli anni '70 sono andate infatti moltiplicandosi in maniera esponenziale le pubblicazioni scientifiche riguardanti l'ornitologia campana. L'ultima check-list dell'avifauna della Campania, pubblicata nel 2007 riporta 337 specie, delle quali 143 nidificanti certe, probabili o possibili (Fraissinet et al., 2007).

Diverse decine, infine, le specie di mammiferi presenti in Campania. Davvero notevole la presenza di specie di particolare rilevanza faunistica, quali Lepre italica (Lepus corsicanus), Lupo (Canis lupus) e Lontra (Lutra lutra), in una regione a così alta densità di abitanti. Ampiamente distribuita la Volpe (Vulpes vulpes), mentre sono più localizzate la Martora (Martes martes) e il Gatto selvatico (Felis silvestris).

Interessante anche la chirotterofauna campana, con diverse specie di pipistrelli, alcune anche rare, come, ad esempio, il Molosso del Cestoni (Tadarida teniotis). Particolarmente studiati in Campania sono i Chirotteri (pipistrelli). Si contano infatti numerosi lavori che analizzano la chirottero-fauna di varie località campane. Sappiamo pertanto che nel Parco Nazionale del Vesuvio sono presenti 8 specie (Carpino et al., 2009), nel Parco regionale del Partenio 12 specie (Carpino e Capasso, 2008), nel Parco nazionale del Cilento e Vallo di Diano 20 specie (Feola et al., 2008). Molti lavori del prof. Danilo Russo hanno indagato inoltre la chirotterofauna di varie località del Parco regionale del Matese (Russo e Jones, 2000, Russo et al., 2001; Russo et al., 2002).

Fora

Sulla base di recenti aggiornamenti dei dati tassonomici e distributivi della flora d'Italia (Conti et al., 2005a; 2007), la flora della Campania risulta costituita da 2845 tra specie e sottospecie (numero relativamente basso se confrontato con altre regioni), di cui 154 endemiche (Conti et al., 2005b), con un tasso di endemicità del 5.4%. Ricordiamo che questi dati risentono di un'insufficiente conoscenza della flora regionale (Strumia et al. 2005) e sono destinati a subire interessanti modifiche.

Anche dal punto di vista della vegetazione gli studi non risultano esaustivi (Filesi et al., 2010). Sulla base delle conoscenze disponibili è stato comunque possibile riconoscere nelle fitocenosi presenti in Campania numerosi habitat di interesse comunitario (sensu All. I dir. 92/43/CEE) come descritto in AA.VV. (2010); sulla base di una recente revisione preliminare da noi condotta nell'ambito di un progetto finanziato dalla Regione Campania - Assessorato alle Politiche Ambientali Settore Ecologia, si contano 53 habitat di cui ben 15 prioritari.

Nonostante le carenze di conoscenze quindi, in base ai dati disponibili per le piante vascolari (ma anche per alghe, muschi, licheni e funghi) e per gli habitat di interesse comunitario, sono state individuate nella regione 13 Important Plant Areas (Strumia e Santangelo, 2010), confermando l'importanza biogeografica della Campania.

Descrizione generale

(**da Progetto Natura Campania https://www.naturacampania.it/index.asp?dir=flora_menu.htm**)

La Campania possiede alcune peculiarità ambientali che hanno avuto e continuano ad avere un ruolo importante nel determinare non soltanto la presenza delle singole specie e delle comunità vegetali, ma anche la loro distribuzione spaziale.

La particolare posizione geografica a cavallo tra Appennino centrale e meridionale ha reso la Campania una

fonte: http://burc.regione.campania.it

sorta di “cerniera biogeografica”, sia in termini floristici (La Valva, 1992 che in termini vegetazionali (Filesi et al., 2010), perché interessata da varie “correnti migratorie” che hanno arricchito il suo patrimonio botanico. A ciò si associa una grande diversità di litotipi su cui spesso poggiano coltri piroclastiche con granulometrie variabili, derivanti dalle intense attività eruttive antiche e recenti dei complessi vulcanici della regione, che hanno prodotto suoli unici al mondo per la loro fertilità (Di Gennaro, 2002). Anche dal punto di vista climatico si osserva una notevole complessità (Blasi et al., 1988) con valori di piovosità mediamente più elevati rispetto alle regioni vicine. A questa matrice ambientale già estremamente variegata si è aggiunto nei secoli l’effetto delle attività antropiche, da quelle agro-silvo-pastorali alla più recente urbanizzazione. L’uomo ha pertanto profondamente modificato il territorio, particolarmente in alcuni ambiti (coste, pianure alluvionali), determinando un’alterazione delle fitocenosi o, nei casi più gravi, una loro riduzione o addirittura scomparsa.

Anche le formazioni vegetali apparentemente meglio conservate, come i boschi, mostrano evidenti gli effetti della gestione selvicolturale, presentandosi alterati sia in termini di composizione floristica che in termini di struttura. L’uomo ha teso sempre a selezionare le specie più “utili” ai fini dello sfruttamento boschivo, sia nel tipo di governo a ceduo che in quello ad alto fusto, alterando profondamente la naturalità di queste fitocenosi, sia nello strato arboreo che in quello arbustivo ed erbaceo. Di seguito saranno descritte brevemente le caratteristiche floristico-vegetazionali nei principali settori bioclimatici della nostra regione con riferimento alle principali serie di vegetazione.

Specie esotiche invasive

Le specie esotiche (denominate anche "aliene") sono quelle introdotte dall'uomo, intenzionalmente o involontariamente, al di fuori del loro areale di distribuzione recente. Sono definite invasive quelle che, per comportamento e adattabilità, riescono a diffondersi con estrema facilità interagendo con l'ambiente in modo da competere negativamente con le specie preesistenti e arrecando spesso danni all'ambiente, all'economia e alla salute dell'uomo.

Le specie esotiche invasive sono considerate la seconda causa di estinzione delle specie nel mondo e per questo motivo l'Unione Europea ha deciso di contrastarne la diffusione adottando il **Regolamento n. 1143 del 2014**.

Il **Decreto Legislativo n. 230 del 2017**, recependo il Regolamento Europeo, assegna alle Regioni e alle Province autonome, il compito di sorveglianza delle popolazioni di specie esotiche invasive presenti sul territorio nazionale e quello di sorveglianza rispetto alla possibilità che se ne insedino di nuove, in tal caso intervenendo prontamente.

La Regione Campania, dopo un primo studio realizzato nel 2020 con l'Università Federico II per definire e

fonte: http://burc.regione.campania.it

quantificare il fenomeno nella regione, ha avviato nel 2023 un primo programma di sorveglianza e controllo che vede coinvolto il mondo accademico, le aree protette, gli enti del terzo settore e i cittadini.

Quinta parte: il P.F.G.

Descrizione generale

In accordo con il "Testo unico in materia di foreste e filiere forestali" (TUFF, D.lgs. 3 aprile 2018, n. 34) e con la legislazione regionale vigente, il Piano forestale generale della Campania[1] definisce gli obiettivi e le azioni per la tutela e la gestione attiva del patrimonio forestale regionale.

In accordo con l'art. 6 del Testo unico, il Piano forestale generale della Campania si inserisce nel complessivo quadro programmatico nazionale, che si articola in 4 livelli:

- La **Strategia Forestale Nazionale** che definisce gli indirizzi nazionali per la tutela, la valorizzazione e la gestione attiva del patrimonio forestale nazionale e per lo sviluppo del settore e delle sue filiere produttive, ambientali e socioculturali;
- Il **Programma forestale regionale**, che definisce gli obiettivi e le relative linee d'azione, coerenti con la Strategia Forestale Nazionale in relazione alle specifiche esigenze socio-economiche, ambientali e paesaggistiche, nonché alle necessità di prevenzione del rischio idrogeologico, di mitigazione e di adattamento al cambiamento climatico;
- I **piani forestali di indirizzo territoriale**, che possono essere predisposti dalle regioni con riferimento a comprensori territoriali omogenei per caratteristiche ambientali, paesaggistiche, economico-produttive o amministrative, finalizzati all'individuazione, al mantenimento e alla valorizzazione delle risorse silvo-pastorali e al coordinamento delle attività necessarie alla loro tutela e gestione attiva, nonché' al coordinamento degli strumenti di pianificazione forestale;
- I piani **di gestione forestale**, redatti per le proprietà pubbliche e private, riferiti ad un ambito aziendale o sovraziendale di livello locale, quali strumenti indispensabili a garantire la tutela, la valorizzazione e la gestione attiva delle risorse forestali, attuativi dei Programmi forestali regionali e coordinati con i Piani forestali di indirizzo territoriale.

Compito del Piano forestale generale è pertanto quello di attuare nel territorio della regione Campania, in considerazione delle specifiche caratteristiche ed esigenze, gli obiettivi e le azioni della Strategia Forestale Nazionale, che a sua volta recepisce per il territorio nazionale i contenuti degli accordi internazionali e della legislazione e programmazione comunitaria in materia di risorse forestali e ambientali, biodiversità, lotta al

[1] LA DENOMINAZIONE DELLO STRUMENTO DI PROGRAMMAZIONE FORESTALE DI LIVELLO REGIONALE È DIFFERENTE NELLE DISPOSIZIONI DI LEGGE AI DIVERSI LIVELLI: IL TUFF LO DEFINISCE "PROGRAMMA FORESTALE REGIONALE"; IL REGOLAMENTO 3/2017 DELLA REGIONE CAMPANIA DI TUTELA E GESTIONE SOSTENIBILE DEL PATRIMONIO FORESTALE REGIONALE LO DEFINISCE "PIANO FORESTALE GENERALE"; LA PRECEDENTE LEGGE FORESTALE DELLA CAMPANIA L.R. 11/96 "PIANO FORESTALE REGIONALE". PER COMODITÀ, NEL PRESENTE DOCUMENTO È ADOTTATA LA DIZIONE "PIANO FORESTALE GENERALE".

fonte: http://burc.regione.campania.it

cambiamento climatico, tutela del paesaggio.

Al centro del modello di programmazione forestale definito dal Testo unico rimane il concetto-guida di *Gestione Forestale Sostenibile* (GFS) o *gestione attiva* del patrimonio forestale.

A livello regionale, in piena coerenza con il Testo unico, il Regolamento 3/2017 della Regione Campania di tutela e gestione sostenibile del patrimonio forestale regionale, definisce ulteriormente all'art. 5 i contenuti del Piano Forestale Generale che:

a. descrive le caratteristiche ecologiche, strutturali ed evolutive del patrimonio forestale regionale;
b. definisce le strategie generali di tutela e gestione sostenibile del patrimonio forestale regionale ed individua gli obiettivi da conseguire e le azioni prioritarie di miglioramento delle foreste pubbliche e private, tenendo conto degli obiettivi della tutela ambientale e dello sviluppo socio-economico delle popolazioni interessate e costituendo il quadro di riferimento per la pianificazione forestale a livello territoriale e locale;
c. si coordina con la pianificazione specialistica vigente, con espresso riferimento al piano paesaggistico di cui all'articolo 135 del D.Lgs. 22 gennaio 2004, n. 42 (Codice dei beni culturali e del paesaggio); ai piani di bacino di cui all'articolo 66 del D.Lgs. 3 aprile 2006, n. 152 (Norme in materia ambientale); ai piani di gestione della Rete Natura 2000 di cui al D.P.R 8 settembre 1997, n. 357 (Regolamento recante attuazione della direttiva 92/43/CEE relativa alla conservazione degli habitat naturali e seminaturali, nonché della flora e della fauna selvatiche).

Ai fini della caratterizzazione del patrimonio boschivo regionale il Piano forestale generale fa riferimento alla **Carta delle risorse forestali della Campania**, redatta contestualmente ad esso.

In linea generale, il presente Piano seguirà i criteri previsti dalla Gestione Forestale Sostenibile (rif. Regolamento Regionale num.3/2017), per i dettagli si rimanda al Capitolo 8 del Documento di Piano.

Tipologie delle azioni e/o opere

In accordo con il Testo unico in materia di foreste e filiere forestali, articolo 6 comma 2, il Piano forestale generale della Campania è chiamato a definire gli obiettivi e le relative linee d'azione, coerenti con la Strategia Forestale Nazionale, in relazione alle specifiche esigenze socioeconomiche, ambientali e paesaggistiche, nonché alle necessità di prevenzione del rischio idrogeologico, di mitigazione e di adattamento al cambiamento climatico.

Alla luce delle indagini e delle elaborazioni svolte, il Piano forestale regionale della Campania individua 7 differenti obiettivi prioritari articolati in 26 differenti azioni, descritte nei seguenti paragrafi. Lo schema degli obiettivi e delle azioni di piano è riportato nella tabella alla pagina seguente.

Le azioni individuate dal Piano forestale generale trovano preciso riferimento in quelle indicate nella Strategia Forestale Nazionale, oltre che nella legislazione nazionale e regionale vigente (vedi cap. 10 e 13).

B5. Mitigazione e adattamento dei sistemi forestali della Campania ai cambiamenti climatici

Il Piano forestale generale della Campania persegue il rafforzamento della capacità di mitigazione e adattamento dei sistemi forestali della Campania ai cambiamenti climatici in maniera trasversale, attraverso l'implementazione combinata delle diverse azioni di piano finalizzate:

- all'incremento della superficie boschiva regionale pubblica e privata interessata da pianificazione forestale alle diverse scale (aziendale, territoriale) e da gestione attiva, in grado di assicurarne l'integrità fisica e funzionale, nel rispetto delle dinamiche ecologico-evolutive, degli aspetti di biodiversità, della capacità di fornire in maniera sostenibile il pool di servizi ecosistemici di supporto e regolazione;
- alla diffusione di Disciplinari di gestione forestale sostenibile, per le diverse categorie forestali e tipi colturali, finalizzati all'aumento della resistenza/resilienza del bosco nei confronti del rischio climatico e ambientale;
- Alla capacità di "governare l'abbandono", promuovendo e incentivando la cura e la gestione attiva dei boschi abbandonati e/o silenti, dei boschi di neoformazione, degli arbusteti mediterranei e temperati di ricolonizzazione dei coltivi eroici abbandonati.

Elenco delle azioni

A. Una nuova governance per le foreste in Campania

A1. Promuovere una governance forestale in Campania basata sulla cooperazione istituzionale, l'integrazione di strumenti e politiche, la partecipazione e condivisione degli obiettivi di Gestione Forestale Sostenibile (GFS)

A2. Estendere la superficie dei beni silvo-pastorali di proprietà pubblica, privata e collettiva della Campania dotati di piani di gestione forestale

A3. Promuovere la pianificazione forestale di area vasta (Piani Forestali di Indirizzo Territoriale)

B. Rafforzare il capitale naturale, assicurare i servizi ecologici essenziali, prevenire i rischi

B1. Conservazione e miglioramento della biodiversità forestale nella rete regionale di aree protette

B2. Gestione attiva dei boschi di protezione.

B3. Incrementare la capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica del territorio e tutela delle acque

B4. Prevenzione attiva dei rischi naturali o antropici, incendi, calamità naturali ed eventi catastrofici

C. Curare e gestire le risorse forestali della Campania

C1. Curare i rimboschimenti storici della Campania

C2. Valorizzare in chiave multifunzionale le foreste urbane e periurbane

C3. Curare e proteggere i boschi planiziali della Campania

C4. Tutela e valorizzazione dei castagneti da frutto della Campania

C5. Tutelare i boschi vetusti e gli alberi monumentali

C6. Promuovere la gestione sostenibile dei prati e pascoli permanenti

C7. Promuovere e valorizzare i sistemi agroforestali

D. Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare

D1. Rafforzare la capacità operativa delle imprese boschive. Promuovere la qualificazione degli operatori forestali

D2. Promuovere la certificazione delle foreste del territorio regionale e la tracciabilità lungo tutta la filiera, dal tronco al mobile finito

D3. Riconoscere e remunerare i servizi di interesse pubblico, ambientale e sociale forniti dalle aree forestali (foreste e

fonte: http://burc.regione.campania.it

pascoli) e mantenuti ed accresciuti dalla GFS
D4. Promozione delle produzioni forestali non legnose in una prospettiva di filiera
D5. Adesione al Cluster legno-foresta italiano e costituzione del Cluster legno foresta della Campania

E. Vivere le foreste della Campania
E1. Valorizzare le 10 foreste regionali come "laboratori verdi multifunzionali" e centri di diffusione permanente della GFS in Campania
E2. Valorizzazione multifunzionale della viabilità forestale e silvo-pastorale e della sentieristica in Campania

F. Conoscere le foreste della Campania
F1. Promuovere un programma integrato di monitoraggio e cartografia delle risorse forestali della Campania
F2. Implementazione dello Sportello unico regionale per le attività forestali (SUAF)
F3. Promozione di iniziative e programmi divulgativi per rafforzare la consapevolezza pubblica dell'importanza e il ruolo ecologico del patrimonio forestale della Campania

G. Le nuove foreste della Campania
G1 Valorizzare e potenziare i vivai forestali; estendere la superficie dei boschi da seme; valorizzare le risorse genetiche; potenziare la produzione di materiale di propagazione forestale
G2 Promozione di tecniche forestali per il recupero dei siti degradati in Campania

Azioni di Conservazione per Habitat Sensibili nella Rete Natura 2000

Inoltre, dall'analisi del documento di Piano, si evince che lo stesso prevede, a scala logicamente regionale e con il grado di dettaglio specifico commisurato alla dimensione della pianificazione, alcune azioni e previsioni in linea con aspetti conservazionistici mirati, rivolte in particolare ad alcuni habitat particolarmente delicati della Rete Natura 2000.

Queste azioni si distinguono per l'attenzione posta alla tutela di zone di elevato pregio naturalistico, in cui la gestione forestale viene orientata dalla necessità di conservare gli equilibri ecologici e di rispettare le specificità degli ecosistemi presenti. Gli interventi pianificati, infatti, tengono conto della vulnerabilità di tali habitat e della presenza di specie e comunità vegetali di rilievo, garantendo che le pratiche adottate siano compatibili con la salvaguardia degli elementi caratteristici di ciascuna area.

In sintesi, il Piano si configura come uno strumento che integra obiettivi di gestione forestale con la protezione di habitat sensibili, adottando misure operative che rispondono alle esigenze di conservazione della Rete Natura 2000 a livello regionale.

Il PFG prevede il ricorso a pratiche gestionali conservative particolari per le formazioni a leccio e a macchia in aree di pregio localizzate all'interno della rete Natura 2000 della Campania, quali le dune costiere, quando interessate da misure regolamentari o di conservazione specifiche (vedi ad esempio la ZSC IT8010021 "Pineta di Patria" per gli habitat 2250*, 2260, e 9340 - Habitat di specie per Testudo hermanii). (pag. 67 del Piano gestione forestale della Campania).

Il PFG prevede il ricorso a pratiche gestionali conservative particolari per le formazioni a pino domestico in aree

fonte: http://burc.regione.campania.it

di pregio localizzate all'interno della rete Natura 2000 della Campania, quali le dune costiere, quando interessate da misure regolamentari o di conservazione specifiche (vedi ad esempio la ZSC IT8010021 "Pineta di Patria" per l'habitat 2270* - Habitat di specie per Testudo hermanii). (pag. 68 del Piano gestione forestale della Campania).

Il PFG prevede che il pascolo in bosco non sia consentito negli habitat della Rete Natura 2000 della Campania interessati da misure di conservazione prevedenti specifico divieto. (pag. 72 del Piano gestione forestale della Campania).

In considerazione del particolare valore naturalistico e protettivo, e degli aspetti di vulnerabilità dei boschi misti di caducifoglie mesofile che si sviluppano sui versanti acclivi dei valloni, su depositi di versante e affioramenti rocciosi, appartenenti all'habitat 9180* (Foreste di versanti, ghiaioni e valloni del Tilio-Acerion lungo gli impluvi e nelle forre umide con abbondante rocciosità superficiale), il PFG prevede che la loro gestione si conformi, all'interno della rete Natura 2000 della Campania, alle misure di conservazione previste, consistenti nel divieto di qualunque intervento di taglio boschivo. (pag. 64 del Piano gestione forestale della Campania).

Il PFG prevede che il ricorso al fuoco prescritto in accordo con le "Prescrizioni tecniche e procedure operative inerenti alle applicazioni di fuoco prescritto in Regione Campania", approvate con DDR n.341 del 22/12/2020 in attuazione della Legge regionale 13 giugno 2016, n.20, sia comunque vietato nei siti della Rete Natura 2000 della Campania i cui piani di gestione prevedano misure di conservazione specifiche al riguardo. (pag. 129 del Piano gestione forestale della Campania).

In attuazione del Decreto 230/2017 recante disposizioni per prevenire e gestire l'introduzione e la diffusione delle specie esotiche invasive, il Piano forestale generale persegue una strategia di contenimento e sostituzione per ricolonizzazione spontanea si specie autoctone, con il ricorso a tipologie differenziate di intervento, e con particolare attenzione per le aree prioritarie per la conservazione della natura. (pag. 129 del Piano gestione forestale della Campania).

Per i dettagli ed approfondimenti riferiti alle singole azioni strategiche di Piano, si rimanda al Capitolo 15 del Documento di Piano.

Coerenza dell'intervento con le Misure di Conservazione

In considerazione dei possibili impatti sulla Rete Natura 2000 si ritiene necessario integrare la VAS con la Valutazione di Incidenza Ambientale ai sensi dell'art. 5 del Decreto del Presidente della Repubblica 8 settembre 1997, n. 357 predisponendo uno studio per individuare e valutare gli effetti che il piano può avere sui siti Natura 2000, redatto secondo l'allegato G al d.p.r. 120/2003.

Misure di Conservazione e Soggetti Gestori

Si riportano di seguito i principali riferimenti normativi vigenti inerenti le Misure di conservazione per Zone di Protezione Speciale (ZPS) e Zone Speciali di Conservazione (ZSC).

		2	superfici a seminativo soggette all'obbligo del ritiro dalla produzione (set-aside) e non coltivate durante tutto l'anno e altre superfici ritirate dalla produzione ammissibili all'aiuto diretto, mantenute in buone condizioni agronomiche e ambientali a norma dell'art. 5 del regolamento (CE) n. 1782/2003. Sono fatti salvi interventi di bruciatura connessi ad emergenze di carattere fitosanitario prescritti dall'autorità competente o a superfici investite a riso e salvo diversa prescrizione della competente autorità di gestione	NON PERTINENTE	-
B	sulle superfici a seminativo soggette all'obbligo del ritiro dalla produzione (set-aside) e non coltivate durante tutto l'anno e altre superfici ritirate dalla produzione ammissibili all'aiuto diretto, mantenute in buone condizioni agronomiche e ambientali a norma dell'art. 5 del regolamento (CE) n. 1782/2003, obbligo di garantire la presenza di una copertura vegetale, naturale o artificiale, durante tutto l'anno, e di attuare pratiche agronomiche consistenti esclusivamente in operazioni di sfalcio, trinciatura della vegetazione erbacea, o pascolamento sui terreni ritirati dalla produzione sui quali non vengono fatti valere titoli di ritiro, ai sensi del regolamento (CE) n. 1782/2003. Dette operazioni devono essere effettuate almeno una volta all'anno, fatto salvo il periodo di divieto annuale di intervento compreso fra il 1° marzo e il 31 luglio di ogni anno, ove non diversamente disposto dalle regioni e dalle province autonome. Il periodo di divieto annuale di sfalcio o trinciatura non può comunque essere inferiore a 150 giorni consecutivi compresi fra il 15 febbraio e il 30 settembre di ogni anno. È fatto comunque obbligo di sfalci e/o lavorazioni del terreno per la realizzazione di fasce antincendio, conformemente a quanto previsto dalle normative in vigore. In deroga all'obbligo della presenza di una copertura vegetale, naturale o artificiale, durante tutto l'anno sono ammesse lavorazioni meccaniche sui terreni ritirati dalla produzione nei seguenti casi	**1**	pratica del sovescio, in presenza di specie da sovescio o piante biocide	NON PERTINENTE	-
		2	terreni interessati da interventi di ripristino di habitat e biotopi	NON PERTINENTE	-
		3	colture a perdere per la fauna, ai sensi dell'art. 1, lettera c), del decreto del Ministero delle politiche agricole e forestali del 7 marzo 2002	NON PERTINENTE	-
		4	nel caso in cui le lavorazioni siano funzionali all'esecuzione di interventi di miglioramento fondiario	NON PERTINENTE	-
		5	sui terreni a seminativo ritirati dalla produzione per un solo anno o, limitatamente all'annata agraria precedente all'entrata in produzione, nel caso di terreni a seminativo ritirati per due o più anni, lavorazioni del terreno allo scopo di ottenere una produzione agricola nella successiva annata agraria, comunque da effettuarsi non prima del 15 luglio dell'annata agraria precedente all'entrata in produzione. Sono fatte salve diverse prescrizioni della competente autorità di gestione	NON PERTINENTE	-
C	divieto di conversione della superficie a pascolo permanente ai sensi dell'art. 2, punto 2, del regolamento (CE) n. 796/2004 ad altri usi			**PERTINENTE**	Il P.F.G. recepisce al suo interno tale divieto.
D	divieto di eliminazione degli elementi naturali e seminaturali caratteristici del paesaggio agrario con alta valenza ecologica individuati dalle regioni e dalle province autonome con appositi provvedimenti			NON PERTINENTE	-

fonte: http://burc.regione.campania.it

E	divieto di eliminazione dei terrazzamenti esistenti, delimitati a valle da muretto a secco oppure da una scarpata inerbita; sono fatti salvi i casi regolarmente autorizzati di rimodellamento dei terrazzamenti eseguiti allo scopo di assicurare una gestione economicamente sostenibile	**PERTINENTE**	Il P.F.G. recepisce al suo interno tale divieto.
F	divieto di esecuzione di livellamenti non autorizzati dall'ente gestore; sono fatti salvi i livellamenti ordinari per la preparazione del letto di semina e per la sistemazione dei terreni a risaia	**PERTINENTE**	Il P.F.G. recepisce al suo interno tale divieto.
G	divieto di esercizio della pesca con reti da traino, draghe, ciancioli, sciabiche da natante, sciabiche da spiaggia e reti analoghe sulle praterie sottomarine, in particolare sulle praterie di posidonie (Posidonia oceanica) o di altre fanerogame marine, di cui all'art. 4 del regolamento (CE) n. 1967/06	NON PERTINENTE	-
H	divieto di esercizio della pesca con reti da traino, draghe, sciabiche da spiaggia e reti analoghe su habitat coralligeni e letti di maerl, di cui all'art. 4 del regolamento (CE) n. 1967/06	NON PERTINENTE	-
I	divieto di utilizzo di munizionamento a pallini di piombo all'interno delle zone umide, quali laghi, stagni, paludi, acquitrini, lanche e lagune d'acqua dolce, salata, salmastra, nonché nel raggio di 150 metri dalle rive più esterne.	NON PERTINENTE	-
	relativamente alla lettera b) del Decreto MATTM del 17/10/2007 il periodo di divieto annuale di sfalcio compreso fra il 1° marzo e il 31 luglio di ogni anno è applicato solo per i siti individuati anche come ZPS; mentre per quelli individuati solo come SIC il divieto è previsto dal 4 maggio al 30 settembre.	NON PERTINENTE	-
	Le presenti misure di conservazione e gli eventuali piani di gestione sono coordinati con i programmi e i piani nazionali, regionali e sub-regionali che potenzialmente possono interferire con lo stato di conservazione dei siti. Di conseguenza, le autorità competenti provvedono, entro dodici mesi dalla designazione delle ZSC, ad adeguare i piani territoriali e i programmi regionali a quanto disposto dalle misure di conservazione e dai piani di gestione	NON PERTINENTE	
	Le misure di conservazione generali e sito specifiche e le azioni previste dai piani di gestione per il raggiungimento degli obiettivi di conservazione finalizzati a mantenere o migliorare lo stato di conservazione di habitat di all. A e specie di all. B del D.P.R. 357/97 e succ.mm.ii., quali misure di attuazione della Direttiva n. 92/43/CEE e del D.P.R. n. 357/97 e succ mod., costituiscono dispositivo normativo sovraordinato a quanto disposto dagli strumenti di pianificazione che derivino da norme regionali e nazionali	**PERTINENTE**	Il P.F.G. ha recepito tali dettami in fase di stesura della pianificazione allineandosi anche alla normativa regionale di riferimento.
	Il Piano Forestale Generale, i Piani forestali di cui all'art. 5 della L.R. 11/96 e succ.mm.ii., i Piani di Assestamento forestale di cui all'art. 10 della L.R. 11/96 e succ.mm.ii., i regolamenti degli usi civici, da adottare dopo la designazione delle ZSC, devono tener conto delle misure di conservazione generali e sito specifiche e di quelle indicate dai piani di gestione	**PERTINENTE**	Il P.F.G. da pieno riscontro a questo punto, analizzando, nei successivi paragrafi, le azioni con le misure di conservazione di tutte le ZSC e ZPS della Regione.
	In assenza della cartografia sulla distribuzione delle specie animali e vegetali di all. B del D.P.R. 357/97 e succ.mm.ii., realizzata dal soggetto gestore ai fini del monitoraggio dello stato di conservazione delle popolazioni, negli studi per la valutazione dell'incidenza di piani e progetti si assume che la distribuzione delle specie coincida con il loro areale potenziale di presenza, definito in base alla distribuzione del loro habitat, salvo che rilievi specifici fatti dal proponente in sede di relazione per la Valutazione di Incidenza, dimostrino il contrario	NON PERTINENTE	-
	È fatto divieto su tutto il territorio regionale di immettere nelle acque libere gamberi appartenenti a specie diverse da Austropotamobius pallipes (=A. italicus)	NON PERTINENTE	-
	Se presenti impianti eolici, qualora il risultato dei piani di monitoraggio dell'impatto sulla fauna, prescritti in fase autorizzativa, ne evidenzino la necessità, i soggetti gestori delle ZSC devono concordare con i proprietari misure per minimizzare gli impatti sulle specie di chirotteri e degli uccelli funzionali agli habitat interessati dall'impianto	NON PERTINENTE	-
	In tutti i SIC è fatto divieto di svolgere gare sportive a motore al di fuori delle strade asfaltate	NON PERTINENTE	-

fonte: http://burc.regione.campania.it

	In attuazione del DM 10/03/2015 e basandosi sui risultati dell'indagine conoscitiva dell'ISPRA sulla "Valutazione del rischio potenziale dei prodotti fitosanitari nelle Aree Natura 2000. Rapporto n° 216/2015" e delle ricerche scientifiche disponibili nella letteratura di settore, a tutela della flora degli habitat di importanza comunitaria, dell'entomofauna, dei chirotteri e dell'avifauna insettivora, in tutto il territorio dei SIC è fatto divieto dell'uso di pesticidi sistemici neonicotinoidi, in particolare quelli a base di clothianidin, thiamethoxam e imidacloprid, e dell'impiego di sementi trattate con tali prodotti; è altresì vietato l'uso e la detenzione di prodotti fitosanitari contenenti la sostanza attiva "glifosate". La misura non si applica per gli impegni già presi nell'ambito delle misure PSR Campania 2014-2020 per le adesioni volontarie alle "Norme tecniche per la difesa ed il diserbo integrato delle colture" di cui al Decreto Dirigenziale n. 43 del 14.03.2017	NON PERTINENTE	-
	La redazione di eventuali Piani di Gestione di SIC o ZSC deve basarsi sulla carta degli habitat di all. A e della distribuzione reale delle specie di all. B del D.P.R. 357/97 e succ.mod., che sono parte integrante dei Piani di Gestione e che devono essere realizzate secondo le procedure indicate nella parte "3 - Piano di Monitoraggio" di queste Misure di Conservazione	NON PERTINENTE	-
	Agli interventi, ai programmi e ai piani per i quali, alla data di pubblicazione sul BURC delle presenti Misure di Conservazione, siano conclusi i procedimenti di Valutazione di Incidenza, ai sensi dell'art. 5 del D.P.R. 375/97, in alternativa alle presenti misure di conservazione viene applicato quanto previsto dagli esiti di suddetta procedura	NON PERTINENTE	-
	Quanto disposto dalle presenti misure di conservazione non si applica alle superfici agricole e forestali che aderiscono alle misure connesse alla superficie del PSR 2014/2020, approvato dalla Commissione Europea e già sottoposto a Valutazione Ambientale Strategica integrata con la Valutazione di Incidenza	NON PERTINENTE	-

Screening sulle Misure Sito Specifiche

Introduzione

La designazione delle ZSC, secondo quanto previsto dall'articolo 4 della Direttiva Habitat e dall'Art. 3, comma 2, del D.P.R. 357/97 e ss.mm.ii. e dall'art. 2 del D.M. 17 ottobre 2007, è un passaggio fondamentale per la piena attuazione della Rete Natura 2000 perché garantisce l'entrata a pieno regime di misure di conservazione sito specifiche e offre una maggiore sicurezza per la gestione della rete e per il suo ruolo strategico finalizzato al raggiungimento dell'obiettivo di arrestare la perdita di biodiversità in Europa entro il 2020.

Le seguenti misure si aggiungono alle disposizioni nazionali e regionali in materia di conservazione e tutela della biodiversità; qualora diversamente disposto, tra quanto riportato in queste misure e quanto previsto in altri provvedimenti normativi, si intende applicare le misure più restrittive.

Le seguenti misure si applicano in tutto il territorio del SIC o, se diversamente indicato, limitatamente ai territori occupati dagli habitat e dalle specie indicate in ciascuna misura. Nelle more della realizzazione della carta degli Habitat, di cui al par. 5.3, le misure habitat specifiche si applicano secondo quanto previsto dalla tabella allegato n. 6 delle presenti Misure di conservazione.

Gli habitat e le specie, riportati tra parentesi, indicano l'obiettivo che motiva ciascuna misura.

L'allegato pone quale obiettivo primario di conservazione il mantenere lo stato di conservazione degli habitat e delle specie che nel formulario del sito, nelle tabelle 3.1 e 3.2, alla voce "valutazione globale" sono classificate

fonte: http://burc.regione.campania.it

A o B.

In riferimento alle norme di conservazione “generali” e “specifiche”, riferite alle ZSC in esame dopo aver provveduto ad effettuare ulteriori approfondimenti in merito alla sostenibilità ed inquadramento ambientale, di seguito si descrive, per quanto concerne le Misure di conservazione generali, in tutti i pSIC - ZSC della Regione Campania sono vigenti le misure minime di conservazione indicate nel Decreto MATTM del 17/10/2007.

Inquadramento normativo: duplice regime di misure di conservazione in Campania

Alla data di approvazione del Piano Forestale Generale della Regione Campania, la Rete Natura 2000 regionale risulta composta da 123 siti complessivi (108 ZSC e 31 ZPS, con alcune sovrapposizioni ZSC/ZPS sul medesimo perimetro). Su tale insieme di siti si è progressivamente stratificato un quadro di misure di conservazione articolato su due livelli:

- misure minime uniformi di cui al D.M. 17/10/2007, applicabili a tutte le ZSC/ZPS;
- misure sito-specifiche regionali, adottate con atti di Giunta e successivamente aggiornate.

Con D.G.R. n. 795 del 19/12/2017 (BURC n. 5 del 18/01/2018) la Regione Campania ha approvato le *Misure di conservazione dei SIC per la designazione delle ZSC della Rete Natura 2000*, definendo per l’intero insieme dei pSIC/ZSC regionali un quadro di obiettivi di conservazione primari e secondari (in funzione della “valutazione globale” A, B o C delle specie/habitat nei formulari standard) e un corpus di misure generali e sito-specifiche articolate per tipologia di pressione/minaccia.

Successivamente, con D.G.R. n. 617 del 14/11/2024 (BURC n. 83 del 02/12/2024), la Regione ha approvato i Piani di Gestione e le nuove Misure di conservazione di 57 siti regionali della Rete Natura 2000 (SIC/ZSC e ZPS), selezionati nell’ambito delle aree rurali B, C e D del PSR Campania 2014-2020. Per tali siti, le misure sito-specifiche sono state aggiornate, articolate in schede di azione (misure gestionali, regolamentari e trasversali) e rese coerenti con:

- i criteri minimi DM 17/10/2007;
- il “Manuale per la gestione dei Siti Natura 2000”;
- i documenti metodologici del progetto “Mettiamoci in linea” per obiettivi e misure di conservazione.

Ne deriva una situazione bifasica:

- **per 57 siti valgono oggi le nuove misure di conservazione e i Piani di Gestione** approvati con D.G.R. 617/2024 (comprensive di Carta degli habitat, regolamenti di sito e valori target dei parametri di stato di conservazione);
- **per i restanti 66 siti della Rete Natura 2000 regionale**, non ancora dotati di Piano di Gestione approvato, continuano ad applicarsi le misure di conservazione sito-specifiche adottate con D.G.R. 795/2017, integrate dal Piano di monitoraggio delle misure di conservazione regionale.

In entrambi i casi rimangono comunque pienamente vigenti, come livello minimo, le misure uniformi nazionali di

fonte: http://burc.regione.campania.it

cui al DM 17/10/2007, richiamate espressamente sia nella D.G.R. 795/2017 sia nella D.G.R. 617/2024 e recepite nei relativi allegati.

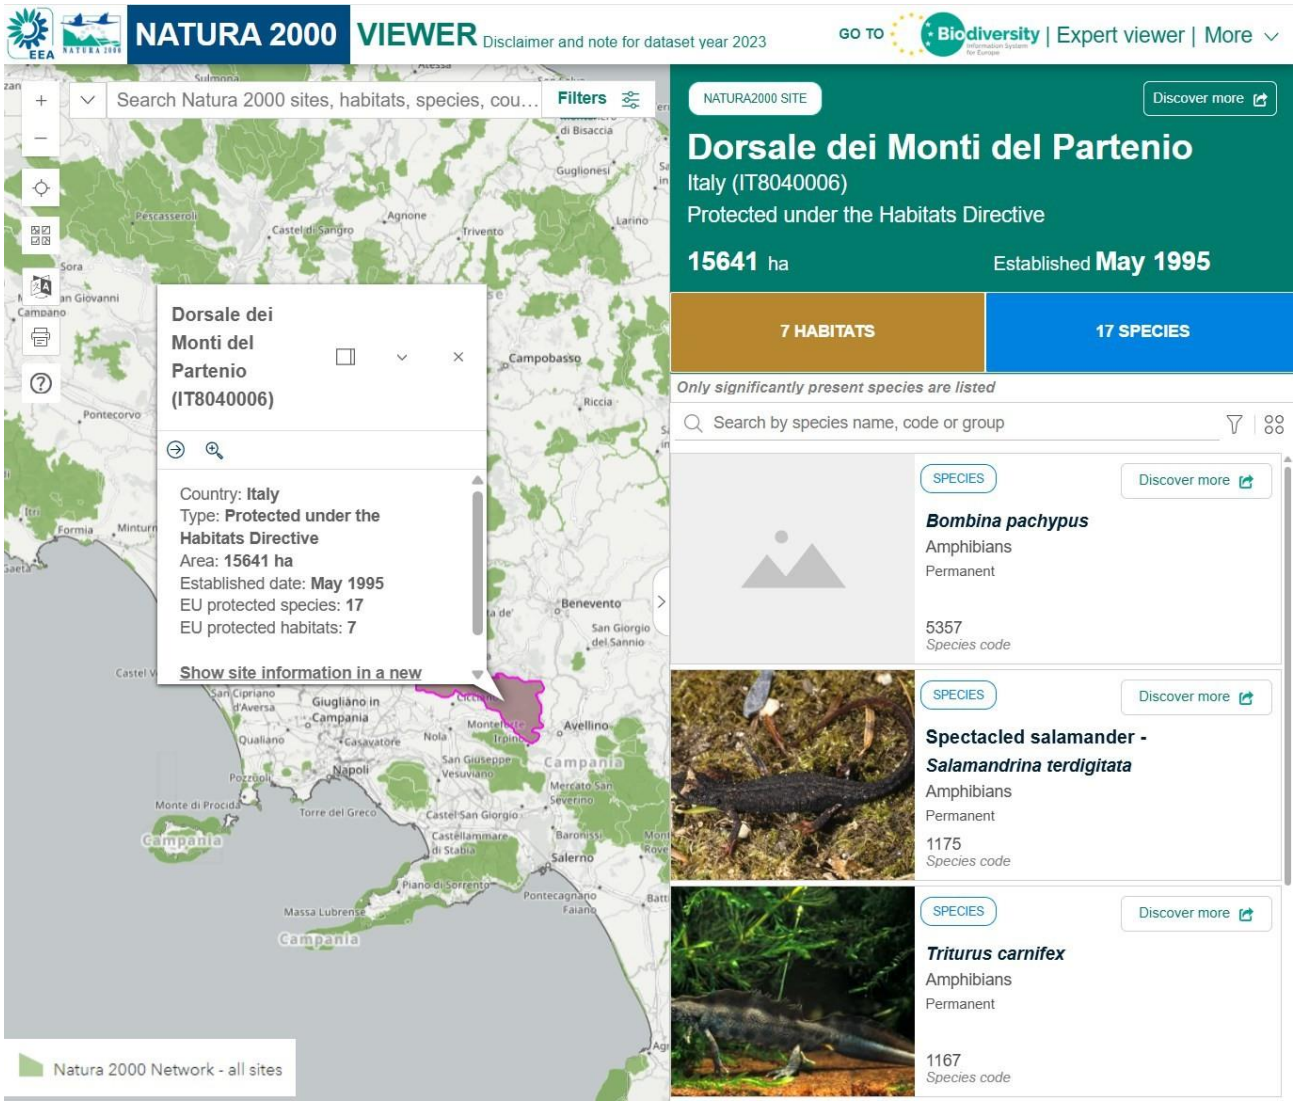
Materiali e Metodi

La metodologia adottata per la Valutazione di Incidenza Ambientale (VIncA) del Piano Forestale Generale della Regione Campania (PFG) è stata sviluppata in conformità all'art. 6 della Direttiva 92/43/CEE "Habitat", alle Linee Guida nazionali VIncA (MATTM, 2019) e al quadro regolamentare regionale (Reg. Reg. n. 1/2010; DGR 795/2017; DGR 617/2024).

La natura regionale del Piano, che interviene sull'intero sistema forestale campano, ha richiesto l'elaborazione di una metodologia ampia, sistemica e pienamente coerente con la scala ecologica dei processi che caratterizzano la Rete Natura 2000 regionale. Di seguito si descrive in modo unitario, armonizzato e strutturato l'intero percorso metodologico sviluppato.

Impostazione generale e quadro concettuale della metodologia

L'approccio è stato costruito assumendo la necessità di:



1. considerare tutti i siti Natura 2000 della Campania (108 ZSC e 31 ZPS);
2. analizzare tutte le componenti ecologiche rilevanti (habitat e specie degli Allegati);
3. distinguere tra i due regimi vigenti di misure di conservazione:
    - DGR 795/2017 (misure sito-specifiche "storiche"),
    - DGR 617/2024 (nuovi Piani di Gestione e misure aggiornate per 57 siti);
4. confrontare azioni e indirizzi del PFG con:
    - misure di conservazione vigenti,
    - pressioni e minacce identificate nei siti;
5. verificare le possibili incidenze dirette, indirette e cumulative attraverso una matrice valutativa.

La VIncA è stata quindi articolata come un processo di integrazione progressiva, basato su tre grandi sistemi informativi:

- Sistema descrittivo ecologico (habitat e specie) → standard data form;
- Sistema normativo e gestionale (misure di conservazione) → D.G.R.;
- Sistema spaziale (analisi GIS e intersezioni territoriali) → database vettoriali georiferiti.

Raccolta, omogeneizzazione e classificazione dei siti Natura 2000

fonte: http://burc.regione.campania.it

Identificazione dei siti e distinzione tra regimi normativi: tutti i 139 siti Natura 2000 presenti in Campania sono stati identificati, classificati e organizzati in due gruppi, in base al regime di misure di conservazione vigente:

- Gruppo A - siti disciplinati dalla DGR 795/2017, per i quali le misure sito-specifiche approvate nel 2017 risultano tuttora vigenti;
- Gruppo B - siti disciplinati dalla DGR 617/2024, che dispone l'adozione dei nuovi Piani di Gestione e delle nuove misure di conservazione.

Questa distinzione è essenziale per garantire che la valutazione di incidenza sia condotta in coerenza con il quadro prescrittivo effettivamente applicabile a ciascun sito.

Un archivio digitale dedicato riporta, per ogni sito:

- codice e denominazione;
- tipologia (ZSC, ZPS, ZSC/ZPS);
- appartenenza al regime 795 o 617;
- disponibilità dei Piani di Gestione;

fonte: http://burc.regione.campania.it

- elenco delle misure vigenti associate.

Analisi sistematica degli Standard Data Form (SDF)

Per ogni sito sono state analizzate integralmente le sezioni degli SDF relative a:

- habitat dell'Allegato I (codice, denominazione, priorità, estensione, stato di conservazione);
- specie di interesse comunitario (allegati II, IV, V Habitat; allegato I Uccelli; ecologia e habitat di riferimento).

I dati sono stati estratti, normalizzati e trasposti in un database unico, contenente:

- elenco regionale degli habitat (prioritari / non prioritari);
- elenco regionale delle specie suddivise per gruppi (uccelli, mammiferi, anfibi, rettili, invertebrati, pesci, flora);
- associazione tra habitat/specie e siti di presenza;
- stato di conservazione riportato negli SDF.

Questo database costituisce la base conoscitiva primaria utilizzata per l'intera VIncA.

Database delle Pressioni e Minacce (DPM)

In coerenza con le SDF e con i Piani di gestione, è stato costruito un database dedicato alle pressioni e minacce che gravano sui siti Natura 2000.

- Per i siti **DGR 795/2017**, le pressioni/minacce sono state estratte dagli allegati originali e ricodificate in formato tabellare.
- Per i siti **DGR 617/2024**, le pressioni/minacce derivano dalle "analisi di contesto" e dalle diagnosi ecologiche dei nuovi Piani di Gestione.

Il database associa ogni codice pressione/minaccia a:

- habitat e specie sensibili;
- criticità gestionali;
- potenziali interferenze con gli indirizzi del PFG.

Database delle misure di conservazione DGR 795/2017 e DGR 617/2024 (DMC)

Armonizzazione metodologica dei Piani di Gestione approvati con DGR 617/2024

L'analisi delle misure di conservazione dei 57 siti Natura 2000 disciplinati dalla **DGR 617/2024** ha presentato un livello di complessità nettamente superiore rispetto alla precedente DGR 795/2017. Infatti, i nuovi Piani di Gestione (PdG), pur essendo accomunati da uno schema generale e da riferimenti metodologici condivisi, **sono stati redatti da gruppi di progettazione differenti**, con approcci, strutture descrittive, criteri di classificazione e livelli di dettaglio **non uniformi**.

Per rendere la valutazione omogenea e scientificamente solida, è stato necessario sviluppare un processo articolato di **armonizzazione metodologica**. Questa fase è stata necessaria per "decodificare" ogni documento,

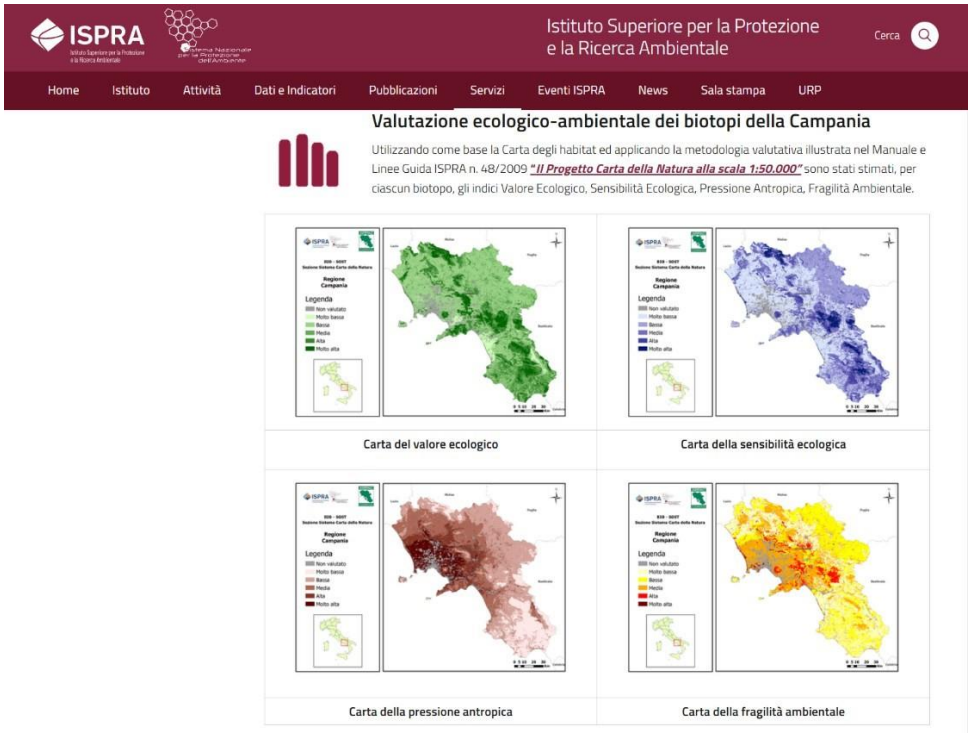
fonte: http://burc.regione.campania.it

ricostruendone la logica interna, inoltre ha rappresentato il vero nodo metodologico, poiché ha permesso di trasformare una molteplicità di sistemi descrittivi differenti in un set coerente e confrontabile.

Tutti i contenuti dei PdG sono stati inseriti in un database unificato, strutturato per armonizzare i dati e poterli integrare nel database regionale In assenza di questo lavoro preliminare, la valutazione regionale avrebbe risentito della forte disomogeneità dei PdG 617/2024, generando risultati non comparabili. Questa operazione di natura interpretativa ha richiesto uno sforzo analitico particolarmente elevato. È un elemento chiave che merita di essere esplicitato nel presente Studio, per garantire trasparenza, tracciabilità e rigore scientifico.

Sono stati predisposti due archivi paralleli, uniformi nella struttura e coerenti nella classificazione:

Misure di conservazione DGR 795/2017 per quei siti della R.N. 2000 ancora vigenti



- estratte dagli allegati PDF originali;
- suddivise per sito, per habitat e per specie;
- ricondotte a categorie funzionali (misure regolamentari, gestionali, preventive, attive).

Misure di conservazione DGR 617/2024 Per i 57 siti con Piano di Gestione approvato:

- estrazione completa da Regolamenti e Piani;
- classificazione per habitat, specie e obiettivi specifici;
- integrazione delle misure di gestione attiva, conservazione strutturale, regolamentazione accessi, prevenzione incendi, gestione forestale sostenibile.

Entrambi i sistemi sono stati integrati in una **struttura comparabile**, così da permettere un'unica lettura valutativa coerente con il regime normativo vigente.

Fonti cartografiche e metodologia GIS

fonte: http://burc.regione.campania.it

L'intero processo valutativo è stato supportato da un sistema GIS standardizzato, con dati provenienti da fonti ufficiali:

- Geoportale Nazionale (perimetri ufficiali ZSC/ZPS);
- Geoportale Regione Campania (limiti amministrativi, habitat mappati, carta forestale, uso suolo);
- Ortofoto AGEA;
- DTM/DSM ufficiali;
- Piani di Gestione approvati (per habitat e sistemi ecologici mappati).
- Carta Forestale Regionale
- Database stato di conservazione degli Ecosistemi regionali

Intersezione spaziale

Per ciascun tematismo del PFG è stata effettuata:

1. **intersezione PFG ↔ siti Natura 2000**;
2. **intersezione PFG ↔ habitat mappati**;

Ogni area di intersezione è stata valutata in base a:

- valore conservazionistico dell'habitat;
- priorità (habitat "*");
- vulnerabilità ecologica;
- misure di conservazione attive/regolamentari.

Costruzione della matrice di incidenza

La matrice di incidenza è stata costruita come **strumento integrativo finale**, collegando:

- azioni e indirizzi del PFG;
- habitat e specie presenti nei siti;
- pressioni e minacce preesistenti;
- misure di conservazione vigenti.

Modello a 4 livelli

La valutazione è articolata su quattro livelli successivi:

1. Corrispondenza spaziale (intersezione GIS).
2. Corrispondenza ecologica (sensibilità habitat/specie).
3. Corrispondenza con pressioni/minacce.
4. Corrispondenza con misure di conservazione (D.G.R. 795 e 617).

Struttura tabellare della matrice

La matrice valuta, per ogni coppia *Azione del PFG ↔ Habitat/Specie*:

- tipo di effetto (diretto/indiretto/cumulativo);

fonte: http://burc.regione.campania.it

- entità dell'effetto (scala qualitativa);
- significatività potenziale;
- eventuale rinvio alla Valutazione Appropriata (Livello II).

Questa struttura è armonizzata con le sezioni **"Matrici degli impatti"**, **"Significatività dell'incidenza"** e **"Tabella riassuntiva degli impatti"** presenti nel documento.

L'intera procedura adottata si fonda su:

- base dati completa (habitat, specie, pressioni, misure);
- rigorosa integrazione GIS;
- confronto multilivello PFG ↔Natura 2000;
- matrice finale di incidenza come strumento di sintesi, trasparenza e tracciabilità.

Verifica di coerenza del PFG: doppio screening parallelo per gruppi di siti

Alla luce di questo doppio regime di misure di conservazione, la Valutazione di Incidenza del Piano Forestale Generale verrà strutturata come doppio percorso di screening parallelo, coerente con le Linee guida nazionali VIncA (Livello I - screening) e con il principio di valutazione "per gruppi di siti omogenei" richiamato per le pre-valutazioni regionali. In sintesi:

Gruppo 1 – Siti con Piano di Gestione e misure aggiornate (D.G.R. 617/2024)

Per ciascuno dei 57 siti dotati di Piano di Gestione e nuove misure di conservazione, lo screening di incidenza del PFG verrà condotto verificando la coerenza del quadro pianificatorio forestale con:

1. Misure generali DM 17/10/2007 (criteri minimi uniformi per ZSC/ZPS);
2. Misure regolamentari e gestionali sito-specifiche contenute nei Piani di Gestione e nei relativi allegati (schede di azione, regolamenti di sito, condizioni d'obbligo, target quantitativi di stato di conservazione);
3. Obiettivi di conservazione generali e specifici per habitat e specie (tabelle obiettivi nei PdG e nei formulari aggiornati);
4. Misure trasversali (AIB, pascolo, fruizione, reti infrastrutturali, utilizzi forestali) che interagiscono direttamente con le azioni pianificate dal PFG.

Per questo gruppo, lo screening sarà quindi ancorato ai singoli Piani di Gestione e ai relativi regolamenti di sito, assumendo le nuove misure DGR 617/2024 come quadro di riferimento prevalente rispetto alle precedenti misure sito-specifiche 2017, salvo espressi rinvii contenuti nei PdG.

Gruppo 2 – Siti ancora regolati dalle misure D.G.R. 795/2017

Per i rimanenti siti della Rete Natura 2000, non ancora dotati di Piano di Gestione approvato, la verifica di coerenza del PFG sarà invece svolta con riferimento a:

1. Misure minime uniformi DM 17/10/2007;

fonte: http://burc.regione.campania.it

2. Misure di conservazione generali e sito-specifiche approvate con D.G.R. 795/2017 (incluse le norme relative a tagli forestali, pascolo, modifiche idrologiche, fruizione, infrastrutture, ecc.);
3. Obiettivi di conservazione primari e secondari riportati nell'allegato alla D.G.R. 795/2017, definiti in funzione della "valutazione globale" degli habitat e delle specie nei Formulari Standard;
4. Schema di monitoraggio regionale delle misure di conservazione (linee guida regionali di monitoraggio habitat e specie), ai fini della coerenza con gli impegni di monitoraggio ex art. 17 Dir. 92/43/CEE.

In questo secondo gruppo, lo screening del PFG assumerà dunque la D.G.R. 795/2017 come quadro regolamentare diretto di riferimento, valutando per ciascun sito la compatibilità delle azioni pianificate (indirizzi selvicolturali, pianificazione forestale territoriale, viabilità forestale, prevenzione incendi, pascolo, ecc.) con le misure di conservazione site-specifiche vigenti.

Logica operativa dello screening applicata al Piano Forestale Generale

L'intero processo è stato condotto secondo la logica dello screening specifico di incidenza per piani definito dalle Linee guida nazionali VIncA, adottando per il PFG la seguente struttura di lavoro:

1. Classificazione dei siti Natura 2000 in due macro-gruppi (Gruppo 1: 57 siti con PdG DGR 617/2024; Gruppo 2: 66 siti con sole MdC DGR 795/2017).
2. Per ciascun gruppo, definizione di una matrice di coerenza tra:
    - obiettivi e misure di conservazione (DM 17/10/2007 + DGR 617/2024 o DGR 795/2017);
    - azioni, indirizzi e misure previste dal PFG (piani forestali territoriali, PGF, criteri selvicolturali, rete viaria, misure AIB, ecc.).
3. Per ciascun sito, valutazione qualitativa delle possibili incidenze (dirette, indirette e cumulative) del PFG sugli habitat/specie obiettivo, tenendo conto delle specifiche pressioni/minacce individuate nelle schede di azione dei Piani di Gestione (Gruppo 1) o nelle misure 2017 (Gruppo 2).
4. Esito di screening per gruppi di siti omogenei, in linea con il concetto di "pre-valutazione regionale" delle Linee guida nazionali: ove il PFG risulti intrinsecamente coerente con le misure di conservazione, potrà essere esclusa a priori una incidenza significativa, fermo restando l'obbligo di VIncA puntuale per i singoli interventi attuativi che ricadano nei singoli siti.

Questo approccio di doppio screening parallelo, calibrato sui due diversi regimi di misure di conservazione, consente di:

- garantire la piena considerazione degli aggiornamenti introdotti dalla D.G.R. 617/2024 nei 57 siti già dotati di Piano di Gestione;
- assicurare al contempo la continuità del sistema di tutela nei 66 siti ancora regolati dalla D.G.R. 795/2017, evitando vuoti normativi e mantenendo il collegamento con il quadro nazionale (DM 17/10/2007, Linee guida art. 6 Dir. Habitat)

fonte: http://burc.regione.campania.it

D.G.R.N. 795 Del 19/12/2017

Con D.G.R. 795/17, sono state approvate le Misure di Conservazione dei Siti di Interesse Comunitario per la designazione delle ZSC della Rete Natura 2000 della Regione Campania.

Norme e misure di conservazione adottate per la rete natura 2000 della regione Campania specificatamente indicate nell'allegato alla deliberazione giunta regionale n. 795 del 19/12/2017 - approvazione misure di conservazione dei sic (siti di interesse comunitario) per la designazione delle ZSC (zone speciali di conservazione) della rete natura 2000 della regione Campania.

È obiettivo primario di conservazione il mantenere lo stato di conservazione degli habitat e delle specie che nel formulario del sito, nelle tabelle 3.1 e 3.2, alla voce "valutazione globale" sono classificate A o B.

È obiettivo secondario di conservazione il mantenere lo stato di conservazione degli habitat e delle specie che nel formulario del sito, nelle tabelle 3.1 e 3.2, alla voce "valutazione globale" sono classificate C.

Gli obiettivi di conservazione non considerano gli habitat e le specie che nel formulario del sito, nelle tabelle 3.1 e 3.2, alla voce "valutazione globale" non sono classificati, perché presenti nel sito in modo non significativo.

Valutazione di Sintesi sulle Pressioni e Minacce

Dall'analisi del database effettuato risulta che le pressioni e minacce pertinenti con il Piano Forestale Generale sono:

Pressione/Minaccia	Interazione con P.F.G.	Valutazione
attività forestali non elencate	La sua pertinenza con il PFG è dovuta alla stretta correlazione tra "attività forestali" e conservazione di alcune specie specifiche.	Non si necessità di Misure di mitigazione, in quanto, il PFG contrasta positivamente questa pressione attenendosi ai dettami della Gestione Forestale Sostenibile.
gestione e uso di foreste e piantagioni	La sua pertinenza con il PFG è dovuta alla stretta correlazione tra "attività forestali" e conservazione di alcune specie specifiche.	Non si necessità di Misure di mitigazione, in quanto, il PFG contrasta positivamente questa pressione attenendosi ai dettami della Gestione Forestale Sostenibile.
fuoco e soppressione del fuoco	Il PFG prevede l'adozione di strumenti come l'uso del fuoco prescritto per la prevenzione agli incendi boschivi. Questo riguarda direttamente la conservazione di habitat e specie prioritari.	**Si necessita di attuazione di Misura di mitigazione.**
agricoltura / pascolo	Il PFG tratta la tematica del pascolo secondo i dettami di sostenibilità ambientale, dando dei parametri di utilizzazione in linea con la conservazione degli habitat di riferimento.	Non si necessita di Misure di mitigazione
specie alloctone invasive	All'interno del PFG si fa specifico riferimento alla lotta alle specie alloctone invasive.	Non si necessita di Misure di mitigazione
disturbo antropico, altri disturbi ed intrusioni umane e sport e divertimenti	Il PFG tratta alcune superfici boscate regionali come fonte di utilizzazione diretta, altre come luoghi di fruizione.	**Si necessita di attuazione di Misura di mitigazione.**

Effetti del Piano sulle Misure di Conservazione

fonte: http://burc.regione.campania.it

L'analisi di sintesi relativa alla coerenza tra le Azioni del Piano Forestale Generale (PFG) e le Misure di Conservazione applicabili ai siti della Rete Natura 2000 della DGR in oggetto evidenzia un quadro valutativo complessivamente favorevole e pienamente coerente con gli obiettivi di tutela previsti dalla Direttiva 92/43/CEE e dal quadro regolamentare regionale vigente.

In primo luogo, l'analisi dimostra una **coerenza strutturale** delle Azioni del PFG con i divieti, le prescrizioni e gli obiettivi di conservazione definiti nei differenti livelli normativi. Per la quasi totalità delle misure di conservazione analizzate, il PFG risulta infatti "coerente", senza che emergano elementi di contrasto o incompatibilità. Tale risultato riflette la natura stessa del Piano, che orienta la gestione forestale regionale verso criteri di sostenibilità, tutela degli habitat forestali, prevenzione degli incendi, conservazione della biodiversità, miglioramento della funzionalità ecologica e contenimento delle pressioni antropiche.

Le misure classificate come **"non pertinenti"** riguardano prevalentemente disposizioni riferite a componenti o contesti ecologici estranei al dominio operativo del Piano (ad esempio pozze temporanee, divieti di estrazione in alveo o misure specifiche delle ZPS). La loro non pertinenza conferma che il PFG non genera pressioni indirette o effetti collaterali indesiderati sulle componenti non forestali, mantenendo un profilo di neutralità rispetto a tali misure.

Particolarmente rilevante è il fatto che numerose Azioni del PFG evidenzino una **coerenza positiva**, ossia contribuiscano attivamente al perseguimento di specifiche misure di conservazione. In tale categoria ricadono gli indirizzi relativi alla gestione selvicolturale sostenibile, agli interventi di prevenzione incendi, alla tutela delle aree ripariali, alla conservazione della necromassa e delle strutture forestali microhabitat, al miglioramento della continuità ecologica e alla regolamentazione della viabilità forestale. In questi casi, il Piano non si limita a essere compatibile con le misure di conservazione, ma rappresenta uno **strumento operativo funzionale** alla loro concreta attuazione.

Nel complesso, dall'analisi dei risultati tabellari emerge che:

- non sono presenti misure classificate come "non coerenti";
- nessuna Azione del PFG determina incidenze negative non mitigabili sulle Misure di Conservazione;
- la maggior parte delle relazioni tra Azioni del PFG e Misure di Conservazione assume carattere sinergico, con effetti favorevoli sul mantenimento dell'integrità degli habitat, sulla conservazione delle specie e sul rafforzamento della rete ecologica regionale.

Alla luce di tali evidenze, l'analisi evidenzia come il PFG sia uno strumento integrato nel quadro delle Misure di Conservazione della Rete Natura 2000. Il livello di coerenza registrato supporta la conclusione secondo cui il Piano, nell'assetto definito e alle condizioni richiamate nella presente Valutazione, si pone in continuità funzionale con il sistema di tutela dei siti Natura 2000, concorrendo attivamente alla salvaguardia e al miglioramento del loro stato di conservazione.

D.G.R.N. 617 Del 24/11/2024

Con D.G.R. 617/2024, sono state approvate le nuove Misure di Conservazione dei Siti di Interesse Comunitario per la designazione delle ZSC della Rete Natura 2000 della Regione Campania.

La designazione delle ZSC, secondo quanto previsto dall'articolo 4 della Direttiva Habitat e dall'Art. 3, comma 2, del D.P.R. 357/97 e ss.mm.ii. e dall'art. 2 del D.M. 17 ottobre 2007, è un passaggio fondamentale per la piena attuazione della Rete Natura 2000 perché garantisce l'entrata a pieno regime di misure di conservazione sito specifiche e offre una maggiore sicurezza per la gestione della rete e per il suo ruolo strategico finalizzato al raggiungimento dell'obiettivo di arrestare la perdita di biodiversità in Europa entro il 2020.

Le seguenti misure si aggiungono alle disposizioni nazionali e regionali in materia di conservazione e tutela della biodiversità; qualora diversamente disposto, tra quanto riportato in queste misure e quanto previsto in altri provvedimenti normativi, si intende applicare le misure più restrittive.

Le seguenti misure si applicano in tutto il territorio della ZSC o, se diversamente indicato, limitatamente ai territori occupati dagli habitat e dalle specie indicate in ciascuna misura. Nelle more della realizzazione della carta degli Habitat, di cui al par. 5.3, le misure habitat specifiche si applicano secondo quanto previsto dalla tabella allegato n. 6 delle presenti Misure di conservazione. Gli habitat e le specie, riportati tra parentesi, indicano l'obiettivo che motiva ciascuna misura.

Valutazione di Sintesi sulle Pressioni e Minacce

Il database unificato di tutte le pressioni e minacce estrapolate dai P.d.G. dei 57 siti della RN 2000 regionale si riassume con le seguenti considerazioni:

Pressione/Minaccia	Interazione con P.F.G.	Valutazione
Abbandono della gestione/uso delle praterie	Pertinente con le azioni di piano perché si fa riferimento diretto al valore ecologico delle radure, ponendo le basi per il loro mantenimento.	Non si necessità di Misure di mitigazione, in quanto le azioni di Piano di per se già contrastano tale minaccia, incentivando il mantenimento di radure o attività pascolive sostenibili.
Pascolo intensivo/sovrappascolo di bestiame	Pertinente con le azioni di piano, poiché la pratica del pascolo viene trattata suggerendo linee guida sostenibili che permettano una gestione del carico animale sostenibile nel rispetto degli habitat forestali.	Non si necessità di Misure di mitigazione, in quanto le azioni di Piano di per se già contrastano tale minaccia, incentivando il mantenimento di radure o attività pascolive sostenibili.
Rimozione di alberi morti o morenti	Il PFG prevede l'adozione dei concetti cardine della gestione forestale sostenibile che contempla l'aumento della biodiversità e la tutela della necromassa in bosco	Non si necessita di Misure di mitigazione
Rimozione di alberi senescenti (esclusi morti o morenti)	Il PFG prevede l'adozione dei concetti cardine della gestione forestale sostenibile che contempla l'aumento della biodiversità e la tutela della necromassa in bosco	Non si necessita di Misure di mitigazione
Specie esotiche invasive	All'interno del PFG si fa specifico riferimento alla lotta alle specie alloctone invasive.	Non si necessita di Misure di mitigazione
Tagli o sfoltimenti (esclusi i tagli a raso)	Il PFG prevede l'adozione dei concetti cardine della gestione forestale sostenibile che contempla la pratica di utilizzazione boschiva mediante l'impiego di pratiche sostenibili.	Non si necessita di Misure di mitigazione

fonte: http://burc.regione.campania.it

Vandalismo o incendi dolosi	All'interno del PFG viene contemplato il rischio di incendi, analizzando anche le principali attività di prevenzione e/o lotta.	Non si necessita di Misure di mitigazione

Effetti del Piano sulle Misure di Conservazione

La valutazione di coerenza condotta attraverso l'analisi delle Misure di Conservazione aggiornate ai sensi della D.G.R. 617/2024 evidenzia un livello di compatibilità favorevole e robusto tra il Piano Forestale Generale (PFG) e gli strumenti di tutela derivanti dai nuovi Piani di Gestione e Regolamenti delle ZSC/ZPS della Regione Campania.

Le Misure di Conservazione adottate con la DGR 617/2024 presentano un'elevata specificità tecnica, articolandosi in condizioni d'obbligo, norme regolamentari, criteri gestionali e target di stato di conservazione. Dalla analisi comparata dei risultati tabellari emerge che tutte le Azioni del PFG risultano coerenti con le Misure richiamate, senza individuare elementi di incompatibilità né interferenze tali da prefigurare incidenze negative significative. Al contrario, nella maggior parte dei casi, il contributo del Piano risulta sinergico rispetto alle finalità di tutela degli habitat, delle specie e delle funzioni ecologiche dei siti.

Particolarmente evidente è la coerenza del PFG con le Misure riguardanti:

- la conservazione e il miglioramento della **struttura dei soprassuoli forestali**, incluse le foreste miste termo-mediterranee, le faggete dell'Appennino, le formazioni a castagno e gli habitat prioritari di tipo forestale;
- la tutela delle **strutture microambientali** di importanza faunistica (necromassa, cavità, alberi maturi, elementi di naturalità), espressamente citate nei Regolamenti dei PdG 2024;
- la regolamentazione degli interventi selvicolturali, incluse le tempistiche, le tecniche a basso impatto e le limitazioni nelle aree ad alta sensibilità biologica;
- la prevenzione e la gestione degli incendi boschivi rappresentano un aspetto rilevante per la tutela diretta degli ecosistemi e degli habitat, contrastando una delle minacce principali alla loro conservazione;
- il mantenimento e il rafforzamento delle connessioni ecologiche regionali, in coerenza con la Rete Ecologica Regionale e con le invarianti del PTR;
- la gestione del pascolo, elemento delicato in numerosi siti Natura 2000 montani, rispetto al quale il PFG fornisce criteri e limiti compatibili con le misure del Regolamento 2024.

Laddove l'analisi individua un incrocio tra Misure di conservazione ed azioni di piano come "non applicabile" o "non pertinente", la motivazione risiede nella natura delle Misure, che in alcuni casi riguardano componenti ecologiche o pressioni non correlate alle Azioni del Piano (ad esempio misure per habitat acquatici puri, divieti su attività estrattive o sui disturbi venatori), confermando che il PFG non introduce alterazioni o pressioni indirette su tali comparti.

fonte: http://burc.regione.campania.it

Non emergono invece **misure classificate come non coerenti** con le Azioni del PFG. Questo dato è significativo, poiché riflette la capacità del Piano di inserirsi nel quadro regolamentare regionale senza determinare conflitti né interferenze sugli obiettivi di conservazione dei singoli siti.

Ulteriori elementi positivi derivano dalle coerenze di tipo **proattivo**: alcune Azioni del PFG sono infatti individuate nella tabella come direttamente funzionali all'attuazione delle Misure, in particolare per quanto riguarda:

- la gestione attiva e la rinaturalizzazione dei popolamenti;
- la salvaguardia delle specie forestali autoctone;
- il contrasto alle specie alloctone invasive;
- il miglioramento della qualità paesaggistica e della stabilità idrogeologica;
- la riduzione del disturbo antropico diffuso.

Nel complesso, dal quadro tabellare emerge che il PFG si configura come uno strumento di coordinamento e rafforzamento dei Piani di Gestione approvati con DGR 617/2024:

- ne recepisce le misure,
- ne implementa i criteri,
- ne amplia l'efficacia operativa,
- e non introduce elementi di rischio aggiuntivo per la conservazione.

Pertanto, la valutazione conclusiva sulla coerenza mostra che il PFG della Regione Campania risulta **allineato, compatibile e funzionalmente favorevole** al sistema delle Misure di Conservazione aggiornate, concorrendo alla loro effettiva attuazione e contribuendo alla salvaguardia dell'integrità dei siti Natura 2000.

Matrici degli impatti

(Capitolo 3.4 delle Linee Guida Nazionali per la VIncA, ART. 6, paragrafi 3 e 4 – paragrafo III. Analisi ed individuazione delle incidenze sui siti Natura 2000)

- La suddivisione dell'iter progettuale in fasi generatrici di possibili impatti si è resa necessaria per chiarire meglio gli effetti negativi sull'ambiente circostante e risulta utile a comprendere quali sono quelle che con maggiori probabilità potrebbero interferire negativamente su ecosistema, flora e fauna. Nelle tabelle successive, i risultati dell'analisi vengono riassunti in altrettante matrici, onde meglio evidenziare la presenza/assenza di incidenza sulle principali componenti interessate al vincolo di protezione.

AZIONI DI PIANO

A1	Promuovere una governance forestale in Campania basata sulla cooperazione istituzionale, l'integrazione di strumenti e politiche, la partecipazione e condivisione degli obiettivi di Gestione Forestale Sostenibile (GFS).
A2	Estendere la superficie dei beni silvo-pastorali di proprietà pubblica, privata e collettiva della Campania dotati di piani di gestione forestale
A3	Promuovere la pianificazione forestale di area vasta (Piani Forestali di Indirizzo Territoriale)
B1	Conservazione e miglioramento della biodiversità forestale nella rete regionale di aree protette
B2	Gestione attiva dei boschi di protezione.
B3	Incrementare la capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica del territorio e tutela delle acque
B4	Prevenzione attiva dei rischi naturali o antropici, incendi, calamità naturali ed eventi catastrofici
C1	Curare i rimboschimenti storici della Campania
C2	Valorizzare in chiave multifunzionale le foreste urbane e periurbane
C3	Curare e proteggere i boschi planiziali della Campania
C4	Tutela e valorizzazione dei castagneti da frutto della Campania
C5	Tutelare i boschi vetusti e gli alberi monumentali
C6	Promuovere la gestione sostenibile dei prati e pascoli permanenti
C7	Promuovere e valorizzare i sistemi agroforestali
D1	Rafforzare la capacità operativa delle imprese boschive. Promuovere la qualificazione degli operatori forestali
D2	Promuovere la certificazione delle foreste del territorio regionale e la tracciabilità lungo tutta la filiera, dal tronco al mobile finito
D3	Riconoscere e remunerare i servizi di interesse pubblico, ambientale e sociale forniti dalle aree forestali (foreste e pascoli) e mantenuti ed accresciuti dalla GFS
D4	Promozione delle produzioni forestali non legnose in una prospettiva di filiera
D5	Adesione al Cluster legno-foresta italiano e costituzione del Cluster legno foresta della Campania
E1	Valorizzare le 10 foreste regionali come "laboratori verdi multifunzionali" e centri di diffusione permanente della GFS in Campania

fonte: http://burc.regione.campania.it

E2	Valorizzazione multifunzionale della viabilità forestale e silvo-pastorale e della sentieristica in Campania
F1	Promuovere un programma integrato di monitoraggio e cartografia delle risorse forestali della Campania
F2	Implementazione dello Sportello unico regionale per le attività forestali (SUAF)
F3	Promozione di iniziative e programmi divulgativi per rafforzare la consapevolezza pubblica dell'importanza e il ruolo ecologico del patrimonio forestale della Campania
G1	Valorizzare e potenziare i vivai forestali; estendere la superficie dei boschi da seme; valorizzare le risorse genetiche; potenziare la produzione di materiale di propagazione forestale
G2	Promozione di tecniche forestali per il recupero dei siti degradati in Campania

Effetti su Habitat ed habitat di specie

In chiave di lettura si specifica che, come decodificato dalle succitate Linee Guida, gli impatti saranno valutati con riferimento al grado di conservazione dell'habitat (o degli habitat) individuati cartograficamente con la nuova Carta degli Habitat redatta in fase di stesura dei P.D.G. (D.G.R. 617/2024), coadiuvato dalle indagini in campo effettuate; e quindi in funzione delle specie che li rappresentato, tenendo conto degli obiettivi di conservazione delle ZSC e ZPS. All'uopo gli impatti sono valutati secondo la codifica seguente:

- (**D**) diretto / (**I**) indiretto:
- (**B**) breve / (**L**) lungo termine
- (**U**) durevole / (**R**) reversibile
- (**0**) nullo

Significatività dell'incidenza del piano

Per una maggiore tutela delle componenti biotiche della ZSC e per mitigare ogni possibile impatto, con riferimento all'Allegato I della Direttiva 79/409/CEE, si descrivono i fattori di minaccia e di disturbo riferiti agli uccelli migratori (elencati e non), ai mammiferi, ai rettili e anfibi, e agli invertebrati classificati come specie prioritaria, nonché il tipo di impatto e le relative misure di mitigazione alla conservazione.

Per tale motivo di seguito è stata elaborata una matrice di incidenze differenziata per ogni specie sopracitata, specificando il tipo di impatto.

La seguente matrice è sviluppata a partire dai dati eco - etologici delle specie potenzialmente presenti nei Siti di Interesse Comunitario suddetti; questi, uniti ai fattori di minaccia conosciuti per ogni singola specie (quando presenti) ed alle caratteristiche ecologiche e vegetazionali dell'area di intervento, sono di ausilio per stabilire la potenziale significatività delle incidenze dovute al P/P/P/I.

Metodologia di valutazione della significatività dell'incidenza

fonte: http://burc.regione.campania.it

La stima del livello di significatività delle possibili incidenze del progetto è stata condotta in coerenza con le *Linee guida nazionali per la Valutazione di Incidenza (MATTM, 2019)*, attuative dell'art. 6 della Direttiva 92/43/CEE "Habitat" e recepite dalla normativa nazionale e regionale vigente.

L'intero processo valutativo si è basato sui seguenti principi:

Evidenze scientifiche comprovabili

La valutazione è fondata su dati oggettivi, ufficiali e verificabili, in particolare:

- cartografie ufficiali degli habitat e delle specie della Rete Natura 2000 (ISPRA, Ministero dell'Ambiente, Regione Campania - SIT Natura 2000), vedi paragrafo 5.2.2. del presente studio;
- *Piano di Gestione e Regolamento di tutte le ZSC e ZPS della Regione Campania* (rev. maggio 2024) con relative misure di conservazione, pressioni, minacce e obiettivi di gestione;
- banche dati scientifiche nazionali (ISPRA, CREA) e pubblicazioni tecnico-scientifiche pertinenti (manuali di interpretazione degli habitat UE, rapporti di monitoraggio nazionali e regionali);
- rilievi diretti in campo e osservazioni ambientali documentate da report fotografici (vedi paragrafo 5.1.4 del presente studio) - aggiungi frase su analisi e indagini anche indirette effettuate coerenti con il sito e il progetto da esaminare .

Metodi coerenti

La stima dell'incidenza è stata eseguita secondo metodologie trasparenti e coerenti con le Linee guida, applicando criteri standardizzati che garantiscono la riproducibilità delle valutazioni:

- utilizzo di matrici incidenza-componente ambientale per individuare possibili effetti diretti e indiretti su habitat, specie e processi ecologici;
- valutazione parametrica della significatività in base a estensione spaziale, intensità, durata temporale, frequenza e reversibilità degli effetti;
- analisi degli effetti cumulativi e sinergici con altre pressioni note o progetti in atto, come prescritto dall'art. 6 della Direttiva Habitat;
- confronto con gli obiettivi di conservazione specifici definiti per la ZSC interessata (vedi paragrafo 7.3.1. del presente studio).

Principio di precauzione

Considerata la natura dei siti Natura 2000 e la tutela prioritaria degli habitat e delle specie, la valutazione è stata improntata al principio di precauzione: in presenza di incertezza o di dati non pienamente conclusivi, l'analisi ha adottato un approccio cautelativo, assumendo la possibilità di potenziale incidenza fino a prova contraria. Vedasi le "possibili" incidenze che vengono attribuite alle singole specie nella tabella 8.2.4.1 nella quale è stato attribuito una "potenziale" incidenza anche a specie che potrebbero esser presenti, ma delle quali non è stata riscontrata una prova diretta.

fonte: http://burc.regione.campania.it

Criterio di significatività dell'incidenza

Per una maggiore tutela delle componenti biotiche della ZSC e per mitigare ogni possibile impatto, con riferimento all'Allegato I della Direttiva 79/409/CEE, vengono sviluppati di seguito il grado di significatività delle incidenze in funzione dei fattori di minaccia e di disturbo riferiti agli uccelli migratori (elencati e non), ai mammiferi, ai rettili e anfibi, e agli invertebrati classificati come specie prioritaria, nonché il tipo di impatto e le relative misure di mitigazione alla conservazione.

Il tutto viene schematizzato per ogni habitat di specie e per ogni specie di interesse comunitario, mediante l'associazione di una significatività di incidenza del tipo:

- **Nulla** (non significativa - non genera alcuna interferenza sull'integrità del sito)
- **Bassa** (non significativa - genera lievi interferenze temporanee che non incidono sull'integrità del sito e non ne compromettono la resilienza)
- **Media** (significativa, mitigabile)
- **Alta** (significativa, non mitigabile)

"La classificazione della significatività dell'incidenza è stata effettuata sulla base dei criteri stabiliti dalle Linee guida nazionali VIncA (MATTM 2019) e dalla Guida alla Valutazione di Incidenza della Commissione Europea (2019). In particolare, sono stati considerati: (i) estensione spaziale dell'impatto rispetto all'habitat o alla popolazione della specie, (ii) durata temporale dell'effetto, (iii) reversibilità, (iv) intensità e gravità, (v) sensibilità ecologica e stato di conservazione. L'incrocio di questi parametri ha consentito di attribuire a ciascuna potenziale incidenza un livello di significatività tra: nulla/non significativa - bassa - media - alta."

Criteri per la determinazione dei livelli di significatività

- Estensione spaziale dell'impatto
    - Puntuale/locale (≤1% dell'habitat o popolazione)
    - Limitato (1-10%)
    - Ampio (10-30%)
    - Esteso (>30%)
- Durata temporale
    - Breve (giorni - settimane, reversibile)
    - Media (mesi - alcuni anni)
    - Lunga (oltre un ciclo ecologico)
    - Permanente
- Reversibilità/recuperabilità
    - Totale e rapida
    - Parziale/medio termine

fonte: http://burc.regione.campania.it

- Difficile o impossibile

- Intensità/gravità dell'effetto
  - Disturbo lieve o temporaneo (es. rumore)
  - Alterazione moderata (es. riduzione temporanea di habitat)
  - Alterazione rilevante (es. perdita di habitat di specie protette)
  - Compromissione grave (es. frammentazione irreversibile)
- Sensibilità ecologica
  - Considera lo status di conservazione dell'habitat/specie (direttive UE, priorità, minacce note, vulnerabilità).
  - Esempio: un piccolo impatto su un habitat prioritario 9260 pesa molto più di un impatto simile su un habitat comune.

Attribuzione dei livelli di significatività

Incrociando i criteri sopra (in genere con una matrice o tabella), puoi definire così:

Nullo/non significativo → incidenza assente o irrilevante; effetti trascurabili, temporanei, completamente reversibili; non minacciano habitat/specie né obiettivi di conservazione.

Bassa → effetti localizzati e di breve durata; reversibili; interessano porzioni marginali o non sensibili di habitat/specie.

Media → effetti di estensione maggiore o di durata significativa; parzialmente reversibili; possono ridurre la qualità o la funzionalità ecologica di habitat/specie.

Alta → effetti estesi, permanenti o irreversibili; perdita di habitat o individui di specie di interesse comunitario; possibile compromissione degli obiettivi di conservazione e dell'integrità del sito.

Per tale motivo di seguito è stata elaborata una matrice di incidenze differenziata per ogni specie sopracitata, specificando il tipo di impatto.

La seguente matrice è sviluppata a partire dai dati eco - etologici delle specie potenzialmente presenti nei Siti di Interesse Comunitario suddetti; questi, uniti ai fattori di minaccia conosciuti per ogni singola specie (quando presenti) ed alle caratteristiche ecologiche e vegetazionali dell'area di intervento, sono di ausilio per stabilire la potenziale significatività delle incidenze dovute al P/P/P/I di "*Redazione di Piano Forestale Generale per la Regione Campania*"

Significatività dell'Incidenza su Habitat e specie di interesse comunitario riscontrati

Identificazione della Significatività delle Incidenze (sulle componenti abiotiche)

Di seguito si analizzano le aree di intervento (e non intervento) in relazione alla distribuzione degli habitat

fonte: http://burc.regione.campania.it

presenti mediante l'incrocio con la carta della Natura dell'ISPRA reinterpretata in chiave Habitat Rete Natura 2000 – EUNIS.

Successivamente si elencano gli aspetti vulnerabili del sito rispetto alle interferenze individuate, tenendo conto della qualità, della capacità di rigenerazione delle risorse naturali della zona e della capacità di carico dell'ambiente naturale, con riferimento minimo alle cartografie Corine Land Cover, e a maggior dettaglio con la carta degli Habitat incrociate con gli opportuni sopralluoghi di campo.

Utilizzo delle risorse naturali

Con riferimento alle risorse ambientali (*suolo, aria, acqua*) si riporta di seguito l'analisi delle possibili incidenze.

SUOLO	L'attuazione del Piano Forestale Generale non comporta trasformazioni fisiche del territorio, né movimentazioni, sbancamenti, infrastrutturazioni o opere che possano generare alterazioni dirette del suolo. Il PFG, quale strumento di pianificazione sovraordinata, produce esclusivamente indirizzi strategici e linee guida per la gestione sostenibile del patrimonio forestale regionale. Gli effetti potenziali sul suolo sono pertanto indiretti, legati alle buone pratiche che il PFG promuove in materia di: • prevenzione dell'erosione dei versanti; • aumento della copertura forestale stabile; • mantenimento della lettiera naturale e della necromassa; • gestione dei disturbi (tagli, incendi, pascolo) secondo criteri a basso impatto; • promozione di tecniche selvicolturali orientate alla continuità strutturale e alla protezione idrogeologica. L'insieme degli indirizzi del Piano favorisce una significativa riduzione dei processi di degrado (erosione, ruscellamento, compattazione), con conseguenti benefici per la stabilità dei versanti e la funzionalità ecologica dei suoli forestali. **Valutazione della significatività: → Incidenza NON significativa** e prevalentemente positiva per il suolo, in quanto il PFG migliora le condizioni di tutela pedologica e di stabilità dei sistemi forestali regionali.
ARIA	Il PFG non introduce attività che generino emissioni, combustioni, polveri, sostanze odorigene o processi industriali. Non sono previste opere cantieristiche né movimentazioni che possano produrre particolato o alterare la qualità dell'aria. Gli effetti indiretti sul medio-lungo periodo sono invece favorevoli, in quanto il Piano: • rafforza la funzione di sink di carbonio delle foreste regionali; • promuove una gestione che aumenta l'accumulo di biomassa stabile; • contribuisce alla mitigazione degli effetti del cambiamento climatico; • riduce le superfici potenzialmente soggette a incendi boschivi, principale fonte di emissioni acute in ambito forestale; • favorisce la continuità e l'efficienza dei popolamenti forestali, aumentando la capacità di assorbimento della CO_2. **Valutazione della significatività: → Incidenza NON significativa** e con effetti positivi, riferiti al contributo climatico e alla riduzione delle emissioni derivanti da eventi catastrofici (incendi, dissesti).
ACQUA	La componente idrica avrà un tendenziale miglioramento grazie all'attuazione del PFG, in quanto gli indirizzi del Piano favoriscono la stabilità dei versanti e dei suoli forestali, riducendo il rischio di erosione e di trasporto solido verso i corsi d'acqua. La gestione forestale sostenibile orientata dal Piano contribuisce inoltre a: • migliorare la **capacità di infiltrazione** e la ricarica delle falde; • stabilizzare le superfici boscate nelle aree a maggiore fragilità idrogeologica; • ridurre l'impatto dei processi di ruscellamento e dilavamento; • tutelare gli habitat igrofili, dei valloni e delle testate di bacino; • migliorare la **regolazione idrologica** nei bacini forestali, con effetti positivi sulla qualità delle acque superficiali e sotterranee. Non essendo previste opere di captazione, escavazione o modifica dei reticoli idrografici, il Piano non determina pressioni negative dirette sulla componente idrica. **Valutazione della significatività: → Incidenza NON significativa**, con effetti **positivi** sulla regolazione idraulica e sulla riduzione del rischio idrogeologico diffuso.

Fabbisogno nel campo dei trasporti, viabilità e reti infrastrutturali

Con riferimento al fabbisogno di mobilità si riporta di seguito l'analisi delle possibili incidenze connesse alla realizzazione del progetto.

TRASPORTI	Componente non pertinente per la tipologia di Piano/Programma oggetto di analisi.
VIABILITÀ	Componente non pertinente per la tipologia di Piano/Programma oggetto di analisi.
RETI INFRASTRUTTURALI	Componente non pertinente per la tipologia di Piano/Programma oggetto di analisi.

Emissioni: scarichi, rifiuti, rumori, inquinamento luminoso

Con riferimento alle emissioni si riporta di seguito l'analisi delle possibili incidenze.

SCARICHI emissioni solide emissioni liquide emissioni gassose	Componente non pertinente per la tipologia di Piano/Programma oggetto di analisi.
PRODUZIONE DI RIFIUTI	Componente non pertinente per la tipologia di Piano/Programma oggetto di analisi.
EMISSIONI DI RUMORE	Componente non pertinente per la tipologia di Piano/Programma oggetto di analisi.
EMISSIONI LUMINOSE	Componente non pertinente per la tipologia di Piano/Programma oggetto di analisi.
RUMORE E VIBRAZIONI	Il Piano Forestale Generale non prevede attività operative, cantieri, movimentazioni meccanizzate o realizzazione di infrastrutture che possano generare emissioni acustiche o vibrazionali. Gli indirizzi del PFG hanno carattere strategico e normativo, rivolto alla gestione sostenibile delle foreste, senza comportare esecuzione diretta di interventi. Le attività selvicolturali che potranno essere attuate in futuro (tagli colturali, manutenzioni, interventi idraulico-forestali) saranno sempre oggetto di specifica pianificazione e sottoposte a valutazione ambientale, garantendo la mitigazione delle emissioni acustiche a livello locale. **Valutazione della significatività: → Assenza di incidenze significative**. Il rumore non subisce variazioni legate al PFG; eventuali azioni di piano future saranno valutate in sede di stesura di Piani specifici di dettaglio più operativo.

Per quanto analizzato è possibile affermare che **i potenziali disturbi non indurranno rilevanti incidenze sui siti in questione.**

Interferenze con il sistema naturale

Con riferimento agli aspetti ecologici ed ambientali necessari per la conservazione di specie vegetali e animali

fonte: http://burc.regione.campania.it

(flora, fauna, invertebrati etc..) di seguito si analizzano gli impatti e le interferenze sugli habitat, habitat di specie e connessioni ecologiche riportando le possibili incidenze e le mitigazioni da apportare in fase di esercizio.

HABITAT (perdita e/o frammentazione)	Il Piano Forestale Generale (PFG) non prevede la realizzazione diretta di interventi trasformativi sul territorio (nuove infrastrutture, sbancamenti, cambi di destinazione d'uso), ma definisce indirizzi di gestione forestale da applicare attraverso successivi strumenti attuativi (PFIT, PGF, piani aziendali), ciascuno sottoposto a specifica VIncA. In questo quadro, il PFG non determina perdita diretta di habitat né nuove frammentazioni fisiche della copertura forestale; al contrario, le azioni di piano: • promuovono il mantenimento e il miglioramento strutturale dei popolamenti forestali; • favoriscono l'evoluzione verso stadi più maturi e complessi, con aumento di eterogeneità interna; • scoraggiano trasformazioni di uso del suolo in contrasto con gli obiettivi di conservazione; • integrano gli obiettivi e le misure previste dai Piani di Gestione e Regolamenti dei siti Natura 2000. Eventuali effetti locali di frammentazione potranno derivare esclusivamente da singoli interventi futuri, che resteranno comunque vincolati alle Misure di Conservazione e sottoposti a VIncA di dettaglio. **Valutazione della significatività: → Incidenza negativa significativa non riscontrata** a livello di PFG. Il Piano produce nel complesso effetti neutri o positivi sul mantenimento e sul miglioramento degli habitat forestali, senza determinare perdita o frammentazione diretta.
HABITAT DI SPECIE (perdita e/o frammentazione)	Gli habitat di specie (microhabitat, siti di alimentazione, riproduzione, rifugio, svernamento) risultano influenzati in modo indiretto dalle modalità di gestione dei popolamenti forestali e dalla continuità degli habitat principali. Le azioni del PFG, orientate a: • conservare e incrementare la struttura verticale e orizzontale dei boschi; • mantenere necromassa, cavità, alberi maturi e microstrutture utili a chirotteri, uccelli forestali e fauna saproxilica; • ridurre il disturbo diffuso e la semplificazione eccessiva dei soprassuoli; • favorire il mantenimento di mosaici forestali-arbustivi-prativi di elevato pregio, non comportano riduzione diretta degli habitat di specie, né introducono interventi tali da generare frammentazione sistematica su scala regionale. Gli eventuali interventi selvicolturali discendenti dal PFG dovranno, a scala di dettaglio, rispettare le Misure di Conservazione dei singoli siti, le indicazioni dei Piani di Gestione e le specifiche prescrizioni relative alle specie di interesse comunitario, con possibilità di modulare epoche, intensità e tecniche di taglio in funzione dei cicli biologici. **Valutazione della significatività: → Incidenza negativa significativa non riscontrata**. Il PFG, per la sua natura strategica e per il richiamo esplicito alle Misure di Conservazione, determina nel complesso un effetto favorevole alla qualità e continuità degli habitat di specie.
CONNESSIONI ECOLOGICHE	Le connessioni ecologiche (corridoi forestali, dorsali boscate, valloni, reti ripariali, fasce di margine agro-forestale) costituiscono l'ossatura funzionale sia della Rete Natura 2000 sia della Rete Ecologica regionale. Il PFG: • riconosce il ruolo delle foreste come infrastruttura ecologica principale a scala regionale; • promuove il mantenimento della continuità dei complessi boscati lungo le dorsali montane e nei sistemi vallivi; • orienta la gestione in modo da evitare la frammentazione eccessiva dei soprassuoli; • integra gli obiettivi del PTR e dei PTCP relativi alla Rete Ecologica, rafforzandone il disegno. Non sono previste nuove opere lineari o barriere fisiche che possano interrompere corridoi esistenti; al contrario, la gestione attiva proposta dal Piano è funzionale a prevenire il degrado e la perdita di funzionalità delle connessioni ecologiche (es. dopo incendi, schianti, dissesti). Eventuali criticità locali potranno emergere solo nella progettazione di interventi puntuali (viabilità forestale, infrastrutture di servizio), che saranno comunque oggetto di specifica valutazione.

fonte: http://burc.regione.campania.it

	Valutazione della significatività: → Incidenza complessiva NON significativa in senso negativo. Il PFG contribuisce, nel medio-lungo termine, a mantenere e rafforzare le connessioni ecologiche regionali, con effetti prevalentemente positivi sulla continuità della Rete Natura 2000.
FLORA	Il PFG non introduce nuovi fattori di pressione diretta sulla flora di interesse comunitario, né prevede interventi di rimozione su larga scala della vegetazione naturale. Gli indirizzi di gestione: • favoriscono la conservazione degli habitat forestali naturali e seminaturali che ospitano le specie floristiche di pregio; • sostengono l'evoluzione verso stadi più maturi, nei quali aumenta la diversità strutturale e microambientale, con potenziali benefici per molte specie vegetali; • orientano le pratiche selvicolturali in modo da contenere impatti su specie rare e habitat sensibili (valloni umidi, radure, ambienti rupestri, ecc.); • richiamano i Piani di Gestione ZSC/ZPS e le relative Misure di Conservazione, che prescrivono esplicitamente tutele floristiche. Non sono previste attività sistematiche di drenaggio, bonifica, dissodamento o conversione a uso agricolo intensivo che potrebbero determinare perdita di flora di interesse conservazionistico. **Valutazione della significatività: → Incidenza negativa significativa non rilevata** a livello di PFG. Gli effetti attesi sono neutri o moderatamente positivi, subordinati alle modalità di attuazione delle azioni di piano a scala locale, che saranno regolamentate e valutate caso per caso.
FAUNA	La fauna di interesse comunitario (mammiferi, uccelli, anfibi, rettili, invertebrati) risulta influenzata principalmente tramite: • la qualità e continuità degli habitat forestali; • la disponibilità di siti di rifugio, riproduzione e alimentazione; • il livello di disturbo antropico associato agli interventi di gestione. Il PFG: • promuove la gestione sostenibile dei popolamenti forestali, con attenzione alla struttura dei boschi e al mantenimento di elementi chiave per la fauna (necromassa, cavità, margini ecotonali, radure naturali, boschi maturi); • recepisce e integra le Misure di Conservazione dei siti Natura 2000, che prevedono specifiche prescrizioni faunistiche (periodi di disturbo, limiti alle attività in fase riproduttiva, tutela dei siti di rifugio); • non prevede un aumento generalizzato del disturbo antropico, né nuove infrastrutture lineari ad alta capacità che possano incrementare mortalità diretta o frammentazione. Eventuali effetti temporanei di disturbo (rumore, presenza operatori, mezzi) potranno verificarsi solo in fase di attuazione di singoli interventi selvicolturali, ma saranno gestiti attraverso: • regolazione dei periodi di intervento; • limitazione delle superfici interessate; • adozione di tecniche a basso impatto, in coerenza con i Piani di Gestione e le Linee Guida VIncA. **Valutazione della significatività: → Nessuna incidenza negativa significativa alla scala del PFG**. Gli effetti complessivi risultano neutri o favorevoli alla fauna, grazie al miglioramento della qualità e della continuità degli habitat forestali e alla subordinazione delle azioni attuative alle Misure di Conservazione e alle procedure di VIncA di dettaglio.
CLIMA E MICROCLIMA	Il PFG, pur non operando direttamente sul territorio, concorre a stabilizzare e incrementare i servizi ecosistemici delle foreste regionali, inclusa la regolazione climatica. Le principali ricadute indirette sono: • incremento dello stoccaggio del carbonio e riduzione delle emissioni complessive; • maggiore resilienza dei popolamenti forestali ai cambiamenti climatici; • mitigazione dell'isola di calore nelle aree periurbane interessate da espansione boschiva; • miglioramento della continuità vegetazionale e degli effetti sul microclima locale; • riduzione degli incendi, principale fattore emissivo negativo negli ecosistemi forestali.

fonte: http://burc.regione.campania.it

	Non si generano invece alterazioni climatiche negative o perturbazioni microclimatiche. **Valutazione della significatività: → Incidenza NON significativa e positiva**, con effetti favorevoli sulla regolazione climatica e sulla resilienza degli ecosistemi forestali.
RISCHIO INCENDI	Il PFG ha un ruolo determinante nella prevenzione degli incendi boschivi, essendo direttamente collegato alle misure del Piano AIB regionale e alla gestione attiva del bosco. Il Piano favorisce: • riduzione del combustibile tramite gestione selvicolturale programmata; • aumento della stabilità e della resilienza delle formazioni forestali; • diminuzione della continuità del combustibile nelle zone a rischio; • rafforzamento della sorveglianza territoriale attraverso la pianificazione; • mitigazione dei fenomeni estremi legati alla siccità. Poiché non prevede azioni operative immediate, il PFG non aumenta il rischio, ma al contrario crea il quadro strategico che ne riduce gli effetti. **Valutazione della significatività: → Incidenza NON significativa**, con effetti nettamente positivi legati alla prevenzione e gestione del rischio incendi.
RISCHIO IDROGEOLOGICO	Il Piano Forestale Generale costituisce uno strumento di pianificazione orientato alla protezione del suolo e alla stabilizzazione dei versanti. Gli indirizzi del PFG prevedono: • conservazione della copertura boschiva nelle aree più fragili; • gestione selvicolturale a basso impatto in zone sensibili; • misure di prevenzione dell'erosione e dei fenomeni di instabilità; • promozione di interventi idraulico-forestali sostenibili e coerenti con i Piani di Bacino; • mantenimento della continuità vegetazionale nelle zone ripariali e negli impluvi. Non sono previsti interventi di dissodamento, apertura piste, sbancamenti o lavori che possano innescare movimenti franosi o aumentare il rischio idraulico. **Valutazione della significatività: → Incidenza NON significativa**, con effetti indiretti positivi in termini di riduzione del rischio idrogeologico e miglioramento della stabilità dei versanti.

Paesaggio

La redazione del Piano Forestale Generale (PFG) non costituisce un intervento operativo sul territorio, ma un atto di pianificazione sovraordinata che definisce obiettivi, indirizzi e linee strategiche per la gestione del patrimonio forestale regionale. Nonostante la natura non esecutiva, il PFG può generare incidenze indirette sulla componente Paesaggio, in quanto orienta la futura pianificazione operativa (PFIT, Piani di Gestione Forestale) e incide sui sistemi territoriali regolati dal Codice del Paesaggio (D.Lgs. 42/2004, art. 135-145).

Il Piano insiste su strategie che mirano alla gestione attiva, alla continuità ecologica, alla conservazione dei boschi maturi, alla riduzione del rischio incendi e all'incremento dei servizi ecosistemici. Tali obiettivi, descritti diffusamente nelle sezioni 8, 9 e 15 del PFG (Indirizzi di gestione, boschi di protezione, azioni del Piano), risultano coerenti con le finalità paesaggistiche dell'art. 131 e 133 del Codice del Paesaggio, e puntano al mantenimento del "carattere identitario dei paesaggi rurali e forestali".

Come stabilito dal Regolamento 3/2017 (art. 5, comma c), il PFG deve coordinarsi con il Piano Paesaggistico regionale. La struttura del Piano e la Carta delle Risorse Forestali promuovono un approccio ecosistemico e integrato che agevola la lettura paesaggistica dei sistemi forestali, contribuendo alla tutela delle invarianti ecologiche, dei versanti boscati e dei paesaggi agrari tradizionali (es. castagneti da frutto).

fonte: http://burc.regione.campania.it

Gli effetti potenzialmente rilevanti sono positivi e consistono in maggiore qualità scenica dei paesaggi collinari e montani derivante dal miglioramento strutturale dei popolamenti forestali; mantenimento e recupero dei castagneti tradizionali, riconosciuti nel Piano come elementi di valore paesaggistico-identitario; tutela dei mosaici paesaggistici montani (boschi - pascoli - arbusteti), disciplinati nel PFG e centrali per PTPR e Rete Natura 2000; prevenzione del degrado paesaggistico connesso a incendi, dissesti e abbandono colturale.

Non emergono potenziali impatti negativi significativi, in quanto il Piano non introduce nuove trasformazioni, non prevede radicali conversioni d'uso, non consente deroghe al Codice del Paesaggio e mantiene piena subordinazione agli strumenti paesaggistici vigenti.

Il PFG risulta coerente, compatibile e favorevole alla tutela del paesaggio regionale.

Eventuali incidenze negative potranno manifestarsi solo nella fase attuativa (PFIT e PGF locali), che resteranno comunque sottoposte alle procedure ordinarie di VIncA e autorizzazione paesaggistica.

In conclusione la componente Paesaggio non presenta criticità in fase di adozione del PFG; gli effetti complessivi sono positivi, strutturali e rafforzativi degli obiettivi di tutela paesaggistica.

Piani, progetti e interventi che possono interagire (impatti e incidenze cumulative)

Il Piano Forestale Generale, data la sua natura di strumento di pianificazione regionale di livello superiore, presenta inevitabili relazioni di coerenza e possibili interazioni cumulative con numerosi strumenti di pianificazione territoriale, ambientale e settoriale.

In conformità alle Linee Guida Nazionali VIncA (MATTM 2019) e al DPR 357/1997, tali interazioni devono essere analizzate considerando sia la coerenza degli obiettivi, sia le incidenze cumulative sull'integrità dei siti Natura 2000.

Principali strumenti di pianificazione con cui il PFG interagisce

a) Piani di Gestione e Regolamenti delle ZSC/ZPS della Campania (D.G.R. 617/2024)

Costituiscono la base di riferimento principale.

Il PFG deve essere coerente con:

- misure di conservazione generali e specifiche,
- obiettivi di conservazione di habitat e specie,
- regolamentazioni su gestione forestale, incendi, pascolo, viabilità, interventi idraulico-forestali. Il PFG rafforza tali indirizzi, integrandoli nella Carta delle Risorse Forestali e nelle azioni strategiche.

b) Piano Territoriale Regionale (PTR) – L.R. 13/2008

È lo strumento che definisce:

- la Rete Ecologica Regionale,
- gli obiettivi paesaggistici,
- le invarianti territoriali,

fonte: http://burc.regione.campania.it

- le strategie di rigenerazione territoriale.

Il PFG risulta pienamente coerente con il PTR perché:

- incentiva la connettività ecologica (cap. 4 e SIT-Foreste),
- rafforza la resilienza dei sistemi collinari e montani,
- integra i tematismi del SIT nel quadro delle invarianti.

L'interazione è positiva e produce effetti cumulativi favorevoli alla funzionalità ecologica della Rete Natura 2000 e della Rete Ecologica Regionale.

c) Piani Territoriali di Coordinamento Provinciale (PTCP)

I PTCP disciplinano:

- sistemi ambientali,
- aree boscate,
- corridoi ecologici,
- rischio idrogeologico,
- zonizzazioni paesaggistiche.

Il PFG concorre con i PTCP nel definire criteri uniformi di gestione forestale, prevenzione incendi e tutela delle aree boscate. L'effetto cumulativo previsto è **positivo**, poiché entrambe le pianificazioni convergono su conservazione, gestione attiva e riduzione del rischio.

d) Piani di Bacino Idrografico (Autorità di Distretto – D.Lgs. 152/2006)

Rilevanti per: rischio frana, dissesto idraulico, fasce fluviali.

Il PFG promuove interventi coerenti con i Piani di Bacino. Le sinergie cumulative risultano favorevoli alla stabilità dei versanti e alla protezione dei corsi d'acqua.

e) Piani dei Parchi Nazionali e Regionali

Il PFG incrocia le norme di Parco riguardanti: gestione forestale, zone di tutela integrale, sentieristica, incendi e uso del suolo.

Gli effetti cumulativi sono prevalentemente sinergici, poiché gli strumenti di Parco e il PFG condividono finalità di conservazione e gestione sostenibile.

f) PFIT e Piani di Gestione Forestale aziendali (PGF)

Rappresentano la fase attuativa del PFG.

Le incidenze cumulative, in questo caso, riguarderanno:

- il volume complessivo degli interventi sul territorio,
- le ricadute su connessione ecologica e habitat,
- le azioni coordinate su incendi, pascoli, rimboschimenti e viabilità forestale.

Il PFG stabilisce un quadro di indirizzo che **evita cumulazioni negative**, imponendo criteri di pianificazione sostenibile e VIncA obbligatoria per tutti i piani sottostanti.

fonte: http://burc.regione.campania.it

Valutazione complessiva delle incidenze cumulative

Dalla lettura integrata degli strumenti regionali e dei contenuti del PFG, emerge quanto segue:

- nessuna sovrapposizione critica con altri piani che possa generare effetti negativi sulla Rete Natura 2000;
- forte coerenza strategica con PTR, PTCP, Piani di Bacino e Piani dei Parchi;
- effetti cumulativi **positivi** in termini di:
    - continuità ecologica,
    - prevenzione incendi,
    - stabilità idrogeologica,
    - recupero paesaggi rurali storici (castagneti, boschi cedui, prati-pascoli),
    - rafforzamento della Rete Ecologica Regionale;
- la futura fase attuativa (PFIT/PGF) rimane assoggettata a **VIncA di dettaglio**, garantendo il controllo delle pressioni cumulative a livello locale.

Le interazioni cumulative tra il PFG e gli altri strumenti di pianificazione territoriale e ambientale risultano **non significative in senso negativo**, pienamente governabili e, nella maggior parte dei casi, **favorevoli** agli obiettivi di conservazione dei siti Natura 2000.

Tabella riassuntiva della significatività delle incidenze

Sulla base delle considerazioni esposte nei paragrafi precedenti relative alle caratteristiche eto - ecologiche delle specie potenzialmente presenti nei siti della Rete Natura 2000 della Regione Campania, degli habitat cartografati e di quelli di specie indicati per le tipologie di "habitat" e per le classi di fauna esaminate, sulla base dei fattori di minaccia, è possibile riassumere nella tabella che segue, per ogni indicatore, la tipologia di incidenza e l'effetto che la realizzazione dell'opera è in grado di avere.

TAB. Previsione e valutazione della significatività degli effetti con riferimento agli habitat, habitat di specie e specie.

NON VALUTABILE (la tipologia di Azione prevista dal P.F.G. non è valutabile in termini qualiquantitativi)
NULLA (la tipologia di Azione prevista dal P.F.G. non genera alcuna incidenza)
POSITIVA (la tipologia di Azione prevista dal P.F.G. può generare esclusivamente incidenze positive)
POSSIBILE INCIDENZA NEGATIVA MITIGABILE (la tipologia di Azione prevista dal P.F.G. potrebbe generare incidenze negative ma mitigabili con opportune misure; da prevenire attivamente attraverso il pieno rispetto delle condizioni e buone pratiche indicate dal piano)
NAGATIVA NON MITIGABILE (la tipologia di Azione prevista dal P.F.G. potrebbe generare incidenze negative non sufficientemente mitigabili, per le quali si richiedono delle attività o misure di compensazione)

fonte: http://burc.regione.campania.it

Considerazioni :

La tabella riassuntiva della significatività delle incidenze costituisce la sintesi logica e argomentata di tutte le valutazioni svolte nelle sezioni precedenti sulle matrici di impatto, sugli habitat, sugli habitat di specie, sulle componenti biotiche e abiotiche e sugli effetti cumulativi del Piano Forestale Generale (PFG). Essa traduce in forma comparabile, per ciascuna azione di Piano, l'esito del percorso valutativo impostato secondo le Linee Guida nazionali VIncA (MATTM, 2019) e i criteri di estensione, intensità, durata, reversibilità e sensibilità ecologica definiti nel capitolo sulla significatività dell'incidenza.

Dalla lettura integrata della tabella emerge che, per la quasi totalità delle Azioni del PFG, l'incidenza su habitat, habitat di specie, specie di interesse comunitario, componenti abiotiche e connessioni ecologiche è classificata come **"nulla" o "positiva"**, in coerenza con la natura strategica del Piano e con il suo orientamento esplicito alla gestione forestale sostenibile, alla conservazione della biodiversità, al rafforzamento della Rete Ecologica regionale e al supporto degli obiettivi di conservazione dei siti Natura 2000. Non risultano assegnazioni alla classe "negativa non mitigabile", mentre le poche situazioni ricondotte alla categoria di **"possibile incidenza negativa mitigabile"** riguardano esclusivamente effetti potenziali, puntuali e reversibili (es. aumenti localizzati di disturbo, pressioni temporanee correlate all'attuazione dei futuri strumenti di dettaglio), che il Piano stesso disciplina attraverso specifiche misure di mitigazione e tramite l'obbligo di VIncA per PFIT/PGF e altri piani sottostanti.

In termini critici, la tabella evidenzia come il PFG non si configuri come fonte autonoma di nuove pressioni strutturali sul territorio (assenza di previsioni infrastrutturali lineari, di consumo di suolo, di trasformazioni d'uso incompatibili), ma come **quadro regolatore** in grado di contenere e governare in modo unitario le potenziali incidenze derivanti dalla gestione forestale, indirizzandole verso esiti coerenti con le Misure di Conservazione generali e sito-specifiche (D.G.R. 795/2017 e D.G.R. 617/2024). La classificazione prevalente in classi di incidenza nulla o positiva e, in subordine, in incidenze potenziali ma mitigabili, conferma che il Piano, se attuato nelle condizioni e con le cautele descritte nello Studio, **non altera l'integrità dei siti Natura 2000**, ma ne supporta il mantenimento e, in molti casi, il miglioramento dello stato di conservazione di habitat, specie e paesaggi forestali.

Tabella riepilogativa delle Incidenze delle Azioni del Piano

SGNIFICATIVITA' DELLE INCIDENZE	INCIDENZA SU HABITAT E SPECIE					INCIDENZE SULLE COMPONENTI AMBIENTALI								IMPATTI CUMULATIVI	
AZIONI DEL PIANO FORESTALE GENERALE	Perdita di superficie di habitat	Perdita di superficie di habitat prioritari	Frammentazione di habitat	Perdita di superficie di habitat di specie	Perdita di specie a interesse conservazionistico	Disturbo antropico	Emissioni solide	Emissioni liquide	Emissioni gassose	Emissioni luminose	Emissioni di rumore	Alterazione della qualità delle acque	Alterazione della qualità dell'aria	Interazione con le relazioni eco-sistemiche principali	Complementarità con altri piani / progetti (All. G Dir. 92/43/CE)
A1. Promuovere una governance forestale in Campania basata sulla cooperazione istituzionale, l'integrazione di strumenti e politiche, la partecipazione e condivisione degli obiettivi di Gestione Forestale Sostenibile (GFS).															
A2. Estendere la superficie dei beni silvo-pastorali di proprietà pubblica, privata e collettiva della Campania dotati di piani di gestione forestale															
A3. Promuovere la pianificazione forestale di area vasta (Piani Forestali di Indirizzo Territoriale)															
B1. Conservazione e miglioramento della biodiversità forestale nella rete regionale di aree protette															
B2. Gestione attiva dei boschi di protezione.															
B3. Incrementare la capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica del territorio e tutela delle acque															
B4. Prevenzione attiva dei rischi naturali o antropici, incendi, calamità naturali ed eventi catastrofici															
C1. Curare i rimboschimenti storici della Campania															

fonte: http://burc.regione.campania.it

C2. Valorizzare in chiave multifunzionale le foreste urbane e periurbane															
C3. Curare e proteggere i boschi planiziali della Campania															
C4. Tutela e valorizzazione dei castagneti da frutto della Campania															
C5. Tutelare i boschi vetusti e gli alberi monumentali															
C6. Promuovere la gestione sostenibile dei prati e pascoli permanenti															
C7. Promuovere e valorizzare i sistemi agroforestali															
D1. Rafforzare la capacità operativa delle imprese boschive. Promuovere la qualificazione degli operatori forestali															
D2. Promuovere la certificazione delle foreste del territorio regionale e la tracciabilità lungo tutta la filiera, dal tronco al mobile finito															
D3. Riconoscere e remunerare i servizi di interesse pubblico, ambientale e sociale forniti dalle aree forestali (foreste e pascoli) e mantenuti ed accresciuti dalla GFS															
D4. Promozione delle produzioni forestali non legnose in una prospettiva di filiera															
D5. Adesione al Cluster legno-foresta italiano e costituzione del Cluster legno foresta della Campania															
E1. Valorizzare le 10 foreste regionali come "laboratori verdi multifunzionali" e centri di diffusione permanente della GFS in Campania															

fonte: http://burc.regione.campania.it

E2. Valorizzazione multifunzionale della viabilità forestale e silvo-pastorale e della sentieristica in Campania															
F1. Promuovere un programma integrato di monitoraggio e cartografia delle risorse forestali della Campania															
F2. Implementazione dello Sportello unico regionale per le attività forestali (SUAF)															
F3. Promozione di iniziative e programmi divulgativi per rafforzare la consapevolezza pubblica dell'importanza e il ruolo ecologico del patrimonio forestale della Campania															
G1 Valorizzare e potenziare i vivai forestali; estendere la superficie dei boschi da seme; valorizzare le risorse genetiche; potenziare la produzione di materiale di propagazione forestale															
G2 Promozione di tecniche forestali per il recupero dei siti degradati in Campania															

fonte: http://burc.regione.campania.it

Misure di attenuazione e/o di mitigazione

Nello schema che segue vengono illustrate le misure di mitigazione necessarie ove, dall'analisi effettuata nei precedenti capitoli, si è evinta la sussistenza di potenziali incidenze sulla Z.S.C.

Il grado di impatto è articolato in quattro gradi di giudizio:

- **POSITIVO**: assenza di perturbazioni ed apporto di cambiamenti favorevoli;
- **IRRILEVANTE**: assenza di perturbazioni o impatti a carico degli habitat o delle specie prioritari;
- **BASSO**: presenza di perturbazioni o impatti che possono causare impatti potenzialmente trascurabili;
- **MEDIO**: perturbazione reversibile sul medio o sul lungo periodo, oppure degrado ovvero perdita di habitat prioritari per superfici modeste;
- **ALTO**: degrado di habitat comunitari per superfici estese, perturbazione irreversibile a carico di specie prioritarie.

Codice Azione	Descrizione	Fattori di perturbazione potenziali	GRADO DI IMPATTO	Misura di Mitigazione applicabile
B2	Gestione attiva dei boschi di protezione.	Interventi selvicolturali "diretti" a carico di superfici boscate altrimenti inutilizzate: a) Presenza antropica b) Attività di taglio boschivo	MEDIO MITIGATO	In considerazione delle condizioni "speciali" dei soprassuoli caratterizzanti le aree a protezione boschiva della Campania, al fine di preservare gli habitat e le specie, si prescrive che vengano applicate al minimo le seguenti Misure: i. Le attività e le lavorazioni dovranno in qualsiasi caso, iniziare almeno 1 ora dopo l'alba e terminare almeno 1 ora prima del tramonto. Tali attività dovranno sempre prevedere un "fermo biologico" compatibile con le caratteristiche ecologiche del Sito. ii. Dove possibile si dovrà sempre preferire l'impiego di attrezzature a batteria o elettriche, e specialmente manuali atte a garantire una selettività delle attività di taglio della vegetazione; iii. Prevedere il rilascio di una quantità di necromassa minima per soddisfare le esigenze ecologiche delle specie saprofite presenti;
B3	Incrementare la capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica del territorio e tutela delle acque	Interventi diretti di Ingegneria naturalistica: a) Presenza antropica b) Impiego di specie vegetali c) Lavorazioni specialistiche di ing. nat. d) Potenziali attività di scavo, mobilitazione e trasporti; e) Taglio della vegetazione spondale;	MEDIO MITIGATO	In considerazione delle caratteristiche ambientali in cui si attueranno tali interventi, si prescrive, al fine di preservare gli habitat e le specie, che vengano applicate al minimo le seguenti Misure: iv. Impiegare specie vegetali esclusivamente autoctone, di origine certificata, o, ove possibile, prelevate in situ. v. Le attività e le lavorazioni dovranno in qualsiasi caso, iniziare almeno 1 ora dopo l'alba e terminare almeno 1 ora prima del tramonto. Tali attività dovranno sempre prevedere un "fermo biologico" compatibile con le caratteristiche ecologiche del Sito. vi. Dove possibile si dovrà sempre preferire l'impiego di attrezzature a batteria o elettriche, e specialmente manuali atte a garantire una selettività delle attività di taglio della vegetazione.

fonte: http://burc.regione.campania.it

B4	Prevenzione attiva dei rischi naturali o antropici, incendi, calamità naturali ed eventi catastrofici	Attività a cadenza triennale a carico della componente vegetale delle aree soggette a rischi naturali o antropici: a) Presenza antropica b) Attività di taglio boschivo c) Impiego di specie vegetali d) Lavorazioni specialistiche di ing. nat. e) Potenziali attività di scavo, mobilitazione e trasporti; f) Taglio della vegetazione annuale, arbustiva o erbacea; Attività di prevenzione agli incendi boschivi mediante l'applicazione del fuoco prescritto	MEDIO MITIGATO	In considerazione delle aree in cui le attività saranno attuate, si prescrive, al fine di preservare gli habitat e le specie, che vengano applicate al minimo le seguenti Misure: vii. Impiegare specie vegetali esclusivamente autoctone, di origine certificata, o, ove possibile, prelevate in situ. viii. Le attività e le lavorazioni dovranno in qualsiasi caso, iniziare almeno 1 ora dopo l'alba e terminare almeno 1 ora prima del tramonto. Tali attività dovranno sempre prevedere un "fermo biologico" compatibile con le caratteristiche ecologiche del Sito. ix. Dove possibile si dovrà sempre preferire l'impiego di attrezzature a batteria o elettriche, e specialmente manuali atte a garantire una selettività delle attività di taglio della vegetazione. x. Impedire l'utilizzo del fuoco prescritto in tutte quelle superfici oggetto di Pianificazione che rientrano negli habitat identificati con "forma prioritaria".
C1	Curare i rimboschimenti storici della Campania	Interventi selvicolturali a carico di superfici boscate: a) Presenza antropica b) Attività di taglio boschivo c) Taglio della vegetazione annuale, arbustiva o erbacea; d) Attività di trasporto e movimento materiali e) Impiego di specie vegetali f) Lavorazioni specialistiche di ing. nat. g) Rimozione di necromassa;	BASSO MITIGATO	In considerazione delle condizioni "speciali" dei rimboschimenti presenti, si prescrive, al fine di preservare gli habitat e le specie, che vengano applicate al minimo le seguenti Misure: xi. Impiegare specie vegetali esclusivamente autoctone, di origine certificata, o, ove possibile, prelevate in situ. xii. Le attività e le lavorazioni dovranno in qualsiasi caso, iniziare almeno 1 ora dopo l'alba e terminare almeno 1 ora prima del tramonto. Tali attività dovranno sempre prevedere un "fermo biologico" compatibile con le caratteristiche ecologiche del Sito. xiii. Dove possibile si dovrà sempre preferire l'impiego di attrezzature a batteria o elettriche, e specialmente manuali atte a garantire una selettività delle attività di taglio della vegetazione; xiv. Prevedere il rilascio di una quantità di necromassa minima per soddisfare le esigenze ecologiche delle specie saprofite presenti;
C2	Valorizzare in chiave multifunzionale le foreste urbane e periurbane	Interventi selvicolturali a carico di superfici boscate: a) Taglio della vegetazione annuale, arbustiva o erbacea; b) Impiego di specie vegetali c) Lavorazioni specialistiche di ing. nat. d) Rimozione di necromassa;	MEDIO MITIGATO	In considerazione delle caratteristiche che i boschi urbani possono rappresentare, si prescrive, al fine di preservare gli habitat e le specie, che vengano applicate al minimo le seguenti Misure: xv. Impiegare specie vegetali esclusivamente autoctone, di origine certificata, o, ove possibile, prelevate in situ. xvi. Le attività e le lavorazioni dovranno in qualsiasi caso, iniziare almeno 1 ora dopo l'alba e terminare almeno 1 ora prima del tramonto. Tali attività dovranno sempre prevedere un "fermo biologico" compatibile con le caratteristiche ecologiche del Sito. xvii. Dove possibile si dovrà sempre preferire l'impiego di attrezzature a batteria o elettriche, e specialmente manuali atte a garantire una selettività delle attività di taglio della vegetazione; xviii. Prevedere il rilascio di una quantità di necromassa minima per soddisfare le esigenze ecologiche delle specie saprofite presenti;

fonte: http://burc.regione.campania.it

C7	Promuovere e valorizzare i sistemi agroforestali	Impianti selvicolturali a carico di superfici agro-forestali o agricole in evoluzione: a) Impiego di specie vegetali; b) Attività di scavo, trasporto e movimento materiali;	BASSO MITIGATO	In considerazione degli habitat potenziali che le superfici agricole possono rappresentare, si prescrive, al fine di preservare gli habitat e le specie, che vengano applicate al minimo le seguenti Misure: xix. Impiegare specie vegetali esclusivamente autoctone, di origine certificata, o, ove possibile, prelevate in situ. xx. Le attività e le lavorazioni dovranno in qualsiasi caso, iniziare almeno 1 ora dopo l'alba e terminare almeno 1 ora prima del tramonto. Tali attività dovranno sempre prevedere un "fermo biologico" compatibile con le caratteristiche ecologiche del Sito.
E2	Valorizzazione multifunzionale della viabilità forestale e silvo-pastorale e della sentieristica in Campania	Lavorazioni per opere infrastrutturali in ambiente naturale e seminaturale: a) Presenza antropica b) Lavorazioni specialistiche di ing. nat. c) Potenziali attività di scavo, mobilitazione e trasporti; d) Taglio della vegetazione annuale, arbustiva o erbacea; Valorizzazione della sentieristica mediante attività di miglioramento della rete sentieristica in Campania.	BASSO MITIGATO	In considerazione delle caratteristiche ambientali in cui si attueranno tali interventi, si prescrive, al fine di preservare gli habitat e le specie, che vengano applicate al minimo le seguenti Misure: xxi. Le attività e le lavorazioni dovranno in qualsiasi caso, iniziare almeno 1 ora dopo l'alba e terminare almeno 1 ora prima del tramonto. Tali attività dovranno sempre prevedere un "fermo biologico" compatibile con le caratteristiche ecologiche del Sito. xxii. Dove possibile si dovrà sempre preferire l'impiego di attrezzature a batteria o elettriche, e specialmente manuali atte a garantire una selettività delle attività di taglio della vegetazione. xxiii. Per le attività di valorizzazione della rete sentieristica si dovrà prevedere uno studio di incidenza dettagliato ad hoc per ogni intervento. Lo studio dovrà essere effettuato sia per interventi diretti (materiali) che per interventi indiretti (immateriale), come ad esempio la promozione di nuovi itinerari che incentivino l'aumento di flussi turistici in determinate aree.

Ottava parte: Conclusioni

Il presente paragrafo riporta le considerazioni conclusive in linea con la Deliberazione Giunta Regionale n. 795 del 19/12/2017 Direzione Generale 6 - Direzione Generale per l'Ambiente, la Difesa del Suolo e l'Ecosistema Oggetto dell'Atto: *Approvazione Misure di conservazione dei SIC (Siti di Interesse Comunitario) per la designazione delle ZSC (Zone Speciali di Conservazione) della rete Natura 2000 della Regione Campania, e* nel documento titolato "Misure di conservazione del SIC (*oggi ZSC*)*"*, allegato alla D.G.R. n. 795 del 19/12/217, della Regione Campania, dove sono specificati, con indicazione anche dei divieti ed obblighi da osservare per la conservazione degli habitat e specie presenti nel Sito:

- gli obiettivi di conservazione del Sito;
- le pressioni e minacce sul Sito;
- le misure di conservazione, sia regolamentari che amministrativi;
- le azioni e gli indirizzi di gestione.

Significatività delle Incidenze

Lo scopo del presente Studio è la valutazione della significatività dell'incidenza, dovuta all'interazione fra il Piano ed i parametri ambientali, in termini di:

- perdita di habitat, habitat di specie e specie di interesse conservazionistico;
- frammentazione e perturbazione dell'ambiente circostante;
- eventuali cambiamenti negli elementi principali caratterizzanti l'integrità della Rete Natura 2000 della Regione Campania;

Le potenziali incidenze sono state analizzate a partire dall'area di intervento sulla base delle caratteristiche ecologiche e delle componenti biotiche che sono state cartografate nel formulario Natura 2000, incrociandole con opportune indagini specialistiche specifiche per il sito tese all'individuazione di eventuali specie presenti. Sono stati inoltre considerati tutti quei fattori di disturbo passibili di incidenza sulle componenti abiotiche (atmosfera, acqua, suolo e sottosuolo).

La significatività delle potenziali incidenze è stata messa in relazione alle caratteristiche puntuali dei luoghi ed è stata schematizzata nella tabella riassuntiva riportata nelle pagine precedenti.

Sono state inoltre valutate le possibili misure di mitigazione degli impatti, riassunte nella tabella delle mitigazioni.

È stata valutata anche la coerenza dell'intervento con le Misure di Conservazione di riferimento allegate alla D.G.R. n° 795 del 19/12/2017 della Regione Campania, avente ad oggetto "Misure di Conservazione dei SIC per la designazione della ZSC delle Rete Natura 2000 della Regione Campania", pubblicata sul BURC n. 05 del 18.01.2018.

Alla luce delle valutazioni effettuate nei paragrafi precedenti in funzione dell'attuazione delle misure di

fonte: http://burc.regione.campania.it

mitigazione proposte, si ritiene che il P/P/P/I in oggetto:

- **non comporterà** frammentazione degli habitat presenti;
- **non comprometterà** le componenti floristiche e faunistiche della Rete Natura 2000 della Regione Campania;
- **risulta coerente** con gli obiettivi di conservazione e di integrità delle ZSC e ZPS;

Infine, **ritenuto** che l'obiettivo primario del presente Studio è quello di mantenere o migliorare lo stato di conservazione degli habitat e delle specie che nel formulario del sito, nelle tabelle 3.1 e 3.2, alla voce "valutazione globale" sono classificate A o B, ovvero habitat o specie di importanza prioritaria; mentre quello secondario è mantenere o migliorare lo stato di conservazione degli habitat e delle specie che nel formulario del sito, nelle tabelle 3.1 e 3.2, alla voce "valutazione globale" sono classificate C, i sottoscritti ritengono che, grazie all'attuazione delle Misure di Mitigazione individuate, non si pregiudicherà l'attuale esistenza delle specie di flora e fauna caratterizzanti le ZSC e le ZPS esaminate.

Considerazioni finali

La strategia europea identifica nel patrimonio forestale e nella sua gestione sostenibile e attiva, in chiave multifunzionale, uno dei principali strumenti di contrasto del cambiamento climatico, e nelle filiere forestali un settore di produzione primaria da rilanciare nel quadro dell'economia circolare e della bioeconomia.

Per consentire alla Campania di contribuire da protagonista al processo in corso, si è resa necessaria una rivisitazione urgente, tempestiva e vigorosa del nostro complessivo sistema di governance del patrimonio forestale, e delle politiche pubbliche sino ad ora messe in campo.

Così come stabilito dal Testo unico, il Piano forestale generale si pone l'obiettivo di delineare con chiarezza una nuova strategia forestale per la Campania, riferita al complessivo patrimonio forestale regionale, in grado di definire operativamente i fabbisogni e le azioni da promuovere, a partire da quelle indicate nella Strategia forestale nazionale, cogliendo tutte le opportunità offerte dai differenti strumenti di finanziamento comunitari, nazionali, regionali.

Il quadro conclusivo che emerge dalla Valutazione di Incidenza del PFG è quello di uno strumento **essenzialmente orientato alla conservazione e alla gestione sostenibile delle risorse forestali**, piuttosto che alla loro trasformazione. Il Piano integra e rende operativi, in chiave forestale, gli obiettivi di conservazione fissati a livello comunitario, nazionale e regionale, ponendosi come livello di coordinamento tra:

- misure di conservazione generali e sito-specifiche (D.G.R. 795/2017 e D.G.R. 617/2024);
- rete Natura 2000 e rete ecologica regionale;
- pianificazione territoriale (PTR, PTCP, Piani dei Parchi) e pianificazione forestale di dettaglio (PFIT, PGF).

fonte: http://burc.regione.campania.it

La struttura del Piano, fondata su Azioni prevalentemente non strutturali (governance, pianificazione, miglioramento selvicolturale, prevenzione incendi, tutela idrogeologica, valorizzazione paesaggistica e multifunzionale dei boschi), fa sì che gli effetti diretti sugli habitat e sulle specie siano limitati, regolati e mediati da procedure preventive (VAS con VIncA integrata, VIncA sui piani sottordinati) e da un sistema di mitigazioni esplicite. In questo senso, il PFG:

- **riduce il rischio di interventi episodici, scoordinati e potenzialmente dannosi**, sostituendoli con una regia unitaria e con criteri omogenei di Gestione Forestale Sostenibile;
- offre un quadro di riferimento stabile per gli Enti gestori dei siti Natura 2000 e per i soggetti pubblici e privati che operano nei territori forestali, favorendo la convergenza tra esigenze produttive, protettive e di conservazione;
- consolida il ruolo delle foreste campane come **infrastruttura ecologica primaria**, essenziale per la tutela della biodiversità, del suolo, delle acque, del paesaggio e per l'adattamento ai cambiamenti climatici.

In coerenza con le Linee Guida nazionali VIncA e con l'interpretazione dell'art. 6 della Direttiva Habitat, le conclusioni del presente Studio non sostituiscono, ma **preparano e indirizzano** le valutazioni future a scala di progetto: ogni PFIT, PGF o intervento strutturale dovrà essere nuovamente sottoposto a VIncA, verificando in modo sito-specifico la coerenza con gli obiettivi di conservazione e con le condizioni poste dal PFG.

In sintesi, il PFG della Regione Campania – alle condizioni e con le cautele definite nello Studio – può essere ritenuto **compatibile con la Rete Natura 2000**, in quanto non determina incidenze negative significative sull'integrità dei siti e contribuisce, al contrario, a rafforzare nel medio-lungo periodo la qualità ecologica, la funzionalità ecosistemica e la resilienza del sistema forestale regionale.

Assunto ciò, può affermarsi la **coerenza dell'intervento con gli obiettivi di Conservazione e di integrità dei Siti della Rete Natura 2000**, e, pertanto, che non si prevedono conseguenze negative dovute all'attuazione del Piano Forestale Generale sulla Rete Natura 2000 della Campania, in relazione al rischio della sua compromissione rispetto agli obiettivi di conservazione.

Tanto volevasi ad espletamento dell'incarico ricevuto.

15. Le azioni del Piano forestale generale **109**

A. Una nuova governance per le foreste in Campania **111**
A1. Promuovere una governance forestale in Campania basata sulla cooperazione istituzionale, l'integrazione di strumenti e politiche, la partecipazione e condivisione degli obiettivi di Gestione Forestale Sostenibile (GFS). 111
A2. Estendere la superficie dei beni silvo-pastorali di proprietà pubblica, privata e collettiva della Campania dotati di piani di gestione forestale 113
A3. Promuovere la pianificazione forestale di area vasta (Piani Forestali di Indirizzo Territoriale) 115

B. Rafforzare il capitale naturale, assicurare i servizi ecologici essenziali, prevenire i rischi **117**
B1. Conservazione e miglioramento della biodiversità forestale nella rete regionale di aree protette 117
B2. Gestione attiva dei boschi di protezione diretta. 118
B3. Incrementare la capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica del territorio e tutela delle acque 119
B4. Prevenzione attiva dei rischi naturali o antropici, incendi, calamità naturali ed eventi catastrofici 121

C. Curare e gestire le risorse forestali della Campania **123**
C1. Curare i rimboschimenti storici della Campania 123
C2. Valorizzare in chiave multifunzionale le foreste urbane e periurbane. 124

fonte: http://burc.regione.campania.it

C3. Curare e proteggere i boschi planiziali della Campania 125
C4. Tutela e valorizzazione dei castagneti da frutto della Campania 127
C5. Tutelare i boschi vetusti e gli alberi monumentali. 128
C6. Promuovere la gestione sostenibile dei prati e pascoli permanenti. 129
C7. Promuovere e valorizzare i sistemi agroforestali 131

D. Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare 133
D1. Rafforzare la capacità operativa delle imprese boschive. Promuovere la qualificazione degli operatori forestali. 135
D2. Promuovere la certificazione delle foreste del territorio regionale e la tracciabilità lungo tutta la filiera, dal tronco al mobile finito 139
D3. Riconoscere e remunerare i servizi di interesse pubblico, ambientale e sociale forniti dalle aree forestali (foreste e pascoli) e mantenuti ed accresciuti dalla GFS 142
D4. Promozione delle produzioni forestali non legnose in una prospettiva di filiera 144
D5. Adesione al Cluster legno-foresta italiano e costituzione del Cluster legno della Campania 144

E. Vivere le foreste della Campania 147
E1. Valorizzare le foreste regionali come "laboratori verdi multifunzionali" e centri di diffusione permanente della GFS in Campania 147
E2. Valorizzazione multifunzionale della viabilità forestale e silvo-pastorale e della sentieristica in Campania 148

F. Conoscere le foreste della Campania 149
F1. Promuovere un programma integrato di monitoraggio e cartografia delle risorse forestali della Campania; 149
F2. Implementazione dello Sportello unico regionale per le attività forestali (SUAF) 150
F3. Promozione di iniziative e programmi divulgativi per rafforzare la consapevolezza pubblica dell'importanza e il ruolo ecologico del patrimonio forestale della Campania; 151

G. Le nuove foreste della Campania 153
G1. Valorizzare e potenziare i vivai forestali; estendere la superficie dei boschi da seme; valorizzare le risorse genetiche; potenziare la produzione di materiale di propagazione forestale 153
G2. Promozione di tecniche forestali per il recupero dei siti degradati in Campania 155

16. Le misure del CSR Campania 2023-2027 di interesse forestale 157
Misure forestali 157
SRA27 - Pagamento per impegni silvoambientali e impegni in materia di clima 157
SRA28 - Sostegno per mantenimento della forestazione/imboschimento e sistemi agroforestali 158
SRD05 - Impianti forestazione/imboschimento e sistemi agroforestali su terreni agricoli 159
SRD15 - Investimenti produttivi forestali 159
Altre misure del CSR Campania di interesse del Piano forestale generale 161
SRA25 - Tutela delle colture arboree a valenza ambientale e paesaggistica 161
SRD03 - Investimenti nelle aziende agricole per la diversificazione in attività non agricole 161
SRD04 - Investimenti non produttivi agricoli con finalità ambientale 162
SRG07 - Cooperazione per lo sviluppo rurale, locale e smart villages 163
SRG09 - Cooperazione per azioni di supporto all'innovazione e servizi rivolti ai settori agricolo, forestale e agroalimentare 165
Misure connesse alla strategia AKIS (Agricultural Knowledge and Innovation System) 165
SRH01 - Erogazione servizi di consulenza 165
SRH02 - Formazione dei consulenti 166
SRH03 - Formazione degli imprenditori agricoli 166
SRH04 - Azioni di informazione 167
SRH06 - Servizi di back office per l'AKIS 167

1. Introduzione

Il Il quadro programmatico in materia forestale si è fortemente evoluto in questi ultimi anni. Nel luglio 2021 la Commissione europea ha adottato la nuova strategia dell'UE per le foreste per il 2030. Essa costituisce, assieme alla strategia per la biodiversità, una delle principali basi del New Green Deal europeo e di Next Generation UE.

La strategia forestale europea identifica nel patrimonio forestale e nella sua gestione sostenibile e attiva, in chiave multifunzionale, uno dei principali strumenti di adattamento e contrasto del cambiamento climatico, e nelle filiere forestali un settore di produzione primaria da rilanciare nel quadro dell'economia circolare e della bioeconomia.

La strategia mette anche in risalto il ruolo delle foreste di prossimità urbana, come spazio di vita e ricreazione all'aria aperta per le popolazioni delle città europee, oltre che di mitigazione del rischio ambientale, in risposta alle nuove esigenze nate con la pandemia.

Nel nostro Paese, la Strategia Forestale Nazionale (SFN) approvata nel dicembre 2021 dal Ministero delle Politiche Agricole Alimentari e Forestali, di concerto con il Ministero della Cultura, il Ministero dell'Ambiente e della Sicurezza Energetica e il Ministero dello Sviluppo Economico, recepisce le nuove politiche comunitarie, adattandole al contesto nazionale, in attuazione degli obiettivi definiti dalla più recente legislazione statale, il "Testo unico in materia di foreste e filiere forestali" (D.lgs. 3 aprile 2018, n. 34, di seguito denominato "Testo unico").

Il fatto nuovo rispetto al passato è che tutte queste decisioni non riguardano un ambito strettamente settoriale, ma le politiche di recupero e resilienza nel loro complesso.

I servizi ecosistemici forniti dal patrimonio forestale, insieme alle molteplici economie che essi sono in grado di generare, sono al centro del New Green Deal europeo. Questi temi sono ampiamente presenti nel Piano italiano per la Transizione Ecologica, e ad essi sono state dedicate specifiche missioni del Piano Nazionale di Ripresa e Resilienza (PNRR), con le relative linee di finanziamento.

Se la crisi climatica e quella pandemica hanno innescato questo poderoso processo evolutivo delle politiche forestali ai diversi livelli, è evidente l'esigenza per la Campania di prendervi parte, con un ruolo e con responsabilità adeguate alla sfida.

Il patrimonio forestale della Campania è ingente. Secondo i dati dell'Inventario Forestale Nazionale 2015, il 35,9% del territorio regionale è ora ricoperto da ecosistemi forestali, e la superficie forestale è in costante aumento a causa delle dinamiche di abbandono agricolo. Questi processi interessano in prevalenza le aree collinari e montane interne, ma in maniera sorprendente anche l'area metropolitana regionale Caserta-Napoli-Salerno dove, interclusi nella maglia urbana pure sono presenti 20.000 ettari di foreste, sarebbe a dire i boschi di prossimità il cui ruolo multifunzionale viene ribadito ed esaltato nella strategia forestale europea ma anche nel PNRR.

In un quadro territoriale regionale tanto articolato, le coperture forestali rappresentano uno dei pilastri delle politiche di sostegno e rilancio delle aree interne della Campania, come risorsa multifunzionale in grado di alimentare una pluralità di filiere produttive, sociali, culturali, assieme a un flusso di beni pubblici e servizi ecosistemici legati alla mitigazione del cambiamento climatico, al mantenimento della biodiversità, del ciclo idrogeologico, alla difesa del suolo e dei paesaggi. Tutte cose che devono trovare adeguato riscontro nella nuova politica economica regionale, assicurando una partizione delle risorse in grado di remunerare adeguatamente queste funzioni pubbliche essenziali per la qualità di vita e la sicurezza dell'intera popolazione campana.

fonte: http://burc.regione.campania.it

Al centro di questa visione, è il concetto di gestione forestale sostenibile o gestione attiva, definita dalle strategie forestali europea e nazionale come "l'insieme delle azioni selvicolturali volte a valorizzare la molteplicità delle funzioni del bosco, a garantire la produzione sostenibile di beni e servizi ecosistemici, nonché una gestione e uso delle foreste e dei terreni forestali nelle forme e ad un tasso di utilizzo che consenta di mantenere la loro biodiversità, produttività, rinnovazione, vitalità e potenzialità di adempiere, ora e in futuro, a rilevanti funzioni ecologiche, economiche e sociali a livello locale, nazionale e globale, senza comportare danni ad altri ecosistemi".
Per l'attuazione della strategia, il compito che il Testo unico e il Regolamento forestale regionale 3/2017 assegnano al Piano forestale regionale è quello di definire "gli obiettivi e le relative linee d'azione, coerenti con la Strategia Forestale Nazionale in relazione alle specifiche esigenze socio-economiche, ambientali e paesaggistiche, nonché alle necessità di prevenzione del rischio idrogeologico, di mitigazione e di adattamento al cambiamento climatico."
Per assolvere a tale compito il Piano forestale generale della Campania individua 7 differenti obiettivi prioritari articolati in 26 differenti azioni. Gli obiettivi prioritari sono i seguenti:

- Promuovere una governance forestale in Campania basata sulla cooperazione istituzionale, l'integrazione di strumenti e politiche, la partecipazione e condivisione degli obiettivi di Gestione Forestale Sostenibile (GFS) ed estendere la superficie dei beni silvo-pastorali di proprietà pubblica, privata e collettiva della Campania dotati di piani di gestione forestale;
- Rafforzare il capitale naturale, assicurare i servizi ecologici essenziali, prevenire i rischi ambientali, tutelare e rafforzare la biodiversità forestale nella rete di aree protette della Campania, guidare l'adattamento delle coperture forestali al cambiamento climatico globale, rafforzandone il ruolo di serbatoi di carbonio;
- Curare e gestire in chiave multifunzionale le risorse forestali della Campania, i rimboschimenti storici, i boschi planiziali, i sistemi agroforestali, i castagneti da frutto, i boschi vetusti e gli alberi monumentali, il patrimonio di praterie, prati e pascoli permanenti;
- Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale, l'economia circolare, la bioeconomia; rafforzare la capacità operativa delle imprese boschive e promuovere la qualificazione degli operatori forestali; promuovere la certificazione delle foreste del territorio regionale e la tracciabilità lungo tutta la filiera; riconoscere e remunerare i servizi di interesse pubblico, ambientale e sociale forniti dalle aree forestali (foreste e pascoli) e mantenuti ed accresciuti dalla GFS;

Fig. 1.1

Boschi di faggio e pascoli dell'altopiano degli Alburni

fonte: http://burc.regione.campania.it

Fig. 1.2

Fasi del lavoro di sistemazione del Sentiero degli Dei, in Costiera amalfitana, con tecniche di ingegneria naturalistica

- Conoscere e monitorare le foreste della Campania, promuovere un programma integrato di monitoraggio e cartografia delle risorse forestali regionali, implementare pienamente il Sistema informativo forestale regionale e lo Sportello unico regionale per le attività forestali (SUAF);
- Promuovere la funzione sociale, culturale, ricreativa delle foreste della Campania; valorizzare le 10 foreste demaniali come "laboratori verdi multifunzionali" e centri di diffusione permanente della GFS in Campania; promuovere iniziative e programmi divulgativi per rafforzare la consapevolezza pubblica dell'importanza e il ruolo ecologico del patrimonio forestale della Campania;
- Valorizzare e potenziare i vivai forestali; estendere la superficie dei boschi da seme; valorizzare le risorse genetiche; potenziare la produzione di materiale di propagazione forestale; favorire il ricorso a tecniche forestali per il recupero dei siti degradati in Campania.

Di concerto con la definizione della strategia forestale regionale, il Piano forestale generale assolve ad alcuni specifici compiti ad esso assegnati dal Testo unico e dal Regolamento forestale regionale 3/2017:

- l'individuazione e la definizione ai sensi degli articoli 3 e 8 del Testo unico di linee guida di gestione dei boschi di protezione diretta, sarebbe a dire le coperture forestali che svolgono "funzione di protezione diretta di persone, beni e infrastrutture da pericoli naturali, impedendo l'evento o mitigandone l'effetto".
- La definizione così come previsto dall'art. 8 del testo unico degli ambiti del territorio regionale cui riferire i Piani forestali di indirizzo territoriale, che possono essere predisposti dalle regioni per comprensori territoriali omogenei per caratteristiche ambientali, paesaggistiche, economico-produttive e/o amministrative, di scala intermedia tra quella regionale del Piano forestale generale, e quella aziendale del Piano di gestione forestale.

Il Piano forestale generale definisce inoltre linee di gestione sostenibile per le diverse categorie forestali e tipi colturali, come base per la definizione di disciplinari condivisi di gestione forestale sostenibile, che potranno essere sottoposti a valutazione preliminare di compatibilità e di incidenza ambientale, ai sensi delle vigenti "Linee Guida Nazionali per la Valutazione di Incidenza", sempre assicurando le indispensabili valutazioni tecniche preliminari sito-specifiche.

Risulta evidente come le azioni prioritarie di valorizzazione e gestione forestale sostenibile promosse dal Piano forestale regionale dovranno essere riferite al patrimonio forestale inteso come bene unitario di interesse pubblico, al di là della suddivisione di competenze tra soggetti istituzionali e amministrativi, promovendo la cooperazione attiva tra di essi per il conseguimento degli obiettivi molteplici di sviluppo locale e coesione territoriale, cura dell'ambiente e dei paesaggi, tutela della salute pubblica e promozione della cultura sanciti dalla Carta costituzionale.

Quindi, non più una pletora di interventi e atti amministrativi puntuali, scollegati e parcellizzati, ma piuttosto un corso d'azione condiviso, rispondente ai fabbisogni territoriali specifici, definiti di concerto tra i diversi soggetti, in funzione delle rispettive competenze istituzionali, con un efficace ruolo di coordinamento della Regione, con i suoi atti di programmazione, così come richiesto dalla legislazione vigente.

2. La Strategia Forestale Nazionale

La **Strategia Nazionale per il Settore Forestale e le sue Filiere (SFN)**, in coerenza con la Nuova strategia dell'UE per le foreste per il 2030, è il documento di indirizzo nazionale a supporto delle Amministrazioni centrali dello Stato e di quelle regionali e delle Province autonome, previsto all'art. 6, comma 1, del d.lgs 3 aprile 2018 n. 34 ("Testo unico in materia di foreste e filiere forestali", di seguito "Testo unico").
La Strategia Forestale Nazionale, approvata con Decreto interministeriale del dicembre 2021 del Ministro delle politiche agricole alimentari e forestali, di concerto con Il Ministro della cultura con Il Ministro della transizione ecologica e con Il Ministro dello sviluppo economico, promuove, con una visione di lungo termine e in attuazione degli impegni assunti dall'Italia a livello internazionale ed europeo, la gestione sostenibile e attiva del patrimonio forestale nazionale per il conseguimento degli obiettivi congiunti ecologici, ambientali, produttivi, culturali, di sicurezza pubblica.
La SFN si propone di fornire risposte operative alle principali sfide a cui il settore forestale nazionale è chiamato a contribuire con riferimento tra l'altro:

- alla protezione dell'ambiente, alla conservazione della biodiversità e al recupero funzionale e strutturale degli ecosistemi;
- alla tutela del paesaggio;
- alle esigenze di decarbonizzazione della economia e di sviluppo delle energie rinnovabili;
- all'uso efficiente delle risorse e alla necessità di sostenere lo sviluppo sostenibile, l'economia circolare e a garantire il presidio dei territori rurali e montani;
- alla commercializzazione e trasformazione di prodotti forestali di origine legale e, quindi, alla cooperazione internazionale per la protezione delle foreste e il ripristino dei territori degradati.

In particolare, la Strategia Forestale Nazionale:

- riconosce il patrimonio forestale come risorsa e bene comune primario del Paese e della società, promuovendo un progetto di sviluppo (in termini di obiettivi e di azioni) rivolto non solo a una migliore "organizzazione e gestione delle risorse", ma anche alla protezione e ricostruzione, attraverso l'integrazione delle politiche, di una relazione identitaria, consapevole e responsabile tra foreste e società, di cui l'integrazione tra gli aspetti economico, conservazionistico ed ecologico costituiscono fondamento;
- riconosce e promuove la "Gestione forestale sostenibile o gestione attiva" (art.3, comma 2, lettera b) del Testo unico) quale strumento programmatico e operativo di scelta responsabile, in grado di conciliare le diverse esigenze dell'economia, dell'ambiente e della società, garantendo la conservazione delle foreste e la fornitura di beni e i Servizi ecosistemici;
- riconosce il contributo attivo del settore forestale e delle sue filiere nel perseguimento degli impegni internazionali sottoscritti dal Governo italiano e da cui discendono gli indirizzi strategici europei e le Strategie e politiche nazionali in ambito climatico, di tutela e conservazione della biodiversità, sviluppo della bioeconomia, energia e mantenimento dell'occupazione nelle aree rurali;
- indica un percorso condiviso e partecipativo tra le istituzioni statali e regionali competenti, le autonomie locali, le organizzazioni sociali ed economiche, le associazioni ambientaliste e di categoria, il mondo produttivo e imprenditoriale, gli ordini professionali e il mondo scientifico,

fonte: http://burc.regione.campania.it

proponendo una nuova concezione del ruolo delle filiere del settore forestale nella società.

Per il perseguimento di queste finalità, la Strategia individua 3 Obiettivi generali riconducibili ai tre Principi guida della Strategia Strategia forestale UE per il 2030, declinandoli e contestualizzandoli alle esigenze ambientali e socio-economiche del territorio nazionale:

A. Favorire la Gestione Forestale Sostenibile e il ruolo multifunzionale delle foreste, per garantire, a scala nazionale, ecoregionale, regionale e locale, la fornitura equilibrata, costante e continua di Servizi ecosistemici.

B. Migliorare l'efficienza nell'impiego delle risorse, ottimizzando il contributo multifunzionale delle foreste allo sviluppo della bioeconomia, delle economie forestali e delle aree rurali e interne del Paese, promuovendo inoltre l'espansione e la valorizzazione delle foreste nei contesti urbani e suburbani per migliorare il benessere e la qualità ambientale.

C. Monitorare e sviluppare una conoscenza multidisciplinare e una responsabilità diffusa nella tutela delle foreste, anche attraverso la ricerca scientifica multidisciplinare, l'assistenza tecnica, la formazione professionale e la promozione dei prodotti forestali e di pratiche, produzioni e consumi sostenibili.

I tre obiettivi della Strategia forestale nazionale indicano la direzione da seguire per un'azione unitaria, mirata alla tutela del patrimonio forestale, alla valorizzazione e allo sviluppo sostenibile del settore forestale e delle sue filiere, coerentemente con gli orientamenti e gli impegni definiti in ambito internazionale ed europeo. Essi concorrono al perseguimento delle 11 finalità indicate all'art. 2 del Testo unico (Tabella 2.1).

Denominatore comune alla base di queste linee strategiche è la **Gestione Forestale Sostenibile** (GFS), così come definita a livello internazionale nell'ambito delle Conferenze ministeriali per la protezione delle foreste in Europa (*Forest Europe*) e recepita dall'UE e dall'Italia quale strumento essenziale per equilibrare gli interessi e le responsabilità della società, dei proprietari e degli operatori del settore con il fine di tutelare e conservare gli ecosistemi, la diversità strutturale e funzionale delle foreste, frenare il processo di abbandono colturale e culturale, valorizzare il ruolo del bosco e la funzione del settore forestale e delle sue filiere nello sviluppo socioeconomico del Paese.

In coerenza con il quadro programmatico internazionale, all'art. 3) del Testo unico, la *gestione forestale sostenibile* o *gestione attiva*, viene definita come:

> *"l'insieme delle azioni selvicolturali volte a valorizzare la molteplicità delle funzioni del bosco, a garantire la produzione sostenibile di beni e servizi ecosistemici, nonché una gestione e uso delle foreste e dei terreni forestali nelle forme e ad un tasso di utilizzo che consenta di mantenere la loro biodiversità, produttività, rinnovazione, vitalità e potenzialità di adempiere, ora e in futuro, a rilevanti funzioni ecologiche, economiche e sociali a livello locale, nazionale e globale, senza comportare danni ad altri ecosistemi".*

I 3 obiettivi della Strategia forestale nazionale sono stati declinati in 8 *Aree prioritarie di intervento* che ispirano i contenuti della Strategia:

1. **Sostenere le comunità rurali e urbane:** un settore forestale sostenibile e competitivo può svolgere un ruolo importante nello sviluppo delle aree rurali e montane per l'intera economia del paese, fornendo al contempo benefici essenziali per la società.
2. **Migliorare la competitività e la sostenibilità delle industrie forestali dell'UE, della bioenergia e dell'economia verde in generale**: le foreste e le materie prime da esse derivate possono offrire opportunità per mantenere e creare posti di lavoro e per diversificare le entrate in un'economia verde a basse emissioni di carbonio.
3. **Mitigazione e adattamento ai cambiamenti climatici**: le foreste possono aiutare a mitigare i cambiamenti climatici e gli eventi meteorologici estremi ad essi associati: è necessario quindi mantenere e migliorare la loro capacità di ripresa, adattabilità e resilienza, strettamente legata alla tutela della biodiversità e alla presenza di comunità e specie coerenti per ecologia e biogeografia alle potenzialità ecologiche delle terre.
4. **Proteggere le foreste e migliorare i Servizi ecosistemici**. Le foreste forniscono Servizi ecosistemici da cui dipendono le comunità rurali e urbane e ospitano una quota rilevante della biodiversità complessiva di un territorio.
5. **Informazioni e monitoraggio forestale**: il rafforzamento della base di conoscenze forestali consentirà una migliore comprensione delle complesse sfide ambientali e sociali che il settore forestale sta affrontando.
6. **Prodotti forestali nuovi e innovativi che generano valore aggiunto**: uno spazio di ricerca forestale coerente e ambizioso dell'UE è neces-

Tab.2.1

Le 11 finalità di tutela e gestione forestale sostenibile definite dal Testo unico in materia di foreste e filiere forestali (Dlgs 3 aprile 2018, n. 34, art. 2 comma 1)

a. Garantire la salvaguardia delle foreste nella loro estensione, distribuzione, ripartizione geografica, diversità ecologica e bio-culturale.

b. Promuovere la gestione attiva e razionale del patrimonio forestale nazionale al fine di garantire le funzioni ambientali, economiche e socioculturali.

c. Promuovere e tutelare l'economia forestale, l'economia montana e le rispettive filiere produttive nonché lo sviluppo delle attività agro- silvo-pastorali attraverso la protezione e il razionale utilizzo del suolo e il recupero produttivo delle proprietà fondiarie frammentate e dei terreni abbandonati (colturalmente), sostenendo lo sviluppo di forme di gestione associata delle proprietà forestali pubbliche e private.

d. Proteggere la foresta promuovendo azioni di prevenzione da rischi naturali e antropici, di difesa idrogeologica, di difesa dagli incendi e dalle avversità biotiche ed abiotiche, di adattamento al cambiamento climatico, di recupero delle aree degradate o danneggiate, di sequestro del carbonio e di erogazione di altri Servizi ecosistemici generati dalla GFS.

e. Promuovere la programmazione e la pianificazione degli interventi di gestione forestale nel rispetto del ruolo delle Regioni e delle autonomie locali.

f. Favorire l'elaborazione di principi generali, di linee guida e di indirizzo nazionali per la tutela e la valorizzazione del patrimonio forestale e del paesaggio rurale, con riferimento anche agli strumenti di intervento previsti dalla Politica Agricola Comunitaria.

g. Favorire la partecipazione attiva del settore forestale italiano alla definizione, implementazione e sviluppo della Strategia Forestale dell'UE e delle politiche ad essa collegate.

h. Garantire e promuovere la conoscenza e il monitoraggio del patrimonio forestale nazionale e dei suoi ecosistemi, anche al fine di supportare l'esercizio delle funzioni di indirizzo politico nel settore forestale e ambientale.

i. Promuovere e coordinare la formazione e l'aggiornamento degli operatori e la qualificazione delle imprese del settore.

j. Promuovere l'attività di ricerca, sperimentazione e divulgazione tecnica nel settore forestale.

k. Promuovere la cultura forestale e l'educazione ambientale.

sario per stimolare l'innovazione in tutto il settore forestale e il rafforzamento dell'economia circolare.

7. **Collaborare per conoscere meglio le nostre foreste e gestirle in maniera coerente**: il coordinamento tra le diverse competenze disciplinari e professionali, la cooperazione e la comunicazione contribuiranno al raggiungimento della coerenza e della complementarietà delle politiche.

8. **Foreste in una prospettiva globale**: occorre garantire la coerenza tra le politiche e gli obiettivi nazionali e comunitari e gli impegni relativi al quadro forestale a livello internazionale.

Il perseguimento dei 3 Obiettivi generali della Strategia Forestale Nazionale avviene attraverso l'attuazione di:

- **16 Azioni operative**, declinate per competenze e responsabilità dal livello statale a quello delle Regioni e Province autonome. Le azioni operative trovano diretta attuazione nei Programmi Forestali Regionali, all'interno dei quali esse sono finalizzate al perseguimento di risultati concreti con interventi contestualizzati alle esigenze istituzionali, territoriali, ecologiche, socioeconomiche e paesaggistiche delle specifiche realtà locali.
- **8 Azioni specifiche**. Le azioni specifiche rappresentano linee di intervento che riguardano particolari ambiti di carattere strategico per l'azione di governance, definendo approfondimenti, linee-guida e buone prassi per le autorità centrali dello Stato, le Regioni e le Province autonome volte al perseguimento congiunto e coordinato degli obiettivi nazionali, nonché degli impegni internazionali ed europei.
- **5 Azioni strumentali**, che costituiscono azioni portanti e fondamentali per garantire l'attuazione delle Azioni Operative e delle Azioni Specifiche. Costituiscono infatti, una sorta di "misure di supporto diretto" ai necessari adattamenti dell'assetto delle istituzioni.

In accordo con quanto previsto dal Testo unico, il Piano forestale generale della Campania definisce, per il territorio regionale, gli obiettivi e le relative linee d'azione, coerenti con la Strategia Forestale Nazionale in relazione alle specifiche esigenze socio-economiche, ambientali e paesaggistiche, nonché alle necessita' di prevenzione del rischio idrogeologico, di mitigazione e di adattamento al cambiamento climatico.

3. Il Piano forestale generale della Campania nel quadro della programmazione forestale nazionale

In accordo con il Testo unico e con la legislazione regionale vigente, il Piano forestale generale della Campania[1] definisce gli obiettivi e le azioni per la tutela e la gestione attiva del patrimonio forestale regionale.
Il Piano si inserisce nel complessivo quadro programmatico nazionale, che si articola in 4 livelli:

- La **Strategia Forestale Nazionale** che definisce gli indirizzi nazionali per la tutela, la valorizzazione e la gestione attiva del patrimonio forestale nazionale e per lo sviluppo del settore e delle sue filiere produttive, ambientali e socio-culturali;
- Il **Programma forestale regionale**, che definisce gli obiettivi e le relative linee d'azione, coerenti con la Strategia Forestale Nazionale, in relazione alle specifiche esigenze socio-economiche, ambientali e paesaggistiche, nonché alle necessita' di prevenzione del rischio idrogeologico, di mitigazione e di adattamento al cambiamento climatico;
- I **piani forestali di indirizzo territoriale**, che possono essere predisposti dalle regioni con riferimento a comprensori territoriali omogenei per caratteristiche ambientali, paesaggistiche, economico-produttive o amministrative, finalizzati all'individuazione, al mantenimento e alla valorizzazione delle risorse silvo-pastorali e al coordinamento delle attivita' necessarie alla loro tutela e gestione attiva, nonchè al coordinamento degli strumenti di pianificazione forestale;
- I **piani di gestione forestale**, redatti per le proprietà pubbliche e private, riferiti ad un ambito aziendale o sovraziendale di livello locale, quali strumenti indispensabili a garantire la tutela, la valorizzazione e la gestione attiva delle risorse forestali, attuativi dei Programmi forestali regionali e coordinati con i Piani forestali di indirizzo territoriale.

Compito del Piano forestale generale è pertanto quello di attuare nel territorio della regione Campania, in considerazione delle specifiche caratteristiche ed esigenze, gli obiettivi e le azioni della Strategia Forestale Nazionale, che a sua volta recepisce per il territorio nazionale i contenuti degli accordi internazionali e della legislazione e programmazione comunitaria in materia di risorse forestali e ambientali, biodiversità, lotta al cambiamento climatico, tutela del paesaggio.
Al centro del modello di programmazione forestale definito dal Testo unico rimane il concetto-guida di *Gestione Forestale Sostenibile* (GFS) o *gestione attiva* del patrimonio forestale.
A livello regionale, in piena coerenza con il Testo unico, il Regolamento forestale regionale 3/2017 della Regione Campania di tutela e gestione sostenibile del patrimonio forestale regionale, definisce ulteriormente all'art. 5 i contenuti del Piano Forestale Generale che:

a. descrive le caratteristiche ecologiche, strutturali ed evolutive del patrimonio forestale regionale;

b. definisce le strategie generali di tutela e gestione sostenibile del patrimonio forestale regio-

1 La denominazione dello strumento di programmazione forestale di livello regionale è differente nelle disposizioni di legge ai diversi livelli: il TUFF lo definisce "Programma forestale regionale"; il Regolamento 3/2017 della Regione Campania di tutela e gestione sostenibile del patrimonio forestale regionale lo definisce "Piano forestale generale". Per comodità, nel presente documento è adottata la dizione "Piano forestale generale".

fonte: http://burc.regione.campania.it

nale ed individua gli obiettivi da conseguire e le azioni prioritarie di miglioramento delle foreste pubbliche e private, tenendo conto degli obiettivi della tutela ambientale e dello sviluppo socio-economico delle popolazioni interessate e costituendo il quadro di riferimento per la pianificazione forestale a livello territoriale e locale;

c. si coordina con la pianificazione specialistica vigente, con espresso riferimento al piano paesaggistico di cui all'articolo 135 del D.Lgs. 22 gennaio 2004, n. 42 (Codice dei beni culturali e del paesaggio); ai piani di bacino di cui all'articolo 66 del D.Lgs. 3 aprile 2006, n. 152 (Norme in materia ambientale); ai piani di gestione della Rete Natura 2000 di cui al D.P.R 8 settembre 1997, n. 357 (Regolamento recante attuazione della direttiva 92/43/CEE relativa alla conservazione degli habitat naturali e seminaturali, nonché della flora e della fauna selvatiche).

Nel 2022 il Regolamento forestale regionale è stato successivamente adeguato ai seguenti Decreti attuativi del Testo unico in materia forestale e di filiere forestali[2]:

- Decreto interministeriale N. 677064 del 24/12/2021 - Strategia Forestale Nazionale, ai sensi dell'articolo 6, comma 1 del decreto legislativo 3 aprile 2018, n. 34 "Testo unico in materia di foreste e filiere forestali"
- Dec. interm.. N. 563765 del 28/10/2021 - Disposizioni per la definizione dei criteri minimi nazionali per l'elaborazione dei piani forestali di indirizzo territoriale e dei piani di gestione forestale
- Decreto ministeriale N. 608943 del 18/11/2021 - Approvazione delle linee guida per l'identificazione delle aree definibili come boschi vetusti
- Dec. min. N. 563734 del 28/10/2021 - Disposizioni per la definizione dei criteri minimi nazionali delle opere connesse alla gestione dei boschi e alla sistemazione idraulico-forestale
- Dec. interm. 12/08/2021 - Disposizioni per la definizione dei criteri minimi nazionali per il riconoscimento dello stato di abbandono delle attività agropastorali
- Dec. min. N. 4470 del 29/04/2020 - Definizione dei criteri nazionali per iscrizione agli albi regionali delle imprese forestali
- Dec. min. N. 4472 del 29/04/2020 - Definizione dei criteri nazionali per la formazione professionale degli operatori forestali
- Dec. min. 9219119 del 07/10/2020 - Linee guida per definizione criteri per esonero interventi compensativi per trasformazione bosco

Ai fini della caratterizzazione del patrimonio boschivo regionale il Piano forestale generale fa riferimento alla **Carta delle risorse forestali della Campania**, redatta contestualmente ad esso.
Il Piano Forestale Generale ha validità decennale e conserva la propria efficacia fino all'adozione del successivo strumento di pianificazione.

2 Regolamento Regionale 20 giugno 2022, n. 4 "Adeguamento alle previsioni dei decreti ministeriali attuativi del decreto legislativo 3 aprile 2018, n. 34, e ulteriori modifiche al regolamento regionale 28 settembre 2017, n. 3", pubblicato sul Bollettino Ufficiale Regione Campania n. 54 del 21 giugno 2022

4. La Carta delle risorse forestali del territorio della Regione Campania: struttura della legenda e del data base associato

In accordo con quanto disposto dall'articolo 12 del Regolamento regionale 3/2017, la Carta delle risorse forestali "... illustra la distribuzione geografica, la superficie e la qualità delle diverse formazioni forestali presenti nel territorio regionale, anche in relazione alle infrastrutture ed alle sistemazioni forestali eventualmente presenti. Essa costituisce l'inventario di base, unitamente al Piano forestale generale, per la definizione delle strategie di protezione e valorizzazione delle risorse forestali a scala regionale e per la corretta programmazione degli interventi in materia forestale."
La carta regionale delle risorse forestali è parte del Sistema Informativo Regionale delle Foreste (S.I.R.F.), a sua volta, ricompreso nel Sistema informativo territoriale regionale di cui all'articolo 17 della L. R. 22 dicembre 2004, n. 16 (Norme sul governo del territorio), ed all'articolo 9 della L. R. 13 ottobre 2008, n. 13 (Piano Territoriale Regionale).
L'articolo 9 del Regolamento regionale forestale stabilisce che lo strumento di coordinamento delle diverse attività amministrative e autorizzative legate alla tutela, gestione sostenibile e monitoraggio delle risorse forestali è lo Sportello Unico delle Attività Forestali (S.U.A.F.), che costituisce la piattaforma informatica unitaria a livello regionale in materia forestale.

La versione della Carta delle risorse forestali della Campania in scala di semidettaglio 1:25.000 che accompagna il Piano forestale generale è stata realizzata mediante attività di fotointerpretazione e di analisi, revisione, integrazione in ambiente GIS dei dati cartografici contenuti nei seguenti strati informativi:

- Carta della natura della Regione Campania (Ispra, Arpac 2017);
- Carta delle risorse forestali della Campania (Risorsa, 2015);
- Carta forestale della Campania (Sma Campania 2010);
- Carta dell'uso agricolo dei suoli della Campania (Regione Campania, Settore Sirca 2009);
- Indagine sui pascoli pubblici della Campania (Regione Campania Settore Sirca, 2005).

Il data base associato alla Carta delle risorse forestali è organizzato in cinque livelli gerarchici, che consentono di descrivere le coperture forestali a diversi livelli di aggregazione e generalizzazione, in funzione delle specifiche esigenze.
Le descrizioni ai diversi livelli utilizzano le denominazioni impiegate nell'Inventario forestale nazionale, allo scopo di favorire la correlazione tra Carta delle risorse forestali e le informazioni contenute nell'Inventario forestale nazionale. Tutto ciò tenendo sempre presente le differenze tra i due strumenti, che hanno finalità e modalità realizzative proprie.

fonte: http://burc.regione.campania.it

La Carta delle risorse forestali è accompagnata da una libreria di strati informativi che costituiscono il primo nucleo del Sistema informativo delle foreste regionali relativi ai principali aspetti amministrativi, di tutela e di rischio:

- Confini amministrativi degli Enti delegati (Comunità Montane, Province, Città metropolitana di Napoli)
- Confini amministrativi comunali
- Sistemi del territorio rurale
- Siti della Rete Natura 2000
- Carta dei pascoli della Campania
- Aree protette e riserve nazionali e regionali
- Rischio idrogeologico ai sensi della pianificazione di bacino vigente
- Aree percorse dal fuoco (periodo 2000-2020)
- Sistemi di terre
- Modello digitale del terreno
- Carta delle pendenze
- Carta delle aree di interfaccia foresta/urbano (buffer di 2000 intorno alle aree urbanizzate)
- Carta delle dinamiche di uso del suolo

L'incrocio tematico in ambiente GIS della Carta delle risorse forestali con gli strati informativi già disponibili nella versione del SIT Foreste messa a punto consente una vasta gamma di interrogazioni ed elaborazioni, a supporto dell'azione amministrativa e programmatica della regione e degli altri Enti con competenze in materia forestale.
Tra gli strati tematici facenti parte del SIT FORESTE è presente una Carta regionale della risorsa pascolo, realizzata a partire dallo studio floristico-vegetazionale e agronomico sui pascoli pubblici realizzato da Regione Campania. L'indagine aveva condotto alla realizzazione di cartografie dei pascoli pubblici relative ai territori di 19 Comunità montane. Le 19 cartografie sono state integrate in una cartografia unitaria di scala regionale. Per le aree a pascolo non interessate dallo studio, l'identificazione è stata effettuata attingendo alle informazioni contenute in altri strati informativi, in primo luogo la Carta della natura della Regione Campania (Ispra, Arpac 2017), e la Carta dell'uso agricolo dei suoli della Campania (Regione Campania, Settore Sirca 2009).
Ai fini dell'aggiornamento della sistema informativo cartografico delle foreste della Campania il Settore "Ambiente, sviluppo locale, sistema della conoscenza e difesa delle colture" - UOS "Sistemi territoriali e di sviluppo locale, Sistema della Conoscenza" ha avviato con risorse del Fondo per lo sviluppo delle montagne italiane (FOSMIT), una progettualità specifica per la realizzazione:

- Di una versione aggiornata della Carta delle risorse forestali della Campania, redatta alla scala nominale 1:10.000, completa di un Geodatabase dei dati forestali, da realizzare mediante l'integrazione di dati acquisiti da piattaforme aeree e satellitari e da rilievi in campo, a partire dal prototipo di cartografia forestale della regione Campania realizzato dal MASAF/CREA nell'ambito del progetto SINFOR, con riferimento temporale nominale al 2020.
- di approfondimenti tematici relativi alla struttura delle foreste regionali mediante analisi dei dati da sensoristica LIDAR aviotrasposrtata.

5. Il patrimonio forestale della Campania: un profilo sintetico

Superfici forestali e loro dinamica

Secondo l'Inventario Nazionale delle Foreste e dei Serbatoi forestali di Carbonio 2015, la superficie forestale complessiva della Regione Campania è attualmente di 491.259 ettari (Tab. 5.1).

Nel decennio intercorso tra i due Inventari Forestali Nazionali (2005-2015), la superficie forestale regionale è aumentata di 45.983 ettari (+10,4%), rispetto alla superficie 2005, che era di 444.119 ettari.

La superficie forestale 2015 copre ora il 35,9% del territorio della Campania (32,6% nel 2005).

La superficie dei boschi è aumentata di 19.530 ettari (+5,1%), con spiccate differenze tra i diversi tipi forestali: le faggete aumentano dell'1,9%, i castagneti del 5,2%, le cerrete del 9,7%, i boschi a roverella dell'11,1%, mentre i boschi igrofili e ripariali diminuiscono del 6,2%.

La superficie delle Altre terre boscate (boschi bassi, boschi radi, boscaglie, arbusteti) passa da 60.879 ettari nel 2005, a 87.332 ettari del 2015, con un incremento di 26.453 ettari (+43,5%), legato in particolar modo all'espansione rilevante degli arbusteti (22.049 ettari, +77,8%).

Queste variazioni rappresentano il saldo netto di dinamiche differenziate: le persistenze forestali, sarebbe a dire le aree forestali rilevate nel 2005 che non hanno subito variazioni d'uso hanno estensione di 440.049 ettari. I processi di forestazione di aree che al 2005 erano agricole, pascolative, o comunque non forestali, che sono diventate bosco al 2015, hanno interessato una superficie di 50.210 ettari. I diboscamenti, le aree forestali al 2005 e che hanno subito una variazione ad usi non forestali nel 2015, hanno interessato una superficie di 4.301 ettari.

Tipo colturale, proprietà

Secondo INFC 2015, il 43,7% dei boschi della Campania è governato a ceduo (175.324 ettari), il 27,2% a fustaia (109.293 ettari), il 5% (20.372 ettari) con forme di governo speciali (castagneti da frutto in attualità di coltura, noceti ecc.), il 23,8% (95.775 ettari) con forme di governo non definite o non classificate (Tab. 5.2).

Il 54,9% dei boschi della Campania è di proprietà privata, il restante 45,1% di proprietà pubblica (Tab. 5.3). La proprietà delle altre terre boscate (boschi bassi, boschi radi, boscaglie, arbusteti) è per il 41,9% privata, per il 26,0% pubblica, per il restante 32,0% non determinata. Nel complesso la proprietà delle aree forestali della Campania (boschi + altre terre boscate) è pubblica per il 52,6% della superficie forestale complessiva; privata per il 41,3%, con un restante 6,1% che risulta non classificato.

Disaggregando il dato della proprietà comunale, emerge che i comuni proprietari di bosco sono in totale 479, di questi

- 108 comuni con superficie boscata minore di 50 ettari
- 70 comuni con superficie boscata compresa tra 50 e 100 ettari
- 169 comuni con superficie boscata compresa tra 100 e 500 ettari
- 79 comuni con superficie boscata compresa tra 500 e 1000 ettari
- 53 comuni con superficie boscata maggiore di 1.000 ettari

Tab.5.1

La superficie delle tipologie di bosco del territorio regionale della Campania negli Inventari forestali nazionali del 2005 e del 2015

Tredici comuni hanno una superficie boscata compresa tra 2.000 e 3.000 ettari e solo sette comuni hanno una superficie superiore a 3.000 ettari.
Incrociando per le diverse categorie forestali i dati relativi alla proprietà, con quelli relativi al tipo colturale, è possibile rilevare come il patrimonio forestale pubblico e quello privato presentino spiccate differenze e specificità, rappresentando in qualche misura mondi notevolmente diversi.
I boschi di proprietà pubblica della Campania coprono una superficie di 179.800 ettari. Essi sono costituiti per la metà circa da fustaie, con il faggio specie prevalente (47%), seguita dal cerro (17%), dai boschi misti di latifoglie (9%), dalle pinete di pini mediterranei (7%).
La superficie dei boschi cedui di proprietà pubblica copre una superficie di 70.000 ettari circa, con le categorie forestali prevalenti rappresentate dagli ostrieti carpineti (36%), dal leccio (22%), dagli altri boschi di latifoglie (18%), dai castagneti (10%), dalla roverella (9%).

I boschi di proprietà privata della Campania coprono una superficie di 218.082 ettari. Essi sono costituiti per oltre l'85% da cedui, con le categorie forestali maggiormente rappresentate che sono roverella (24%), cerro (22%), castagno (21%), ostrieti-carpineti (10%), leccio (8%).

Regimi di tutela: aree protette, Rete Natura 2000

Il sistema delle aree protette della Campania (parchi nazionali e regionali, riserve statali e regionali) interessa una superficie di 350.204 ettari, pari 25,6% del territorio regionale, contro una media nazionale del 10,5%.
La Rete Natura 2000 della Campania comprende 123 siti terrestri per una superficie complessiva di 373.031 ettari, pari al 27,3% del territorio regionale (media nazionale 19,4%).

Secondo INFC 2015 la superficie dei boschi ricadenti in aree a tutela naturalistica (parchi nazionali e regionali, riserve statali e regionali, siti della rete Natura 2000) è di 261.918 ettari, corrispondente al 64,8% della superficie regionale complessiva dei boschi. Di questa superficie:

- 194.369 ettari ricadono contemporaneamente in area parco e in Rete Natura 2000;
- 67.713 ettari ricadono esclusivamente in rete Natura 2000.

La superficie delle altre terre boscate ricadenti in aree a tutela naturalistica (parchi nazionali e regionali, riserve statali e regionali, siti della rete Natura 2000) è di 59.986 ettari, corrispondente al 64,7% della superficie regionale complessiva delle altre terre boscate.

L'incrocio tematico in ambiente GIS tra lo strato informativo "Carta delle risorse forestali" e quello relativo alla perimetrazione e zonizzazione dei parchi nazionali e regionali ha consentito una stima delle superfici delle diverse categorie forestali ricadenti nelle zone a diverso grado di tutela. I dati in tabella mostrano come, dei 194.369 ettari di boschi ricadenti in parchi e riserve, 34.248 ettari ricadono all'interno della zona "A" di riserva integrale, i restanti 159.957 ettari in zone di parco o riserva diverse dalla zona A (Tab. 5.4).

In Tab. 5.5 sono invece riportate le superfici delle diverse categorie forestali ricadenti nei siti della Rete Natura 2000.

fonte: http://burc.regione.campania.it

Rischio idrogeologico, usi civici

Secondo INFC 2015 l'84,3% dei boschi alti della Campania e il 61,7% delle altre terre boscate, ricade in aree interessate da vincolo idrogeologico ai sensi del Regio Decreto 30 dicembre 1923, n. 3267 ("Riordinamento e riforma della legislazione in materia di boschi e di terreni montani")[3].

L'incrocio della Carta delle risorse forestali con lo strato informativo relativo alla pianificazione di bacino vigente, ha consentito di stimare in 78.628 ettari le aree forestali che risultano ricadere in aree a pericolosità idrogeologica "elevata" o "molto elevata".

Secondo INFC2015 la superficie dei boschi della Campania interessati da dinamiche di dissesto è di 46.368 ettari, con 7.365 ettari interessati da frane o smottamenti; 12.241 ettari interessati da erosione idrica e fenomeni alluvionali; 26.752 ettari da distacco e rotolamento di materiale lapideo.

Una stima delle superfici forestali della Campania gravate da usi civici non è al momento disponibile, lo sarà a breve, al completamento della digitalizzazione della cartografia delle aree del territorio regionale gravate da usi civici, in corso di realizzazione nell'ambito delle analisi per la formazione del Piano paesaggistico regionale ai sensi del Dlgs 42/2004 (Codice dei beni culturali e del paesaggio). Per inciso, la superficie complessiva regionale delle aree gravate da usi civici è di circa 350.000 ettari.

Pratiche colturali

La superficie dei boschi presenti nel territorio regionale interessata secondo IFNC 2015 da gestione attiva - dall'effettuazione cioè di pratiche colturali a diversa intensità - è di 261.125 ettari (65,1% della superficie dei boschi regionali).

Di questa superficie, 187.976 ettari (72%) sono oggetto di pratiche colturali minimali, limitate al taglio a fine turno, per la raccolta del prodotto, senza che vengano eseguiti interventi di coltivazione e/o cure colturali (sfolli e/o diradamenti); sono comprese in questo dato le utilizzazioni non programmate, per esempio quelle effettuate in seguito a schianti e dissesti.

Una superficie di 46.925 ettari (11,7%) è interessata da pratiche colturali "classiche", improntate alla selvicoltura tradizionale; oltre alla raccolta del prodotto alla fine del ciclo produttivo (turno) vengono eseguite cure colturali, ma non sono previsti quegli interventi di coltivazione tipici delle pratiche agronomiche, di solito applicati nelle piantagioni specializzate. Rientrano nella sottoclasse tutti quei casi in cui in previsione del taglio finale si associano interventi atti a favorire l'insediamento della rinnovazione e la selezione delle piante portaseme, ad es. tagli di sementazione, secondari, ecc.

Una superficie di 18.877 ettari (7,2%) è interessata da pratiche colturali "speciali", e comprende i castagneti da frutto in attualità di coltura.

15. Sugherete	727	2	0,3

Secondo INFC la superficie dei boschi regionali caratterizzata dall'assenza di pratiche colturali è di 139.358 ettari, pari al 34,7% della superficie regionale dei boschi. In queste aree non sono rilevati o previsti all'attualità interventi selvicolturali di nessun tipo, neppure le utilizzazioni finali. Esse comprendono i soprassuoli ad evoluzione naturale, sia quando questa è dettata da motivazioni di natura giuridica (ad esempio boschi in riserve naturali integrali) sia nel caso in cui le utilizzazioni siano impraticabili (terreni inaccessibili o scomodi) o economicamente non convenienti (boschi a macchiatico negativo).

Questa partizione dei boschi regionali comprende dunque, tra gli altri, i boschi ricadenti nelle zone di protezione integrale "A" del sistema regionale di parchi e riserve, nazionali e regionali. Questi boschi, come detto in precedenza, coprono una superficie complessiva di 34.248 ettari, pari all'8,5% della superficie regionale dei boschi.

Una parte importante dei boschi caratterizzati secondo l'Inventario forestale nazionale dall'assenza di pratiche di gestione è costituita da boschi di ricolonizzazione naturale di aree agricole collinari e montane interessate da abbandono colturale a partire dal secondo dopoguerra.

È importante sottolineare a tale riguardo come la progressiva estensione della superficie boschiva regionale dal 1960 ad oggi (+185.134 ettari dal 1960 al 2015, pari a un incremento dell'84%) comporta che l'attuale superficie forestale della Campania sia costituita per il 54,2% da boschi a maggior grado di maturità, già presenti nel 1960; per il restante 45,8% da boschi di neoformazione, che hanno spontaneamente colonizzato aree agricole montane e collinari ad "agricoltura eroica", interessate da abbandono colturale, sovente interessate da sistemazioni storiche tradizionali (ciglionamenti, terrazzamenti).

La superficie dei boschi caratterizzati dall'assenza di pratiche gestionali contiene anche una porzione rilevante dei boschi regionali ai quali è possibile attribuire una funzione prioritaria di protezione diretta ai sensi dall'art. 3 comma 1 lett. r) del TUFF. In queste aree la funzione prioritaria del soprassuolo forestale ai fini della prevenzione/mitigazione del rischio idrogeologico (colate piroclastiche, colate di detrito) a carico degli abitati e del patrimonio infrastrutturale, impone l'adozione di una strategia di gestione e recupero specifica, di seguito delineata nel cap. 9 del presente piano.

fonte: http://burc.regione.campania.it

Stato della pianificazione forestale

Secondo INFC 2015 i boschi di proprietà pubblica della Campania coprono una superficie di 179.800 ettari, pari al 45% della superficie boschiva regionale.
Un aspetto rilevante del patrimonio forestale pubblico in Campania è il fatto che la superficie interessata da piani di gestione (142.892 ettari) costituisce oramai la porzione prevalente, di poco inferiore all'80% della superficie complessiva dei boschi pubblici.
La superficie pianificata delle aree forestali e pascolativa di proprietà pubblica in Regione Campania è riportata in Tabella 5.6.
Al momento della redazione del presente Piano (29/01/2025) la situazione dei Piani di Gestione Forestale dei soggetti pubblici è la seguente:

- i Comuni/Enti dotati di P.G.F. vigente sono 132
- i Comuni/Enti con P.G.F. in istruttoria sono 126
- i Comuni/Enti con P.G.F. non vigenti sono 75, di cui 56 in attesa di richiesta di avvio istruttoria.

Come ricordato in precedenza i boschi di proprietà privata della Campania coprono una superficie di 218.082 ettari. Al momento della redazione del presente Piano i piani di gestione forestale approvati di boschi di proprietà privata sono 239, per una superficie di circa 7.500 ettari, pari al 3,4% della superficie complessiva dei boschi di proprietà privata in Campania.

Utilizzazioni legnose forestali

In Tab. 5.7 sono riportati i dati più recenti pubblicati da ISTAT relativi ai prelievi legnosi in Campania, prima della cessazione delle rilevazioni forestali da parte dell'Ente nazionale di statistica. L'ultimo dato plausibile per la Campania si riferisce all'annata 2014, con un prelievo legnoso di circa 314.251 mc, essendo il dato 2015 evidentemente sottostimato e non attendibile.
Il dato di prelievo legnoso fornito da INFC 2015 per la Campania è invece di 397.081 mc, superiore quindi al dato ISTAT 2014.
L'incremento legnoso complessivo annuo dei boschi regionali è stimato da INFC2015 in 2.001.817 mc. L'incremento legnoso complessivo stimato dall'Inventario nazionale 2005 era di 1.556.093 mc.
Il valore dell'incremento annuo stimato dal Piano forestale generale della Campania 2009-2013 era di 1,2 milioni di mc.
Prendendo a riferimento la stima di incremento legnoso fornita da INFC2015, il tasso di utilizzo legnoso dei boschi della Campania è del 15,7% se si considera il dato di prelievo ISTAT 2014, del 19,8% se si considera invece il dato di prelievo INFC2015.
A scala nazionale, secondo Pettenella, l'attuale tasso di prelievo forestale è compreso tra il 18,4% e il 37,4% dell'incremento annuo, molto inferiore alla media europea, pari al 73% (Pettenella, 2023).
Nella relazione tecnica della Strategia Forestale Nazionale è scritto che "...considerando l'attuale tasso di utilizzo nazionale, stimato nel 33% dell'incremento annuo (RAF, 2019), con la gestione forestale in Italia le attività di prelievo potrebbe raggiungere un massimo del 40-45% dell'incremento annuo dei boschi sottoposti a pianificazione forestale".
Il tasso di utilizzo legnoso dei boschi della Campania si colloca quindi entro l'intervallo fornito da Pettenella, e comunque molto al di sotto del tasso di utilizzo medio nazionale del 33% indicato nella relazione tecnica della Strategia forestale nazionale.

Provincia	Totale superficie demaniale pianificata (Ha)	Superficie boscata (Ha)	Superficie pascolabile (Ha)	Altre superfici (Ha)

2014	110	730	1.791	1.848	1.901	2.578

Rimane il fatto che i dati sui prelievi e il tasso di utilizzo legnoso devono essere trattati e interpretati con le dovute precauzioni, essendo il prodotto di rilevazioni sovente frammentarie e incomplete.
In particolare, la stima del tasso di utilizzo legnoso dei boschi campani non può rappresentare tout court una base per le attività di programmazione, rappresentando la media di situazioni opposte, di sotto-utilizzazione della risorsa in alcuni ambiti del territorio regionale; di sovra-utilizzo dei boschi in altri contesti forestali regionali, con differenze notevoli nell'intensità di utilizzo, anche legate al regime di proprietà.
Ai fini di un governo sostenibile del patrimonio boschivo regionale si avverte quindi la necessità di disporre di dati disaggregati, relativi a sistemi forestali omogenei.
Il presente Piano si propone di soddisfare tale esigenza basilare promuovendo con una specifica azione la realizzazione, attraverso lo Sportello per le Attività Forestali (SUAF), espressamente prevista dal Regolamento forestale regionale, di una piattaforma digitale a scala regionale alla quale possano confluire in tempo reale i dati sui piani di gestione, le istanze di taglio, le autorizzazioni, e i controlli effettuati a scala locale dagli uffici regionali e dagli Enti delegati.

La struttura duale del patrimonio forestale regionale

Il profilo del patrimonio forestale regionale fornito nei paragrafi precedenti evidenzia come esso costituisca un sistema di risorse estremamente diversificato e articolato, sotto molteplici punti di vista, ecologico, vegetazionale, amministrativo, gestionale. Come in altre regioni italiane, ad emergere, sono anche le differenze che caratterizzano nel complesso il patrimonio forestale di proprietà pubblica da quello di proprietà privata.
In definitiva, il patrimonio forestale pubblico della Campania, comprendente il 45% dei boschi della regione, è caratterizzato:

- da un rapporto più equilibrato tra le diverse forme di governo (fustaia, ceduo), con un peso rilevante delle fustaie di faggio e di querce caducifoglie che costituiscono la metà circa dei boschi di proprietà pubblica;
- dal fatto di essere in larga misura (l'80% circa della superficie complessiva) interessato da una pianificazione forestale vigente.

Il patrimonio forestale di proprietà privata della Campania, che copre il restante al 55% della superficie boschiva regionale, è costituito per l'85% da boschi cedui. Esso presenta in maniera accentuata gli aspetti di debolezza identificati dalla Strategia forestale nazionale nei termini di una "elevata frammentazione delle proprietà forestali e della

fonte: http://burc.regione.campania.it

ridotta dimensione aziendale con scarsa propensione alla gestione associata e all'adeguamento gestionale, strutturale e produttivo". Come visto in precedenza, la superficie dei boschi privati dotata di piani di gestione forestale vigenti è estremamente ridotta, rappresentando il 3,4% appena di quella totale.

Considerazioni generali sulle basi di dati forestali impiegate dal Piano forestale generale della Campania

Analogamente a quanto avviene per il Censimento generale dell'agricoltura effettuato a cadenza decennale da ISTAT, i dati dell'Inventario Forestale Nazionale hanno valore di dato ufficiale, a livello comunitario e internazionale, per quanto riguarda la definizione di direttive, regolamenti, convenzioni in campo forestale; a scala nazionale e la definizione delle politiche settoriali interne.

I dati dell'Inventario Forestale Nazionale sono stati resi pubblici a partire dal 2022, e conservano il valore di dato ufficiale sino alla pubblicazione dei dati del prossimo Inventario. Tali dati consentono anche un confronto diretto con quelli del precedente Inventario forestale effettuato nel 2005.

È importante sottolineare come i dati dell'Inventario forestale sono pubblicati in forma esclusivamente tabellare, non essendo reso disponibile il dato cartografico di qualsiasi formato (immagine o vettoriale).

Fermo restando il fatto che la proposta di Piano forestale generale della Campania (PFG) non può prescindere, per le ragioni suddette, dal considerare i dati ufficiali dell'Inventario 2015, la necessità di disporre di dati "in progress" disponibili in forma cartografica digitale per le analisi e interpretazioni in ambiente GIS necessarie per la formazione del piano, è stata necessariamente considerata, procedendo, come descritto nel paragrafo 4, alla realizzazione della Carta forestale regionale che accompagna la proposta di PFG, che rappresenta la sintesi delle conoscenze cartografiche più aggiornate disponibili al momento di redazione del Piano (vedi Par. 4).

I dati della Carta forestale sono coerenti – per gli scopi di pianificazione generale che il Piano si propone - con quelli dell'Inventario forestale, con le inevitabili differenze dovute alla diversa metodologia di realizzazione e finalità delle due basi di dati.

Così, ad esempio, la superficie forestale desumibile dalla Carta forestale che accompagna la proposta di Piano è di 488.567 ettari, contro i 491.260 stimati dall'Inventario forestale. La differenza di 2.693 a favore dell'Inventario è dell'ordine dello 0,5% della superficie complessiva.

Un ulteriore aggiornamento del dato si è reso disponibile dopo la pubblicazione della proposta di PFG, con la condivisione, da parte del CREA, dello stralcio relativo al territorio della Campania, della Carta forestale nazionale, che il CREA ha realizzato a scala nazionale a partire da ortofoto 2020. La Carta forestale nazionale costituirà in progresso di tempo, insieme all'Inventario forestale nazionale, la base di dati ufficiale e il riferimento anche per la definizione delle politiche regionali.

I dati della Carta forestale nazionale CREA relativi al territorio della Campania risultano anch'essi fortemente coerenti – per gli scopi di pianificazione generale che il Piano si propone - con quelli dell'Inventario forestale nazionale, e con quelli della Carta forestale regionale che è stata realizzata contestualmente alla proposta di PFG. La superficie forestale della Campania stimata dalla Carta forestale nazionale CREA aggiornata al 2020, realizzata sulla base della definizione di "bosco" dettata dal TUFF, è di 492.125 ettari, un dato fortemente allineato come si vede a quelli delle altre due basi di dati considerate dal Piano.

6. Le formazioni forestali

Boschi a prevalenza di querce caducifoglie e formazioni di latifoglie mesofile

Secondo i dati dell'IFNC 2015 i querceti di roverella e di cerro occupano una superficie rispettivamente di 60.934 e di 74.644 ettari. In confronto al 2005 le variazioni sono state in aumento, dell'11,1% e del 9,7%.

Il querceto di roverella (*Quercus pubescens*) trova maggiore diffusione nelle aree collinari a morfologia dolce, corrispondenti agli affioramenti argillosi del Sannio, dell'alta Irpinia e alle aree a flysch del Cilento. Il querceto xerofilo ha subìto una forte contrazione areale perché, fin dal secolo scorso, ha dovuto lasciare il posto ai seminativi, in particolare alla cerealicoltura estensiva. Al suo interno si esercita, meno che in passato, il pascolo nel periodo autunno-invernale che provoca danni considerevoli alla continuità del cotico erboso e compromette la conservazione del suolo. Il modello strutturale più ricorrente è la fustaia con piante appartenenti a cicli ben differenziati, spesso bietanea.

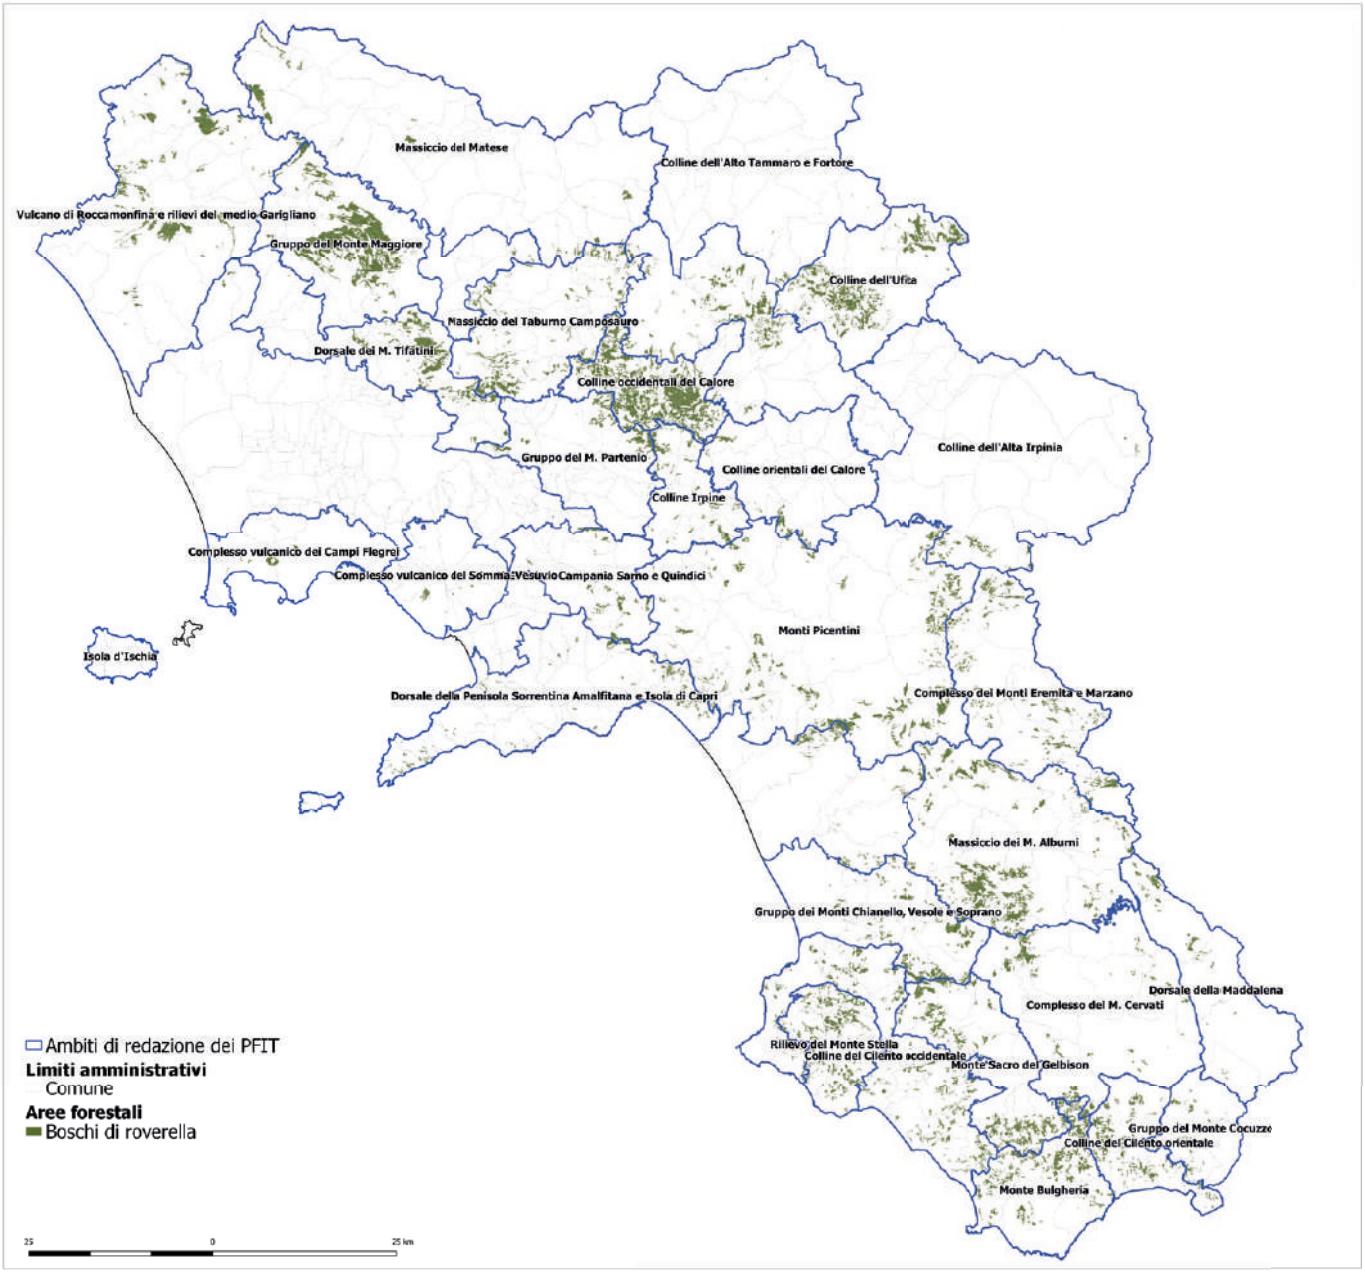
Le piante di maggiori dimensioni rappresentano la componente arborea di pascoli e seminativi. La cessazione dell'aratura, del pascolo dei suini e della raccolta della ghianda ha riavviato il processo di rinnovazione con conseguente ricolonizzazione degli spazi aperti, avvenuta molto spesso in tempi relativamente ristretti, grazie alle successive "ondate" di pasciona. Non sono infrequenti, nelle poche aree non urbanizzate del napoletano, i casi di ricolonizzazione di pendici terrazzate in abbandono un tempo coltivate. La roverella caratterizza la fisionomia del ceduo solo in ambiti limitati, spesso rappresenta, invece, una componente più o meno preponderante di un consorzio di specie della medesima fascia di vegetazione fra cui orniello, acero napoletano, acero campestre, carpino nero, sorbi, ecc..

La partecipazione al consorzio xerofilo di piante di quercia con caratteri ibridogeni può ritenersi un fatto molto comune, mentre la presenza del farnetto (*Quercus frainetto*) in ambito regionale è ristretta al versante nord-occidentale del Cilento (in Comune di Felitto, Trentinara, Monteforte Cilento, etc.) e a poche altre aree regionali distribuite in modo puntiforme.

La farnia (*Quercus robur*) in Campania è un tipico rappresentante di boschi mesoigrofili extrazonali relitti nella fascia mediterranea. La specie è localizzata in aree (fondi di crateri vulcanici spenti, aree ripariali esondabili, depressioni retrodunali soggette a ristagni d'acqua) dove alle piante viene garantito un adeguato rifornimento idrico di falda nel periodo arido estivo. La sua distribuzione è ristretta all'area Flegrea, in provincia di Napoli, alle fasce boscate demaniali di Serre Persano e ai lembi residui di boschi ripariali del beneventano. Nella Riserva degli Astroni, gli esemplari monumentali di farnia sono in fase di declino vegetativo e manifestano problemi di stabilità meccanica legati al precario stato fitosanitario delle radici. In questa riserva la compresenza dell'aliena quercia rossa (*Quercus rubra*) rappresenta una significativa fonte di inquinamento genetico. La categoria boschi di rovere, riportata dall'INFC, appare sovrastimata in Campania, come in altre regioni meridionali. Per i querceti acidofili più verosimile appare la maggior presenza di querce ibride e, forse, della vicariante quercia di Dalechamps (*Quercus dalechampii*).

I principali boschi di cerro (*Quercus cerris*) sono localizzati nel Sannio, in Irpinia, nel Cilento, sui monti della Maddalena, sui contrafforti del Cervati (Cerreta e Cognòle), sul Centaurino. La cerreta connota la parte superiore della fascia submontana, ma

fonte: http://burc.regione.campania.it



scende in posizione extrazonale nei boschi mesoigrofili planiziari (fasce boscate di Persano) e risale nelle propaggini inferiori della faggeta termofila, dove vegeta discretamente nelle aree di tensione in cui il faggio diviene meno competitivo. L'aumento di quota rende il fusto particolarmente vulnerabile ai cretti da gelo.

Nella proprietà pubblica (demanio regionale e comunale) sono concentrate la gran parte delle fustaie. I soprassuoli di origine agamica, ove presenti in questa tipologia di proprietà, sono anch'essi in buona parte in conversione a fustaia. Il ceduo rappresenta, invece, la forma di governo più diffusa nella proprietà privata, ma molto spesso si lamenta una densità insufficiente di ceppaie. Anche per la cerreta vi sono esempi di ridiffusione in ex-coltivi inclusi all'interno della medesima formazione forestale (Centaurino) e in aree agricole marginali contigue a soprassuoli boscati (Cilento).

Le fustaie sono coetaneiformi, a struttura monoplana o, in taluni casi, con piano inferiore costituito da specie tolleranti l'ombra. Sebbene la tendenza al monofitismo sia una condizione imposta dalla coltivazione, vi sono molte specie che partecipano in modo subordinato al consorzio arboreo. Fra queste si annoverano: *Acer campestre*, *A. obtusatum*, *A. neapolitanum*, *A. cappadocicum* subsp. *lobelii*, *Fraxinus ornus* (e il più raro e localizzato *F. oxycarpa*), *Carpinus betulus*, *C. orientalis*, *Ostrya carpinifolia*, *Alnus cordata* e il più raro e localizzato *glutinosa*, *Sorbus domestica*, *S. torminalis*, *Betula pendula*, etc.. L'elemento che accomuna tutte le specie consociate al cerro è, quasi sempre, l'origine agamica. La reiterata ceduazione dei carpini ne ha esaltato la loro capacità di ricaccio fino a fargli rag-

Fig. 6.1

fonte: http://burc.regione.campania.it

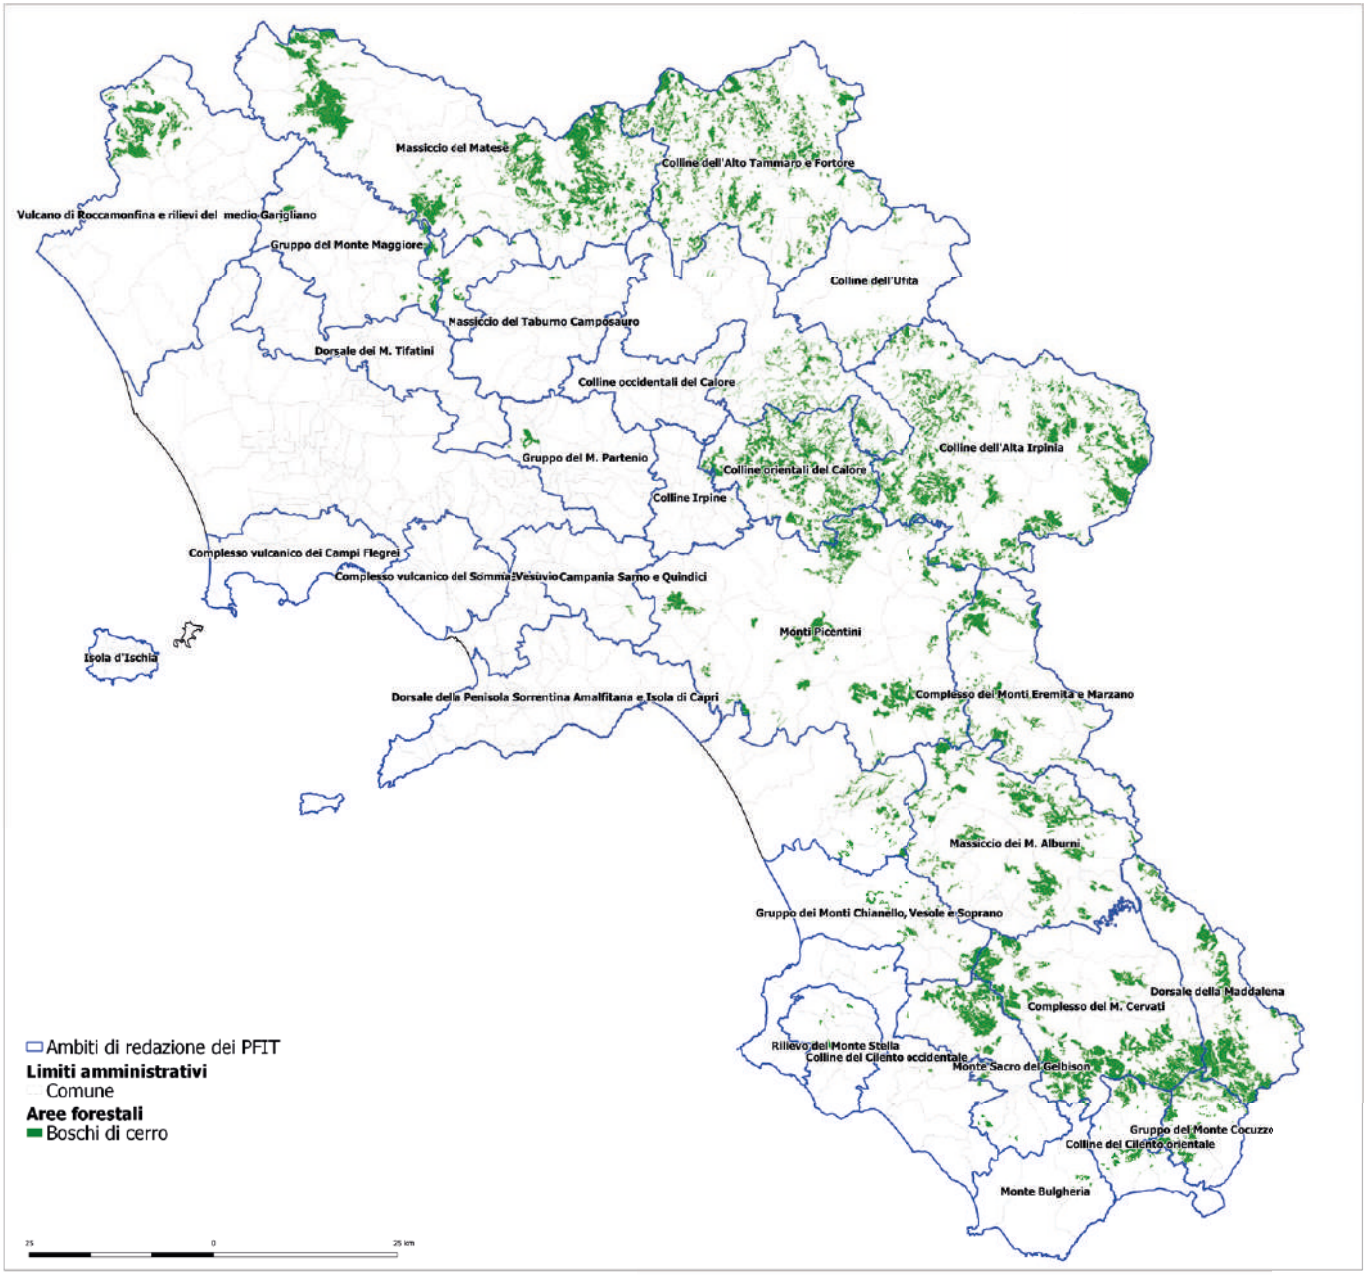

Fig. 6.2

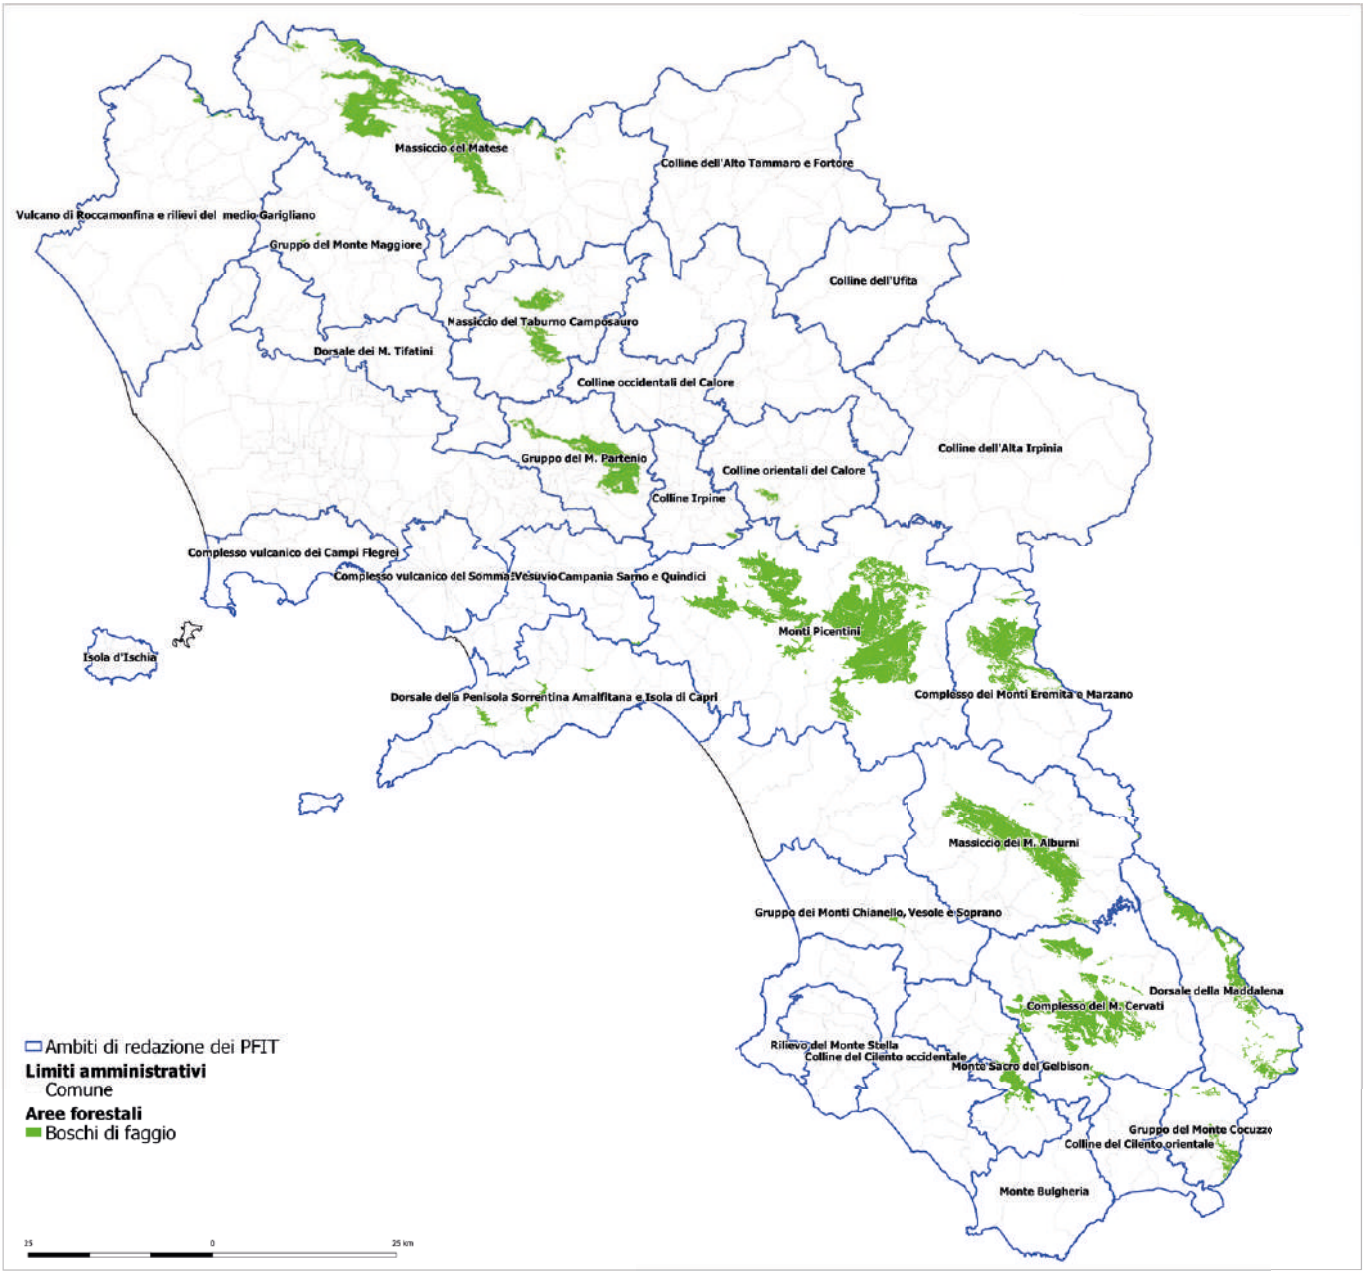
Distribuzione dei boschi di cerro nel territorio regionale.



giungere, localmente, un grado di copertura molto elevato nel piano inferiore.

Fra le più comuni specie arbustive di cerreta si annoverano biancospino, prugnolo e, fra le sempreverdi, agrifoglio, pungitopo ed erica arborea. La loro frequenza e il loro indice di copertura è funzione del grado di copertura delle chiome e, quindi, del clima luminoso del bosco. In generale con valori di irradianza relativa ottimali tendono a rarefarsi le specie dello strato arbustivo e diviene consistente lo strato erbaceo di graminoidi. L'agrifoglio e le specie spinescenti correlate possono divenire più consistenti anche per l'azione di disturbo e di selezione operata dal bestiame domestico.

Sebbene la coltivazione della cerreta abbia rappresentato un importante elemento di semplificazione della struttura e della composizione specifica della cenosi, le variazioni morfologiche corrispondenti a incisioni naturali, salti di quota, dossi e crinali, etc. rappresentano importanti luoghi dove si concentrano, molto spesso, tutte le specie consociate al cerro.

fonte: http://burc.regione.campania.it

Faggete

Le faggete in Campania occupano 56.244 ettari (IFNC 2015); rispetto al 2005 si registra una sostanziale stabilità, con un incremento dell'1,9%. Le faggete sono localizzate nella fascia montana dei più importanti sistemi montuosi della dorsale appenninica carbonatica: Matese, Taburno, Monti d'Avella, Lattari, Picentini, Marzano, Alburni, Motola, Cervati, Maddalena, Monte Sacro, Monte Scuro-Tempa la Castagna e Cocuzzo di Casaletto Spartano. Faggete depresse, vegetanti a quote molto inferiori a quelle abituali per la specie (meno di 500 m s.l.m.), si rinvengono nella valle del Sabato in Comune di Serino (AV), a San Martino Valle Caudina, e sul torrente Savone in Comune di Roccamonfina (CE), mentre sul Cervati la faggeta chiusa si spinge fino a circa 1800 m. Oltre questa quota si dirada, non fruttifica e progredisce nello spazio mediante propagginatura.

La tipologia di faggeta più rappresentata è quella termofila con *Ilex aquifolium* e *Daphne laureola*, in cui convergono spesso altri elementi sempreverdi come *Ruscus aculeatus* e, in alcuni casi (faggete irpine), *R. hypoglossum*. *Taxus baccata* è spesso confinato negli ambienti di faggeta più inaccessibili e mostra una maggior frequenza nei distretti caratterizzati da spiccata oceanicità del clima. Un comportamento riproduttivo peculiare di *Ilex aquifolium* è quello di occupare lo spazio mediante popolazioni clonali, grazie alla propagginatura dei rami bassi. In questo modo raggiunge gradi di copertura che possono essere di ostacolo all'insediamento della rinnovazione del faggio. Queste dense

Fig. 6.3

Distribuzione dei boschi di faggio nel territorio regionale

fonte: http://burc.regione.campania.it

coperture di agrifoglio nel piano inferiore possono costituire anche un importante vettore di propagazione del fuoco.
La forma di governo prevalente è la fustaia, mentre il ceduo a regime può considerarsi pressoché scomparso. In passato alcune faggete di quota (Matese, Picentini, tavolato degli Alburni, Monte Sacro, versante settentrionale del Monte Cervati, etc.), a causa della loro scarsa accessibilità, venivano ceduate per la produzione di carbone. Questi soprassuoli sono tutti in evoluzione naturale a fustaia e la loro età supera i 50 anni.
La fustaia, prevalente nella proprietà pubblica, compendia tutte le tipologie strutturali, da quella monoplana, alla biplana fino alla stratificata. Più che il risultato dell'applicazione di razionali sistemi selvicolturali, la struttura della faggeta è l'esito di vicende che, molto spesso, hanno una forte connotazione locale ma anche legate alle intense ed estese utilizzazioni condotte nella metà del secolo scorso nei principali distretti montuosi (Picentini, Alburni, Monte Sacro, Cervati), adottando criteri di mero sfruttamento della risorsa (taglio raso con riserve) ed esboscando il tondame con buoi e impianti di teleferica. Lo smacchio con strascico di buoi ha accentuato le incisioni morfologiche presenti in diverse massici montuosi, mentre le vestigia di teleferiche si rinvengono nelle faggete salernitane di Giffoni Valle Piana, Castelcivita, Ottati, Piaggine, Cuccaro Vetere, etc.
Sempre in tema di testimonianze di archeologia forestale si segnalano vecchie ceppaie alte di faggi di diametro imponente abbattuti con lo stroncone nel demanio di Piaggine, nonché residue testimonianze di riserve di tagli borbonici in faggete del Comune di Lioni (AV) e di Corleto Monforte (SA).
In alcuni casi il disordine nella condotta dei tagli fa coesistere un soprassuolo principale di origine gamica con un ciclo più giovane di origine agamica. Nei soprassuoli con prevalenza di piante di origine agamica, come ad es. quelli in conversione, si registra un elevata frequenza di piante biforcate a diverse altezze lungo il fusto.
Il più consistente nucleo di faggio-abete bianco in ambito regionale è localizzato sul versante settentrionale del Monte Motola di Teggiano (SA) e nella contigua faggeta di Corleto Monforte (Saracino *et al.* 2005), ove gli abeti raggiungono dimensioni maggiori e sono sottoposti a danni da sfregamento di cinghiali (Mottola, 2001). Nell'agosto del 2007 gli incendi hanno lambito il consorzio del Monte Motola, indicando in modo chiaro come la minaccia del fuoco, con il concorso di condizioni meteorologiche sfavorevoli, si sia estesa anche ai consorzi vegetali della fascia montana.
Specifiche misure di salvaguardia dovrebbero essere rivolte sia verso i nuclei residui di abete, la cui struttura di età delle popolazioni è espressione di una popolazione tutt'altro che in espansione, sia verso le residue piante monumentali, fra cui si segnala quella vegetante nella fascia montana del versante settentrionale del Monte Cervati e alcune di quelle presenti in località Cozzo del Rosieddo, nella faggeta demaniale di Corleto Monforte.

Cedui e castagneti da frutto

I castagneti occupano in Campania una superficie di 55.986 ettari (IFNC 2015); rispetto al 2005 si registra un aumento del 5,2%. Prevalgono i castagneti da frutto (selve castanili) che hanno estensione di 36.396 ettari (+2,12 rispetto al 2005); i cedui castanili hanno estensione di 15.251 ettari (+12,9% rispetto al 2005). Per 4.419 ettari di castagneti la sottocategoria forestale non risulta classificata. In Campania il castagneto da frutto raggiunge la sua massima espansione, pari a circa un quarto della superficie nazionale.
La coltivazione del castagno è stata favorita dall'uomo da tempo immemorabile, così come documentano i diversi reperti archeobotanici (legni, frutti, etc.) rinvenuti nei principali siti archeologici regionali. La sua diffusione è avvenuta soprattutto a scapito del bosco misto di latifoglie mesoxerofile della fascia submontana. A ciò ha contribuito la presenza di suoli alloctoni, fertili e a reazione acida originati dal materiale piroclastico (ceneri, pomici e lapilli) di ricaduta, liberato in quantità più o meno abbondante nel corso dei diversi episodi eruttivi che hanno segnato l'attività di vulcani attivi (Vesuvio) e spenti (Roccamonfina e, con ogni probabilità, Vulture in Basilicata). Nell'area perivesuviana i suoli originati da questi depositi sono una successione di ceneri e materiale piroclastico, di dimensioni progressivamente maggiori scendendo lungo il profilo che formano coltri di spessore molto variabile. Si tratta di suoli facilmente erodibili, soggetti a instabilità (colate rapide) per sovrassaturazione in occasione di piogge abbondanti e non attraversabili dalle radici negli strati incoerenti per impedimenti di ordine fisico (eccessiva aerazione). Per prevenire i fenomeni erosivi e per facilitare la raccolta delle castagne, le pendici sono quasi sempre sistemate a gradoni, lunette e ciglioni con scarpata di contenimento in pietrame a secco o inerbita. Ciononostante in alcune aree dove la coltivazione del castagneto si limita al solo controllo della vegetazione sottostante e dove viene a mancare la manutenzione delle opere di sistemazione, il suolo vulcanico è facilmente erodibile e determina l'inta-

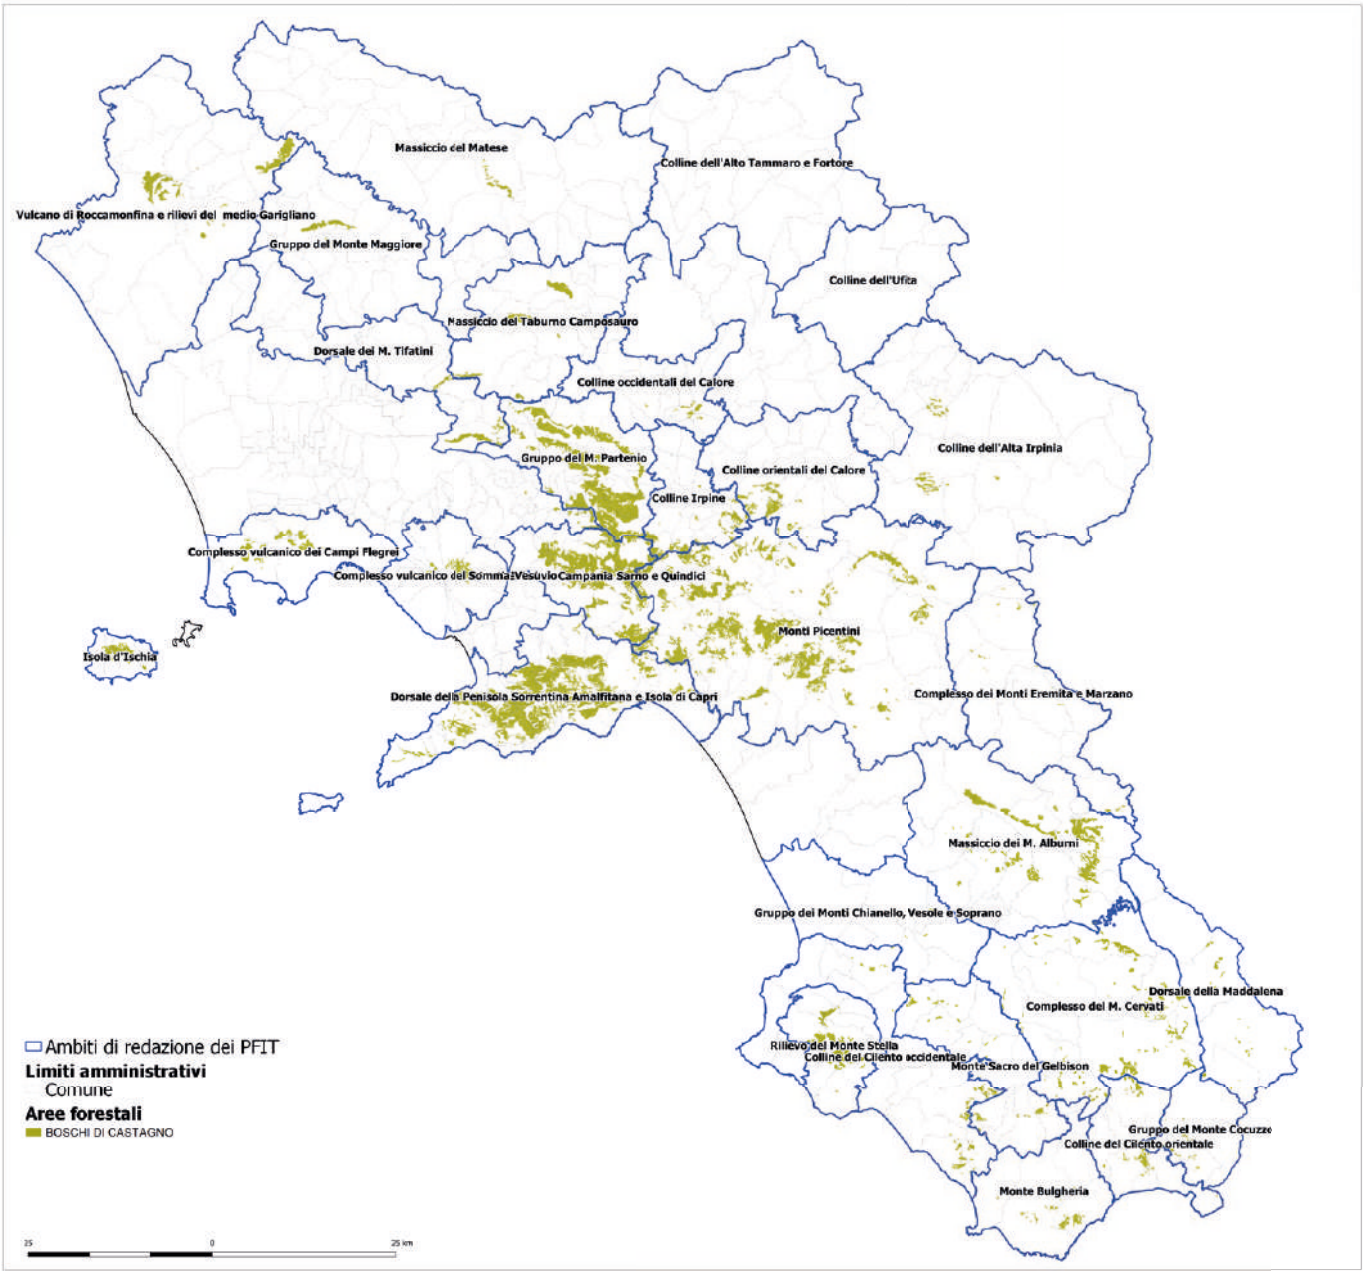

Fig. 6.4

Distribuzione dei boschi di castagno nel territorio regionale.

samento delle sedi viarie e delle opere idrauliche di presidio della viabilità, soprattutto in occasione degli intensi e concentrati eventi piovosi estivo-autunnali. Nei castagneti da frutto più degradati, sparsi un po' ovunque sul territorio regionale ma particolarmente vistosi nella costiera amalfitana, le piante presentano il colletto fino a 1 m sopra l'attuale piano di campagna.

La selva castanile è sottoposta a regolare diserbo, soprattutto meccanico, compiuto in agosto-settembre a carico degli arbusti e delle annuali di taglia alta (*Pteridium aquilinum*), prima della caduta dei ricci e delle castagne. Fra le peculiarità delle opere di ricostituzione del castagneto da frutto vi è quella di rimpiazzare le piante deperite e/o ricostituire i nuovi impianti a partire dai polloni. In questo caso su ciascuna ceppaia si reclutano 2-4 polloni ben distribuiti lungo il perimetro e prima dell'inizio della seconda stagione vegetativa si sottopongono ad innesto ad anello o a spacco. I polloni innestati vengono allevati fino a lasciarne 1-2 per ceppaia. Fra le varietà più rinomate si ricordano: Montemarano, Inserta, Roccadaspide, Napoletana. Le maggiori estensioni di selve castanili si rinvengono nei comuni di Montella e Serino in Provincia di Avellino, Roccadaspide (SA), Roccamonfina (CE).

Oltre al problema immanente della conservazione del suolo vulcanico facilmente erodibile, vi è anche quello dell'espansione della coltivazione del castagno in aree non idonee sotto il profilo vegetazionale. Per es. il suo ampliamento nelle propaggini inferiori della faggeta termofila pone il problema del controllo del reinsediamento del faggio e dell'agrifoglio, che vegetano nel loro optimum climatico,

fonte: http://burc.regione.campania.it

e ciò rappresenta un onere aggiuntivo sul bilancio economico della coltura.
Il ceduo di castagno è quasi sempre matricinato e la matricinatura si riduce quanto più breve è il turno. Nell'area dell'agro nocerino-sarnese, della valle dell'Irno e in un ambito limitato della costiera salernitana (Tramonti) il turno del ceduo è ridotto a 9 anni (turno tecnico) per la produzione di assortimenti utili per la coltivazione del pomodoro S. Marzano e per la realizzazione di limoneti pensili. Turni tecnici più lunghi (12 anni), sono la norma nel resto del territorio e sono adottati allo scopo di ricavare paleria agricola di varie dimensioni diametriche.
Nell'estesa area perivesuviana, ove i versanti montani sono caratterizzati da eterogeneità del profilo del suolo, la gestione sostenibile del ceduo di castagno implica la regolare ceduazione in modo da non appesantire eccessivamente i versanti, nonché tagliate di forma ed estensione adeguate per impedire alle acque di scorrimento superficiale di poter raggiungere velocità erosive.
Fra le buone prassi, ormai desuete nella coltivazione del ceduo di castagno nella regione perivesuviana, si menziona la consociazione temporanea con ginestra dei carbonai (*Cytisus scoparius*), utile a contrastare il depauperamento della fertilità del suolo che è una prerogativa della coltivazione del ceduo. La fascina derivante dal taglio della ginestra era uno dei prodotti del ceduo richiesto dai forni per la panificazione.
Nel Cilento (Sambiase di Ceraso) vi è ancora memoria e si rinvengono le vestigia di una vecchia industria di estrazione del tannino facente capo ad una famiglia di origini francesi.

Leccete e altre formazioni sempreverdi mediterranee

Le leccete e le formazioni di sclerofille sempreverdi mediterranee occupano una superficie di 37.485 ettari (IFNC 2015) con una sostanziale stabilità rispetto al 2005 (+1,0%). A questa superficie deve essere aggiunta quella della macchia mediterranea a dominanza di leccio, non chiaramente individuata dall'INFC. Le formazioni di leccio più consistenti si rinvengono nella sub regione del Cilento e, risalendo la costa, sono presenti nelle riserve regionali di Cuma-Area Flegrea e degli Astroni, con lembi più ridotti e degradati nelle isole flegree e Capri. Altre formazioni pure di leccio e miste a prevalenza di leccio, si rinvengono nelle provincie di Caserta e Benevento sui rilievi del Monte Massico, del Monte Maggiore e lungo le esposizioni meridionali del complesso del Matese. Nelle aree più interne il leccio si localizza più frequentemente in posizione rupestre fino a consociarsi, localmente, con il faggio nella parte più meridionale della regione.
I migliori esempi di fustaia sono gli attuali boschi urbani realizzati in periodo borbonico (Parco Gussone a Portici, Capodimonte a Napoli, riserva reale di caccia degli Astroni, bosco di S. Silvestro, foresta demaniale di Cuma, Parco di Villa d'Ayala Valva). Questi boschi svolgono un'importante funzione paesaggistica e di depurazione dell'aria in ambiti densamente popolati e, talvolta, fortemente degradati come il caso della lecceta degli Astroni, nell'area flegrea, contigua alla discarica di rifiuti del popoloso quartiere di Pianura, A parte questi casi, le fustaie assumono carattere relitto perché quasi ovunque la lecceta è di origine agamica.
La coltivazione del ceduo in passato era incentrata sulla produzione del pregiato carbone cannello ottenuto grazie anche ai turni brevi che permettevano di ottenere carboni di forma cilindrica simili ai segmenti di una canna. Di tale pratica si trova ancora traccia nel turno minimo del forteto, posto pari a 14 anni dalle Prescrizioni di Massima e di Polizia Forestale allegate alla L.R. 11/96, non più in vigore.
Una gestione sostenibile del ceduo di leccio, particolarmente diffuso in una vasta area del Cilento che ricade quasi per intero nel Parco Nazionale del Cilento e Vallo di Diano, passa necessariamente attraverso un allungamento del turno (26 anni).
Le specie consociate al leccio, spesso allo stato sporadico, sono l'orniello, la carpinella, l'acero napoletano, il terebinto, etc., che dovranno essere privilegiate nella fase di reclutamento delle matricine.
Gli arbusti sempreverdi di macchia occupano quasi sempre una posizione marginale nel soprassuolo, mentre vere e proprie mescolanze si realizzano solo nelle forme fisionomiche meno evolute, frutto di fenomeni regressivi causati da disturbi reiterati (incendi, pascolo, etc.). Il ceduo di leccio denso, edificato da polloni snelli, è particolarmente vulnerabile ai sovraccarichi di neve e soggetto a troncature a carico del fusto o, nel migliore dei casi, a flessioni ad arco. Negli anni più recenti questa tipologia di danno si è manifestata con particolare intensità nell'area cilentana e nel golfo di Policastro.
Con epicentro il golfo di Policastro e aree limitrofe, nella stessa fascia di vegetazione del leccio, trova diffusione la residua popolazione di sughera, distribuita in piccoli nuclei e piante isolate, assediate dall'espansione degli insediamenti turistici e infrastrutture correlate. La raccolta del sughero attualmente viene praticata in modo sporadico ed è anch'essa soggetta ad estinguersi insieme alla residua popolazione di sughera. Le formazioni sempreverdi correlate con il leccio sono le diverse

fonte: http://burc.regione.campania.it

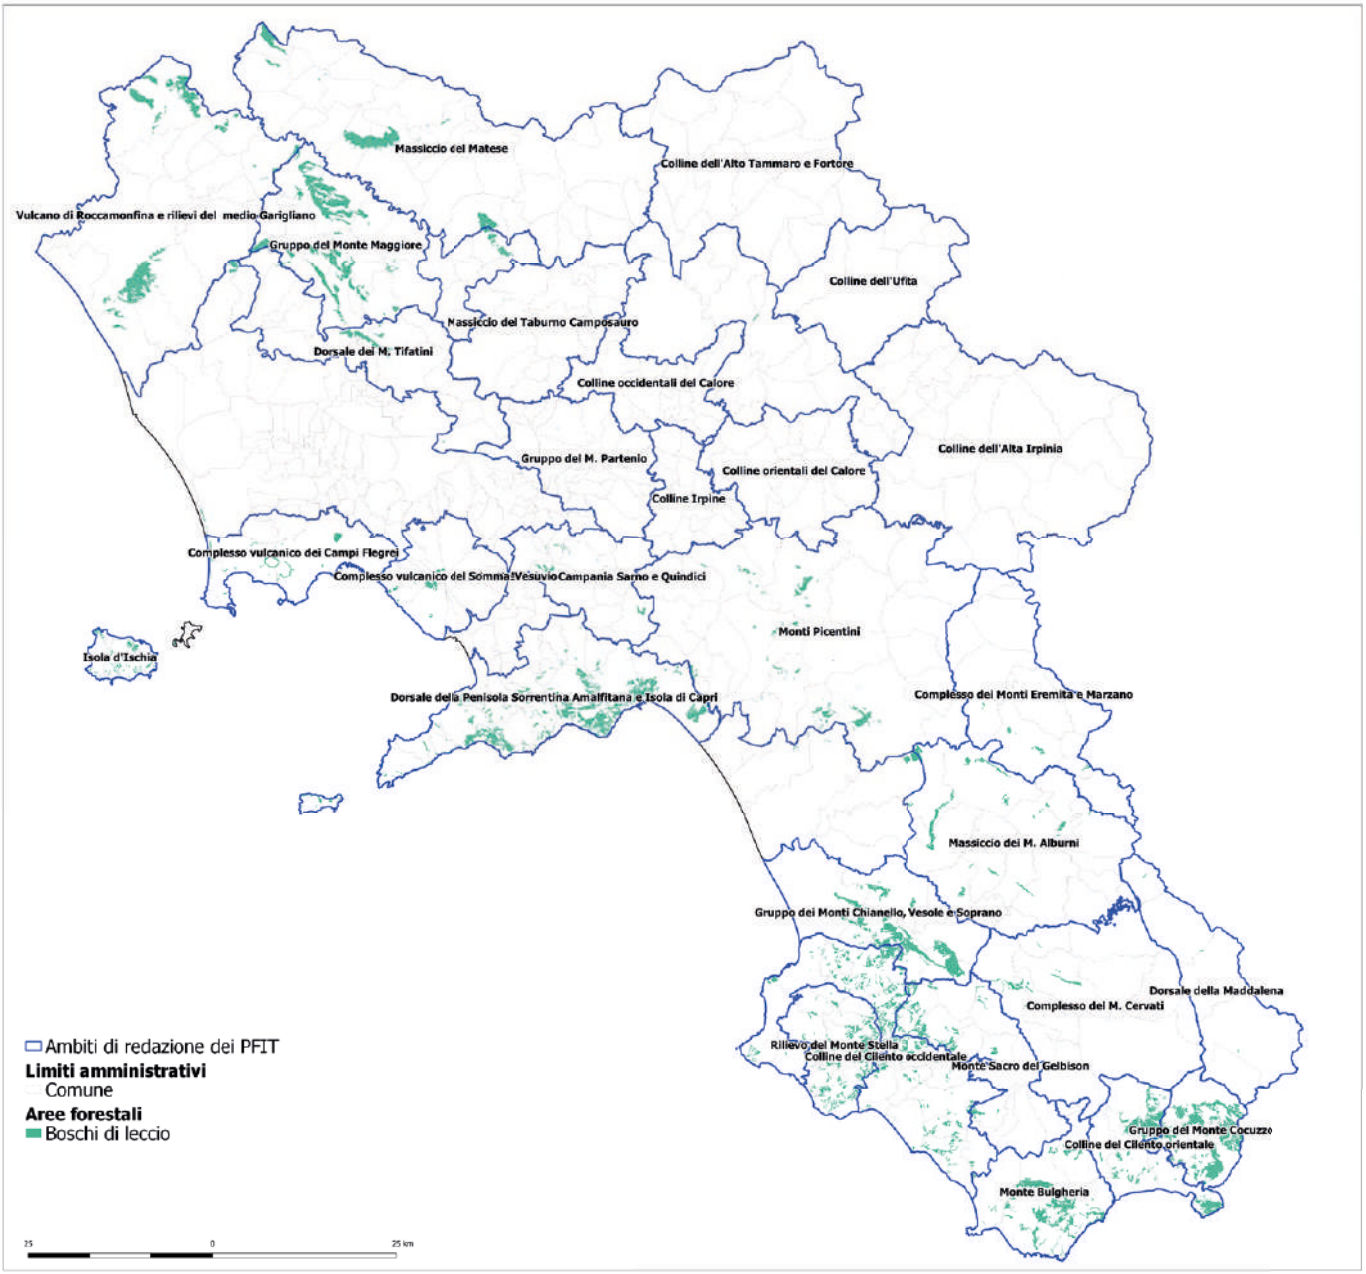

Fig. 6.5

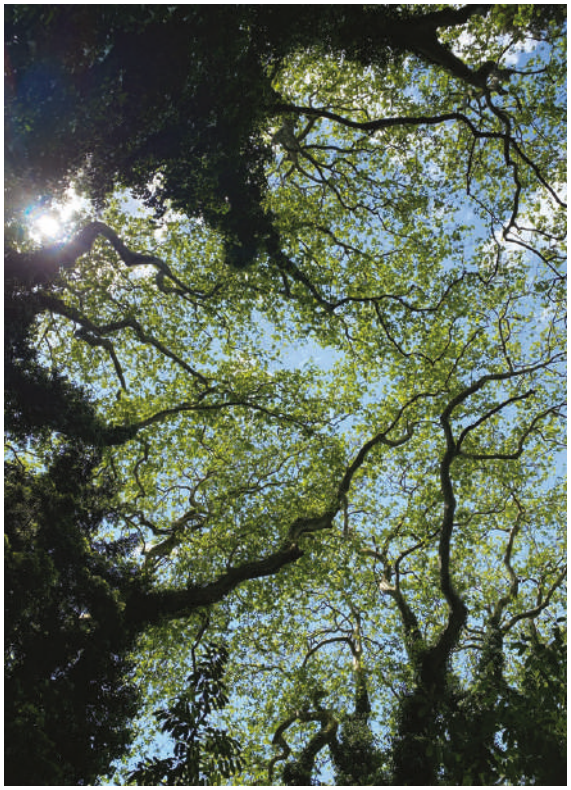
Distribuzione dei boschi di leccio nel territorio regionale.

fisionomie di macchia mediterranea, particolarmente frequenti lungo le coste alte e rocciose e, in minor misura, lungo le coste basse e sabbiose ormai pressoché saturate dagli stabilimenti balneari. Oltre al corredo tipico di sclerofille sempreverdi (lentisco, alaterno, fillirea, mirto, etc.) in rapporti di mescolanza molto variabili a seconda delle condizioni ambientali locali, in queste formazioni costiere trovano la massima espressione i popolamenti di ginepro fenicio, spesso in corrispondenza di coste rocciose e ambienti di rupe, e ginepro coccolone nelle aree retrodunali lungo le coste basse e sabbiose.



Condizioni edafiche e climatiche particolari, corrispondenti a substrati flyschoidi a reazione acida su versanti prospicienti la costa tirrenica con elevati apporti meteorici ed umidità atmosferica, possono favorire localmente consociazioni inconsuete quale quella a corbezzolo e mirto (con *Erica arborea* ai margini o nei nuclei meno densi) riscontrabile nell'area pisciottana del Cilento, di Camerota e in quella del golfo di Sapri di Morigerati, come anche in alcune aree più interne di Casalvelino, Lustra, Rutino. Si tratta di cedui con densità di forteto e polloni di dimensioni medie ragguardevoli per le specie principali. Non è escluso che la consociazione sia stata favorita anche sotto la pressione selettiva della ceduazione.

Fra le attività che si praticano in modo sporadico e che ancora alimentano un artigianato locale si ricorda l'estrazione del ciocco da *Erica arborea*, diffusa in alcune aree del Cilento ove edifica anche popolamenti puri.

fonte: http://burc.regione.campania.it

Fig. 6.6

Fustaia mista di latifoglie, Parco di Villa d'Ayala Valva, Valva (SA)

Si segnalano, infine, le filliree monumentali (diametri 35-40 cm, altezza media 12-14 m) del consorzio misto extrazonale della Foresta Demaniale regionale Fasce di Persano (Mazzoleni et al. 2009), mentre corbezzoli monumentali di diametri consistenti (35-40 cm) si trovano ad Omignano e comuni limitrofi.

Boschi di ontano napoletano

I boschi a ontano napoletano coprono in Campania una superficie pari a 9.943 ettari secondo IFNC 2015 (10.311 ha nel 2005, -3,6%). La superficie regionale a Alnus cordata rappresenta il 33,7% della superficie nazionale. Alnus cordata costituisce pertanto un endemismo meridionale distribuito fra Campania, Basilicata e Calabria (oltre che Sardegna e Corsica meridionale). In particolare, l'areale principale di questa importante formazione forestale ricade in Campania, in un'area ristretta del Cilento compresa fra Monte Gelbison, Monte Scuro, Antilia e il Cervati-Centaurino con un nucleo consistente di soprassuoli puri ricadenti nei comuni di Rofrano, Ceraso e Sanza, nel cuore del Parco Nazionale del Cilento e Vallo di Diano. Il motivo di questa localizzazione distributiva è legato, oltre alle condizioni climatiche idonee, alle modificazioni di uso del suolo occorse nella metà del secolo scorso: versanti collinari e submontani, precedentemente terrazzati e posti a coltura, sono stati rapidamente colonizzati da questa specie spiccatamente pioniera non appena è cessata la coltivazione.

Gli ontaneti sono in fase di attiva espansione e hanno ancora la possibilità di diffondersi nei pascoli abbandonati, soprattutto dei versanti meridionali. Gli ontaneti puri sono spazialmente separati dalla faggeta termofila, circostanza facilmente verificabile in primavera quando il faggio anticipa la fogliazione rispetto all'ontano. Nella faggeta termofila la consociazione con l'ontano napoletano è legata alla presenza di vecchi inclusi coltivati e radure pascolive in fase di progressiva chiusura delle chiome. In ogni caso l'ontano compete in altezza con il faggio sebbene non riesca a rinnovarsi via via che la faggeta diviene sempre più densa.

I soprassuoli puri di ontano esibiscono quasi sempre una prevalenza di piante di origine agamica e la loro densità è sempre molto disforme. La copertura delle chiome è tale da garantire adeguata irradianza relativa sotto copertura, ciò favorisce la presenza di un denso strato erbaceo dominato, fisionomicamente, da *Pteridium aquilinum,* nonché spesso dal rovo, cha a volte si sviluppa sino a coprire le chiome, come nel comune di Ceraso. La densa copertura di queste essenze funge da filtro ecologico riguardo alla qualità e alla quantità di luce che affluisce sul pavimento della foresta nei diversi periodi dell'anno, circostanza che condiziona la composizione floristica dello strato erbaceo e il reclutamento di nuove piante arbustive ed arboree.

Altro peculiare aspetto delle formazioni ad ontano riguarda la stabilità meccanica delle piante. A questo riguardo si deve considerare che le piante di ontano, a causa del loro spiccato portamento monopodiale, simile a quello delle conifere, in caso di sovraccarichi di neve sulla chioma sono soggette a troncature sul fusto. Inoltre, la caduta tardiva delle foglie facilita l'intercettazione della neve pesante, caratteristica degli eventi precoci autunnali, sempre più frequenti negli anni recenti. In linea generale i soprassuoli radi e infraperti, edificati da piante con fusto più rastremato e chioma verde più profonda sono più stabili dal punto di vista biomeccanico, mentre gli ontaneti densi e di forra, costituiti da piante snelle e con poca chioma verde, sono frequentemente soggetti a diffusi schianti e sradicamenti che aumentano considerevolmente l'accumulo di legno morto.

Gli ontaneti sono formazioni pioniere e transitorie che, in assenza di disturbi e nel lungo periodo richiesto dalla successione, dovranno lasciare il posto al querceto mesofilo e alla faggeta termofila, già presenti prima dell'intervento antropico.

fonte: http://burc.regione.campania.it

Fig. 6.7

Boschi ripariali nell'Oasi di Persano (SA)

Gli ostrieti e i carpineti

Gli ostrieti e i carpineti occupano una superficie complessiva di 53.030 ha (IFNC 2015), con una contrazione dell'1,4 rispetto al 2005. All'interno della sotto-categoria gli orno-ostrieti si estendono su una superficie di 40.140 ettari, la restante parte è costituita da formazioni di carpinella, carpino bianco, etc.

L'orno-ostrieto è diffuso un po' ovunque sul territorio regionale ove è governato esclusivamente a ceduo, vista la spiccata capacità pollonifera che caratterizza i carpini e l'orniello. Una tipologia molto comune è il ceduo di protezione-produzione vegetante su versanti molto acclivi della montagna calcarea in esposizione meridionale (in questa tipologia è assente il carpino bianco). In passato la legna era anche sottoposta a carbonizzazione, spesso in assortimento con quella di carpino bianco, faggio, leccio, etc. Per i cedui demaniali le utilizzazioni sono state spesso interrotte da tempo ma, a causa dei sempre più ridotti trasferimenti di risorse dallo Stato verso le amministrazioni periferiche, molti comuni manifestano la volontà di ritornare alla ceduazione, dimenticando l'importante ruolo che queste formazioni svolgono nella protezione dei versanti e delle infrastrutture viarie e degli insediamenti umani dal rotolamento di massi. Gli orno-ostrieti con denso tappeto di graminoidi sono quelli d ove più di frequente si esercita il pascolo con capre.

Le boscaglie di carpino orientale sono localizzate in corrispondenza di detriti di falda e di conoidi detritici. In una ristretta area del salernitano ospitano anche un altro elemento di flora balcanica, *Cercis siliquatrum* che conferisce una gradevole nota di colore nel periodo primaverile della fioritura. La carpinella si mescola in vario modo con il leccio nei soprassuoli cedui, oppure può rappresentare il componente principale dello strato arbustivo di cerrete (Campora, Centaurino di Sanza, Fontegreca etc.).

Per quanto concerne i boschi pressoché monofitici di carpino nero con fisinomia di fustaia, si segnala un soprassuolo di origine agamica nei comuni di Casaletto Spartano (Monte Iuncolo), e Calabritto, in Provincia di Salerno, in cui si associano in modo subordinato anche aceri e ontano napoletano.

Le formazioni pure di carpino bianco sono molto sporadiche in ambito regionale. Una delle più interessanti, peraltro in consorzio con faggio, è localizzata in posizione eterotopica nella valle del Torrente Sabato, in Comune di Serino (AV). Questa formazione è stata utilizzata in passato per scopi di carbonizzazione e attualmente i polloni di carpino sono dominati da quelli di faggio. Un'altra importante formazione di alto fusto di carpino bianco si ritrova nel comune di Sanza, in località Ponte dell'Abate.

fonte: http://burc.regione.campania.it

I boschi igrofili

I boschi igrofili si estendono in Campania su una superficie di 11.048 ettari (IFNC 2015); rispetto al 2005 si registra una diminuzione del 6,2%. A questa categoria inventariale appartengono le formazioni di ripa, comprendenti i pioppeti naturali (2.210 ettari secondo IFNC 2015) e i saliceti (1.473 ettari). La massima espressione compositiva e strutturale è raggiunta nei tratti planiziari dei principali corsi d'acqua, ove si è assistito al maggior sviluppo urbano, si sono concentrate le attività agricola intensive, vi è stato il maggior insediamento di attività produttive e industriali e, in altre parole, vi è il maggior disordine nell'uso del suolo. Ciò ha determinato una cospicua contrazione spaziale (sia in senso lineare che in profondità) delle ripisilve, di cui spesso non si apprezza più la successione spaziale delle diverse specie arboree, dislocate più o meno distanti dal corso d'acqua perenne a seconda del loro grado di idrofilia e di tolleranza alle escursioni di falda. Le aree planiziarie drenate dai più importanti corsi d'acqua soffrono, inoltre, di elevati accumuli di macronutrienti (soprattutto azoto) derivanti dalle attività agricole e dagli allevamenti bufalini. Infine l'emungimento non regolamentato delle falde è responsabile delle intrusioni di acqua marina nelle aree interne costiere e della incipente salinizzazione dei terreni coltivati.

Questo insieme di fattori di disturbo altera la cenosi di ripisilve e ne semplifica la composizione a favore delle specie che manifestano maggiore amplitudine ecologica. Nelle formazioni meno disturbate, come quelle rinvenibili lungo alcuni tratti dei corsi d'acqua Sele, Calore Salernitano, Volturno, etc. il climax è di tipo azonale, ovvero non segue una precisa zonazione climatica, dipendendo piuttosto da fattori edafici, locali. In queste situazioni meno disturbate si rinvengono in consorzio e in vario rapporto di mescolanza, *Salix alba, Populus alba, P. canescens* e *P. nigra*. Nei tratti più decisamente planiziari costieri e sub costieri della piana del Sele si rinvengono anche le residue popolazioni di *Fraxinus oxycarpa*, spesso ridotte a piante isolate. Nei tratti dei corsi d'acqua più decisamente di versante e montani si rinvengono altre specie di *Salix*, fra cui *S. eleagnos*, *S. purpurea*, etc., oltre ad *Alnus glutinosa*.

Altri boschi caducifogli

Questa categoria inventariale si estende in Campania su 34.386 ettari (IFNC 2015). All'interno di esse, un posto di rilievo è rivestito, come visto in precedenza, dalle formazioni ad *Alnus cordata*. In questo paragrafo ci si sofferma brevemente sugli acereti appenninici, sugli aceri-frassineti e sui betuleti.

Gli acereti appenninici (4.051 ettari secondo IFNC 2015, in aumento del 10,0% rispetto al 2005) sono alquanto sporadici, essendo legati alla convergenza di condizioni locali di morfologia e di clima che non si realizzano in modo frequente, soprattutto nelle montagne a matrice carbonatica. La superficie riportata dall'INFC per questa categoria inventariale può essere considerata verosimile se la si amplia alla mescolanza prevalente con altre specie, piuttosto che alle sole formazioni pure. In linea generale l'acereto è puro solo in alcune posizioni di forra, mentre fra i più bei acereti a scala regionale, non di forra, si segnala quello ad *Acer obtusatum* di località Manca di Fisco di Casaletto Spartano (SA), esteso su due ettari con piante di origine gamica di 40-70 cm di diametro a petto d'uomo, vegetante su terra bruna forestale e le cui condizioni di eutrofia sono evidenziate dalle dense coperture nello strato erbaceo dell'endemico e raro *Arisarum proboscideum*. Notevoli esemplari di acero si rincontrano anche nei comuni di Calabritto e Roccadaspide.

Gli aceri-frassineti sono una consociazione alquanto sporadica in ambito regionale (1.473 ettari secondo IFNC 2015) e qualche lembo residuo si rinviene nel Centaurino di Sanza (SA), ove vegetano anche i più imponenti esemplari di frassino maggiore. Queste consociazioni ricadono in modo preponderante nella fascia di vegetazione del querceto mesofilo ed oltre ad *A. obtusatum*, si rinvengono nello strato arboreo anche *A. neapolitanum*, *Alnus cordata*, *A. glutinosa*, *Tilia* spp., *Betula pendula*, etc.

Più in generale gli aceri partecipano ad altre formazioni, soprattutto delle faggete, sebbene in alcuni casi i rapporti di mescolanza appaiano paritari come ad es. nelle faggete di Calabritto, in Provincia di Avellino.

In ogni modo, oltre ad *A. obtusatum*, *A. pseudoplatanus* e *A. neapolitanum*, in ambito regionale sono presenti il sub endemico *A. cappadocicum* subsp. *lobelii* diffuso un po' ovunque sulle montagne calcaree e dislocato in un ampio range altimetrico che spazia dal querceto mesofilo fino alla faggeta montana (Irpinia, Alburni, etc.). *A. platanoides*, per contro, appare molto più localizzato e ristretto alla porzione superiore della faggeta sub montana come ad es. in Irpinia, e nel comune di Atena Lucana. Sempre in queste faggete sono segnalati i più imponenti esemplari di *Tilia platyphyllos* (particel-

fonte: http://burc.regione.campania.it

le forestali 34 e 35 dei boschi demaniali di Lioni, in Provincia di Avellino).
Infine si menzionano i popolamenti di *Betula pendula* (368 ettari secondo IFNC 2015) relativamente più consistenti alle falde del Monte Cervati, nella foresta demaniale regionale del Vesolo, ma presente con piccoli nuclei o piante sparse a partire dal Monte Somma nel Parco Nazionale del Vesuvio, a scendere nei boschi misti del Comune di Serino, Bagnoli, etc. nel massiccio del Terminio-Cervialto, nonché sul sistema Alburni-Cervati nei Comuni di Polla, Corleto Monforte e nel Centaurino di Sanza, etc. È in località Campo Filano e nella contigua foresta demaniale (Comuni di Sassano e Sanza) che la betulla forma boschetti puri o in consorzio con faggio, cerro, acero d'Ungheria, perastro, etc. spesso edificando strutture stratificate e con piante anche di 80 cm di diametro a petto d'uomo.
Questa categoria inventariale comprende anche i robinieti e gli ailanteti, ricoprenti nel complesso una superficie di 4.787 ettari secondo IFNC 2015.

Pinete e altri boschi di conifere

I boschi di conifere coprono in Campania una superficie di 15.534 ettari (IFNC 2015), in lieve aumento (+2,8%) rispetto al dato 2005. I boschi di conifere comprendono:

- i rimboschimenti di pino nero, che si estendono su una superficie di 5.254 ettari (-11,8% rispetto al 2005);
- le pinete di pini mediterranei, con superficie di 9.146 ettari (+18,3% rispetto al 2005), comprendente a sua volta 2.210 di pinete a pino domestico, 5.831 ettari di pinete a pino d'Aleppo, 737 ettari a pino marittimo.

Una più esigua superficie (864 ettari) è, invece, costituita da altre conifere fra cui si menzionano le formazioni a cipresso (368 ha), di cui il popolamento di Fonte Greca, in Provincia di Caserta, è stato incluso nel libro dei boschi da seme regionale per la sua manifesta resistenza al cancro del cipresso (*Seiridium cardinale*).
Da citare l'imboschimento di abeti bianchi della foresta demaniale regionale del Taburno e di Trevico, dove diffusa è la rinnovazione.
Diffusi si riscontrano anche gli impiani puri di douglasia (calabritto, giffoni valle piana ecc.), rimboschimenti di pino d'aleppo (per es. una tipicità nel comune di Ricigliano, ecc.).
L'IFNC 2005 segnalava anche la presenza di 1.100 ha di impianti di conifere esotiche fra cui si annoverano douglasia, pino radiato, pino strobo, pino dell'Eldar e cipresso dell'Arizona che formano spesso impianti puri. Talvolta sono invece consociati con larice giapponese, abete rosso, abete greco, abete bianco, etc.

Sistemi dunali

Le coste basse e sabbiose ricorrono nell'area casertana del Volturno- Garigliano, nell'area flegrea, fra Salerno e Agropoli, fra Palinuro e Camerota e nel Golfo di Policastro. Gli arenili e le dune retrostanti sono originate dall'accumulo di materiale di piccole dimensioni (ghiaie e sabbie in primo luogo), trasportato dai corsi d'acqua fino alle foci e ridistribuito dal moto ondoso orizzontalmente lungo il litorale. Il vento svolge un ruolo importante nel trasporto in sospensione dei granelli di sabbia e quindi ad una progressione delle dune mobili verso le aree interne (sorrenamento). Questo fenomeno ricorreva in passato in diverse aree costiere della penisola e delle isole ed è stato neutralizzato con le operazioni di rinsaldamento e rimboschimento delle dune.
Le dune fossili sono, appunto, quelle rinsaldate con vegetazione che, invece manca nelle dune mobili.
In un ideale transetto perpendicolare alla linea di costa, a partire dal bagnasciuga si rinvengono associazioni vegetali che si succedono spazialmente e che divengono sempre meno effimere e più consistenti procedendo verso l'interno. Oltre ad una successione spaziale, la vegetazione delle dune si caratterizza anche per il suo dinamismo temporale impartito dalla dinamica di avanzamento e di arretramento della linea di costa. Si passa per una zona priva di qualsiasi forma di vegetazione, zona afitoica dell'arenile, cui succede la spiaggia con le sue forme pioniere di vegetazione del Cakiletum e dell'Agropyretum dell'anteduna. Le sabbie mobili del vertice della duna, quando scarsamente alterato, è rinsaldato dalle specie dell'Ammophiletum, mentre nell'area retrodunale si insediano le specie arbustive ed i piccoli alberi pionieri della macchia mediterranea, molto resistenti all'azione dei venti marini. Questi spirano prevalentemente da occidente e trasportano l'aerosol marino carico di salsedine e di inquinanti tensioattivi. Inoltre i granelli di sabbia trasportati in sospensione esercitano un'azione meccanica abrasiva e di smerigliamento. In questo modo, le parti delle chiome esposte al vento subiscono reiterati danneggiamenti a carico dei meristemi di crescita che originano le caratteristiche forme asimmetriche a bandiera o a fiaccola. È questa l'origine del cuneo di vegetazione, consorzio di arbusti sclerofilli sempreverdi e di piccoli alberi (ginepro coccolone, ginepro fenicio filliree,

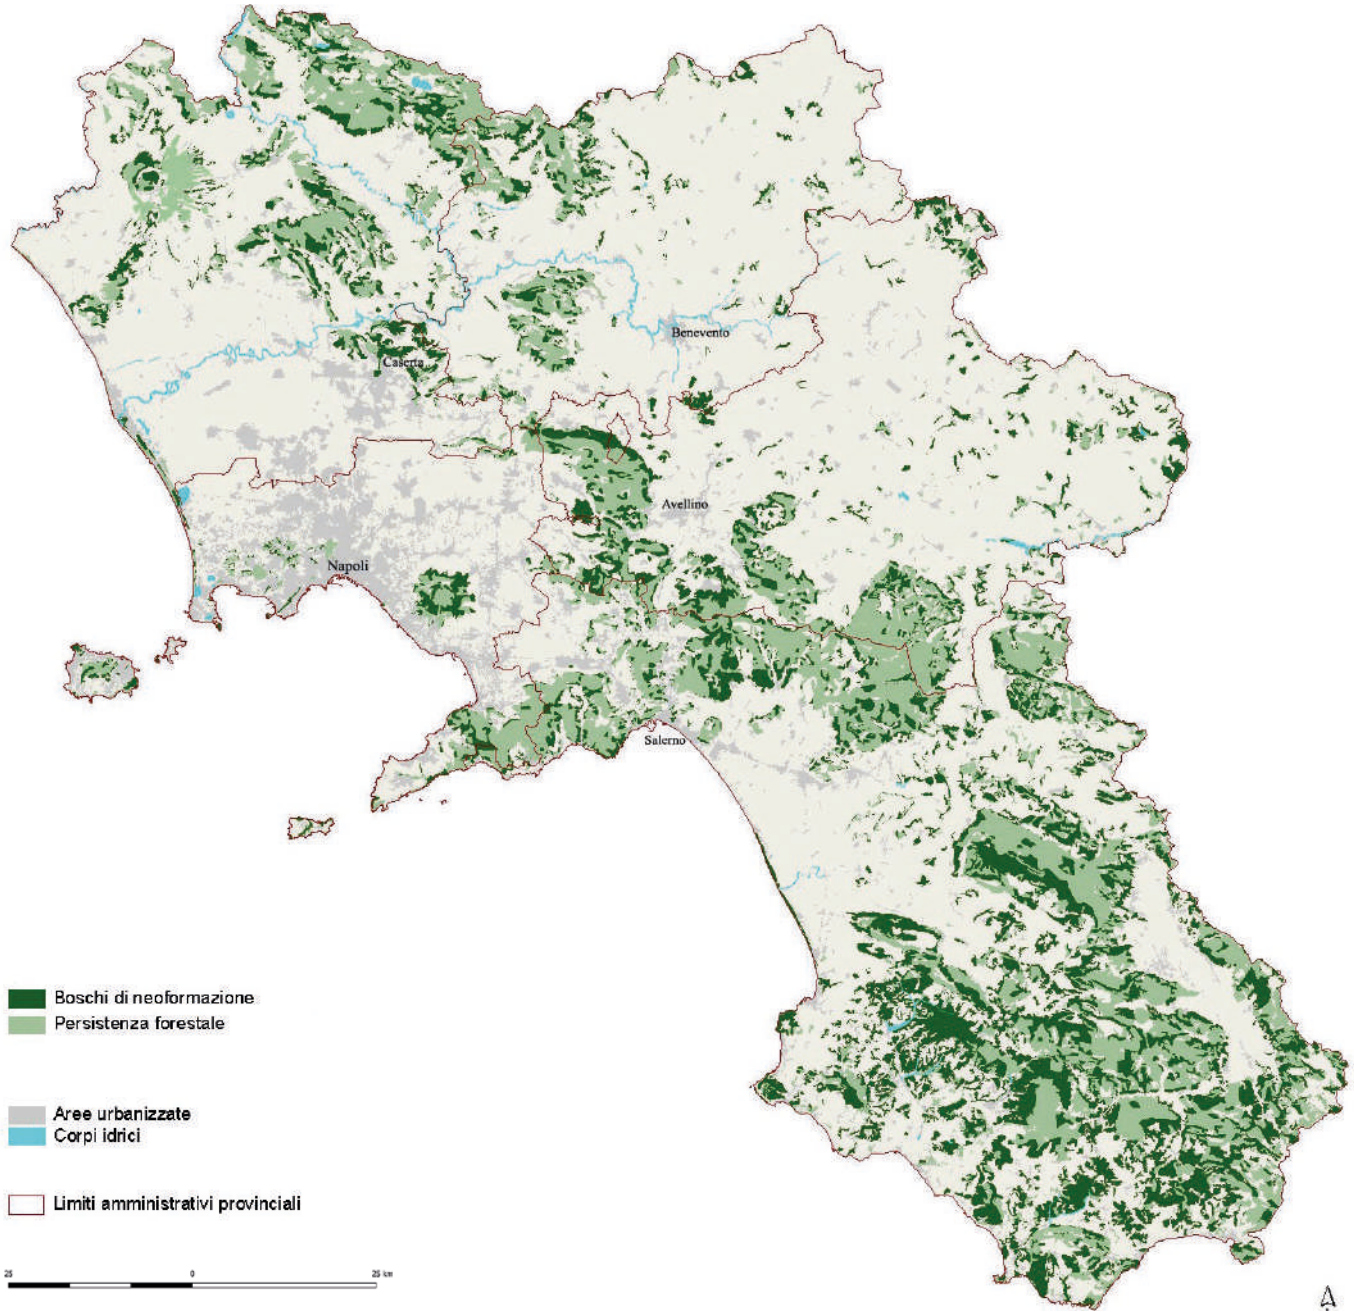

Fig. 6.8

Aree interessate dalla forestazione di aree agricole e pascolative abbandonate.

lentisco, pino d'Aleppo) di forma asimmetrica e di taglia crescente allontanandosi dalla linea di costa la cui funzione è quella di deviare verso l'alto i flussi laminari dei venti che si spostano dal mare verso le aree interne e di ostacolare la diffusione dei granelli di sabbia trasportati in sospensione. In questa fascia, spesso, sono state introdotte alcune specie esotiche resistenti alla salsedine fra cui *Acacia saligna* e *A. cianophylla* e, nelle bassure umide, *Eucalyptus* spp.

La fascia arborea retrostante è costituita da formazioni di origine naturale come la lecceta, intercalata a nuclei di specie mesoigrofile (frassino meridionale, farnia con Iris pseudacorus) in corrispondenza delle bassure umide (per es. area flegrea), oppure ai rimboschimenti litoranei di conifere che sono stati trattati in apposito capitolo. L'alatarno è molto diffuso laddove il leccio trova difficoltà ad affermarsi. Nel retroduna si rinviene l'habitat prioritario *2250 Dune costiere con Juniperus spp.

I Boschi di neoformazione

L'origine di un bosco di neoformazione viene documentato con l'ausilio di idonea cartografia storica, di immagini fotografiche e cronosequenze di aereofotogrammi.

Il confronto in ambiente GIS di cartografie storiche mostra come la superficie agricola utilizzata in Campania abbia subito nel periodo 1960-1998 una diminuzione netta di 175.000 ettari (-16%). Ad essa si contrappone un incremento di 104.000 ettari (+43%) delle formazioni seminaturali – i boschi e gli arbusteti - e di 71.000 ettari delle aree urbane (+321%).

Le direttrici del cambiamento a carico del territorio rurale appaiono chiare: le aree agricole si contraggono per trasformarsi in bosco o in città.

Questi cambiamenti sono fortemente polarizzati. Il 75% dello sviluppo urbano è localizzato in pianura, intorno ai vulcani e lungo le coste: sarebbe a dire nelle aree più fertili, più pericolose e di maggior pregio paesaggistico della regione. All'opposto, l'85% dei boschi di nuova formazione è in montagna e nella collina costiera, dove l'agricoltura abbandona progressivamente i coltivi e gli arboreti terrazzati, retaggio della lunga fase di agrarizzazione del territorio regionale, durata grosso modo due secoli, e culminata alla metà del '900.

La carta riportata in figura 6.8 evidenzia gli ambiti del territorio regionale interessati nell'ultimo quarantennio da persistenza delle formazioni forestali, e quelle invece interessate dalla forestazione di aree agricole e pascolative abbandonate (boschi di neoformazione).

La Tabella 6.7 illustra invece la ripartizione nelle province della Campania e nella città metropolitana di Napoli delle aree di persistenza forestale e di quelle interessate dalla formazione di nuovi bo-

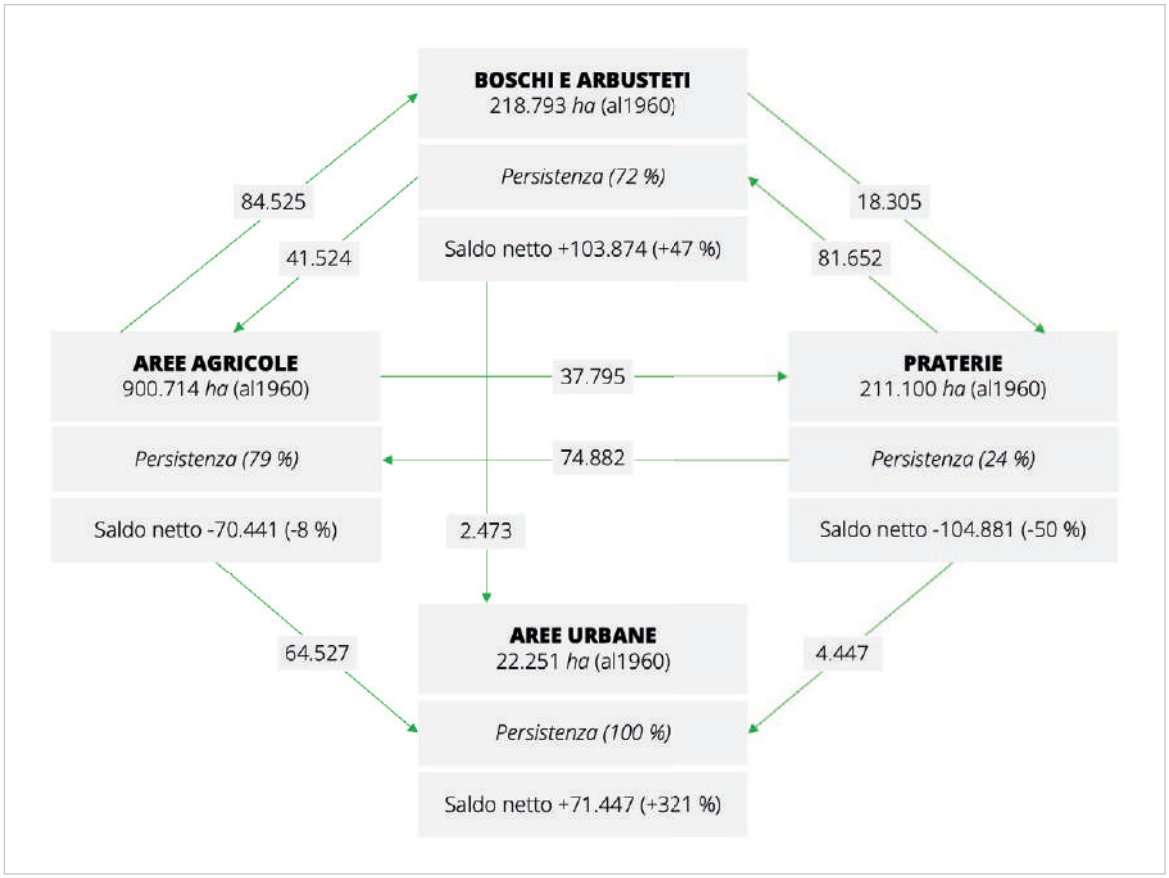

Fig. 6.9

Grafico a frecce delle dinamiche di trasformazione di uso delle terre nel periodo 1960-2000

fonte: http://burc.regione.campania.it

schi. In termini sia assoluti che relativi, la provincia maggiormente interessata nel corso dell'ultimo quarantennio dalla formazione di nuove cenosi forestali è quella di Salerno, nella quale ricade il 62% dei boschi di neoformazione.
I dati in tabella sono stati ricavati dalle superfici del territorio regionale interessate nel periodo 1956-1998 da persistenza forestale ovvero da forestazione di aree agricole e pascolative (Elaborazione per il Piano forestale a partire dai dati riportati in di Gennaro e Innamorato, cit. Fonti cartografiche: CNR-Touring Club,1956; INEA,1998). L'espansione dei boschi di neoformazione costituisce senza dubbio un importante processo di variazione ecologica e paesaggistica di scala regionale. Esso pone all'attenzione alcuni rilevanti aspetti gestionali e di governo delle risorse forestali. Per discutere brevemente questi aspetti è opportuno considerare il grafico di transizione a quattro comparti in fig. 6.9 che sintetizza i cambiamenti di land cover in Campania nel periodo 1960-1998.
Il grafico evidenzia come le trasformazioni nette che contribuiscono in misura preponderante all'espansione delle formazioni forestali sono:

- il rimboschimento di praterie (saldo netto 63.300 ettari)
- il rimboschimento di aree agricole (saldo netto 43.000 ettari)

L'espansione netta delle formazioni forestali nel quarantennio considerato proviene quindi per il 60% circa dal rimboschimento di praterie, per il restante 40% dal rimboschimento di aree agricole.
Per quanto concerne il rimboschimento delle praterie, è possibile osservare come la superficie degli ecosistemi di prateria risulti pressoché dimezzata a scala regionale, rispetto al valore iniziale, alla fine del periodo considerato. È ragionevole dunque porsi il quesito se questa tendenza debba essere sempre e comunque assecondata, oppure se la gestione locale dei mosaici ecologici non richieda, in particolari casi, l'adozione di misure per la salvaguardia degli ecosistemi aperti di prateria, quando questi costituiscano elementi importanti per la biodiversità, per i sistemi economici locali ed i paesaggi.
L'altro aspetto rilevante riguarda il rimboschimento spontaneo di aree agricole abbandonate. Infatti, l'espansione dei boschi di ricolonizzazione delle aree agricole proviene, per oltre il 70%, dalla forestazione spontanea di arboreti e sistemi agricoli tradizionali promiscui della collina e delle aree pedemontane, interessando molti dei paesaggi terrazzati storici della Campania. In questi ambienti, all'abbandono agricolo può seguire una fase caratterizzata da instabilità delle coperture pedologiche, legata al progressivo declino strutturale delle sistemazioni tradizionali[7].
Il risultato di questo processo è sovente costituito dalla formazione di mosaici agro-forestali, caratterizzati dalla minuta compenetrazione di aree agricole attive e piccoli nuclei boschivi di ricolonizzazione. In simili contesti, appare giustificata una riflessione sulla possibilità che gli indirizzi per la gestione dei boschi di neoformazione possano prevedere opzioni differenziate, comprendenti sia la gestione dei processi di abbandono, sia il recupero agricolo delle aree abbandonate, quando ciò sia giustificato da particolari opportunità economico-produttive (prodotti tipici di alta qualità), o da obiettivi rilevanti di difesa del suolo e di mantenimento dei paesaggi tradizionali.

I Rimboschimenti

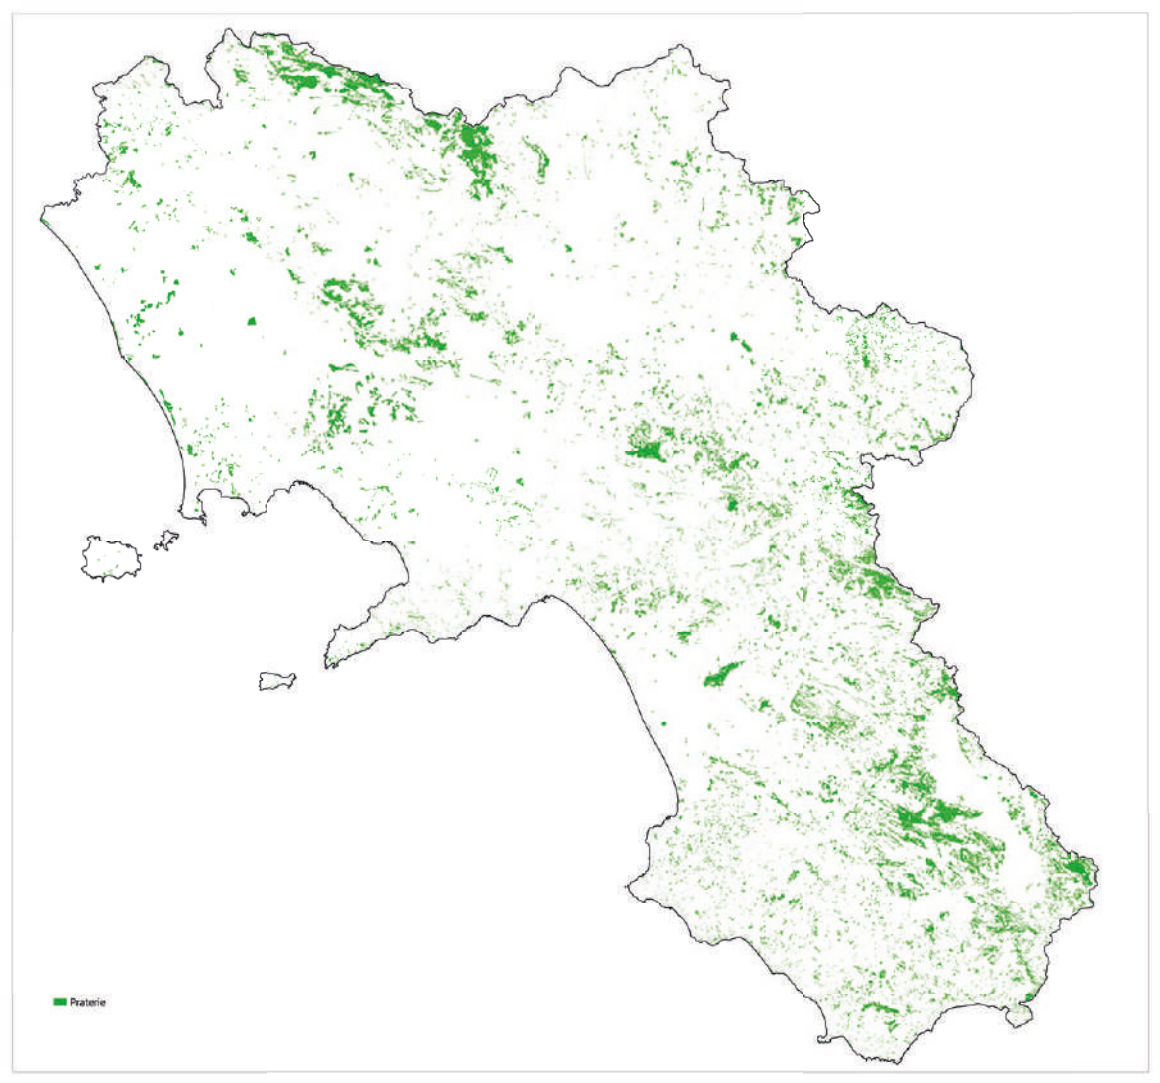
I rimboschimenti in Campania sono stati realizzati, con finalità diverse, nel secolo scorso in tre momenti distinti: all'inizio del '900, a metà secolo e intorno agli anni '80.
I primi rimboschimenti con funzione di protezione di importanti bacini idrologici regionali sono stati realizzati in Irpinia, nel bacino del Sele (con la conca carsica di piano Laceno). Altre importanti superfici rimboschite per scopi protettivi sono state realizzate nelle diverse aree del territorio regionale dove la copertura arborea risultava fortemente degradata o eliminata dal pascolo e dagli incendi (aree del Matese, del salernitano (Casalbuono), aree costiere cilentane (Castellabate).
Oltre all'area irpina a matrice carbonatica, fra le più cospicue zone di intervento vi sono gli estesi affioramenti argillosi collinari a confine con la Basilicata e con la Puglia (Foresta di Monteverde), nonché le aree a flysch nel Cilento e, ancora, i substrati carbonatici dei rilievi del Vallo di Diano, dove oltre ai pini mediterranei, sono stati impiantati la douglasia e il pino nero.
Nella fascia litoranea domiziana e fra Salerno e Capaccio, a supporto delle operazioni di bonifica integrale completate negli anni '50 del secolo scorso, sono state messe a dimora diverse specie di pini mediterranei (pino d'Aleppo, pino marittimo e pino domestico) disposti in fasce parallele alla linea di costa e di ampiezza variabile, secondo la sequenza sopra riportata a partire dalla linea di costa verso l'interno. Nella fascia retrostante gli impianti di conifere sono stati impiantati gli eucalipti. Le barriere arboree in origine avevano la funzione di proteggere le retrostanti aree coltivate dai venti marini occidentali. Attualmente queste pinete sono mi-

fonte: http://burc.regione.campania.it

nacciate dalla forte pressione antropica e dall'arretramento della linea di costa. Nelle pinete di pino domestico, oltremodo dense, della fascia litoranea salernitana viene praticata la raccolta non autorizzata delle pigne.
I più consistenti rimboschimenti di conifere a rapido accrescimento, effettuati a cavallo degli anni '70 e '80 dello scorso secolo alla scopo di produrre legname per pasta da cellulosa, sono stati realizzati ancora una volta in Irpinia e nel Cilento, insieme a estesi rimboschimenti di eucalipti. La principale specie impiegata è stata *Pinus radiata*, sebbene per scopi sperimentali siano state utilizzate molte altre specie (*Pseudotsuga menziesii*, *Larix leptolepis*, *Pinus wallichiana*, *Pinus elliotii*, *Chamaecyparis lawsoniana*, etc.).
Nelle piantagioni la densità è quasi sempre eccessiva rispetto allo stadio evolutivo del soprassuolo; ciò le rende vulnerabili alle avversità abiotiche (schianti e sradicamenti) e a quelle biotiche. Questo stato di cose è, talvolta, aggravato dalla circostanza che le specie impiegate vegetano al di fuori del loro optimum ecologico. I rimboschimenti effettuati nell'ambito delle iniziative di forestazione produttiva su terreni di privati sono, nella totalità dei casi, a fine turno e in fase di utilizzazione. Lo stato colturale di quelli realizzati su terreni demaniali risulta nel complesso più scadente e, spesso, sono mescolanze di specie con diverso ritmo di accrescimento e/o non idonee rispetto alle condizioni stazionali.
Alcuni meccanismi ecofisiologici dell'effetto baliatico (*nurse effect*) esercitato dalle piantagioni artificiali sul reinsediamento della vegetazione forestale autoctona sono stati documentati in rimboschimenti di *Pinus radiata* nel P.N. del Cilento e Vallo di Diano (D'Alessandro *et al.* 2005 e 2006). Sebbene la piantagione di specie aliene assuma un forte connotazione negativa in aree protette sia a scala di paesaggio che nell'opinione pubblica, il suo importante ruolo nel reinsediamento della vegetazione autoctona è indiscutibile e di impatto ambientale limitato nel tempo considerata la transitorietà dell'impianto.

Piantagioni di arboricoltura da legno

IFNC ha censito nel 2015 in Campania una superficie complessiva degli impianti di arboricoltura da legno pari a 3.163 ettari, costituiti per 1.539 ettari da pioppeti, per 1.624 ettari da altre latifoglie.
Molte di queste piantagioni sono state realizzate usufruendo degli aiuti previsti nei diversi cicli di programmazione della PAC, a partire dal Reg. CE 2080/92.
Le specie maggiormente impiegate sono state noce e ciliegio, in minor misura acero, cerro, frassino, etc.
Nella Valle Caudina (S. Agata dei Goti, Limatola, Nocelleto, Dugenta, etc.) trova la sua massima diffusione la pioppicoltura con impiego di un clone di pioppo nero chiamato localmente (in modo improprio) "Astone" o, più propriamente, "Nocelleto". Nelle anse fluviali di espansione (Isclero e Calore) le piantagioni mostrano accrescimenti superiori a quelli dell'ibrido euoramericano I- 214 e il legno, di maggiore massa volumica, trova impiego nelle segherie locali per la produzione di *pallets*.



Pascoli montani

La superficie a prati permanenti e pascoli identificata nella Carta regionale delle risorse forestali redatta per l'aggiornamento del Piano Forestale Generale, è di circa 108.000 ettari. Per inciso, la superficie delle aree a prateria è diminuita del 70% rispetto al 1960, a causa dei processi contrastanti di abbandono e forestazione spontanea da un lato, di dissodamento e messa a coltura dall'altro.
I pascoli presenti nel territorio regionale sono quasi sempre di origine secondaria, perché derivanti da disboscamento e dissodamento di aree forestali, in rarissimi casi si tratta di praterie di origine primaria poste oltre il limite altimetrico superiore della foresta di faggio chiusa (localmente sul Cervati).
Il Regolamento forestale regionale dispone che il pascolo sia gestito con un Regolamento del pascolo redatto dai comuni come parte del Piano di gestione forestale.
Quasi sempre l'attività pastorale viene praticata senza possedere un proprio fondo, quindi senza alcuna possibilità di produrre scorte di foraggio. L'uso dei pascoli demaniali avviene mediante il pagamento di una fida per capo di bestiame. Pertanto, il diritto di uso civico di pascolo è, a differenza di altri usi civici, allargato anche ai non residenti. Al culmine del periodo arido estivo (agosto-settembre) le erbacee annuali dei pascoli hanno portato a

fonte: http://burc.regione.campania.it

Fig. 6.10

Le aree a pascolo presenti nel territorio regionale

compimento il loro ciclo biologico e seccano, pertanto il bestiame si riversa in massa nella faggeta. In ambito regionale, la transumanza viene praticata attivamente e le principali aree di svernamento coincidono con le formazioni a macchia delle aree costiere del Cilento, alcune aree del napoletano e del Piana di Battipaglia.

Lo studio sui pascoli demaniali delle Comunità Montane della Campania ha evidenziato come una porzione notevole del patrimonio pascolivo regionale sia interessato da una condizione gestione di non-equilibrio, dovuta localmente a una pressione d'uso eccessiva rispetto al carico ottimale, con problemi di degradazione del cotico e erosione dei suoli; ovvero, all'opposto, da condizioni di sotto-utilizzo che favoriscono invece la ricolonizzazione arbustiva e arborea.

È interessante notare come le due condizione di sovra-utilizzo e sotto-utilizzo, possano convivere all'interno del territorio di una medesima comunità montana, evidenziando una carenza di pianificazione e di controllo dell'uso della risorsa a scala locale che il Piano forestale intende superare attraverso la definizione di linee guida di corretta gestione delle diverse risorse pascolative, e la promozione di sistemi locali di uso sostenibile della risorsa, secondo quanto previsto dai piani di gestione forestale, e dal Regolamento del pascolo (DRD n. 711 del 05.11.2024).

Lo studio evidenzia uno stato colturale dei pascoli che non può ritenersi affatto soddisfacente essendo invasi da specie non pascolabili perché velenose o dotate di organi spinescenti di difesa dal morso. Fra queste si annoverano gli asfodeli, le rose, i pruni, i ginepri, il perastro, etc..

La specie che, più di tutte, impartisce la fisionomia di molti pascoli è *Pteridium aquilinum*. Questa forma densi e impenetrabili popolamenti sia su suoli profondi a matrice carbonatica che su quelli a matrice flyschoide. Sebbene connoti in modo particolarmente vistoso estese plaghe delle aree interne del Cilento, dei Picentini, etc. il felceto si associa ad un ricco corteggio floristico di specie pabulari la cui fenologia è anticipata o compatibile con la densa copertura del felceto che, in genere, si satura solo a primavera inoltrata.

Tab. 6.2

Tabella riassuntiva dei risultati dell'indagine conoscitiva sui pascoli pubblici delle Comunità Montane della Campania

Il felceto riveste un ruolo chiave nella successione secondaria che si innesca nei coltivi e nei pascoli abbandonati. La sua comparsa è precoce e occupa lo spazio per via rizomatosa fino a diventare la specie esclusiva. La sua permanenza prosegue anche nello stadio della successione degli arbusti, dove sono particolarmente abbondanti le specie dei Prunetalia (biancospino, prugnolo, perastro, rose, etc.), e si conserva in quello delle arboree pioniere in particolare negli ontaneti di ontano napoletano il cui piano inferiore è particolarmente luminoso.

Negli anni più recenti un po' ovunque le aree a pascolo incluse nelle aree forestali o spazialmente contigue, ma anche quelle di vetta e di crinale, sono sempre più frequentemente danneggiate dai cinghiali che ricercano frutti, funghi ipogei, bulbi di geofite, insetti e larve nello strato di suolo più superficiale, rendendosi in tal modo responsabili di rotture del cotico anche su ampie superfici.

Fattori locali quali profondità del suolo, fertilità stazionale e reazione del suolo, nonché le stesse modalità di utilizzo del pascolo da parte del bestiame (come specie e come carico), sono determinanti nel condizionare la fisionomia, la composizione, i rapporti di mescolanza e gli indici di copertura delle diverse specie. In linea generale una riduzione del carico di pascolo determina una successione progressiva dapprima verso fisionomie arbustive e poi verso il bosco. In ogni caso la fisionomia, la composizione specifica e la stessa integrità del cotico erboso possono dipendere:

- dal comportamento della specie animale al pascolo;
- dalle tecniche pastorali messe in atto;
- dagli effetti prodotti dal calpestìo;
- dalle caratteristiche delle deiezioni solide prodotte.

Ciascuna delle specie animali allevate esercita un ruolo funzionale ben preciso nella cenosi pascoliva. I bovini, in linea generale, possono modificarne la composizione specifica a causa della loro modalità di assunzione dell'erba a strappo e sono anche in grado di produrre una omogenea concimazione dei terreni. Gli equini possono utilizzare a scopo alimentare risorse vegetali di scarso valore e possono migliorare le capacità produttive di alcuni pascoli grazie alle restituzioni di sostanza organica attraverso le deiezioni. Gli ovini, invece, possono indurre variazioni nella composizione floristica ma anche nella fisionomia a causa della loro selettività alimentare e il comportamento gregario che li porta a frequentare sempre le stesse aree di riposo, dove si possono verificare fenomeni di accumulo delle deiezioni. Il pascolo in bosco è vietato ai caprini, a causa della bassa selettività del loro morso, dell'abilità a sorreggersi su fusti e rocce stando sulle zampe posteriori, della destrezza a muoversi anche su pendici molto impervie, inducendo sostanziali variazioni sia della composizione specifica che della fisionomia del pascolo stesso.

Le conseguenze del pascolo all'interno del bosco sono numerose e gli effetti possono persistere anche molti anni dopo la sua interruzione. Infatti, il brucamento avviene in maniera selettiva: le specie tossiche sono evitate e quelle spinescenti vengono brucate solo dalle capre e nei periodi di maggior carenza di foraggio. Inoltre, le specie appartenenti alle famiglie delle labiate e delle ombrellifere sono

fonte: http://burc.regione.campania.it

poco appetibili mentre vengono attivamente brucate le graminacee e le leguminose: ciò porta ad un parziale cambiamento della composizione specifica del pascolo.
Il morso del bestiame danneggia i semenzali delle specie arboree con conseguente ostacolo per la rinnovazione; in alcuni casi, il morso degli animali danneggia l'accrescimento delle piante la cui chioma assume forme caratteristiche: la parte inferiore viene conformata a cono fino all'altezza a cui possono essere raggiunte dagli animali. Se un getto riesce a superare questa altezza, la pianta si sviluppa regolarmente ma conserva alla base un fitto intreccio di polloni. Inoltre le capre, nutrendosi di giovani fusti legnosi, possono asportare la corteccia degli alberi.
Il pascolo in bosco è fortemente condizionato dal clima. Per questo motivo viene praticata la transumanza, cioè lo spostamento periodico degli animali lungo percorsi altimetrici fissi per consentire lo sfruttamento invernale dei pascoli delle zone di pianura e quello estivo dei pascoli di montagna.
Infine in bosco, al culmine della crisi idrica estiva, agosto-settembre, quando le scorte foraggere verdi si sono esaurite anche nelle formazioni più mesofile, può essere praticato localmente lo sgamollo di specie quali l'orniello, il cerro, i pioppi, etc. Si tratta di una pratica ancora localmente praticata in ambito regionale, soprattutto per le mandrie di bovini e ovini.

Il carico non dimensionato alle capacità produttive del pascolo, il vagare incontrollato degli animali e il carico concentrato in corrispondenza dei punti di abbeverata, unitamente ad un anticipo e dilazione della monticazione, sono i principali fattori responsabili della rottura del cotico erboso che è una condizione comune a tutte le aree a vocazione pascoliva della regione.
Il maggior degrado del cotico erboso si osserva, quasi sempre, in corrispondenza dei punti di abbeverata corrispondenti a sorgenti captate e trasformate, quasi sempre, in fontane-abbeveratoi. La irrazionale pavimentazione e cementificazione di questi luoghi, con relativa bonifica delle pozze umide temporanee, ha un impatto negativo sulla fauna anfibia legata a questi ambienti come le rane terrestri, i rospi e gli ululoni.
Molte delle caratteristiche dei prodotti lattiero caseari apprezzate dal consumatore, dipendono dal sistema di allevamento brado o semibrado che permette agli animali di alimentarsi di specie spontanee capaci di impartire aromi particolari al formaggio, dalle caratteristiche della razza, dai sistemi artigianali tipici di lavorazione del latte.

7. Avversità biotiche e abiotiche

Stato fitosanitario

La situazione fitosanitaria dei boschi della Campania si presenta piuttosto articolata essendo la Regione caratterizzata da una notevole varietà di ambienti, suoli, fasce di vegetazione e specie. Raggruppando la casistica per specie e considerando soltanto quelle più importanti si può tentare una sintesi delle principali avversità:

- Le faggete appenniniche centro-meridionali sono da qualche decennio interessate da deperimento associato a eventi siccitosi ricorrenti. L'associazione tra soprassuoli coetanei e monofitici ed eventi estremi è fortemente conduttiva per organismi patogeni nativi ed esotici presenti nel consorzio forestale. Tra questi alcune specie di *Biscogniauxia* e in particolare *nummularia* e *B. mediterranea*. Si tratta di 2 specie di *Xilariaceae* con habitus endofitico normalmente residenti in tessuti (rami, gemme e foglie) di piante sane. In presenza di condizioni di stress idrico questi funghi passano dalla fase latente a quella parassitaria, colonizzando i tessuti e portando a morte l'intera pianta o parte di essa. Sotto il ritidoma si differenzia uno stroma carbonioso compatto a placche o continuo che si estende anche per alcuni metri, interessando parte o l'intera circonferenza di rami e fusto. Anche patogeni primari come *Phytophthora* spp. partecipano alla sindrome di deperimento del faggio. Tra le specie riscontrate nel suolo di faggete meridionali ed associate a cancri del fusto o marciumi radicali vi sono *Phytophthora cactorum*, *P. pseudosyringae* e *P. cambivora*. Queste specie sono causa di riduzione dell'apparato radicale fine e di estesi cancri corticali. La proliferazione dell'inoculo è legata alla saturazione del suolo (forti precipitazioni) a seguito della quale si ha l'infezione e il marciume delle giovani radichette. In presenza di siccità duratura, le piante attaccate da *Phytophthora* spp. mostrano una minore capacità di approvvigionamento idrico dovuto alla minore presenza di radici fini. Non esistono interventi efficaci di lotta se non quelli selvicolturali finalizzati a disetaneizzare la struttura del soprassuolo con contestuale riduzione della biomassa epigea, nonché incrementare la biodiversità dendrologica mediante introduzione di specie accessorie. In queste stazioni può divenire localmente molto diffusa la presenza di attacchi di *Mikiola fagi*. Il cuore bagnato rappresenta una delle principali cause di declino biologico del faggio: localmente, come ad es. nella faggeta posta sulle falde settentrionali del Monte Cervati di Piaggine (SA), l'alterazione sembra essere diffusa fra le piante delle diverse classi di età, da quelle di rinnovazione a quelle mature e decrepite.
- Per quanto riguarda i soprassuoli a castagno sono frequenti danni da *Cryphonectria parasitica* (cancro corticale) e in minor misura da *Phytophthora cambivora* (mal dell'inchiostro). In quasi tutti i soprassuoli, fatto salvo alcune situazioni sporadiche e puntiformi, si tende a raggiungere un sostanziale equilibrio tra il ceppo virulento e ipovirulento del patogeno fungino agente del cancro. A questo fenomeno positivo si aggiunge il fatto che la conversione dei ceppi da una forme all'altra è favorita dalle temperature miti, sempre più frequenti negli ultimi anni nel periodo primaverile-estivo nelle zone montane. La comparsa anche in Campania del Cinipide galligeno del castagno (*Dryocosmus kuriphilus* Yasumatsu) - una piccola vespa considerata uno degli insetti più dannosi per il castagno - ha comportato negli scorsi anni danni assai ingen-

Fig. 7.1

Germoglio di castagno attaccato dal cinipide galligeno (Dryocosmus kuriphilus)

ti al settore castanicolo regionale, con perdite di produzione che nell'annata 2014, in alcune aree del territorio regionale, hanno raggiunto percentuali intorno al 90%. La specie è molto diffusa in Asia e negli Stati Uniti. In Italia è stato segnalato per la prima volta in Piemonte nel 2002, in Campania nella primavera del 2008 sia su cedui che su castagneti da frutto. I danni che compie sono molto evidenti: provoca la formazione di galle (malformazioni a carattere escrescente dovute alla proliferazione delle cellule vegetali della pianta stessa), di varie forme e dimensioni (anche 3-4 cm di lunghezza e 2-3 cm di diametro), a carico di gemme, foglie e amenti del castagno. Da queste galle nei mesi da giugno ad agosto fuoriescono le femmine alate che vanno a depositare le uova nelle gemme presenti (questa specie presenta una sola generazione annua ed è caratterizzato da una riproduzione per partenogenesi). Dalle uova fuoriescono le larve che si sviluppano molto lentamente sempre all'interno delle gemme, senza che queste presentino sintomi esterni dell'infestazione. Alla ripresa vegetativa, nella primavera successiva, si ha un rapido sviluppo delle larve che determina la formazione delle caratteristiche galle. Spesso determinano un arresto dello sviluppo delle gemme, da cui si sviluppano foglie di dimensioni ridotte. Un forte attacco di quest'insetto può determinare un consistente calo della produzione, una riduzione dello sviluppo vegetativo e un forte deperimento delle piante colpite. Una delle principali modalità di diffusione dell'insetto è attraverso il materiale di propagazione pertanto si sollecita sempre una accurata sorveglianza delle piantine di castagno messe dimora ed una particolare attenzione quando astoni o marze provengono da aree (Piemonte, Lazio) dove il parassita è già presente. Sulle piante giovani è agevole rilevare la presenza delle galle provocate dall'insetto; in tal caso, entro il mese di giugno, vanno raccolte le parti infette, provvedendo alla loro distruzione mediante bruciatura, prima cioè della fuoriuscita delle femmine alate, rallentando così diffusione dell'infestazione. La lotta a questo parassita è basata sulla selezione, attualmente in fase sperimentale, di cultivar di castagno iposensibili, ma soprattutto sulla difesa biologica mediante l'utilizzo di un parassitoide larvale specifico, il *Torymus sinesis*, originario della Cina e introdotto con successo negli anni '70 del secolo scorso in Giappone ed in Corea. I programmi regionali di lancio dell'antagonista naturale nelle aree di maggior infestazione hanno condotto nel tempo a risultati lusinghieri, con un buono insediamento del Torymus, consentendo all'attualità il ritorno a livelli di produttività prossimi a quelli ordinari.

fonte: http://burc.regione.campania.it

- Nei rimboschimenti di conifere (per lo più pini) l'emergenza è attualmente legata alle infestazioni di Toumeyella parvicornis (Cockerell). Si tratta di una cocciniglia il cui areale d'origine è esteso dal Canada meridionale al Messico settentrionale; negli USA è presente in ben 28 Stati (Garcia Morales et al., 2020). È denominata "Pine tortoise scale" = Cocciniglia tartaruga del pino per la particolare morfologia del corpo delle femmine adulte, che ricorda un carapace di tartaruga e per essere infeudata al genere Pinus. Quando la popolazione è molto numerosa, le femmine adulte possono trovarsi anche parzialmente sovrapposte l'una sull'altra lungo l'asse dei germogli, a formare fitti manicotti di decine di individui. A fine anno 2014 la T. parvicornis è stata accertata per la prima volta anche in Europa in particolare in Campania (Italia) su Pinus pinea, nell'area urbana di Napoli (Garonna et al., 2015). Allo stato attuale la Cocciniglia tartaruga è presente nelle regioni Campania e Lazio.
- Da approfondimenti ex-post effettuati attraverso indagini indirette è emerso che i primi sintomi riconducibili ad attacchi di T. parvicornis in Campania sono stati osservati già ad inizio anno 2014 nell'area contigua al Lago Patria (NA). A distanza di pochi mesi la Cocciniglia tartaruga si era diffusa, a macchia di leopardo, in diversi areali del napoletano, del casertano e nel salernitano nelle pinete costiere litorale fino a Capaccio, come è risultato dalle attività di monitoraggio territoriale e raccolta di campioni vegetali eseguite tra dicembre 2014 e gennaio 2015. Dal 2015 è stato affrontato lo studio della biologia della specie in Campania (Garonna et al., 2018), per evidenziare le potenzialità dell'insetto nelle aree di invasione italiane. Al 2020 l'infestazione interessa, se pur non uniformemente, la fascia costiera, dall'alto casertano fino alla città di Salerno, un ampio territorio dove ha contribuito sicuramente già alla morte di molte piante ospiti. Negli ultimi tempi vi è stato un incremento delle segnalazioni anche nei territori interni del beneventano e dell'avellinese, mentre la pineta del comune di Castel Volturno è disseccata completamente in soli 3 anni, per cui è stata completamente abbattuta e sostituita da un mix di conifere e latifoglie.
- Lo studio biologico della cocciniglia T. parvicornis ha messo in evidenza la notevole capacità della specie di insediarsi in nuove regioni geografiche. I dati raccolti hanno mostrato come l'espansione territoriale può avvenire con velocità preoccupante, oltre che per contatto chioma-chioma anche e soprattutto per diffusione passiva ad opera del vento, come già evidenziato sia nell'area nativa e sia in altri territori invasi. Tutto ciò senza considerare altre forme di trasporto passivo lungo le principali vie di comunicazione, favorito dalla presenza di alberature di pino domestico e dal traffico di mezzi pesanti, in grado di creare turbolenze a livello della chioma degli alberi. In Campania, oltre al pino domestico altre specie di pino risultano meno infestate e maggiormente tolleranti la presenza della cocciniglia (es. pino marittimo) oppure raramente o per niente infestate (es. pino d'Aleppo).

La Regione Campania con Decreto dirigenziale n. 1 del 7 gennaio 2021 ha adottato misure fitosanitarie per la prevenzione, il controllo e il contrasto alla Cocciniglia tartaruga Toumeyella parvicornis. Nel dettaglio si è stabilito di:

- allineare il Piano di azione contro la cocciniglia Toumeyella parvicornis, approvato con Decreto regionale dirigenziale n. 52 del 29 luglio 2015, alle Linee guida nazionali (Allegato 1);
- adottare lo schema delle Procedure di indagine approvate dal Comitato fitosanitario nazionale nella seduta del 19 novembre 2020 (Allegato 2);
- delimitare l'area interessata dalle infestazioni della cocciniglia tartaruga. Tale delimitazione è stata effettuata sulla base delle risultanze dei controlli ufficiali effettuati fino al 31 dicembre 2020 e inseriti sulla piattaforma informatica simfito.org. Nella delimitazione rientrano le "zone infestate" e le relative "zone cuscinetto", quest'ultime sono zone di 5 km di larghezza che circondano ciascuna zona infestata (Allegato 3).
- Inoltre, visto che, sulla base delle indagini espletate fino al 31 dicembre 2020, l'eradicazione del parassita non è possibile nel breve periodo, nelle aree infestate della Campania sono stabilite misure ufficiali ai fini del contenimento:
- rimozione e distruzione immediata delle piante o parti di pianta ospite, infestate dal parassita specificato, la cui vitalità sia irrimediabilmente compromessa;
- applicazione trattamenti appropriati, compresi approcci integrati di sistema, per controllare la presenza del parassita specificato e prevenirne l'ulteriore diffusione;
- limitazioni al movimento al di fuori dell'area delimitata per il materiale di risulta infestato da T. parvicornisproveniente dagli abbattimenti, a meno che non sia stato sottoposto a trattamenti appropriati per eliminare il parassita specificato oppure sia assicurato che il trasporto avvenga

fonte: http://burc.regione.campania.it

con camion chiusi/telonati fino ai siti autorizzati di distruzione o di adeguato successivo trattamento termico o di altro tipo;

- altre buone pratiche agronomiche e selvicolturali riportate nelle Linee guida per la gestione del fitomizo (allegato 1A del DRD n. 01 del 07.01.2021).

Sempre nei rimboschimenti a conifere (in particolar modo nella foresta demaniale del Taburno su abete bianco) si rileva la presenza di *Heterobasidion annosum* e di disseccamenti della chioma da *Sphaeropsis sapinea* in situazioni di stress idrici. Ai danni da funghi si associano spesso quelli dovuti a scolitidi (*Tomicus sp.*, *Orthotomicus erosus*) capaci di veicolare anche il patogeno fungino *Leptographium sp.* agente di disseccamento delle piante e di azzurramento del legno.
Sphaeropsis sapinea è attiva sui coni del pino causando il noto fenomeno delle pine gallerone e pagliose e soltanto in modo secondario costituisca un agente di defogliazione delle piante.
Sui pini si rilevano anche attacchi di processionaria (*Thaumatopoea pytyocampa*), in genere localizzati su piantagioni ubicate al di fuori dell'optimum ecologico della specie (*Pinus radiata*, *P. halepensis*, *P. nigra*).
La specie più importante, responsabile di questi fenomeni è *Lymantria dispar*. Questo lepidottero svolge un solo ciclo annuale svernando allo stadio di larva di prima età all'interno dell'uovo che schiude in concomitanza con il risveglio vegetativo delle querce. La specie, completa lo sviluppo larvale in circa 2 mesi e si incrisalida sulle piante ospiti. La defogliazione causata dall'attività trofica delle larve è uno degli eventi più drammatici che possono interessare un bosco. Infatti, la perdita delle foglie, riducendo la superficie fotosintetizzante, altera le condizioni fisiologiche della pianta rendendola maggiormente suscettibile agli attacchi di altri fitofagi che, nel caso di pullulazioni reiterate negli anni possono causare la morte delle piante. Inoltre le larve della specie, possedendo dei peli provvisti di ghiandole urticanti, creano, nelle aree a fruizione turistica, dei disagi ai cittadini. Il controllo della specie va finalizzato alla riduzione delle densità di popolazione integrando diverse tecniche di intervento comunque basate su mezzi biologici. A tal proposito, gli orientamenti ormai proposti nelle diverse realtà nazionali si basano sull'adozione di interventi localizzati con formulati microbiologici a base di *Bacillus thuringiensis* e nel potenziamento della biocenosi parassitaria. I trattamenti a base di *B. thuringiensis* vanno in genere focalizzati solo in quelle aree caratterizzate da elevata presenza antropica (aree pic-nic, aree sosta, viali alberati, ecc.).

Fig. 7.2

Attacco severissimo di cocciniglia tartaruga del pino (Toumeyella parvicornis) che ha condotto alla completa defoliazione e alla morte di ampi tratti della pineta di Castel Volturno (CE).

Il potenziamento della biocenosi parassitaria, oggi risulta economicamente vantaggioso ed efficace, se effettuato su larga scala, tanto che in numerosi paesi del bacino del mediterraneo sono operative delle biofabbriche deputate all'allevamento massale di ooparassitoidi specifici. Nei nostri ambienti quello che maggiormente si presta a tale scopo è *Oencyrtus kuwanae.* Un altro lepidottero defogliatore dei querceti presente in Campania è il Tortrice verde delle querce (*Tortrix viridana*), si rinviene sia in boschi soggetti a stress idrici che in aree soggette ad allagamenti. Comune in cedui non utilizzati per più turni. Durante forti attacchi le querce a foglia caduca vengono completamente defogliate, al contrario su querce sempreverdi si ha prevalentemente la distruzione della vegetazione dell'anno, per cui nel caso delle leccete le chiome mantengono una colorazione verde. A fine aprile gruppi di foglie erose riunite con fili sericei formano dei piccoli glomeruli. Il fitofago arrotola le foglie longitudinalmente per ripararsi. Durante forti infestazioni si rinvengono ovunque i lunghi fili sericei prodotti dalle larve, che talvolta possono rivestire come una densa ragnatela anche la vegetazione arbustiva ed erbacea. Per la lotta a questo insetto i trattamenti indicati sono quelli a base di *B. thuringiensis*.
Nei querceti meridionali localmente *Euproctys chrysorrea* può defogliare in modo significativo cerro, roverella, prugnolo, biancospino, perastro, etc.. L'azione urticante dei suoi peli è molto più temibile per l'uomo rispetto alla specie precedente.
Negli anni più recenti negli ontaneti sono stati registrati ciclicamente forti attacchi dell'insetto erbivoro *Galerucella solarii* a carico degli ontaneti di *Alnus cordata* del Cilento, che hanno determinato la completa erosione del mesofillo fogliare di estesi soprassuoli rendendo ancora più luminoso, sebbene in modo transitorio, il piano inferiore del bosco.

fonte: http://burc.regione.campania.it

Tra le avversità biotiche, si segnalano danni alla vegetazione naturale e alle coltivazioni da parte della fauna ungulata. Quelli più diffusi e consistenti sono causati dal cinghiale, a causa della elevata densità raggiunta localmente dalle popolazioni, soprattutto in ambito protetto. Particolarmente grave risulta l'attività di sfregamento sul ritidoma delle residue piante di abete bianco vegetanti nella faggeta di Corleto Monforte (SA). Questa interazione negativa ungulato- vegetazione riguarda sia piante appartenenti allo strato di rinnovazione che piante adulte, il cui ritidoma risulta asportato su buona parte del perimetro nella porzione inferiore del fusto e sulle radici superficiali (Mottola, 2001).
In un'area più limitata del P.N. del Cilento e Vallo di Diano (Laurino) la reintroduzione del cervo e del daino ha fatto lamentare danni alle piantagioni da frutto (noceti), ai vigneti, ai ricacci dei cedui quercini, ai medicai e agli orti periurbani.

Incendi boschivi

Gli incendi boschivi in Campania costituiscono un serio problema e tra i fattori di degrado che colpiscono le foreste, sono certamente i più distruttivi.
Analizzando il periodo 2003-2023, in Campania si sono verificati 58.140 incendi (Tabella 7.1), che hanno interessato una superficie di 115.383 ha di cui 63.938 ha di superficie boscata e 51.446 ha di superficie non boscata. Dal 2003 al 2023 ogni anno, in media sono stati percorsi dal fuoco 5.494 ha di bosco pari a circa l'1,9% del patrimonio boschivo regionale.
Analizzando nel dettaglio i dati riportati in Tabella 7.1 emerge che gli anni 2007 e 2017 sono stati caratterizzati da un elevato numero di incendi con una vasta superficie percorsa, mentre nel 2013, 2014 e 2018 è stato registrato il più basso numero di incendi e la minore superficie percorsa dal fuoco.
Il numero annuo di incendi e le superfici percorse mostrano un andamento variabile con picchi di incremento e di decremento e sono indipendenti dalle caratteristiche e dall'efficienza della struttura antincendio, mentre sono legati a fattori socio-economici-ambientali, in particolare: l'abbandono delle campagne, il turismo di massa, l'urbanizzazione diffusa, l'uso del fuoco quale strumento di vendetta privata o per manifestare il dissenso contro le Amministrazioni pubbliche e/o contro l'imposizione di regimi vincolistici legati alla creazione di aree naturali protette, ma anche a pratiche che, sebbene illegali, rientrano in una tradizione antica di uso del territorio (pastorizia, raccolta degli asparagi, caccia, pulizia dei castagneti e bruciatura di residui di coltivazione).
Altro elemento che emerge dalla serie storica è la notevole incidenza, mediamente intorno al 45% delle superfici non boscate sul totale delle superfici percorse dal fuoco, con punte intorno al 60% in alcune annate. È probabile che il fenomeno sia da

Fig. 7.3

I vasti Incendi delle pinete del Vesuvio nell'estate dell'anno 2017 (Foto di Riccardo Siano)

fonte: http://burc.regione.campania.it

collegare alla frammentazione colturale del territorio collinare e montano, per cui spesso gli incendi dalle superfici boschive si propagano alle vicine superfici arbustive e erbacee che peraltro possono costituire un'esca ancora più infiammabile del bosco stesso.

In fig. 7.3 si riporta la cartografia di scala regionale della densità degli incendi relativa al periodo 2013-2023. La magnitudo incendi è rappresentata con una gradazione che va dal bianco (nessun incendio) al rosso (numero max incendi).

La dimensione media delle aree percorse dal fuoco nel periodo 2003-2023, come evidenziato in Tab. 7.1 è pari a 1,83 ha/incendio.

Prendendo in riferimento il periodo 2013-2023, attraverso una post elaborazione dei dati archiviati nel Decision Support System (DSS), si è proceduto ad una ripartizione di tutti gli incendi in 12 classi dimensionali.

Tale lavoro è stato condotto analizzando il fenomeno per ogni singola provincia campana.

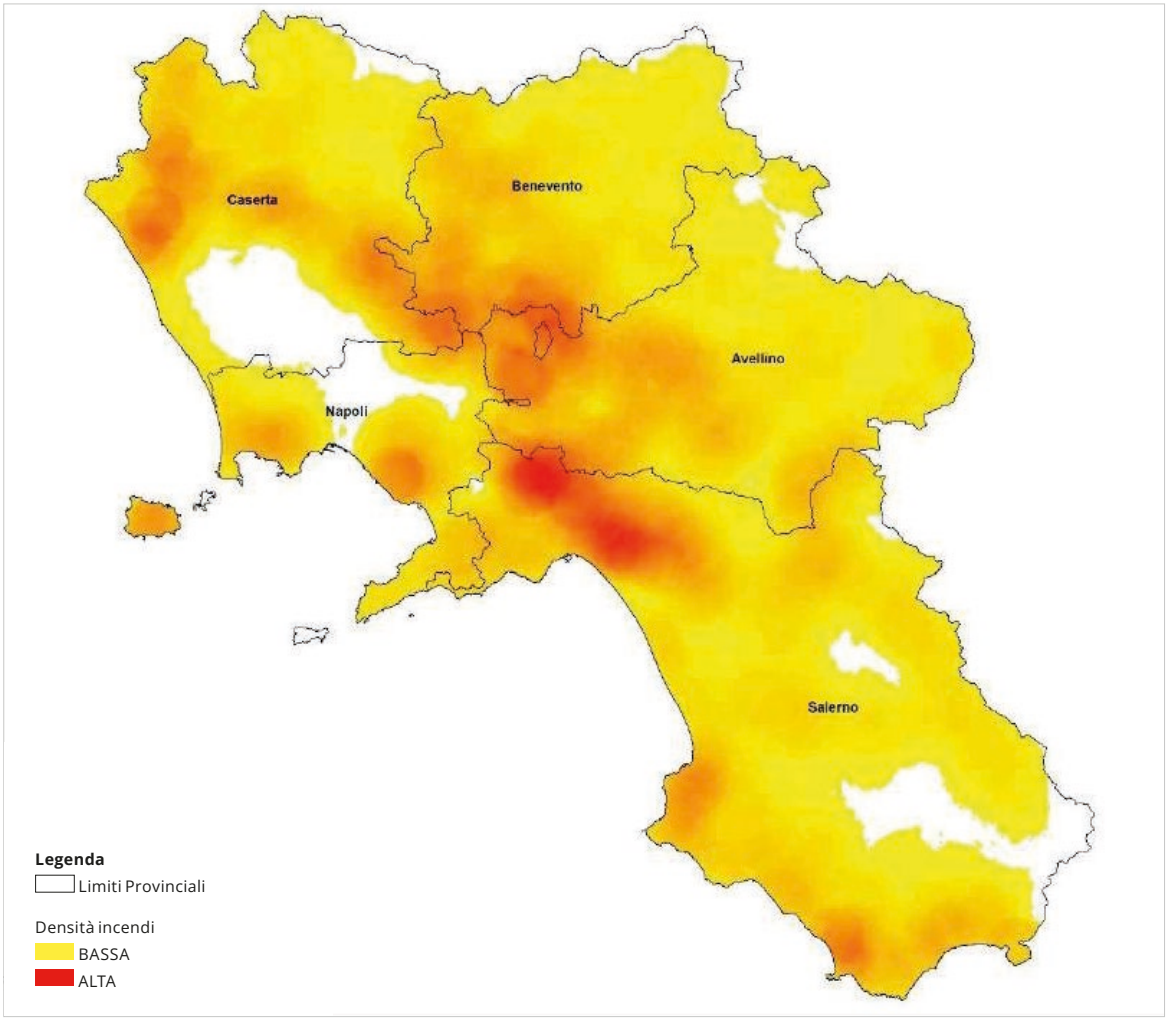
Da tale ripartizione emerge che circa il 72% degli incendi risulta essere di dimensioni molto contenute ed inferiori ad 1 ha, mentre circa il 93% degli incendi sono ricompresi entro i 5 ha di ampiezza. Gli incendi di più elevata dimensione, cioè quelli che superano i 25 ha di estensione, costituiscono poco più dell'1% del totale.

La Tab. 7.2 suddivisa in due parti (periodo intero anno e periodo massima pericolosità), mostra il numero degli incendi verificatisi nel corso del 2023 e la relativa superficie percorsa dal fuoco, con la specificazione della tipologia di incendio, boschivo e non boschivo.

La maggior parte degli incendi, circa l'85%, si è verificato nel periodo di massima pericolosità, nel medesimo asse temporale si è registrata la maggiore superficie percorsa dal fuoco, circa il 88%.

Il dato sulla superficie media percorsa dal fuoco: nel 2023 tale valore è risultato pari a 2,12 ha/incendio, dato di poco superiore al valore medio della serie storica pari a 1,83 ha/incendio.

Tab. 7.1



Numero incendi e superficie percorsa dal fuoco in regione Campania nel periodo 2003-2023 (fonte DSS, Piano AIB Campania 2024-2026).

Anno	Numero incendi	Superficie boscata	Superficie nonboscata	Superficietotale percorsa dal fuoco	Superficie media delle aree incendiate (ha/numero incend.)
2003	3.709	4.100,04	4.253,32	8.352,36	2,25
2004	2.447	2.503,33	1.566,67	4.070,00	1,66
2005	2.383	1.317,30	1.840,49	3.157,79	1,33
2006	1.861	911,00	1.844,06	2.755,06	1,48
2007	5.855	11.090,92	8.124,76	19.215,68	3,28
2008	3.578	2.432,77	2.962,94	5.395,71	1,51
2009	4.070	3.513,87	2.852,61	6.366,48	1,56
2010	2.741	1.088,66	1.688,03	2.776,70	1,01
2011	5.599	4.096,99	3.683,10	7.780,09	1,39

fonte: http://burc.regione.campania.it

Fig. 7.4

Carta della magnitudo incendi nel periodo 2013-2023 (fonte DSS, Piano AIB Campania 2024-2026)

La superficie boscata totale percorsa dal fuoco è aumentata di circa il 5% passando da 3.283,53 ha del 2022 a 3.446,07 ha del 2023. Stesso trend si evidenzia per la superficie non boscata, infatti al 2023 la superficie non boscata percorsa dal fuoco è aumentata di circa il 12%, passando da 1.428,48 ha del 2022 a 1.609,85 del 2023. Invece per quanto riguarda la superficie boscata si è registrata una lieve diminuzione (circa 1%) rispetto all'anno 2022.

In generale, nel 2023 con 1.624 incendi vi è stato un aumento complessivo pari a 153 eventi rispetto al 2022: tale incremento si è registrato in particolare nel mese di agosto, con 569 eventi rispetto ai 438 dell'anno precedente (variazione in aumento di 131 eventi) e nel mese di settembre, con 603 eventi a fronte dei 49 del 2022 e la variazione in aumento di 554 eventi.

Considerando anche il picco avuto nel mese di ottobre (periodo di non massima pericolosità) si evidenza una tendenza della curva degli incendi a spostare il punto di massimo da agosto a settembre rispetto all'anno precedente, andando nei fatti a prolungare la campagna AIB.

Anche in termini di estensione, l'anno 2023 ha registrato un incremento della superficie danneggiata dal fuoco con 3.446,07 ha rispetto ai 3.283,53 ha dell'anno precedente. Da rilevare che il dato della superficie interessata da incendi è comunque inferiore rispetto alla media del periodo 2013-2022.

Nell'anno 2023 la provincia di Salerno, con 685 eventi incendiari, si conferma la provincia più colpita numericamente da incendi, inoltre è anche la prima provincia per superficie boscata danneggiata dagli incendi nel 2023 con 808,90 ha, pari al 44.05% dell'intera superficie boscata bruciata in regione Campania. Segue la provincia di Caserta con 620,00 ha, pari al 33.77% della superficie boscata bruciata (Tab. 7.3).

Impiego delle squadre di spegnimento

Nel periodo non ricompreso in quello indicato dal Decreto di Massima Pericolosità per gli incendi boschivi dell'anno 2023 (periodo non estivo) sono complessivamente intervenuti nelle attività di spegnimento incendi n. 1.349 operatori AIB. Hanno operato quasi esclusivamente SMA Campania, intervenuta con n.149 squadre AIB, squadre O.D.V AIB con n. 82; la parte residuale è riconducibile ad Enti delegati, ai Vigili del Fuoco ed agli operatori regionali, differenziati come dettagliato nella tabella n. 14 sottostante.

Nel periodo di massima pericolosità, nelle attività di estinzione sono intervenuti n. 10.071 operatori, differenziati come dettagliato nella tabella 7.4 sottostante. Nella stessa è inoltre indicato, per ogni singolo ente o associazione di volontariato di protezione civile, il personale messo a disposizione adibito alla lotta attiva.

Da tale computo è escluso il personale impiegato nella gestione delle Sale Operative e gli addetti alle sole attività di pattugliamento ed avvistamento di eventuali focolai di incendio.

8. Indirizzi di gestione forestale sostenibile

Il capitolo è dedicato alla descrizione sintetica delle modalità di gestione selvicolturale per le principali formazioni forestali, alle quali si dovrà far riferimento in fase di implementazione delle misure di attuazione delle diverse azioni del Piano forestale generale.

Boschi a prevalenza di querce caducifoglie e formazioni di latifoglie mesofile

Nei cedui puri e/o misti matricinati di specie quercine di proprietà pubblica, di norma di superfici piuttosto estese e spesso non utilizzati da lungo tempo, si potrà procedere con le opportune tecniche selvicolturali mirate alla conversione a fustaia, passando attraverso il ceduo composto, invecchiamento naturale, matricinatura progressiva, ecc...
In accordo con l'art. 71 del Regolamento forestale 3/2017, il trattamento dei soprassuoli prevede l'esecuzione di tagli di avviamento, consistenti in diradamenti sulle ceppaie, finalizzati alla progressiva riduzione del numero dei polloni e/o eventuali diradamenti selettivi dei soggetti affermati di origine agamica tali da consentire l'aumento al suolo dei soggetti da seme e preparare il bosco ai futuri tagli di rinnovazione. I soggetti di origine gamica saranno, generalmente, preservati dal taglio, fatto salvo i casi di manifesta senescenza, malattia, concorrenza o forma particolarmente contorta.
Nei cedui di proprietà privata è plausibile un uso del bosco volto alla produzione di legna da ardere con le modificazioni degli ordinamenti e un graduale, continuo e capillare miglioramento di questi boschi. Un miglioramento attuabile intervenendo: sul numero e sulla distribuzione spaziale delle matricine; sui cicli di utilizzazione; sulla dimensione e distribuzione nel tempo e nello spazio delle tagliate; sulla esecuzione delle cure colturali; sulla regolamentazione del pascolo e sulla difesa dagli incendi (CIANCIO, 1990, 1992).
Un primo aspetto riguarda la matricinatura, in accordo con le disposizioni del Regolamento forestale 3/2017. Un secondo aspetto è l'allungamento del periodo intercorrente fra due ceduazioni, quando sia necessario ristabilire un migliore e più corretto equilibrio nel bilancio energetico; quando la fruttificazione delle matricine non abbia raggiunto il livello di massima funzionalità ed efficienza; quando la produttività del ceduo a causa delle precedenti utilizzazioni si mostri in declino o a livelli molto bassi; quando sia necessario migliorare l'efficacia sulla conservazione del suolo. Il rilascio di modeste frazioni (non superiori al 5%) di soprassuolo ceduo non tagliate rappresenta una ulteriore misura ambientale di protezione del suolo e di incremento della biodiversità, soprattutto se le aree non percorse dal taglio coincidono con luoghi morfologicamente sensibili (displuvi, impluvi, salti di quota, balzi di roccia, etc., e con le fasce di protezione previste dal regolamento regionale 3/2017).
Un terzo aspetto riguarda le cure colturali quali decespugliamenti, sfolli e diradamenti. Le ripuliture del sottobosco, le potature delle matricine per favorire una abbondante fruttificazione e per non aduggiare eccessivamente i polloni, gli sfollamenti e i diradamenti sulle ceppaie dei polloni soprannumerari, difettosi, malformati, dominati, rappresentano interventi di miglioramento che si configurano come interventi preventivi di importanza decisiva nella lotta agli incendi.
La precisa e rigorosa regolamentazione del pascolo e le altre misure contro gli incendi rappresentano ulteriori fattori determinanti.
Per quanto riguarda la pianificazione degli interventi in termini di dimensione e distribuzione

fonte: http://burc.regione.campania.it

spaziale delle tagliate, va tenuto presente che in aree con proprietà composte prevalentemente da boschi cedui non è infrequente la presenza di vasti accorpamenti di particelle di una stessa classe cronologica. In questi casi la necessità di ridurre e distanziare le tagliate implica un primo intervento volto a rompere la continuità di tali accorpamenti, anticipando o ritardando il taglio di qualche particella rispetto al turno. In ogni caso è opportuno prevedere il rilascio di fasce di rispetto nelle zone più critiche e che necessitano di protezione.

È difficile disciplinare i istanze di taglio dei cedui secondo parametri che siano applicabili per la generalità dei casi. Le istanze di taglio dovrebbero essere attentamente valutate caso per caso, in considerazione della vulnerabilità all'erosione dei suoli superficiali, alle condizioni di pericolosità per frane superficiali, alla natura del substrato, la presenza di infrastrutture e di aree a rischio che sottendono il ceduo percorso dal taglio, la forma e la dimensione della tagliata, le eventuali tagliate contigue, eventuali incendi in aree contigue, ecc.

Considerando gli effetti che il ceduo può avere sulla dinamica degli elementi nutritivi e sul rapporto idropedologico, fermo restando le misure di prevenzione degli incendi, si dovrà prevedere il rilascio dei residui di lavorazione sul terreno per attenuare l'effetto erosivo delle precipitazioni e ridurre notevolmente il depauperamento del suolo.

Ad ogni modo, nella scelta tra il mantenimento del ceduo e la conversione a fustaia, è possibile anche una terza ipotesi: il ceduo composto. Questa forma colturale, per sua natura concilia le esigenze del proprietario privato e quelle della collettività, e può configurarsi come un modello colturale alternativo qualora, per motivi economici finanziari, non si voglia realizzare la conversione in fustaia con i metodi tradizionali notoriamente costosi, né si possa mantenere, per esigenze ambientali, il governo a ceduo (CIANCIO *et al.*, 1995).

Analogamente alla fustaia disetanea, il ceduo composto garantisce una sufficiente copertura del terreno e una buona efficacia antierosiva. Inoltre, consente prelievi frequenti anche in boschi di limitata estensione. E ancora, poiché a ogni utilizzazione non si eliminano tutte le matricine, si ha un minor impatto sul paesaggio. La capacità produttiva del ceduo composto complessivamente non è inferiore a quella del ceduo matricinato e pur in presenza di una fustaia a densità elevata, la rinnovazione da seme è in grado di sostituire le ceppaie che a lungo andare deperiscono per varie cause.

Per le fustaie pure e/o miste di cerro e le formazioni miste di latifoglie mesofile, la gestione dovrà essere indirizzata a favorire la ridiffusione delle specie mesofile e mesoigrofile, la cui attuale rarefazione è senza dubbio di origine antropica, con un aumento della complessità strutturale. È anche ipotizzabile il trattamento a *fustaia chiara*, per l'applicazione del quale in ambiente mediterraneo sono state prospettate modifiche e adattamenti (CIANCIO *et al.*, 1995).

In considerazione del particolare valore naturalistico e protettivo, e degli aspetti di vulnerabilità dei boschi misti di caducifoglie mesofile che si sviluppano sui versanti acclivi dei valloni, su depositi di versante e affioramenti rocciosi, appartenenti all'habitat 9180* (Foreste di versanti, ghiaioni e valloni del Tilio-Acerion lungo gli impluvi e nelle forre umide con abbondante rocciosità superficiale), la loro gestione si conforma, all'interno della rete Natura 2000 della Campania, alle misure di conservazione previste, consistenti nel divieto di qualunque intervento di taglio boschivo.

Faggete

Per i cedui di faggio di proprietà pubblica, ma anche di privati che per cause diverse hanno abbandonato la coltivazione, da tempo, non più utilizzati e che hanno superato largamente il turno consuetudinario, la scelta di avviare la conversione del ceduo in fustaia diviene una ipotesi di lavoro da attuare nella consapevolezza che tale pratica colturale corrisponde a interessi collettivi, oltre che individuali. Anche per questa tipologia di cedui devono essere previsti interventi di conversione applicando il metodo già richiamato, definito dall'art. 71 del Regolamento forestale regionale 3/2017.

Per i cedui ancora utilizzati, ai fini gestionali valgono le indicazioni già riportate a proposito dei cedui quercini.

Per le fustaie pure di faggio, siano esse di proprietà pubblica o privata, a struttura monoplana, biplana, bistratificata o pluristratificata, si procederà nelle fustaie monoplane (coetanee e coetaniformi) all'effettuazione di tagli successivi uniformi o buche, mentre nelle fustaie pluriplane si adopereranno tagli a scelta (tagli di curazione).

Nei boschi monoplani (coetanei) possono essere applicati i tagli successivi a gruppi al fine di differenziale la struttura e rendere disetaneiforme o più naturaliforme possibile il bosco (anche al fine di aumentare la complessità biologica). In ogni caso in Regione Campania non esistono boschi disetanei in senso stretto ma boschi irregolari o disetaneiformi a piccoli o grandi gruppi. La scelta della forma di trattamento dovrà quindi tener conto di molteplici fattori quali la struttura, l'età, lo stato del soprassuolo, il grado e il tipo di mescolanza, la presenza, la quantità e la qualità della prerinnova-

fonte: http://burc.regione.campania.it

Fig. 8.1

Boschi di faggio nella riserva naturale dei monti Eremita e Marzano (SA).

zione, e le condizioni del suolo e il grado di copertura arborea, arbustiva ed erbacea, come anche la quantità di legno morto a terra e in piedi, la quantità di microhabitat presenti (alberi con cavità, tronchi morti o ceppaie con presenza di cavità, di funghi, insetti), della diversità fenotipica degli individui, presenza di altre specie arboree, arbustive e erbacee, la distribuzione delle altezze e dei diametri, le condizioni della canopea, ecc..

Boschi di castagno

Il problema cardine della gestione dei soprassuoli di castagno, sia cedui matricinati che cedui in conversione e nell'altofusto da legno nonchè castagneti da frutto in attualità di coltura, riguarda la conservazione del suolo. Infatti nel castagneto da frutto in attualità di coltura, data la bassa densità della piantagione, si deve sopperire alla conservazione del suolo con interventi di sistemazione dei versanti più acclivi con lunette, gradoni, etc., e con il mantenimento di un cotico erboso continuo. Si tratta di accorgimenti finalizzati a favorire la infiltrazione delle acque di pioggia nel suolo e ridurre l'azione erosiva delle acque di ruscellamento superficiale. Per i cedui matricinati, invece, i problemi di conservazione del suolo si pongono soprattutto al momento del taglio. In effetti la gestione del ceduo è strettamente connessa all'estensione e alla forma delle superfici sottoposte a taglio, che deve essere ben ponderata nelle aree caratterizzate da suoli molto vulnerabili all'erosione, nonché nelle aree caratterizzate da pericolosità per movimenti franosi superficiali, anche in considerazione di eventuali effetti a valle, ed in particolare nei boschi di protezione diretta (vedi Cap. 9).

In questa luce è quanto mai opportuno che il bosco di castagno sia conservato, in tutte le sue fisionomie, fra le categorie di bosco, anche quando è sottoposto ad elevata colturalità. Ciò perché rappresenta, in rapporto alla sua estensione, una componente territoriale significativa per la conservazione dei versanti.

Al castagneto da frutto sono molto spesso riservate le aree meno acclivi e più facilmente accessibili, sebbene una favorevole congiuntura stia favorendo il suo ampliamento in aree non idonee sotto il profilo bioclimatico.

Una peculiarità campana è l'origine agamica del portainnesto. In questo modo si procede a brusche o progressive trasformazioni del ceduo da paleria in cedui castanili da frutto, a seconda dell'andamento del mercato. Le modalità di trasformazione prevedono, dopo la ceduazione, uno sfollamento sulla ceppaia ed innesti ad anello su 3-4 polloni rilasciati di 1 anno di età. Un'altra modalità che si sta diffondendo e che si applica anche

fonte: http://burc.regione.campania.it

nelle fustaie di castagno da legno è la capitozzatura ad una certa altezza e successivo innesto sui nuovi getti laterali.
Nel caso dei cedui di proprietà privata, la gestione sarà tendenzialmente volta allo sviluppo delle attività economiche, in particolare per la produzione di paleria per usi agricoli (pali Palermo, vergoni, pali per chiudenda, ginelle) che è quella, attualmente, più richiesta dal mercato. Il trattamento applicato sarà il taglio raso su piccole superfici.
Nel caso delle proprietà pubbliche, qualora l'obiettivo da perseguire sia la tutela, conservazione e miglioramento del patrimonio forestale esistente, nonché la conservazione del suolo, si procederà con la pratica della ceduazione su piccole superfici, e con l'allungamento del turno.

Leccete e altre formazioni sempreverdi mediterranee

La gestione sostenibile del ceduo di leccio e delle formazioni sempreverdi correlate, in particolare dei cedui misti di corbezzolo e di mirto, passa necessariamente attraverso l'allungamento del turno, quando previsto dai piani di gestione forestale. Ciò al fine di renderla più confacente con la conservazione del suolo e con il rimpinguamento di un'adeguata quantità di humus nel suolo, con conseguente ripristino di cicli chiusi dei macronutrienti. Il turno dovrà essere ben calibrato in funzione delle condizioni stazionali esistenti.
La dimensione e la forma delle tagliate a raso su ceppaia dei cedui matricinati devono essere calibrate in accordo con le prescrizioni del Regolamento forestale 3/2017, in modo da impedire che le acque meteoriche di deflusso superficiale raggiungano velocità erosive lungo le linee di massima pendenza. A questo riguardo è anche efficace l'accorgimento di accumulare piccole quantità di ramaglia di risulta a monte di ciascuna ceppaia e matricina.
Sui versanti acclivi a matrice geologica carbonatica talvolta risulta utile il rilascio di fasce non tagliate a protezione, soprattutto dal rotolamento di massi, di manufatti e infrastrutture viarie sottostanti.
Per quanto concerne l'incremento della biodiversità dendrologica, fra le matricine si impone il reclutamento di tutte le specie consociate al leccio, fra cui: orniello, carpinella, carpino nero, acero napoletano, terebinto, etc.
Le ampie radure presenti nei cedui di leccio parzialmente degradati e vegetanti su substrati carbonatici, sono caratterizzate da fisionomie erbacee di elevato valore naturalistico (nonché habitat prioritari per la Comunità Europea). Ciò a causa dell'elevato numero di geofite, fra cui dominano molte specie di orchidee, nonché per la presenza di una ricca carica di insetti, soprattutto nelle aree pascolate ricche di escrementi. Nel corso delle utilizzazioni, queste aree devono essere adeguatamente segnalate sul terreno, in modo da impedire il libero

Fig. 8.3

Lecceta dei versanti calcarei con coperture piroclastiche dei M. Tifatini

transito dei mezzi meccanici e altre possibili interferenze negative con il cantiere forestale.

Una modalità di gestione più sostenibile del ceduo di leccio può essere rappresentata dalla trasformazione in ceduo composto, oltremodo compatibile con il fototemperamento della specie e garanzia di una maggiore protezione del suolo grazie alla copertura permanente delle chiome. Ciò è reso possibile dalla coesistenza sulla medesima ceppaia di polloni di età multipla del periodo di curazione, fissato in funzione del raggiungimento di un diametro di recidibilità, funzione, a sua volta, della fertilità stazionale e dello stato colturale di partenza del ceduo medesimo. Il taglio dei soli polloni che hanno raggiunto il diametro di recidibilità garantisce una continuità di protezione del suolo da parte delle chiome dei polloni rilasciati. Sebbene manchino esperienze specifiche in ambito regionale, sarebbe quanto mai auspicabile avviare trasformazioni a scopo dimostrativo nei demani pubblici che maggiormente hanno sofferto delle varie azioni di degrado e che hanno avuto come risultato una vistosa riduzione dello spessore del suolo e una sua discontinuità spaziale.

Infine merita maggiore attenzione la possibilità di certificare la produzione della legna da ardere (in particolare quando prodotta in ambiti protetti) e di riprendere in alcune situazioni l'attività di carbonizzazione, nonché di valorizzare alcune produzioni secondarie dei cedui. Per quanto concerne la certificazione del sistema di coltivazione e della produzione della legna da ardere, questa si impone alla luce dei forti quantitativi richiesti in ambito regionale per scopi di panificazione con forni tradizionali e per pizzerie. Mentre la produzione, anche tracciata, di carbone con sistemi tradizionali (carbonaia di tipo appenninico, denominata in ambito regionale "catuozzo") permetterebbe di produrre carboni di qualità e valorizzerebbe alcune produzioni di pregio come quelle di alcune specie di macchia (corbezzolo, mirto), molto apprezzate nel barbecue per l'ottimo aroma trasmesso alla carne arrostita. Questa rivitalizzazione dei sistemi tradizionali di trasformazione della legna da ardere consentirebbe anche la sopravvivenza di saperi e abilità pressoché estinti nell'Appennino meridionale.

Il ceduo di corbezzolo e mirto si presta, inoltre, alla pratica della transumanza con api e alla trasformazione dei frutti in marmellata.

Il ciocco di erica, infine, in passato oggetto di regolare raccolta, è meritevole di opportuna valorizzazione considerato che forme di produzione locali di artigianato sono ancora attive in Cilento.

Pratiche gestionali conservative particolari devono prevedersi per le formazioni a leccio e a macchia in aree di pregio localizzate all'interno della rete Natura 2000 della Campania, quali le dune costiere, quando interessate da misure regolamentari o di conservazione specifiche (vedi ad esempio la ZSC IT8010021 "Pineta di Patria" per gli habitat 2250*, 2260, e 9340 - Habitat di specie per Testudo hermanii).

fonte: http://burc.regione.campania.it

Pinete e altri boschi di conifere

Per quanto riguarda le pinete di pino nero e di pino d'Aleppo, è possibile prefigurare differenti modelli di gestione in relazione al contesto pedoclimatico e socioeconomico del territorio studiato.
Per le pinete poste nelle stazioni pedologicamente più favorevoli e a maggiore quota, la gestione dovrebbe mirare a facilitare una più ampia diffusione di specie autoctone al fine di ricostituire boschi a prevalenza di latifoglie, soprattutto querce, che ancora oggi sono presenti in alcune aree.
Nelle pinete pure, gestite con il taglio «a scelta», sarebbe opportuno proseguire con tale modalità. Così, da una parte si favorisce la naturalizzazione dove questi processi sono già in atto, dall'altra si conserva la pineta, aumentandone la complessità strutturale e con essa il paesaggio forestale tipico di questo territorio.
Laddove condizioni ecologiche sfavorevoli e il passaggio ripetuto di incendi non consentono l'evoluzione verso formazioni più complesse, si dovrebbe operare con il *taglio a scelta a piccoli gruppi* che, attraverso l'adattamento continuo dell'intervento alla risposta del soprassuolo e alle richieste del mercato, garantisce un sostanziale equilibrio fra le esigenze economico finanziarie del proprietario e gli aspetti bioecologici della coltura forestale, e favorisce strutture disetanee a gruppi.
Con il taglio a scelta a piccoli gruppi, soddisfatta la condizione di un minimo di superficie, è possibile ottenere una ripresa annua e pressoché costante, formata da alberi di elevato valore commerciale senza dover sostenere i costi di cure colturali e di reimpianto. Al tempo stesso si salvaguarda l'efficienza del bosco attraverso la rinnovazione naturale e il mantenimento, sull'unità di superficie, di una provvigione minima, garanzia contro i rischi di degrado del suolo e di depauperamento dell'ecosistema.
Il taglio a scelta a piccoli gruppi si basa sul concetto di unità di intervento che porta a una struttura disetanea di tipo atomistico. In pratica, questo trattamento, poiché determina da un lato l'aumento del numero e dall'altro la diminuzione della superficie delle unità di rinnovazione, crea condizioni microclimatiche idonee per l'affermazione del pino e facilita l'utilizzazione e l'esbosco.
Una volta definito il tipo di taglio, la forma e l'estensione delle tagliate e la struttura dei popolamenti, è possibile predisporre e applicare un piano di gestione forestale che risponda alla funzionalità del bosco e alle esigenze della proprietà. Così, non solo si consegue la stabilità e l'equilibrio dinamico dell'ecosistema senza eludere la responsabilità della gestione, ma si elimina il rischio di modificare il paesaggio a causa della introduzione massiva di latifoglie.
Questo trattamento, se sostenuto da metodi di pianificazione flessibili, è facilmente percepibile dalle popolazioni locali, perché lo hanno applicato nel tempo, e il cui gradimento è fondamentale in ambiente mediterraneo dove qualsiasi altra forma di gestione forestale diviene aleatoria.
In tutti i casi sopra descritti, diviene comunque fondamentale mettere in atto interventi in grado di prevenire o quanto meno ridurre la dimensione e l'intensità degli incendi.
Pratiche gestionali conservative particolari devono prevedersi per le formazioni a pino domestico in aree di pregio localizzate all'interno della rete Natura 2000 della Campania, quali le dune costiere, quando interessate da misure regolamentari o di conservazione specifiche (vedi ad esempio la ZSC IT8010021 "Pineta di Patria" per l'habitat 2270* - Habitat di specie per Testudo hermanii).

Boschi di nuova formazione

Nei casi in cui la rinaturalizzazione riguarda aree la cui precedente forma di utilizzazione era di tipo agricolo o pastorale, le possibili strategie di gestione sono da diversificarsi a seconda del regime vincolistico dell'area, delle problematiche di prevenzione incendi, nonché delle tendenze socio-economiche in atto.
Nelle aree di elevato valore naturalistico, la dinamica di ricostituzione di un bosco di neoformazione deve essere assecondata in quanto integrata in un processo di rinaturalizzazione generale del territorio protetto. In tale situazione si evidenziano tre possibili azioni.
La prima azione riguarda le strategie di prevenzione antincendio, da adottarsi coerentemente con quelle applicate nel contesto boschivo oggetto di pianificazione. In particolare, andrà valutato l'eventuale aumento del rischio di incendio derivante da una maggiore continuità verticale ed orizzontale del combustibile, con conseguente facilità di propagazione su larghe superfici e di transizione ad incendi di chioma. Laddove si paventa questa condizione, è opportuno intervenire con riduzione del carico combustibile e creazione di discontinuità nella copertura vegetale.
La seconda possibile azione concerne l'adozione di interventi atti a favorire la conservazione della biodiversità. In particolare, laddove l'omogeneizzazione eccessiva del paesaggio, derivante dalla colonizzazione da parte della vegetazione forestale, comporta un'eccessiva perdita di zone ecotonali e della biodiversità associata ai mantelli boschivi

fonte: http://burc.regione.campania.it

Fig. 8.4

Boschi di neoformazione sui terrazzamenti storici abbandonati in Penisola Amalfitana.

delle aree di margine e di transizione, si rende necessario operare in controtendenza rispetto al processo dinamico in atto. In altre parole, ai fini del mantenimento della biodiversità può essere opportuno l'intervento di riduzione della biomassa per ricreare un mosaico di chiarìe nella copertura forestale. In tali condizioni, il ricaccio vegetativo può essere controllato mediante metodi biologici quali il pascolo o tecniche di gestione di antico uso, quali il fuoco prescritto.

Nelle aree ad elevata vocazione di carattere agricolo e pastorale, qualora le condizioni socio-economiche ed ambientali rendano opportuna la ripresa del pregresso uso del suolo, sarà possibile considerare una reversibilità del bosco di neo-formazione secondo quanto previsto dall'art. 5 del Testo unico e dagli art. 154 e 154 bis del regolamento forestale regionale 3/2017. Ciò potrà avvenire anche mediante taglio ed eventuale dissodamento del terreno da riutilizzare ad attività economica, fatte salve delle fasce di vegetazione naturale, che mantengano la funzione di corridoi ecologici in continuità di rete con i sistemi naturali contermini.

La terza azione mira a favorire l'affermazione della flora mediterranea arbustiva in luogo di vegetazione arborea nelle aree dove la pendenza, lo spessore e la natura del suolo sono predisponenti ad eventi franosi.

Per i boschi di neoformazione, per il recupero dell'area ai fini agricoli, valgono le disposizioni di cui all'art. 5 comma 2 lett. a) del Decreto Legislativo 3 aprile 2018, n. 34 "Testo unico in materia di foreste e filiere forestali" e dell'art. 154 "Boschi di neoformazione" del Regolamento forestale regionale 3/2017.

Una porzione significativa dei boschi di ricolonizzazione è interessata dalla presenza di specie esotiche (o aliene) quali l'Ailanto e la Robina. Si tratta di specie introdotte dall'uomo, intenzionalmente o involontariamente, al di fuori del loro areale di distribuzione recente. Tra queste, sono definite invasive quelle che, per comportamento e adattabilità, riescono a diffondersi con estrema facilità interagendo con l'ambiente in modo da competere negativamente con le specie preesistenti e arrecando spesso danni all'ambiente, all'economia e alla salute dell'uomo.

Il Decreto Legislativo n. 230 del 2017, recependo il Regolamento Europeo, assegna alle Regioni e alle Province autonome, il compito di sorveglianza delle popolazioni di specie esotiche invasive presenti sul territorio nazionale e quello di sorveglianza rispetto alla possibilità che se ne insedino di nuove, in tal caso intervenendo prontamente.

La Regione Campania, dopo un primo studio realizzato nel 2020 con l'Università Federico II per definire e quantificare il fenomeno nella regione, ha avviato nel 2023 un primo programma di sorveglianza e controllo che vede coinvolto il mondo accademico, le aree protette, gli enti del terzo settore e i cittadini.

In attuazione del Decreto 230/2017, l'obiettivo che il Piano forestale generale si propone non è quello - nella pratica inattuabile - della totale eradicazione, ma piuttosto l'attuazione di una strategia di contenimento e sostituzione, con particolare attenzione

fonte: http://burc.regione.campania.it

per le aree prioritarie per la conservazione della natura.
La strategia prevede le seguenti azioni chiave:

- Monitoraggio della presenza e nuova diffusione delle specie esotiche;
- Aree di Intervento Prioritario: Le azioni di contenimento dovranno concentrarsi prioritariamente nelle aree di pregio naturalistico. L'obiettivo è proteggere gli habitat più vulnerabili e di maggiore valore ecologico dall'aggressione di queste specie pioniere che tendono a soppiantare la flora locale.
- Metodologie di Controllo: Il Piano prevede l'utilizzo integrato di due tipologidi intervento:
    - Interventi Meccanici: Rimozione fisica delle piante (taglio, estirpazione), facendo attenzione a non stimolare l'attività pollonifera.
    - Interventi Chimici Mirati: L'uso di diserbanti specifici, applicati in modo puntuale per minimizzare l'impatto sull'ambiente circostante, spesso necessari per devitalizzare l'apparato radicale e prevenire i ricacci.
- Rinaturalizzazione delle aree: Gli interventi di contenimento descritti sono propedeutici alla ricolonizzazione delle aree liberate dalle specie invasive, favorendo le dinamiche di ricolonizzazione di specie autoctone coerenti con le potenzialità ecologiche dei siti.

Le piantagioni di arboricoltura da legno

Per quelle a cicli medi e lunghi spesso occorre, in molti casi, ridurre l'impatto negativo delle popolazioni selvatiche di ungulati (cinghiali) mediante opportune recinzioni delle piantagioni, mentre lo stato di manutenzione della viabilità interna e di accesso agli impianti è, talvolta, indispensabile a prevenire fenomeni di erosione superficiale.
In ambito regionale si affaccia anche la coltivazione di specie forestali a turno breve, finalizzata alla produzione di biomassa per scopi energetici (Saracino, 2009). Fra le diverse specie testate quelle che mostrano suscettibilità di impiego nei diversi ambienti pedoclimatici della Regione Campania si annoverano: eucalitti (*Eucalyptus camaldulensis* prov. Lake Albacutya, *E. x trabutii*, *E. rostratus* cfr. subsp. *obtusa*) da impiegare soprattutto negli ambienti più caldi delle aree costiere e sub costiere, anche con falda salinizzata (*E. camaldulensis* prov. Albacutya), pioppi ibridi euroamericani (cloni Muur, Oudenberg e I-214) e cloni di pioppo nero (*Populus nigra*) della Valle Caudina (Benevento) di cui quello che sembra aver dato i risultati più lusinghieri è la provenienza torrente Limatola. I pioppi sono suscettibili di impiego in aree pianeggianti e con buon rifornimento idrico di falda.

fonte: http://burc.regione.campania.it

Boschi igrofili

Laddove le formazioni forestali di ripa conservano una loro identità organizzativa, il modello di struttura più evoluto e complesso è quello pluristratificato con piante di diverse classi di età, di cui la foresta a galleria di pioppi e salice bianco è la massima espressione. Oltre ad essere ben rappresentate tutte le classi cronologiche, le piante da ceppaia (soprattutto salici), non solo da taglio ma anche da traumi, si intercalano a piante da seme e/o da originate da talee prodotte e trasportate dalle correnti (salici di piccola taglia, pioppi bianchi e pioppi neri) o polloni radicali (pioppo gatterino). In tutti i casi piante morte in piedi, monconi e legno morto in vari stadi di decomposizione sono depositati lungo le fasce riparie, oppure possono essere trasportati dalle correnti per essere intercettati in corrispondenza di isolotti o altri ostacoli o costrizioni delle sezioni di alveo. Possono, inoltre, essere intercettati dalla base dei fusti delle piante in piedi poste lungo le sponde fino a formare piccole barriere e/o micro-sbarramenti. In tutti questo casi si possono determinare deviazioni di corrente con erosione di sponda e rigurgiti a monte che possono risultare uno dei fattori critici in caso di eventi piovosi eccezionali associati ad eventi di piena.

La gestione dei boschi di ripa postula la conservazione di una copertura delle chiome permanente e la pluristratificazione del profilo arboreo. In questo modo gli interventi gestionali si limitano quasi sempre al taglio fitosanitario e all'asportazione del legno morto pensile e intercettato dall'intrico dei fusti. Questa operazione risulta quanto mai utile da compiere prima dell'inizio delle piogge autunno-invernali e, in ogni caso, al di fuori del periodo riproduttivo dell'avifauna e di altra fauna vertebrata il cui habitat è rappresentato dal bosco di ripa. Le eventuali piantagioni e/o rinfoltimenti fanno ampio uso di talee raccolte in loco.

In ogni caso nella parte meridionale della regione l'habitat di ripa e i corsi d'acqua con migliore qualità delle acque ospitano le residue popolazioni di lontra (*Lutra lutra*) e quelle di gambero di fiume (*Austropotamobius pallipes*).

Le fasce boscate ripariali sono quanto mai utili da ripristinare, spesso sugli stessi terreni demaniali usurpati dai confinanti e ricorrendo a talee raccolte in loco, nelle aree ad agricoltura e ad allevamenti intensivi. Ciò in ragione della loro capacità di assorbire macronutrienti, in particolare l'azoto, che per dilavamento e migrazione laterale si riversano nei corsi d'acqua contribuendo alla loro eutrofizzazione.

Il restauro e la riqualificazione della vegetazione forestale riparia sono fra gli interventi di maggiore interesse ambientale nelle aree planiziarie fortemente antropizzate e/o intensamente coltivate del territorio campano. Le formazioni lineari erano l'ultimo baluardo di vegetazione naturale presente in queste aree e fungevano da importanti corridoi ecologici. Il loro ripristino può rappresentare l'asse su cui sviluppare le attività ricreative all'aperto fra cui percorsi vita, piste ciclabili e percorsi pedonali.

In ambiti circoscritti del territorio campano, quale ad es. i vari torrenti della Valle Caudina, si rinviene, infine, materiale genetico di pioppo nero (per es. sul torrente Limatola) di pregio che localmente viene coltivato per scopi di arboricoltura da legno, ma che è meritevole di essere diffuso a più ampia scala (Saracino 2009).

Sistemi dunali

La vegetazione psammofila e il cuneo di vegetazione svolgono un'importante azione di rinsaldamento delle dune e di protezione dai venti marini e dal sorrenamento per le retrostanti colture agrarie e per gli insediamenti antropici realizzati nelle aree planiziarie sublitoranee (piana del Sele, piana del Volturno e del Garigliano).

La forte antropizzazione delle coste basse e sabbiose ha, in alcuni casi limite, impedito finanche il libero accesso all'arenile ed ha causato un profondo stravolgimento, spesso sfociato nella scomparsa, dello schema successionale della vegetazione sopra descritto. Le minacce incombenti sulle fasce dunali sono il progredire delle infrastrutture e degli insediamenti balneari, nonché l'azione di smantellamento operata sempre più frequentemente dalle mareggiate invernali. Si tratta di un vero e proprio arretramento della linea di costa che ha intaccato le infrastrutture viarie esistenti, oltre che i manufatti, che innescano fenomeni di regressione spaziale delle fisionomia di vegetazione con un arretramento della vegetazione psammofila che si ristabilirà in aree precedentemente occupate dalla vegetazione arbustiva retrodunale, sempre che vi sia lo spazio fisico per la ricolonizzazione e che altre forme di disturbo antropico non alterino in modo irreversibile questo fragile e vulnerabile ambiente di duna.

La conservazione di questa barriera vegetale, laddove ancora sopravvive in forme più o meno integre, e la sua regressione verso fisionomie di taglia più bassa (garighe), è legata ai disturbi arrecati dagli incendi e alle attività antropiche non controllate. Il movimento di mezzi al di fuori delle piste di servizio e l'accesso libero all'arenile per scopi di balneazione determina erosione delle dune prospicienti la linea di costa. Inoltre l'aerosol marino

fonte: http://burc.regione.campania.it

Fig. 8.6

Macchia a fillirea sulle dune costiere di Cuma (NA).

carico di tensioattivi e il deposito abusivo di rifiuti sugli arenili e nelle aree di pic-nic non attrezzate retrostanti contribuiscono ulteriormente al degrado complessivo della vegetazione dunale costiera.

Pascoli montani

Una modalità di gestione sostenibile delle aree a fisionomia erbaceo- arbustiva all'interno di aree boscate (radure di pascolo) prevede il controllo attivo della vegetazione sia con mezzi naturali (il pascolo) sia mediante il taglio degli alberi di piccola statura e degli arbusti più invadenti. Questa gestione attiva delle radure ha come assunto che le radure pascolive esaltano l'effetto margine del bosco che è una prerogativa utile all'incremento della biodiversità vegetale e animale. Nelle radure convergono, inoltre, le specie tipiche degli ambienti aperti che contribuiscono, a loro volta, ad arricchire la biodiversità.

Per quanto concerne la gestione sostenibile delle aree pascolive del demanio dei comuni, la determinazione del carico massimo di bestiame annuo ad ettaro è demandata al Piano di gestione forestale e deve essere in ogni caso contenuto nel Regolamento del pascolo.

I miglioramenti fondiari riguardanti i pascoli sono relativi sia al miglioramento del cotico erboso che alla creazione di idonei punti d'acqua e di ricovero temporaneo degli animali. In linea generale, considerato che in ambito regionale è prevalente il pascolo "senza terra", vale a dire che è prevalente la categoria degli allevatori che, pur disponendo anche di consistenti mandrie, utilizzano come base aziendale le aree dei demani comunali poste lungo gradienti altimetrici, si impone come condizione necessaria per l'utilizzo dei pascoli demaniali quella di documentare adeguate disponibilità di foraggio provenienti anche da erbai permanenti di valle di proprietà o presi in affitto.

Indispensabile risulta anche l'osservanza categorica del calendario di monticazione, visto che i maggiori danni al cotico erboso sono imputabili proprio all'anticipo e alla dilazione del trasferimento di equini e bovini verso e dalle aree a pascolo.

Infine merita una particolare menzione la gestione delle aree a pascolo mediante il fuoco. Si tratta di una pratica atavica che, probabilmente, nelle regioni meridionali ha trovato una concreta diffusione nel periodo di dominazione aragonese e che tuttora viene esercitata localmente dai pastori. Le fisionomie maggiormente interessate dagli incendi periodici sono i ginestreti a *Spartium junceum* e gli ampelodesmeti a *Ampelodesmos mauritanicus*. Le ragioni che spingono i pastori a ricorrere a questa pratica è la necessità di disporre di risorse foraggere fresche grazie al ricaccio delle specie. Purtroppo i fuochi sono molto spesso appiccati nel periodo di massima pericolosità degli incendi e, quindi, facilmente divengono incontrollabili e dilagano nelle altre aree, comprese quelle boscate. Localmente

fonte: http://burc.regione.campania.it

Fig. 8.7

Prati-pascoli dell'altopiano di Morcone (BN).

viene anche praticata la combustione dei ciuffi di ampelodesma, soprattutto nel Cilento nel periodo autunnale. Per una razionale gestione di queste fisionomie di pascolo è indispensabile impedire il proseguimento di modalità improprie di gestione dei pascoli, ricorrendo invece, alla pratica del fuoco prescritto in accordo con le "Prescrizioni tecniche e procedure operative inerenti alle applicazioni di fuoco prescritto in Regione Campania", approvate con DDR n.341 del 22/12/2020 in attuazione della Legge regionale 13 giugno 2016, n.20.
Il pascolo nei boschi destinati a Pratiche Locali Tradizionali (P.L.T.) è normato dal regolamento forestale regionale 3/2017 come segue:

a. nei boschi cedui, il pascolo del bestiame ovino è vietato per un periodo di anni quattro dopo il taglio e, quello del bestiame bovino ed equino, per un periodo di sei anni dopo il taglio;

b. nelle fustaie e nei cedui in conversione, il pascolo degli animali ovini e suini è vietato prima che il novellame abbia raggiunto l'altezza media di 1,50 metri e, quello degli animali bovini ed equini, prima che il novellame abbia raggiunto l'altezza media di 3 metri;

c. nei boschi distrutti o gravemente danneggiati dagli incendi o da altre cause, nei boschi troppo radi o deperienti, il pascolo è vietato per 10 anni e, comunque, fino a quando l'Ente delegato territorialmente competente non abbia adottato uno specifico provvedimento di rimozione del divieto;

d. nei boschi chiusi al pascolo è vietato immettere animali, tuttavia, è consentito il solo transito del bestiame da avviare al pascolo, purché effettuato, senza soste, lungo strade, piste, tratturi e mulattiere.

e. nelle fustaie disetanee ed irregolari e nei cedui a sterzo, il pascolo è sempre vietato;

f. il pascolo delle capre nei boschi è sempre vietato.

Il pascolo in bosco non è consentito negli habitat della Rete Natura 2000 della Campania interessati da misure di conservazione di specifico divieto.

9. I boschi di protezione diretta

Premessa

Il 55% delle aree forestali della Campania, circa 270.000 ettari, si sviluppa su suoli vulcanici, che si evolvono a partire da depositi piroclastici da caduta e da flusso ricoprenti i versanti dei rilievi vulcanici e dell'appennino calcareo. Si tratta di suoli ad elevata fertilità, ma anche altamente vulnerabili, per la loro tendenza, in determinate condizioni morfologiche, statiche e di saturazione idrica, a cambiare repentinamente di stato a seguito di shock meccanici, originando colate piroclastiche rapide, con effetti sovente disastrosi sulle popolazioni, gli insediamenti e i manufatti a valle dei versanti interessati, si pensi ai drammatici eventi di Sarno della primavera 1998, o a quelli recentissimi dell'Isola d'Ischia del novembre 2022.
In condizioni meteorologiche predisponenti (piogge prolungate che appesantiscono i soprassuoli e saturano gli orizzonti di superficie e profondi suolo), l'attivazione di questi eventi avviene per distacco iniziale, in posizione apicale, di volumi ridotti di suolo e soprassuolo, che impattano sui suoli immediatamente sottostanti, fungendo da innesco per la mobilitazione di ulteriori volumi, via via crescenti di suolo e soprassuolo, che fluiscono a gran velocità lungo gli impluvi e i valloni in forma di mud-flow e debris-flow, richiamando a loro volta volumi ulteriori per scalzamento al piede dei versanti di scarpata, in un processo che si autoalimenta.
Le indagini condotte hanno evidenziato come nel distacco iniziale dei limitati volumi di suolo e soprassuolo che fungono da innesco, abbiano rilevanza i seguenti aspetti (Terribile et al., 2000):

- Il distacco avviene in corrispondenza di stazioni apicali, con pendenza superiore al 60%, attualmente caratterizzate da accessibilità nulla o comunque assai problematica;
- Il soprassuolo è costituito da cedui invecchiati, sovente castanili, interessati da abbandono colturale pluridecennale, come anche da boscaglie di ricolonizzazione a leccio e latifoglie decidue;
- La profondità utile alle radici di questi suoli di natura piroclastica o vulcanoclastica è estremamente limitata (20-40 cm) per la presenza di un substrato roccioso impenetrabile, costituito da calcari duri, tufo verde (Ischia), tufo giallo (rilievi flegrei continentali);
- In altri casi (colate rapide di Sarno), il profilo pedologico è caratterizzato dalla presenza di potenti orizzonti pomicei entro la profondità di 100 cm, che sono causa di una brusca discontinuità delle proprietà fisico-meccaniche, idrologiche e di abitabilità da parte degli apparati radicali.
- Il distacco è anche favorito da discontinuità della copertura pedologica di versante dovute a tagli stradali o falesie rocciose.

Gli studi sul sistema suolo-vegetazione nelle aree di distacco hanno evidenziato come le condizioni di abbandono colturale comportino l'appesantimento dei soprassuoli, con un conseguente aumento del carico statico e delle sollecitazioni dinamiche sulle coperture pedologiche nelle quali il bosco radica, a loro volta strutturalmente instabili per la presenza a poca profondità di piani di scivolamento in corrispondenza del substrato roccioso impenetrabile alle radici, o di importanti discontinuità fisico-meccaniche (orizzonti pomicei incoerenti).
Risulta evidente come le aree forestali della Campania aventi le caratteristiche avanti descritte debbano rientrare prioritariamente nella categoria dei "bosco di protezione diretta", definiti dall'art. 3 comma 1 lett. r) del Testo unico come "superficie boscata che per la propria speciale ubicazione svolge una funzione di protezione diretta di perso-

fonte: http://burc.regione.campania.it

ne, beni e infrastrutture da pericoli naturali quali valanghe, caduta massi, scivolamenti superficiali, lave torrentizie e altro, impedendo l'evento o mitigandone l'effetto".
L'art. 8 del Testo unico ("Disciplina della trasformazione del bosco") dispone al comma 7 che i boschi aventi funzione di protezione diretta di abitati, di beni e infrastrutture strategiche, individuati e riconosciuti dalle regioni, non possono essere trasformati e non può essere mutata la destinazione d'uso del suolo, fatti salvi i casi legati a motivi imperativi di rilevante interesse pubblico nonché le disposizioni della direttiva 2004/35/CE sulla responsabilità ambientale in materia di prevenzione e riparazione del danno ambientale e della relativa normativa interna di recepimento.
Il Regolamento forestale regionale 3/2017 disciplina questi boschi all'Art. 26, concernente i "Boschi in situazione speciale", comprendenti:

- alla lettera a), i boschi ricadenti in aree dichiarate a rischio idrogeologico elevato (R3) o molto elevato (R4) dal Piano Stralcio di Assetto Idrogeologico, redatto dalle Autorità di Bacino competenti; ovvero,
- alla lettera b) del medesimo comma, i boschi in situazione speciale individuati dal Piano forestale generale e dai Piani di Gestione Forestale;
- alla lettera d.bis. I boschi, sia naturali che artificiali, siti lungo le coste e sulle sponde dei fiumi che svolgono particolari funzioni di protezione dell'entroterra nonché quelli che hanno una particolare valenza storica e paesaggistica e quelli che sono costituiti da emergenze e relitti vegetazionali o che rappresentano delle particolarità botaniche.

Sia il Testo unico che il Regolamento forestale regionale prevedono che i boschi di protezione diretta siano in primo luogo individuati dal Piano forestale generale.
Il Regolamento forestale regionale 3/02017 fa anche riferimento ai boschi situati aree a rischio secondo la pianificazione di bacino vigente. In Campania questi boschi interessano una superficie di 78.628 ettari. Per questi boschi, il Regolamento prevede che gli atti di pianificazione forestale e di autorizzazione al taglio dei boschi tengono conto delle specifiche prescrizioni ed esigenze di tutela idrogeologica attraverso:

a. la limitazione dell'estensione delle tagliate e la determinazione della forma delle stesse;

b. la prescrizione di speciali forme di trattamento;

c. la determinazione di specifici turni ed epoche di taglio;

d. l'indicazione di ogni altra prescrizione e cautela connessa alla tutela idrogeologica, comprese quelle inerenti all'apertura, alla manutenzione e al ripristino della viabilità forestale e silvo-pastorale nonché alla riserva di fasce di protezione;

e. la sospensione dei tagli.

È importante in questa sede rilevare come all'attualità la pianificazione di bacino non tenga conto degli aspetti di vulnerabilità di natura vegetazionale o pedologica, considerando esclusivamente gli aspetti di tipo geologico e geomorfologico.
Di qui la necessità che il Piano forestale generale integri il quadro programmatico complessivo, attraverso l'identificazione delle aree forestali ad elevata vulnerabilità, rientranti nelle tipologie dei boschi di protezione diretta in accordo con il Testo unico, ovvero dei boschi in situazione speciale (Regolamento forestale 3/2017), sulla base degli aspetti forestali, ecologici, pedologici e gestionali rilevanti.

Identificazione dei boschi di protezione diretta a scala regionale

Come ricordato in precedenza, sia il Testo unico che il Regolamento forestale regionale 3/2017 prevedono che i boschi di protezione diretta siano individuati in sede di pianificazione regionale.
Ai fini di tale identificazione, una specifica analisi è stata condotta preliminarmente in ambiente GIS nell'ambito delle attività per la formazione del presente piano, operando sul data base forestale regionale associato al piano, mediante l'incrocio dei seguenti strati informativi:

- carta delle pendenze prodotta a partire dal modello digitale del terreno derivato dalla Carta tecnica regionale in scala 1:5.000;
- carta della vulnerabilità delle coperture pedologiche, derivata dalla Carta regionale dei suoli in scala 1:200.000;
- carta della capacità protettiva dei soprassuoli, derivata dalla Carta forestale in scala 1:25.000 realizzata per la formazione del piano.

Tale incrocio, basato su una idonea matrice di valutazione, ha condotto all'identificazione cartografica preliminare a scala regionale dei boschi di protezione diretta, per una superficie complessiva 35.928 ettari.
Tale superficie comprende le aree di versante:

- con pendenza superiore al 60%;

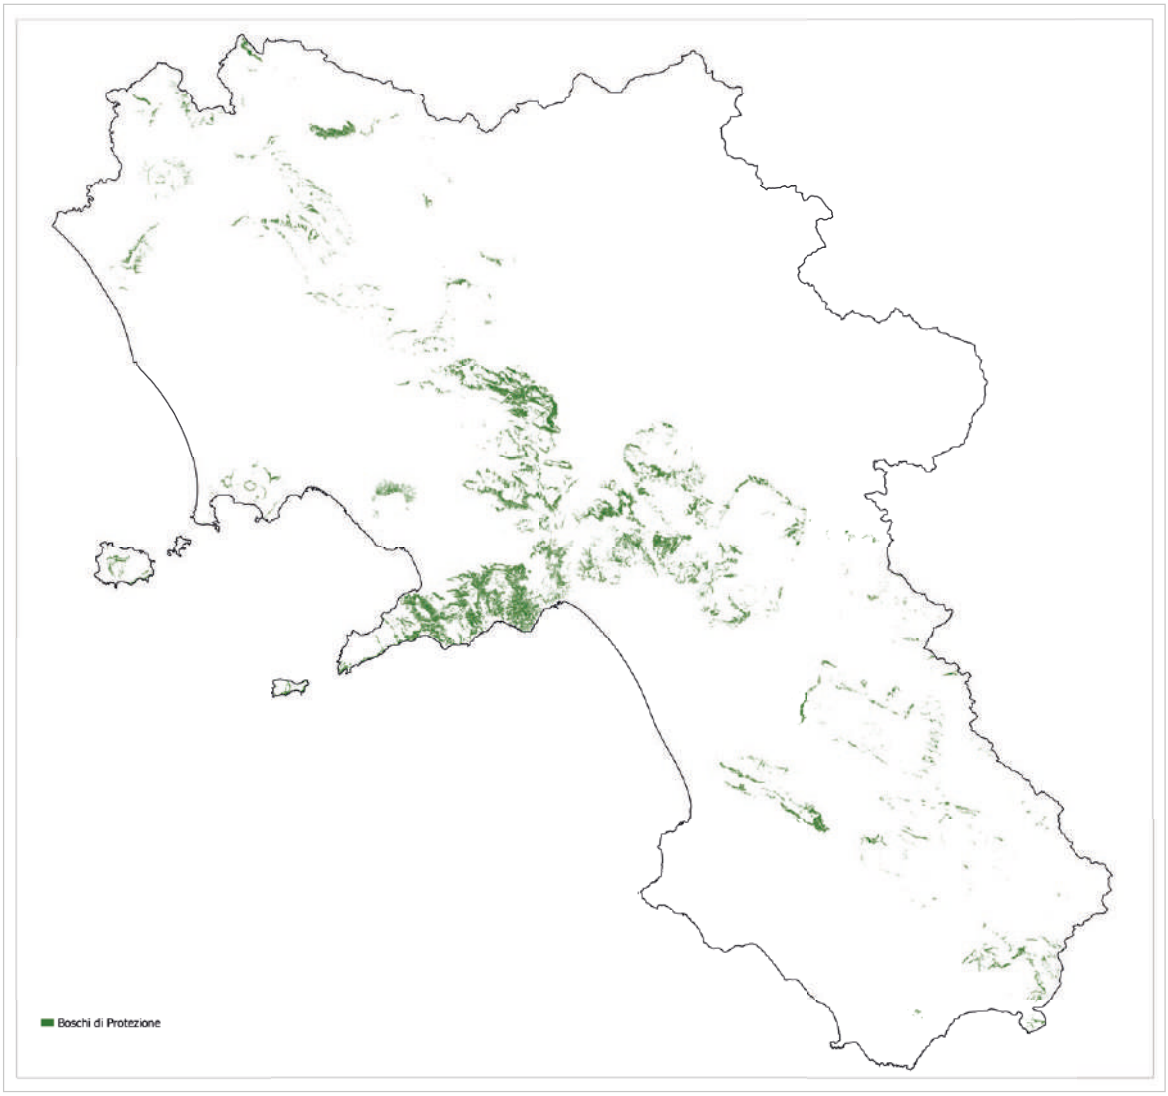

Fig. 9.1

Boschi di protezione negli ambiti individuati dal Piano per la formazione dei PFIT.

- con presenza di suoli piroclastici sottili al di sopra di un substrato impenetrabile agli apparati radicali; ovvero di suoli piroclastici anche profondi, ma caratterizzati dalla presenza di un orizzonte pomiceo entro la profondità di 100 cm;
- con presenza di formazioni forestali a limitata capacità protettiva (cedui castanili, boscaglie di ricolonizzazione).

Risulta evidente come una simile indagine, utile a orientare le necessarie valutazioni di priorità di intervento a scala regionale, abbia carattere preliminare e debba essere di volta in volta suffragata da analisi sito-specifiche di maggior dettaglio condotte in occasione della redazione dei Piani forestali di indirizzo territoriale, e dei Piani di gestione forestali
Una rappresentazione in scala ridotta della cartografia dei boschi protezione diretta è riportata in Fig. 9.1 e 9.2.
Una sintesi delle superfici dei boschi di protezione diretta individuati mediante l'analisi avanti descritta e riportata in Tab. 9.1, con riferimento ai diversi ambiti definiti per la redazione dei Piani forestali di indirizzo territoriale.
In sede di valutazione complessiva dei risultati dello screening in ambiente GIS, è possibile osservare come l'analisi abbia individuato effettivamente le aree storicamente interessate da colate piroclastiche rapide riconducibili alla crisi delle coperture pedologiche e forestali (Versanti del Monte Epomeo, dei Monti di Sarno e Pizzo d'Alvano, della Monti Lattari), insieme ad altre aree forestali che non sono state interessate in tempi recenti da simili fenomeni, che dovranno essere oggetto in progresso di tempo degli opportuni approfondimenti.
Dal punto di vista di una gestione preventiva dei boschi potenzialmente interessati da colate piroclastiche o da colate detritiche del tipo di quelle di Sarno (1998) e Casamicciola (2023), uno degli aspetti focali è costituito, come evidenziato in precedenza, dall'abbandono colturale di lungo periodo delle coperture forestali interessate dai fenomeni avanti descritti.
Secondo i dati dell'Inventario Forestale Nazionale 2015, la superficie dei boschi della Campania carat-

fonte: http://burc.regione.campania.it

terizzati da completa assenza di pratiche colturali è di 139.638 ettari, pari al 34,6,0% della superficie regionale a boschi.

L'Inventario Nazionale identifica queste aree come "situazioni in cui non sono previsti interventi selvicolturali di nessun tipo, neppure le utilizzazioni finali. Comprende i casi dei soprassuoli ad evoluzione naturale, sia quando questa è dettata da motivazioni di natura giuridica (ad esempio boschi in riserve naturali integrali) sia nel caso in cui le utilizzazioni siano impraticabili (terreni inaccessibili o scomodi) o economicamente non convenienti (boschi a macchiatico negativo)" [4].

È ragionevole ritenere che una quota significativa dei boschi di protezione diretta individuati dal Piano forestale generale adottando la metodologia avanti descritta, rientri proprio nella più ampia superficie boschiva per la quale l'Inventario forestale nazionale ha rilevato la completa assenza di pratiche colturali.

La strategia gestionale sostenibile dei boschi di protezione diretta individuati dal Piano forestale generale, specificatamente finalizzata al rafforzamento della funzione dei boschi di protezione di prevenzione/mitigazione dei rischi, è necessariamente incentrata sul ripristino di una loro gestione attiva, superando le attuali situazioni di abbandono, promovendo pratiche colturali finalizzate all'alleggerimento dei soprassuoli e all'incremento della loro diversità specifica.

Linee guida di gestione dei boschi di protezione diretta

La gestione forestale sostenibile dei boschi di protezione diretta deve innanzitutto affrontare le conseguenze negative dovute all'assenza prolungata di cure gestionali (Saracino et al., 2024):

1. Aumento della vulnerabilità biotica e delle patologie

L'invecchiamento e l'assenza di gestione rendono il soprassuolo più suscettibile agli attacchi parassitari e fungini, che contribuiscono al declino (deperimento da Cinipide Galligeno (*Dryocosmus kuriphilus,* Cancro Corticale (*Cryphonectria parasitica*), Mal dell'Inchiostro (*Phytophthora cambivora*).

2. Crisi fisiologica e morte della ceppaia

L'accumulo e l'invecchiamento della biomassa epigea compromettono la vitalità della ceppaia e la sua capacità di sopravvivere nel tempo. L'eccessiva

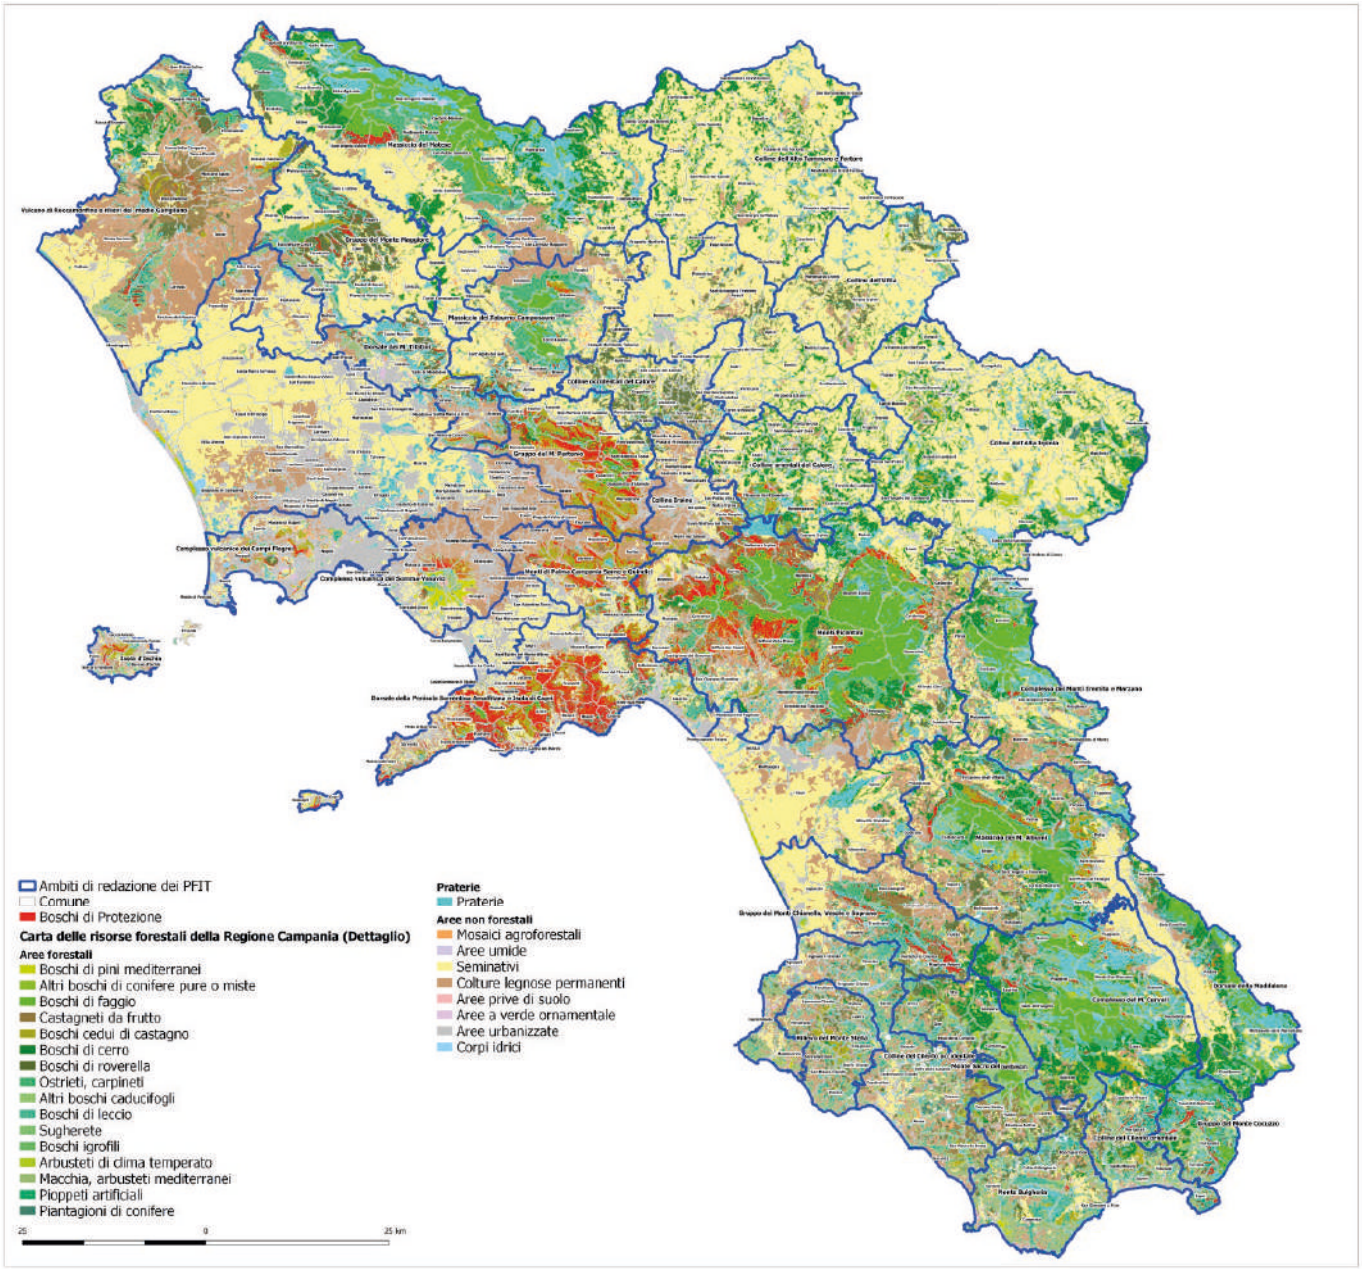

Fig. 9.2

Cedui di castagno con funzione di boschi di protezione diretta dei versanti alti del M. Epomeo interessati dalle frane del 2022 (destra) e dei versanti dei monti di Sarno interessati dalle frane del 1988 (sinistra).

4 Vedi anche la definizione di "terreni abbandonati" data dall'art. 3, comma 1, lettera g) del Testo unico in materia di foreste e filiere forestali: "terreni abbandonati: fatto salvo quanto previsto dalle normative regionali vigenti, i terreni forestali nei quali i boschi cedui hanno superato, senza interventi selvicolturali, almeno della metà il turno minimo fissato dalle norme forestali regionali, ed i boschi d'alto fusto in cui non siano stati attuati interventi di sfollo o diradamento negli ultimi venti anni".

fonte: http://burc.regione.campania.it

densità di polloni a causa del mancato diradamento comporta uno stress Idrico e nutrizionale dovuto all'intensa competizione per acqua e nutrienti. In queste condizioni le ceppaie più deboli o colpite da malattie deperiscono e muoiono, riducendo la densità del popolamento boschivo.

3. Squilibrio biomeccanico, instabilità e vulnerabilità strutturale

L'aumento di biomassa epigea conseguente all'abbandono non è compensato da un corrispondente sviluppo dell'apparato radicale, specialmente dove i suoli sono sottili e poggiano su substrati rocciosi impenetrabili. La disproporzione tra la massa aerea (epigea) e l'apparato radicale (ipogeo), rende le ceppaie vulnerabili allo sradicamento/ribaltamento in caso di sovraccarico (neve) o piogge intense, anche in conseguenza delle sollecitazioni dinamiche che le chiome trasmettono alle radici e alla copertura pedologica in occasione di eventi meteorici intensi o estremi ("effetto leva").

Di grande importanza sono le conseguenze dell'abbandono sulla coesione radicale. Come evidenziato in precedenza, la prolungata sospensione delle operazioni colturali causa l'invecchiamento e il progressivo aumento della biomassa epigea (fusti e chiome), che si sviluppa in modo sproporzionato rispetto all'accrescimento radicale. In particolare su suoli sottili (come quelli piroclastici dei rilievi montani calcarei), l'apparato radicale, limitato dalla presenza di un substrato roccioso o di orizzonti comunque non abitabili dagli apparati radicali, non riesce a svilupparsi a sufficienza per ancorare il peso crescente della parte aerea.

Fig. 9.3

Boschi di protezione (in rosso) negli ambiti ambiti individuati dal Piano per la formazione dei PFIT sullo sfondo della Carta delle risorse forestali della Campania.

fonte: http://burc.regione.campania.it

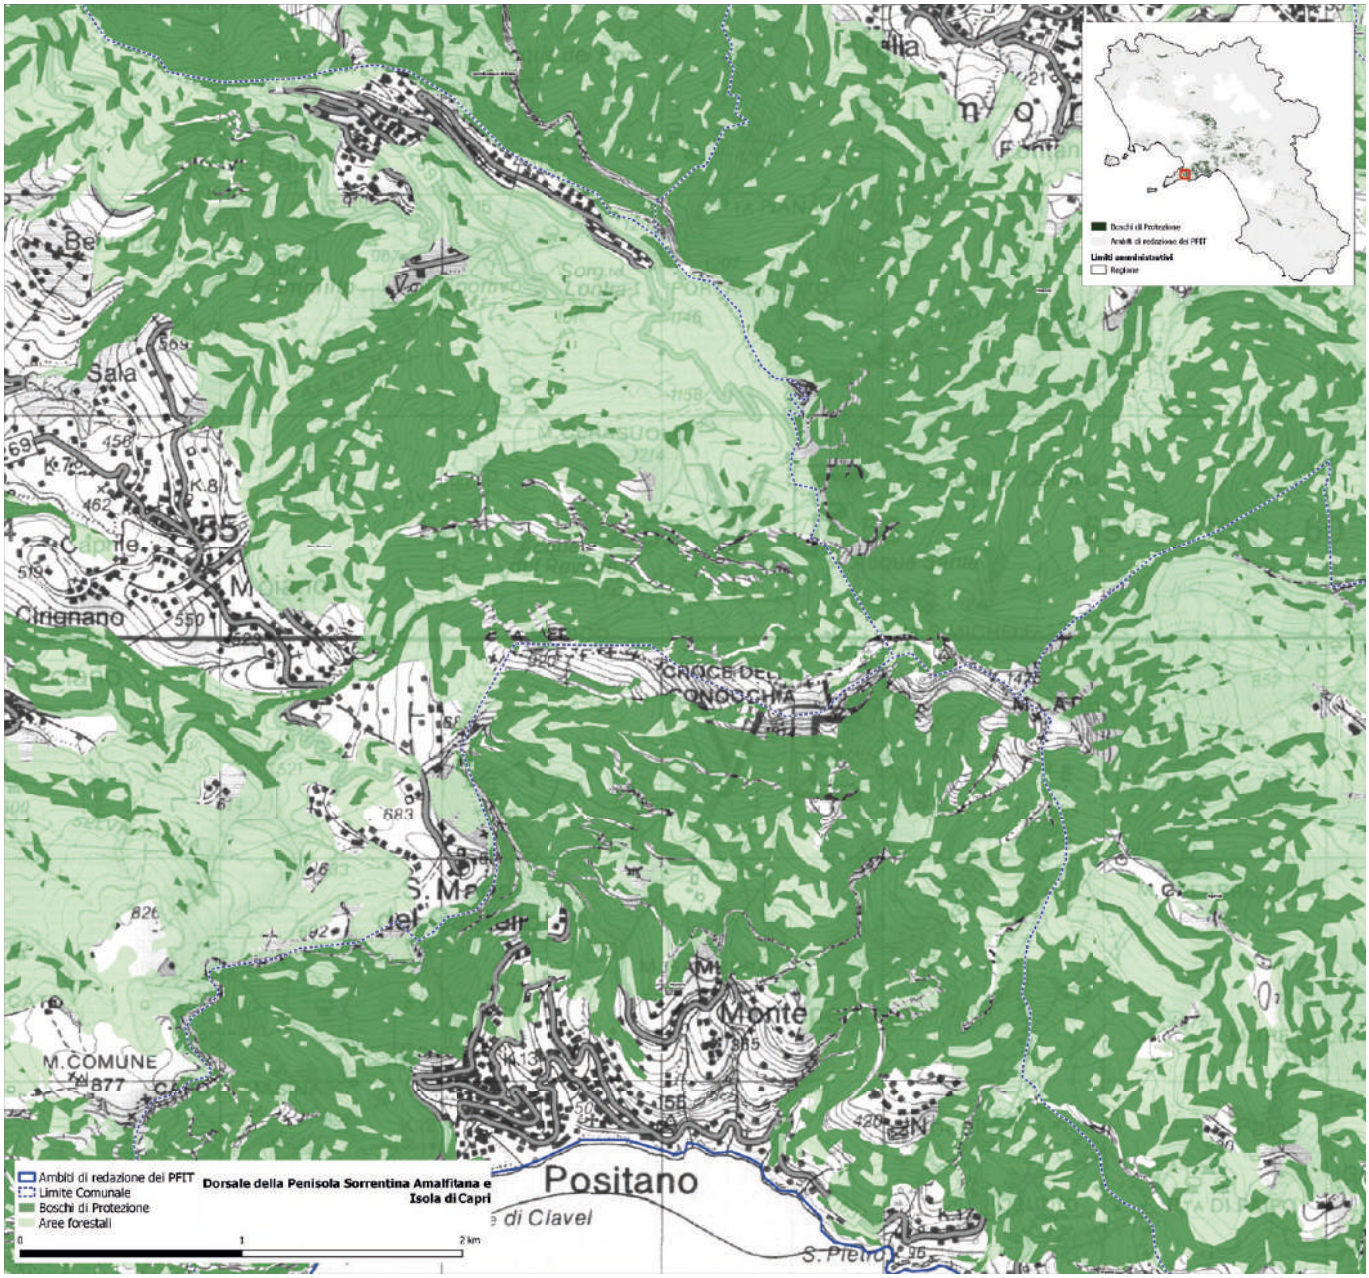

Fig. 9.4

Stralcio della cartografia di piano di identificazione preliminare dei boschi di protezione diretta in un settore della Penisola Sorrentina-Amalfitana

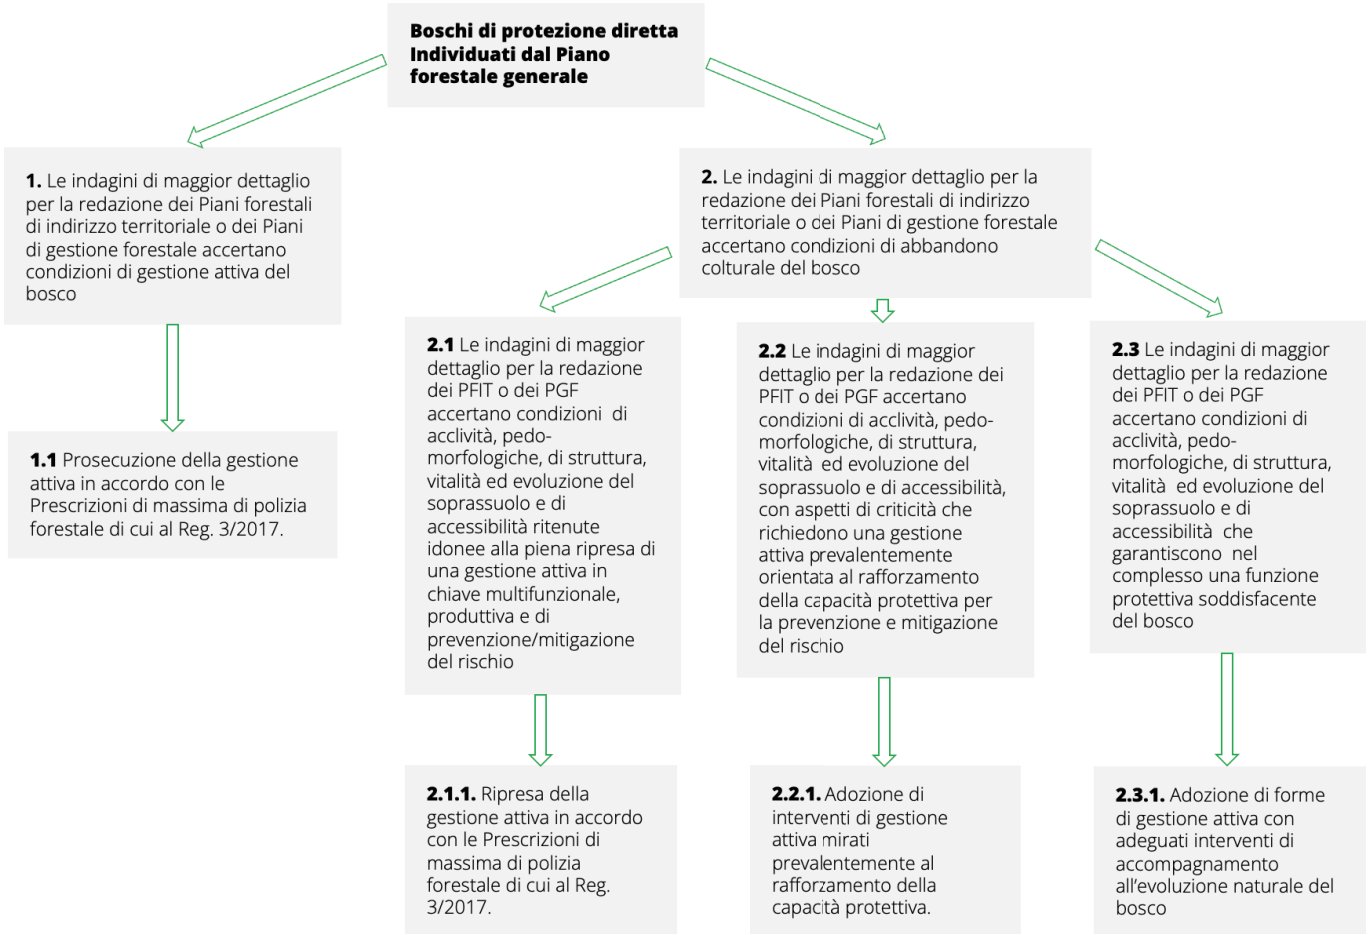
D'altro canto, l'estensione e la vitalità degli apparati radicali declina nel tempo a causa del decadimento delle ceppaie per i motivi innanzi descritti (crisi fisiologica, vulnerabilità alle malattie e attacchi parassitari). Questa sproporzione riduce l'efficacia della rete radicale nel consolidare e tenere insieme la coltre superficiale del suolo.

L'insieme dei fenomeni descritti contribuisce alla drastica diminuzione della capacità protettiva del bosco nei confronti dei processi di dissesto e erosione idrica accelerata. Gli incavi prodotti dallo sradicamento di ceppaie vive o morte ("pit-mounds") costituiscono vie preferenziali di infiltrazione dell'acqua, destabilizzando ulteriormente lo strato superficiale del suolo. D'altro canto, l'assenza di pratiche gestionali conduce all'accumulo di necromassa e vegetazione secca, aumentando la carica di combustibile e il rischio di incendio.

La strategia di gestione dei boschi di protezione diretta identificati dal Piano forestale generale, in funzione di prevenzione e mitigazione del rischio, ha come obiettivo il superamento, con modalità di intervento diversificate e appropriate, delle condizioni di abbandono dei soprassuoli attraverso il ripristino della Gestione Forestale Sostenibile (GFS), o Gestione Attiva, riducendo gli aspetti di vulnerabilità e di instabilità, aumentando la resilienza ecologica delle cenosi forestali e la loro funzione di preventiva e protettiva.

La definizione delle specifiche strategie di intervento ad opera dei Piani forestali di indirizzo territoriale e dei Piani di gestione forestale, a partire dallo screening di scala regionale realizzato per la

fonte: http://burc.regione.campania.it



redazione del Piano forestale generale, sulla base dei necessari approfondimenti sito-specifici, seguirà il percorso valutativo sintetizzato in Fig. 9.4.
I punti essenziali della strategia gestionale di rafforzamento della capacità protettiva per la prevenzione e mitigazione del rischio, da adottarsi nella condizione 2.2.1., comprendono:

- la ceduazione controllata, con esecuzione di tagli e diradamenti selettivi su ceppaia per ridurre il carico statico e dinamico, e ristabilire l'equilibrio tra parte aerea e apparato radicale;
- tagli e diradamenti verranno condotti salvaguardando e preservando la rinnovazione di specie autoctone (macchia, latifoglie) allo scopo di favorire l'incremento di complessità specifica, biologica, strutturale, della resilienza e della capacità protettiva del soprassuolo;
- gestione della ramaglia in funzione protettiva. In accordo con l'art. 58 del Reg. 3/2017 la ramaglia di risulta (diametro inferiore a 2,5 cm) deve essere rilasciata in sito e distribuita in modo diffuso o in andane lungo le curve di livello, in funzione di protezione dei suoli e interruzione dei flussi idrici superficiali.
- Conduzione delle necessarie attività di monitoraggio e controllo periodico a fini preventivi delle condizioni del soprassuolo, dei fossi di drenaggio, delle coperture pedologiche, dello stato della viabilità e dei fenomeni di dissesto, mettendo in opera tempestivamente gli interventi eventualmente necessari.

Nell'applicazione del percorso valutativo sintetizzato in Fig. 9.4, i boschi cedui "invecchiati" ai sensi della definizione data dall'articolo 27 del Regolamento forestale regionale n. 3/2017, non devono essere considerati come boschi "abbandonati" quando la loro gestione rientra in atti di pianificazione o in un ciclo di utilizzazione, autorizzato in base alle norme regionali, anche se l'età risulta superiore al turno minimo di legge. I boschi cedui "invecchiati" non devono tantomeno individuarsi obbligatoriamente come boschi cedui in conversione all'alto fusto o come boschi biologicamente invecchiati; pertanto, più propriamente, questi boschi devono definirsi come "cedui che hanno superato il turno consuetudinario".
Ai sensi dell'articolo del 27 del Regolamento regionale n. 3/2017 i boschi cedui "invecchiati" rientrano

Fig. 9.5

Il percorso valutativo per la definizione delle strategie gestionali specifiche dei boschi di protezione diretta

fonte: http://burc.regione.campania.it

Fig. 9.6

Taglio periodico di un bosco di protezione diretta (ceduo misto di latifoglie) in Penisola sorrentina

nella condizione di "boschi in situazione speciale" per i quali vengono stabilite, tra le altre cose, particolari forme di trattamento e specifici turni di taglio.

Per i boschi cedui "invecchiati" gli atti di pianificazione forestale e di autorizzazione al taglio devono tenere conto delle condizioni colturali e stazionali prevedendo per questi, laddove non sussistono le condizioni per la conversione a fustaia, il mantenimento del governo a ceduo dettando, comunque, le prescrizioni per determinare i criteri di trattamento più idonei (articolo 27, Regolamento regionale n. 3/2017).

Per determinare se è in atto, o meno, la conversione all'alto fusto del ceduo "invecchiato" e se vi sono le possibilità per sostenere tale processo è necessaria una valutazione sito-specifica che tenga conto di molteplici aspetti e condizioni, con l'obiettivo di tutelare e valorizzare le varie funzioni protettive, economiche, ecologiche, naturalistiche, ambientali e socioculturali del patrimonio forestale e silvo-pastorale, con riferimento:

a. l'età: pari o superiore a due volte l'età del turno minimo di taglio di cui all'articolo 63 del Regolamento regionale n. 3/2017 o di quello stabilito nel Piano di Gestione Forestale vigente. Allo scopo non si deve considerare solo l'età ontogenetica ma anche quella stadiale poiché in alcuni contesti divergono e non sono, pertanto, sovrapponibili;

b. la specie;

c. l'adeguata capacità di rigenerazione vegetativa (vitalità delle ceppaie) e di miglioramento della stabilità idrogeologica dei versanti (articolo 7, comma 5, lettera "c", del D.lgs 34/2018);

d. il numero di polloni sulle ceppaie e loro diametro nonché il numero di matricine del vecchio turno;

e. le esigenze di difesa idrogeologica e le condizioni stazionali in generale;

f. le esigenze di natura geo-pedologica, idrogeologica e di sicurezza dei versanti (articolo 70, comma 16, Regolamento regionale n. 3/2017);

g. le condizioni strutturali, edafiche, fitopatologiche, fisiologiche e bioecologiche e le prospettive evolutive (articolo 91, comma 5, del Regolamento regionale n. 3/2017);

h. la presenza di adeguato sviluppo della viabilità forestale e silvo-pastorale;

i. il contesto in cui è immerso il bosco (se sono presenti altre fustaie o altri cedui semplici matricinati o composti);

j. gli aspetti naturali, ambientali e paesaggistici;

k. gli aspetti storici del bosco e quelli socioeconomici.

10. Indirizzi per gli interventi di sistemazione idraulico-forestale

Finalità e principi generali delle sistemazioni idraulico-forestali

Le opere di sistemazione idraulico-forestale sono realizzate allo scopo di controllare gli effetti o limitare le cause di fenomeni di dissesto superficiali o pocoprofondi sui versanti e lungo gli alvei di bacini collinari e montani. I criteri minimi nazionali per la progettazione e realizzazione di opere di sistemazione idraulico-forestale sono definiti dal Decreto Ministeriale n. 563734 del 28/10/2021, emesso in attuazione dell'articolo 9 del Testo unico.
Rientrano nell'ambito delle opere di sistemazione idraulico–forestale anche le opere di ingegneria naturalistica applicate alla sistemazione dei territori collinari e montani, disciplinate in Campania dal "Regolamento per l'attuazione degli interventi di ingegneria naturalistica nel territorio della Regione Campania" approvato con D.G.R. 12 luglio 2002 n. 3417.
La sistemazione idraulico-forestale dei bacini collinari e montani si ispira ai seguenti principi fondamentali:

- gli interventi sistematori devono essere programmati sulla base di una visione integrale del bacino idrografico, tenendo presente le interrelazioni esistenti fra i versanti e gli impluvi;
- gli interventi devono essere programmati per un periodo temporale medio- lungo, al fine di poter adattare con gradualità gli interventi alle evoluzioni dinamiche dei territori collinari e montani;
- gli interventi devono essere monitorati e presidiati con continuità, al fine di verificare l'effetto degli interventi stessi sull'ambiente e assicurare un'adeguata attività di manutenzione.

Nella realizzazione delle opere di sistemazione idraulico-forestale si devono preferibilmente adoperare i materiali vivi ed inerti rinvenibili nei pressi dell'area di intervento, questo anche al fine di ridurre i costi per l'approvvigionamento ed il trasporto dei materiali e di massimizzare l'investimento delle risorse disponibili nell'impegno della manodopera locale. Le tecniche di sistemazione devono essere selezionate tenendo conto delle tradizioni locali, le capacità tecnico-operative della manodopera disponile e la disponibilità di materiali e mezzi di lavoro nell'area di intervento.
Come già specificato nel D.M. del 20 agosto 1912 recanti le "Norme per la preparazione dei progetti dei lavori di sistemazione idraulico-forestale nei bacini montani", le opere di sistemazione idraulico-forestale si possono distinguere in:

- opere a carattere estensivo;
- opere a carattere intensivo.

Le opere a carattere estensivo mirano alla difesa dei versanti da fenomeni di erosione e di instabilità superficiali attraverso la ricostruzione della copertura vegetale diffusa, sia tipo arboreo sia di tipo arbustivo, compreso tutti i lavori preparatori ed i materiali accessori utilizzati per ottenerla. Rientrano nella categoria di opere a carattere estensivo:

- la realizzazione di rimboschimenti;
- gli interventi antierosivi di rivestimento dei versanti, quali le semine a spaglio, idrosemina, rivestimenti con biotessili, reti metalliche, ecc.;
- gli interventi stabilizzanti, mediante messa a dimora di talee, piantagione di arbusti o di alberi, trapianto di zolle erbose, cespi e rizomi, viminate, gradonate, fascinate, cordonate.

fonte: http://burc.regione.campania.it

Criteri generali per la progettazione e realizzazione di interventi di sistemazione dei versanti

Condizione essenziale per la buona riuscita degli interventi di sistemazione dei versanti è lo studio dei fattori che ne causano l'instabilità. È in particolare fondamentale riconoscere la profondità delle superfici di scorrimento e la dinamica delle acque superficiali e di subsuperficiali nell'intorno dell'area oggetto di intervento.

Il drenaggio delle acque può assumere un ruolo fondamentale nella stabilizzazione dei versanti. In alcuni casi, il drenaggio può costituire l'unica soluzione perseguibile nell'ambito di interventi di sistemazione idraulico-forestali per la mitigazione degli effetti di movimenti franosi complessi e profondi.

Nella progettazione degli interventi di sistemazione dei versanti, occorre quindi sempre preventivamente valutare l'opportunità di realizzare opere per l'allontanamento delle acque, quali fossi di guardia a monte e lateralmente all'area di dissesto, opere di drenaggio delle acque subsuperficiali, quali trincee drenanti con tubi forati o con fascinate morte. Particolare cura deve essere prestata alla captazione delle acque sorgive perenni o occasionali, ivi incluse quelle che possono essere messe a luce nel corso dei lavori.

Nel caso la condizione di dissesto sia da ascrivere unicamente a fenomeni di erosione superficiale, l'intervento dovrà favorire il ripristino delle coperture vegetali mediante interventi di rivestimento, quali la semina a spaglio, la semina a paglia e bitume, l'applicazione di reti e stuoie biodegradabili. Il tipo di intervento deve essere selezionato in considerazione della pendenza del versante, della natura del suolo e delle condizioni climatiche.

Nel caso sia necessario conseguire una stabilizzazione diffusa della coltre superficiale di un versante, è possibile ricorrere ad interventi lineari di stabilizzazione, orientati secondo le isoipse del versante stesso, quali messa a dimora di talee o arbusti, viminate vive, fascinate vive, cordonate e gradonate. Particolare cura deve essere prestata nella scelta della interdistanza tra gli interventi di stabilizzazione, in relazione alla pendenza del versante e alla profondità di radicazione delle specie arbustive adoperate.

Gli interventi antierosivi devono essere realizzati prioritariamente nelle aree colpite da incendio, entro un periodo di tempo breve dal momento dell'incendio. È noto infatti che il tasso di erosione è altissimo nelle aree colpite da incendio durante la stagione piovosa immediatamente seguente.

Gli interventi di consolidamento consistono in opere caratterizzate da una struttura autonoma dal punto di vista statico, aventi la funzione di stabilizzare versanti in frana attraverso un'azione di sostegno al piede. Trattandosi di interventi onerosi, il ricorso ad interventi di consolidamento in ambito

Fig. 10.1

Palificata viva di sostegno semplice (Penisola sorrentina-amalfitana)

fonte: http://burc.regione.campania.it

collinare e montano deve essere giustificato sulla base di precise considerazioni circa la natura del movimento franoso e il danno potenziale ad esso associato. Sono da ritenersi prioritarie le opere di consolidamento necessarie:

- per il sostegno delle scarpate lungo sentieri e strade forestali;
- per il sostegno delle sponde degli alvei, nei casi in cui il movimento franoso può interferire con il libero deflusso delle acque di piena o determinare un eccesso di deposito di materiale solido in alveo, con conseguente incremento dellecondizioni pericolosità idraulica a valle.

In accordo con l'art. 82 del Reg. 3/2017, le opere di sistemazione idraulico-forestali, di tipo intensivo ed estensivo, in quanto attività di gestione forestale ai sensi dell'articolo 7, comma 1, del D.lgs n. 34/2018, sono realizzate con le tecniche dell'ingegneria naturalistica prevedendo l'uso di materiale vegetale vivo, piante o parti di esse, in abbinamento con materiali inerti, quali pietrame, legname, fibre vegetali o sintetiche o equivalenti.
Altre opere di sistemazione idraulico-forestali realizzate con tecniche tradizionali possono trovare adeguata realizzazione solo ove le condizioni e le caratteristiche del dissesto ne rendano necessaria la scelta, in alternativa alle soluzioni bio-ingegneristiche di cui al comma 1. Indipendentemente dal tipo di tecnica sistematoria adoperata, è opportuno comunque limitare gli interventi di consolidamento solo a movimenti franosi con superfici di scorrimento a profondità non superiore a 2 m.
È consigliabile inoltre che le opere di consolidamento non abbiano altezzafuori terra superiore a 2 metri ed il rapporto tra la profondità e l'altezza dell'opera non sia inferiore a 0,5. Si tenga tuttavia presente che il rapporto tra la profondità e l'altezza dell'opera pari a 0,5 è da considerarsi a favore di sicurezza solo per alcune condizioni di carico dell'opera. È opportuno quindi sempre verificare la stabilità del manufatto in progetto mediante idonee verifiche statiche.
Nel caso ancora di interventi con tecniche di ingegneria naturalistica, si deve assicurare un'inclinazione del paramento esterno dell'opera sull'orizzontale di circa 60°, per favorire lo sviluppo regolare delle vegetazione sull'intera superficie del paramento stesso. È preferibile inoltre adoperare specie di tipo arbustivo a specie di tipo arboreo.
Le opere di consolidamento sono soggette alle disposizioni del DM 11 marzo 1988 in materia di norme tecniche riguardanti le indagini sui terreni e sulle rocce, la stabilità dei pendii naturali e delle scarpate, i criteri generali e le prescrizioni per la progettazione, l'esecuzione ed il collaudo delle opere di sostegno delle terre e delle opere di fondazione.

Criteri generali per la progettazione e realizzazione di interventi in alveo

Gli interventi di sistemazione lungo i corsi d'acqua di bacini collinari e montani riguardano essenzialmente:

- interventi longitudinali, per la difesa delle sponde dall'azione erosiva della corrente o per il consolidamento del piede dei versanti instabili in alveo;
- interventi trasversali (briglie) per la correzione dei torrenti in erosione o per il contenimento degli apporti solidi nei torrenti di trasporto.

Gli interventi longitudinali di difesa spondale sono da prevedersi quando i fenomeni erosivi lungo le sponde del torrente minacciano l'integrità di beni o infrastrutture di particolare valore o interesse.
Analogamente a quanto già descritto per la sistemazione dei versanti, le difese spondali possono essere realizzate mediante interventi di rivestimento, di stabilizzazione o di consolidamento. Molte tipologie di intervento adottate sui versanti possono essere applicate alla protezione delle sponde torrentizie. Rientrano nella categoria degli interventi di consolidamento spondale, i pennelli ed i repellenti atti a modificare le condizioni idrodinamiche della corrente in corrispondenza delle sponde, al fine di ridurne la capacità erosiva. Rispetto al caso dei versanti, gli interventi di difesa spondale devono essere dimensionati in modo da resistere all'azione erosiva della corrente e tenendo conto della interazione tra la vegetazione spondale e la corrente stessa.
Per la correzione dei torrenti con fondo alveo interessato da processi erosivi che possono compromettere la stabilità dei versanti e di manufatti limitrofi, è necessario ricorrere a briglie di altezza ed interdistanza tale da arrestare i processi erosivi nel fondo dell'alveo e favorire la rapida formazione di un profilo longitudinale in equilibrio rispetto ai processi di erosione e trasporto della corrente in alveo.
Nel caso di torrenti interessati da intensi fenomeni di trasporto che possono compromettere la funzionalità di manufatti o infrastrutture poste più a valle, è possibile ricorrere a briglie di trattenuta, aventi la funzione di contenere la quantità di mate-

fonte: http://burc.regione.campania.it

riale trasportato a valle. Le briglie di trattenuta devono essere oggetto di periodica manutenzione al fine di garantirne la funzionalità nel lungo periodo.
È opportuno che gli interventi in alveo siano realizzati secondo geometrie irregolari, favorendo la variabilità della velocità della corrente sia in senso longitudinale sia in senso trasversale, al fine tutelare la biodiversità.
Nella sistemazione dei torrenti in erosione è preferibile contenere l'altezza della briglie aumentandone il numero e riducendone l'interdistanza. Di norma l'altezza delle briglie non deve superare l'altezza di 2 metri, salvo condizioni morfologiche particolari, come nel caso di briglie a sostegno di guadi stradali. È consigliabile inoltre che il rapporto tra la profondità e l'altezza dell'opera non sia inferiore a 0,5. Si tenga tuttavia presente che il rapporto tra la profondità e l'altezza dell'opera pari a 0,5 è da considerarsi a favore di sicurezza solo per alcune condizioni di carico dell'opera. È opportuno quindi sempre verificare la stabilità del manufatto in progetto mediante idonee verifiche statiche.
Ove possibile, il salto verticale della briglia dovrà essere sostituito con una rampa inclinata, al fine di favorire lo spostamento dell'ittiofauna. In quest'ottica, è opportuno valutare la possibilità di realizzare le difese spondali e le briglie mediante ricollocamenti dei massi rinvenibili in alveo.
Il taglio della vegetazione riparia deve essere limitato solo a quelle singole specie arboree instabili, che possono costituire un fattore di pericolo nel caso venissero trascinate dalla corrente a valle.
Le sistemazioni in alveo devono essere comunque dimensionate in modo da resistere ad eventi di piena con periodo di ritorno di 100 anni. Le condizioni morfologiche di equilibrio devono essere invece valutate in relazione alle portate di modellamento, generalmente corrispondenti portate di piena con periodi di ritorno di 2-5 anni.
Le briglie, come gli interventi di consolidamento delle sponde, sono soggette alle disposizioni del DM 11 marzo 1988 in materia di norme tecniche riguardanti le indagini sui terreni e sulle rocce, la stabilità dei pendii naturali e delle scarpate, i criteri generali e le prescrizioni per la progettazione, l'esecuzione ed il collaudo delle opere di sostegno delle terre e delle opere di fondazione.

Manutenzione degli interventi di sistemazione idraulico-forestale

La funzionalità delle opere di sistemazione idraulico-forestale nel lungo termine può essere garantita attraverso una adeguata attività di monitoraggio dello stato di conservazione delle opere e nella realizzazione di opportuni interventi di manutenzione.
Le parti vive dell'opera possono essere oggetto di interventi quali:

- esecuzione di nuove semine o sostituzione delle piante o delle talee che non hanno attecchito;
- taglio di vegetazione arborea in alveo che può costituire un fattore di pericolosità per il deflusso delle acque di piena;
- l'eliminazione di specie infestanti al fine di favorire lo sviluppo delle specie autoctone;
- taglio selettivo delle specie arboree, al fine di favorire la diversificazione a favore delle specie arbustive;
- la potatura delle talee per favorire un maggiore sviluppo dell'apparato radicale;

Le parti inerti possono essere oggetto di interventi di manutenzione quali:

- sostituzione di singoli elementi strutturali che si sono deteriorati;
- ripristino di opere o porzioni danneggiate a seguito di eventi estremi, ad esempio la rottura della rete metallica di un gabbione o asportazione di una porzione di una difesa spondale in occasione di un evento di piena;
- pulizia delle opere di drenaggio delle acque superficiali o realizzazione di nuove opere di drenaggio superficiale o subsuperficiale che dovessero risultare necessarie per garantire la durabilità dell'opera;
- realizzazione di difese al piede delle sistemazioni spondali o delle briglie (controbriglie) soggette a fenomeni di scalzamento.

Fig. 10.2

Briglia in legno e pietrame di regimazione di un vallone in Penisola sorrentina-amalfitana

Indirizzi per i versanti altamente vulnerabili per eventi di erosione e frane superficiali

Ampie porzioni del territorio collinare e montano della Regione Campania sono caratterizzate da una elevata esposizione a fenomeni di erosione e frane superficiali. Con riferimento ai Grandi Sistemi di Terre (di Gennaro, 2002), gli ambiti più vulnerabili ricadono all'interno dei seguenti Sistemi:

- la Montagna Calcarea, caratterizzata dalla presenza di suoli con proprietà andiche fortemente espresse su depositi piroclastici ricoprenti il substrato calcareo;
- i Complessi Vulcanici, i cui suoli, generalmente con proprietà andiche, sono evoluti da depositi di ceneri e pomici da caduta, da flusso piroclastico, tufi e lave delle eruzioni di età preistorica e storica.
- l'Alta Montagna, in particolare i versanti montani alti dei rilievi calcarei, marnoso-arenacei e marnoso-calcarei, caratterizzata dalla presenza di coperture su depositi piroclastici;

In questi ambiti territoriali, le attività selvicolturali e le operazioni di esbosco in particolare, nonché gli interventi sulla viabilità forestale e silvo-pastorale devono essere accompagnate da una attenta programmazione degli interventi preventivi, già in parte anticipati nei paragrafi precedenti, atti a mitigare la possibilità di innesco di fenomeni di erosione e frane superficiali.

La vulnerabilità di questi territori era già nota ai selvicoltori del secolo scorso. Uno studio della documentazione relativa al territorio di Quindici condotta presso l'Archivio di Stato di Avellino (Amato et al., 2000), ha rinvenuto diversi provvedimenti di ordine amministrativo risalenti al XIX secolo, emessi dalla amministrazione del regno Borbonico e del Regno d'Italia, che avevano riconosciuto tra i fattori predisponenti l'innesco di frane superficiali i disboscamenti e i dissodamenti <<*trovandosi vietato con i Reali Prescritti ogni zappaggione, dissodamento, sboscamento nell'intiero ambito montuoso di Quindici a motivo dei noti alluvioni che hanno prodotto e tutto giorno cagionano sì gravi danni agli abitati ed ai territori sottoposti*>>. È interessante inoltre notare come un Piano di Assestamento Provvisorio redatto nel 1888, prescrive le seguenti azioni preventive all'interno di castagneti: <<*...3) seguitare ad espurgare i castagneti soffocati dalla bassa fratta spinosa; 4) succidere o cepponare tutte le ceppaie malamente recise per ottenere così una migliore riproduzione delle radici; 5) utilizzare il castagneto gentile per ridurlo più proficuo rendendolo selvo ceduo castagnale...*>>. Ancora, interessante citare le indicazioni contenute in un capitolato di appalto per lo sfollo di un ca-

fonte: http://burc.regione.campania.it

stagneto del 1892 prevedendo modalità particolari da osservare al momento dell'esbosco:
"*...i legnami devono essere dall'aggiudicatario trasportati sulle piane di scarico che vengono designate dall'Amministrazione...*" ed inoltre "*...resta espressamente proibito qualunque trascino nel trasporto dei legnami ed avverandosi si conviene una multa di Lire 50...*".
Per questi motivi, il Reg. 3/2017 vieta espressamente la pratica dello strascico. Negli interventi selvicolturali occorre limitare quanto più possibile l'alterazione del soprassuolo e dei suoli superficiali lungo le direttrici preferenziali di drenaggio delle acque superficiali e sotterranee, questo al fine di:

- limitare le lunghezze libere di drenaggio superficiale lungo tratti di versante privi di copertura vegetale idonea alla protezione del suolo superficiale dall'erosione idrica;
- limitare la formazione di aree preferenziali di convergenza delle acque nei suoli superficiali, che rappresenta uno dei fattori principali di innesco delle frane superficiali.

In base al principio generale sopra esposto, la forma e la dimensione delle aree di taglio dovrebbero essere programmate in relazione all'assetto morfologico del versante (pendenza, concavità morfologiche, presenza di discontinuità morfologiche di origine naturale o antropica), nonché alla forma e alla dimensione delle tagliate o altri fenomeni di disturbo recenti (quali incendi) nelle aree contermini. Inoltre, a seguito della realizzazione ed utilizzo delle vie di esbosco, si dovrebbe evitare che queste evolvano in vie preferenziali di convergenza e deflusso delle acque superficiali e sotterranee. In tal senso è opportuno prevedere al termine delle operazioni di taglio la realizzazione di opere antierosive minori (quali rompitratta, cordonate e fascinate) atte a ridurre le lunghezze libere di ruscellamento lungo le vie di esbosco. Nelle condizioni a più elevata criticità, occorre prevedere la realizzazione di vie di esbosco con avvallamento guidato e gru a cavo.
Particolare attenzione occorre prestare alla realizzazione e alla manutenzione delle opere di drenaggio delle acque superficiali lungo la viabilità silvo-pastorale. Le opere di drenaggio devono essere dimensionate in modo da mitigare quanto più possibile l'alterazione indotta dal piano stradale sulle dinamiche di ruscellamento superficiale di versante. Accorgimenti tecnici circa l'assetto plano-altimetrico delle strade sono esposti nel capitolo successivo dedicato agli indirizzi per la viabilità silvo-pastorale. In questa sezione si sottolinea la necessità di prevedere una distribuzione adeguata dei sistemi di allontanamento delle acque dalla strada (ad es. rompitratta, tombini, ecc.) in modo da favorirne una restituzione ai versanti quanto più possibile uniforme. Occorre inoltre valutare con attenzione la capacità dei punti di recapito dei sistemi di drenaggio di sostenere l'azione erosiva delle acque scaricate, adottando ove necessario opportuni sistemi di protezione integrativi.
Ove possibile, nei suoli ad elevata permeabilità, è opportuno prevedere la realizzazione di fosse di assorbimento in corrispondenza dei punti di recapito. Le fosse di assorbimento hanno un duplice vantaggio: i) riducono il ruscellamento superficiale di versante, favorendo la infiltrazione delle acque negli orizzonti più profondi dei suoli; ii) fungono da trappole dei sedimenti, in gran parte derivanti dall'erosione del piano stradale. È opportuno in ogni caso realizzare trappole di sedimenti in corrispondenza dei punti di recapito dei sistemi di drenaggiio, soprattutto quando i sedimenti trasportati dal piano stradale possono costituire un fattore di impoverimento della qualità di corpi idrici ricettori limitrofi, ad elevata naturalità. Le trappole di sedimenti costituiscono inoltre dei punti di approvvigionamento dei materiali per la ricostituzione del piano carrabile in occasione degli interventi di manutenzione.
Le opere di drenaggio vanno mantenute con cadenza annuale, prima dell'inizio della stagione piovosa ed in particolare in autunno nel caso di viabilità all'interno di boschi di caducifoglie. I sistemi di drenaggio vanno inoltre comunque ispezionati a seguito di eventi pluviometrici estremi (periodo di ritorno superiore a 10 anni).

fonte: http://burc.regione.campania.it

11. Indirizzi per la gestione della viabilità silvo-pastorale

Le infrastrutture per la viabilità forestale e silvo-pastorale sono essenziali per la valorizzazione economica delle aree collinari e montane, sia dal punto di vista della produzione primaria, sia dal punto di vista turistico-ricreativo.
Va evidenziato che molte infrastrutture per la viabilità forestale e silvo-pastorale sono state in passato causa di dissesti con grave pregiudizio per l'equilibrio dell'ecosistema forestale e per l'incolumità delle popolazioni residenti, particolarmente sui versanti con coltri piroclastiche.
Il presente paragrafo vuole pertanto fornire quegli elementi tecnici essenziali per una corretta gestione della viabilità forestale e silvo-pastorale nonché per gli eventuali interventi di adeguamento funzionale di viabilità esistenti esposte a fenomeni di degrado.
Le infrastrutture per la viabilità forestale e silvo-pastorale devono essere realizzate e manutenute, ispirandosi ai principi generali di efficienza ed efficacia degli investimenti, nonché ai principi di sostenibilità degli interventi nel contesto ambientale in cui si interviene.
Le infrastrutture per la viabilità silvo-pastorale, quando non opportunamente realizzate ed amministrate, possono costituire un fattore di "impoverimento" del territorio rurale, con possibili ricadute negative anche su componenti territoriali esterne allo stretto ambito rurale. Gli aspetti negativi conseguenti ad una non adeguata realizzazione, manutenzione e gestione della viabilità forestale e silvo-pastorale sono essenzialmente due:

- limitata ricaduta economica dell'investimento per perdita di funzionalità dell'opera in un arco temporale più breve di quello atteso in progetto (scarsa efficienza ed efficacia dell'investimento);
- degrado del territorio, con incremento delle condizioni di pericolosità per i beni socio-economici presenti, perdita di produttività e di biodiversità (non sostenibilità dell'intervento).

Classificazione della viabilità forestale

Il Piano Forestale Generale recepisce i criteri minimi nazionali inerenti gli scopi, le tipologie e le caratteristiche tecnico-costruttive della viabilità forestale e silvo-pastorale, così come definiti dal Decreto attuativo del 28.10.2021, secondo quanto disposto all'articolo 9 del Testo unico.
Come definito nel decreto avanti citato la viabilità forestale e silvo-pastorale, unitamente alle opere ad essa associate costituisce, indipendentemente dal titolo di proprietà, un elemento funzionale essenziale per agevolare e garantire congiuntamente le funzioni previste dall'art. 9 del Testo unico, connesse con:

- il mantenimento della salvaguardia ambientale,
- l'espletamento delle normali attività agro-silvo-pastorali,
- la tutela e la gestione attiva del territorio,
- la sorveglianza, la prevenzione e l'estinzione degli incendi boschivi,
- il pronto intervento contro eventi calamitosi di origine naturale e antropica,
- le attività di vigilanza e di soccorso,
- gli altri compiti di interesse pubblico,

fonte: http://burc.regione.campania.it

- la conservazione del paesaggio tradizionale nonché le attività professionali, didattiche e scientifiche.

La viabilità forestale e silvo-pastorale viene concepita in relazione alle utilizzazioni e funzioni multiple che essa svolge, con orizzonte temporale di lungo periodo e viene differenziata in tre macro-categorie (vedi Tab. 11.1):

- viabilità principale;
- viabilità secondaria;
- tracciati di uso ed allestimento temporaneo.

La viabilità principale è formata da una rete permanente di strade con larghezza di carreggiata non superiore ai 6 metri e, quando presenti, opere connesse quali piazzali e imposti, a fondo stabilizzato e migliorato con materiali inerti ma prevalentemente non asfaltato, anche dotate di opere d'arte e sistemazioni idraulico forestali, progettate e realizzate privilegiando le tecniche di ingegneria naturalistica, atte a garantirne la stabilità e la regimazione delle acque il cui scorrimento non deve pregiudicare la conservazione del piano stradale e la stabilità delle scarpate.
La viabilità principale si distingue in viabilità di primo e di secondo livello:

- primo livello: infrastrutture viarie con carreggiata da 3,5 a massimo 6 metri ed opere connesse quali piazzali ed imposti, adatte al transito di automezzi anche a tre assi, trattori forestali e mezzi speciali di grandi dimensioni e massa, ovvero mezzi con limitata mobilità di avanzamento per pendenza, larghezza e/o raggio di manovra;
- secondo livello: infrastrutture viarie con carreggiata da 2,5 a 3,5 metri ed opere connesse quali piazzali ed imposti, adatte al transito di automezzi, trattori e altri mezzi speciali con ingombri più limitati rispetto a quanto previsto alla lettera precedente e dotati di più elevata mobilità in termini di avanzamento in tratti con pendenze longitudinali elevate e raggi di curvatura ridotti.

La viabilità secondaria si distingue in:

- piste permanenti e opere connesse quali piazzole ed imposti ad uso permanente che possono essere:
  - con fondo naturale, fatta salva, in presenza di pendenze longitudinali maggiori o uguali al 15 per cento, la presenza di eventuali tratti con fondo stabilizzato o migliorato preferibilmente di emulsioni bituminose;
  - aperte con macchine movimento terra che per la loro realizzazione richiedono movimenti terra con eventuali conseguenti interventi di stabilizzazione, anche delle scarpate di monte e di valle, e di regimazione delle acque;
  - caratterizzate per una minima presenza di opere permanenti di regimazione delle acque nei tratti in maggiore pendenza ed ove necessario in prossimità e nell'attraversamento negli impluvi;
  - transitabili ordinariamente da trattori, macchine operatrici specializzate, veicoli fuoristrada a trazione integrale o animali da lavoro;
- percorsi da lavoro, pedonali e per animali, aventi ingombri e pendenze simili ma tipologie realizzative diverse legate alle tradizioni locali e alle realtà geo-pedo-morfologiche.

I tracciati di uso ed allestimento temporanei comprendono:

- tracciati temporanei a fondo naturale, approntati per il passaggio di macchine operatrici specializzate, aperti senza l'ausilio di macchine movimento terra di tipo pesante se non in casi eccezionali e per brevi tratti. I tracciati non devono superare una lunghezza massima di 250 metri per ettaro o sua frazione di superficie interessata dall'attività forestale e una altezza mas-

Fig. 11.2

Sentiero forestale pedonale e per animali da lavoro.

fonte: http://burc.regione.campania.it

sima della sezione di scavo **a** monte di 1,5 metri, in funzione della pendenza;

- piazzole temporanee, a fondo naturale e funzionali alle operazioni di esbosco, utili a consentire l'incrocio, l'inversione di marcia dei mezzi e il deposito temporaneo del legname. La frequenza e la distribuzione delle piazzole devono contemperare le esigenze d'uso del tracciato con la morfologia del terreno. La loro realizzazione deve evitare fenomeni di dissesto idrogeologico;
- linee di avvallamento per gravità, coincidono con formazioni naturali permanenti come impluvi, vallecole o canaloni oppure elementi artificiali temporanei come risine artificiali ancorate temporaneamente al terreno;
- linee di esbosco aeree, varchi o corridoi aerei atti a consentire l'installazione e l'utilizzo temporanei di sistemi a fune (linee di gru a cavo o di teleferiche), con larghezza compresa tra 4 e 8 metri salvo allargamenti per alcuni tratti in situazioni che presentano eccezionali difficoltà per l'esbosco, per consentire la tutela della sicurezza degli operatori, e il libero passaggio dei carichi fluttuanti, affinché non rechino danno alle piante limitrofe se il tracciato non segue la linea di massima pendenza.

I tracciati e di uso e allestimento temporanei e le piazzole temporanee sono:

- inerenti all'esercizio dell'attività forestale, non costituiscono interruzione della superficie boscata e non comportano alterazione permanente dello stato dei luoghi;
- elementi cronologicamente correlati all'esercizio dell'attività forestale e, al termine di quest'ultima, devono essere dismessi assicurando la tutela idrogeologica e favorendo la ripresa della vegetazione naturale;
- esenti dall'applicazione di canoni nel caso di attraversamenti a raso o guadi e prevedono il ripristino del corretto deflusso delle acque.

Strategia manutentiva della viabilità forestale

Il mantenimento in efficienza della rete della viabilità forestale e silvo-pastorale richiede un impegno manutentivo puntuale, tempestivo, costante nel tempo.
Gli interventi di manutenzione ordinaria comprendono le opere di mantenimento, riparazione, parziale rinnovamento, necessarie per l'efficienza del sistema stradale e delle sue pertinenze, attuate anche attraverso il recupero dell'originaria sezione della carreggiata e del suo complessivo ingombro originario, compresa la rimozione e sistemazione del materiale in esubero ovvero le opere che non comportino modificazioni sostanziali delle caratteristiche dimensionali, maggiore del 15 per cento dei valori esistenti, e strutturali.
Sono considerati interventi di manutenzione straordinaria quelli eccedenti la definizione precedente di manutenzione ordinaria, necessari a rinnovare e sostituire parti, anche strutturali, del tracciato e volti a garantire e ripristinare la protezione e la funzionalità dell'infrastruttura e delle relative pertinenze purché non diffusi a tutto il tracciato e non comportanti modifiche delle caratteristiche funzionali.
Sono considerati interventi sistematici, gli interventi sulla viabilità esistente che non costituiscono manutenzione ordinaria o straordinaria e sono volti alla conservazione o all'adeguamento/mutamento funzionale di un'infrastruttura determinandone una modifica delle componenti fisiche o delle modalità d'uso.
In accordo con il Decreto attuativo 28 ottobre 2021 del Testo unico e con il Regolamento forestale regionale 3/2017, la progettazione degli interventi sulla viabilità forestale e silvo-pastorale permanente deve prevedere:

a. modalità di realizzazione o adeguamento tali da seguire ordinariamente l'andamento naturale del terreno evitando al massimo il movimento terra, adottando scelte progettuali idonee a garantire la stabilità dei versanti e delle coperture pedologiche e la corretta regimazione idraulica dell'opera. e, dove possibile, tali da operare il recupero di tracciati preesistenti purché nel rispetto del loro assetto storicizzato e di eventuali opere di valore storico-testimoniale, ove idonei alle moderne esigenze e tenuto conto della sicurezza del transito;

b. l'utilizzo di materiali compatibili con la componente ambientale e paesaggistica locale;

c. la gestione della manutenzione funzionale nel tempo, ispirandosi a principi generali di efficienza, efficacia e sostenibilità degli interventi dal punto di vista ambientale, economico e della durata;

d. la realizzazione, dove possibile, di piazzole di scambio e di inversione per consentire il transito degli automezzi. La loro realizzazione considera la tipologia di automezzo più ingombrante che può transitare lungo la strada e viene attuata

fonte: http://burc.regione.campania.it

in punti favorevoli in termini di morfologia del terreno;

e. sui versanti con pendenze elevate oltre il 60 per cento, l'adozione di opportune scelte progettuali alternative atte a garantire la stabilità delle coperture pedologiche, la corretta regimazione idraulica dell'opera ed il riutilizzo del materiale di scavo in eccesso per la realizzazione in siti idonei di piazzole di scambio, deposito e/o inversione di marcia.

Principio di efficienza e di efficacia

Le ricadute economiche degli investimenti per le infrastrutture rurali sono direttamente legate all'uso e alla durata tecnica della infrastruttura stessa. È necessario pertanto dimensionare e realizzare le infrastrutture tenendo conto sia delle effettive condizioni di esercizio sia dei fattori di pericolosità esogeni che possono comprometterne la funzionalità nel periodo temporale per il quale si intende beneficiare dell'investimento.
In condizioni di limitate disponibilità economiche, occorre porre maggiore attenzione a quegli accorgimenti tecnici che garantiscono la durabilità dell'opera anche a scapito di un ridimensionamento delle condizioni di esercizio dell'opera stessa.
Nel caso della viabilità silvo-pastorale, troppo spesso si trascurano le opere di regimazione idraulica a fronte di interventi di adeguamento del piano viario e di rivestimento del fondo stradale. In assenza totale o parziale di opere di regimazione idraulica, tuttavia, la vita tecnica dell'opera si riduce, ovvero aumentano gli oneri di manutenzione straordinaria, che risultano nel medio termine ben superiori all'investimento iniziale che sarebbe stato necessario per realizzare un intervento tecnicamente corretto.
È importante inoltre sottolineare che ogni nuova realizzazione o intervento di adeguamento funzionale deve essere accompagnato da specifiche norme che disciplinano l'uso e la manutenzione, i cui oneri devono essere commisurati alle impostazioni e le finalità del progetto originario.

Principio di sostenibilità

Le infrastrutture per la viabilità forestale e silvo-pastorale possono determinare l'innesco di processi di degrado dei territori contermini, quali:

- fenomeni di instabilità connessi a movimenti di terra per la realizzazione delle infrastrutture;
- alterazione dei percorsi preferenziali delle acque di ruscellamento superficiale e conseguente accelerazione di processi erosivi e di movimenti di massa, ovvero di evoluzione morfologica dei versanti a seguito di alterazione (in senso statistico) delle condizioni al contorno che ne hanno determinato l'assetto;
- alterazione della dinamica di agenti patogeni, di inquinanti o di altri fenomeni degenerativi (quali gli incendi) associati alla attivazione di nuove vie preferenziali di penetrazione e trasporto.

Il problema della sostenibilità impone al progettista di analizzare non solo gli aspetti tecnici specifici relativi ai manufatti in progetto, ma anche le interferenze di questi manufatti con i processi idrologici ed ecologici che avvengono nel sistema territoriale in cui si interviene, generalmente identificabile con un bacino idrografico, nel rispetto dei criteri generali di intervento per la gestione forestale sostenibile.
Il principio di efficienza ed efficacia ed il principio di sostenibilità sono nella maggior parte dei casi fortemente correlati e difficilmente possono essere trattati in modo disgiunto. Il peso relativo dei due aspetti nella fase di programmazione degli interventi dipende essenzialmente dal contesto ambientale in cui si opera.
Per chiarire quanto sopra esposto si prenda in considerazione il problema della regimazione idraulica lungo la viabilità silvo-pastorale, a titolo di esempio.
Per quanto attiene al solo problema di funzionalità, la sede stradale e le opere accessorie devono essere progettate in modo da limitare la probabilità di occorrenza di fenomeni di erosione del piano viario entro un valore accettabile nell'orizzonte temporale del piano di investimento, anche tenuto conto delle strategie di manutenzione messe in atto. Se la manutenzione straordinaria avviene solo a seguito delle operazioni di taglio, si può assumere per il dimensionamento un *periodo di ritorno* degli eventi pluviometrici di progetto pari al ciclo di taglio stesso. Questo equivale ad ammettere che l'intervallo temporale tra l'occorrenza di due eventi di danno per erosione del piano viario, tali da richiedere interventi di manutenzione straordinaria, sia pari all'intervallo temporale medio fra due operazioni di taglio consecutive.
Per quanto attiene invece ai problemi di sostenibilità, la sede stradale e le opere accessorie dovranno essere dimensionate in modo da contenere il degrado dei territori contermini, dovuto ad esempio all'incremento della possibilità di innesco di fenomeni erosivi o di frane indotte dalle acque derivate in modo incontrollato dalla strada, o ad esempio

(*) Consigliate per le strade di nuova realizzazione e per le strade oggetto di adeguamento, possono non essere presenti o con misure di larghezza più contenute nelle strade già esistenti;
(**) Misurato a centro carreggiata;
(***) Può essere previsto un allargamento in relazione al raggio di curvatura ed alla tipologia di mezzi previsti per la categoria di viabilità;
(+) Solo in casi eccezionali per il contenimento dell'erosione e la stabilità dei versanti al transito veicolare specializzato, pedonale ed animale;
Per i tracciati di prevalente interesse pastorale oltre il limite altitudinale del bosco si possono derogare i parametri di larghezza e curvatura previsti in tabella.

all'incremento dell'apporto di sedimenti al corpo idrico ricettore oltre i limiti sostenibili dagli ecosistemi fluviali. Nel caso di possibile degrado dell'assetto idrogeologico del territorio, le norme tecniche di riferimento prevedono generalmente che le opere accessorie di salvaguardia siano dimensionate in modo da resistere ad eventi pluviometrici di progetto con periodo di ritorno di 100 anni.

Viabilità forestale di pubblico interesse

Gli Enti Delegati, anche su istanza di singoli Comuni, possono identificare, mediante idoneo atto amministrativo, le strade forestali o i sentieri di "pubblico interesse". La dichiarazione di "pubblico interesse" di una strada o di un sentiero dovrebbe essere giustificata da una valutazione delle relative funzioni nell'ambito di un'analisi comprensoriale della viabilità.
Le strade di pubblico interesse possono ricadere in aree la cui proprietà o legittimo uso compete ad un ente pubblico, in aree la cui proprietà risulta incerta o non rivendicata da alcuno, in aree private.
La dichiarazione di pubblico interesse delle infrastrutture viarie ricadenti in aree private è soggetta alla disciplina giurisprudenziale in materia. In tali casi, la dichiarazione di pubblico interesse deve essere oggetto di specifica intesa tra la amministrazione pubblica ed il soggetto privato proprietario, allo scopo di disciplinarne la gestione e l'accesso da parte della pubblica amministrazione o da parte di soggetti terzi che ne potranno fare richiesta.

Valenza socio-economica della viabilità di pubblico interesse

L'analisi delle ricadute socio-economiche della viabilità forestale permanente di pubblico interesse è rilevante per la programmazione degli interventi nell'ambito del Piano Forestale. Le ricadute socio-economiche possono essere valutate in misura del numero di aziende servite, della funzionalità di presidio territoriale (lotta attiva agli incendi boschivi) e turistico-ricreative.
Dal punto di vista socio-economico, la viabilità forestale permanente (strade e sentieri) possono essere distinte in:

- Viabilità comprensoriale, fondamentale per le attività silvo-pastorali di un intero comprensorio rurale, corrispondente un ambito territoriale ben definito dal punto di vista morfologico;
- Viabilità settoriale, fondamentale per le attività silvo-pastorali di un numero limitato di aziende forestali, che interessano una porzione del comprensorio rurale di appartenenza;
- Viabilità di servizio, aventi funzionalità specifiche di interesse pubblico, quali presidio territoriale, antincendio e/o turistico-ricreative.

12. Definizione degli ambiti territoriali per la redazione dei Piani forestali di indirizzo territoriale (PFIT)

Premessa

Con l'introduzione dei Piani forestali di indirizzo territoriale (PFIT) il Testo unico definisce per la prima volta, all'interno del sistema di programmazione forestale italiano, un livello di pianificazione di area vasta, riferita a comprensori territoriali omogenei per caratteristiche ambientali, paesaggistiche, economico-produttive e/o amministrative, di scala intermedia tra quella regionale del Piano forestale generale, e quella aziendale del Piano di gestione forestale.

Il Piano Forestale di Indirizzo Territoriale, qualora predisposto, è elaborato e redatto in conformità al presente Piano Forestale Generale ed è finalizzato all'individuazione, al mantenimento e alla valorizzazione delle risorse silvo-pastorali e all'organizzazione delle attività necessarie alla loro tutela, assicurando la gestione forestale sostenibile, nonché a favorire il coordinamento dei piani di gestione forestale o strumenti equivalenti.

In accordo con il Decreto interministeriale 28 ottobre 2021 sui criteri minimi per l'elaborazione dei piani forestali di indirizzo territoriale e dei piani di gestione forestale, il PFIT con il suo apparato cartografico ripartisce le superfici silvo-pastorali presenti all'interno del territorio considerato in aree omogenee per categoria forestale e tipo colturale, sulla base della classificazione dell'Inventario nazionale delle foreste e dei serbatoi forestali di carbonio.

Per ogni area omogenea il PFIT definisce gli indirizzi di gestione e le priorità per la tutela, gestione e valorizzazione del territorio sottoposto a pianificazione, specificando:

a. l'indirizzo di gestione, espresso in termini di funzioni prevalenti al fine di promuovere la multifunzionalità del patrimonio (di protezione diretta; naturalistica, per la conservazione della biodiversità e la tutela e valorizzazione del paesaggio; produttiva; sociale e culturale, ovvero con finalità turistico-ricreative, artistiche, terapeutiche, scientifiche, didattiche, educative; altre funzioni);

b. gli interventi strutturali e infrastrutturali, compresi l'adeguamento e la manutenzione della viabilità forestale e silvo-pastorale esistente e la localizzazione di quella programmata per ottimizzare la densità viaria in relazione all'indirizzo di gestione;

c. le forme di governo e di trattamento più idonee alla tutela e alla valorizzazione dei boschi, in particolare per la funzione di protezione diretta e gli interventi finalizzati alla prevenzione degli incendi boschivi, nonché allo sviluppo delle filiere forestali locali;

d. le misure a tutela della biodiversità per le superfici forestali ricadenti nelle aree della Rete Natura 2000 e nelle aree protette nazionali e regionali, coerenti con i Piani di gestione dei siti.

e. la specifica normativa d'uso contenuta nei piani paesaggistici.

f. le misure di tutela delle aree sensibili, di gestione dei rischi naturali e di adattamento ai cambiamenti climatici da adottare nel periodo di validità del PFIT, in coerenza con gli strumenti territoriali vigenti per la prevenzione e la mitigazione dei rischi naturali, quali, a titolo esemplifi-

fonte: http://burc.regione.campania.it

cativo, incendi boschivi, tempeste, frane, dissesto, valanghe ed alluvioni, ecc., e l'adattamento ai cambiamenti climatici;

g. le aree potenzialmente utilizzabili per la creazione di nuovi boschi, anche al fine di creare o potenziare i corridoi ecologici.

Ancora, il PFIT recepisce e integra in modo coordinato e attua in termini tecnico-forestali indirizzi, prescrizioni, vincoli, indicazioni programmatiche e di pianificazione territoriale derivanti dagli strumenti di programmazione e di pianificazione territoriale e ambientale vigenti, in conformità ai:

a. Piani paesaggistici regionali di cui al decreto legislativo 22 gennaio 2004, n. 42;

b. Piani regionali di previsione, prevenzione e lotta attiva contro gli incendi boschivi;

c. Piani e agli altri strumenti di gestione delle aree protette nazionali e regionali, nonché agli obiettivi, alle misure di conservazione e ai piani di gestione dei siti della Rete Natura 2000;

d. Piani stralcio per l'assetto idrogeologico;

e. Piani di gestione distrettuali e di bacino in attuazione della Direttiva Quadro Acque 2000/60/CE;

f. Piani per la valutazione e la gestione del rischio di alluvioni in attuazione della direttiva 2007/60/CE relativa alla valutazione e alla gestione dei rischi di alluvioni;

g. Piani di gestione dei siti posti sotto la tutela dell'UNESCO.

Il PFIT è conforme alle previsioni degli strumenti di pianificazione regionali e in particolare al Piano Forestale Generale per la individuazione delle fonti di finanziamento necessarie alla realizzazione degli interventi gestionali e infrastrutturali programmati.
L'apparato cartografico del PFIT comprende obbligatoriamente almeno la seguente cartografia in formato digitale, georiferita e sovrapponibile, con strati informativi su allestimento cartografico regionale di riferimento:

a. carta di destinazione d'uso del suolo, con valore ricognitivo, che individui distintamente le aree classificate come bosco ai sensi degli articoli 3, 4 e 5 del TUFF, e le aree classificate come bosco ai sensi dalla normativa regionale vigente;

b. carta dei vincoli gravanti sul territorio oggetto del PFIT, con valore ricognitivo, comprendente il vincolo idrogeologico, il vincolo di bene culturale e paesaggisticoil vincolo ambientale ai sensi della legge nazionale sulle aree protette, la zonazione delle aree della Rete Natura 2000 con relativi habitat di interesse comunitario ove individuati, le aree a rischio idraulico e idrogeologico o di tutela delle acque;

c. carta delle proprietà forestali e silvo-pastorali pubbliche e collettive e degli usi civici;

d. carta delle aree boschive colturalmente omogenee, riportando per ognuna il principale indirizzo di gestione;

e. carta degli interventi strutturali e infrastrutturali, compresa la localizzazione della viabilità forestale e silvo- pastorale esistente e programmata;

f. carta ricognitiva degli eventuali boschi vetusti e alberi monumentali presenti nell'area;

g. carta dei boschi di protezione diretta.

In ultimo, la Regione Campania assicura il coinvolgimento degli enti e dei portatori di interessi locali nella predisposizione dei PFIT secondo quanto disposto all'articolo 14 del decreto legislativo 3 aprile 2006, n. 152.
Il PFIT è assoggettato alla disciplina di Valutazione Ambientale Strategica ai sensi dall'articolo 6 del decreto legislativo del 3 aprile 2006, n. 152.
Per le sue caratteristiche, il PFIT potrà costituire il quadro conoscitivo dettagliato ed efficace, in grado di orientare e facilitare, all'interno dell'ambito territoriale interessato, la pianificazione a scala aziendale dei boschi pubblici e privati, in forma individuale o associata.

La definizione degli ambiti territoriali per la redazione dei Piani forestali di indirizzo territoriale (PFIT)

Il Piano forestale generale della Campania è chiamato tra l'altro a stabilire gli ambiti geografici cui riferire la redazione dei Piani forestali di indirizzo territoriale (PFIT), secondo quanto previsto dall'art. 6 comma 8 del Testo unico, e dal Decreto interministeriale del 28.10.2021 attuativo del Testo unico, che definisce i criteri minimi nazionali per l'elaborazione dei piani forestali di indirizzo territoriale e dei piani di gestione forestale.
I criteri impiegati per l'individuazione degli ambiti geografici del territorio della Campania di riferimento per la redazione dei PFIT sono quelli indicati nel Testo unico e nel Decreto attuativo:

a. l'articolo 8 del decreto interministeriale stabilisce al comma 3 che i piani forestali di indirizzo

territoriale "... possono essere predisposti dalle regioni con riferimento a comprensori territoriali omogenei per caratteristiche ambientali, paesaggistiche, economico-produttive o amministrative";

b. Nel Decreto attuativo che definisce i criteri minimi nazionali per l'elaborazione dei piani forestali di indirizzo è inoltre specificato (articolo 3, comma 1), che "...ove possibile, i limiti geografici seguono i confini amministrativi dei Comuni interessati";

c. il comma 3 dell'art. 6 del Testo unico precisa che la redazione dei PFIT può essere svolta anche in accordo tra più enti locali in coerenza con quanto previsto dai piani paesaggistici regionali.

Nell'individuazione degli ambiti di riferimento per la redazione dei PFIT in Campania si è privilegiato innanzitutto un criterio di omogeneità geografica, fisiografica, pedo-morfologica, vegetazionale e forestale. Gli ambiti rappresentano quindi le aggregazioni comunali che meglio corrispondono ai complessi fisiografici e forestali della regione nella loro continuità ed interezza, non considerando quindi ulteriori divisioni legate a confini amministrativi provinciali o di comunità montana.
I 29 ambiti di riferimento per la redazione dei PFIT individuati sono elencati nella tabella seguente, aggregati per sistemi fisiografici di appartenenza.

13. Il Demanio Forestale Regionale

In base all'art. 8 della L.R. 11/96 il patrimonio agro-silvo-pastorale della Regione è costituito:

- dalle foreste, dai terreni, dai fabbricati e dagli impianti, già di proprietà dello Stato;
- dai vivai forestali già di proprietà dello Stato;
- dai terreni e beni rustici acquistati o che in qualsiasi modo pervengono in proprietà alla Regione per essere destinati alla formazione di boschi, prati, pascoli, vivai, aziende modello e riserve naturali o faunistiche.

La gestione del Demanio forestale regionale è effettuata dalla Struttura Regionale Centrale competente in materia di politiche forestali per il tramite delle Strutture Regionali Territoriali competenti, nel rispetto delle regole della gestione attiva e sostenibile.
Le foreste demaniali della Campania (Tab. 13.1) coprono una superficie complessiva di 5.440 ettari. La maggior parte delle foreste provengono dallo Stato (Ex A.S.F.D.), altre dalla Ex O.N.C. (Opera Nazionale Combattenti). Una porzione limittata proviene dall'Ente Irrigazione Puglia e Lucania.
La Riserva naturale di Astroni (Na), di proprietà statale, ha una superficie di 253 ettari ed è gestita dal WWF.
Le foreste demaniali in Campania, sono distribuite in ambienti diversi per caratteristiche climatiche e vegetazionali, tra la fascia vegetazionale mediterranea e quella montana. I comprensori territoriali ricadono sia all'interno di aree ZSC e ZPS della rete Natura 2000, che di parchi naturali regionali (dei Monti Picentini, del Partenio, dei Campi Flegrei) e nazionali (Parco Nazionale del Cilento e Vallo di Diano).
Il patrimonio boschivo delle foreste demaniali è costituito in massima parte da cedui quercini (leccio, roverella, cerro), cedui misti (querce, carpini, aceri, frassini), e di castagno, quasi sempre che hanno oltrepassato il turno consuetudinario o in fase di conversione a fustaia.
Le fustaie sono costituite principalmente da latifoglie (faggio, cerro, e altre latifoglie mesofile) e da conifere (abeti, pini, cipressi, larici e douglasia), queste ultime introdotte artificialmente in epoche diverse. Altri rimboschimenti sono stati eseguiti con latifoglie autoctone (principalmente cerro, roverella e ciliegio) ed esotiche (eucalitti). Spesso questi soprassuoli sono degradati a causa degli incendi, del pascolo o di mancati o errati interventi selvicolturali.
I diversi comprensori esplicano attitudini molteplici e diverse sono le emergenze naturalistiche proprie di ogni formazione vegetale, tali da assegnare una o più funzioni (scientifiche, didattiche, turistico-ricreative, protettive e produttive) ad ogni foresta demaniale.
Di seguito, una descrizione sintetica delle foreste demaniali (Mazzoleni et al. 2002):

- *Fascia litoranea Zona Flegrea*: è caratterizzata da un ceduo invecchiato di leccio, macchia mediterranea, mista a corbezzolo e esemplari sparsi di conifere. Questi popolamenti esercitano una importante azione protettiva dai venti marini e dal sorrenamento e quella naturalistica e paesaggistica, con la macchia mediterranea che svolge un'importante azione di rinsaldamento delle dune.
- *Calvello*: è costituita da cedui misti a prevalenza di cerro in conversione naturale a fustaia a tratti degradati, cedui misti e cedui di leccio che hanno oltrepassato il turno consuetudinario; sono molto importanti per la protezione di versanti anche molto acclivi e soggetti ad erosione superficiale e al rotolamento di alcuni massi instabili.

fonte: http://burc.regione.campania.it

- *Cerreta Cognòle*: è rappresentata da soprassuoli transitori di cerro, da cedui di cerro a tratti degradati, cedui di castagno avviati a fustaia, cedui misti meso-xerofili degradati e coniferati. Tra le foreste demaniali regionali, la Cerreta Cognòle è quella che più di tutte si presta ad attività diversificate (scientifiche, didattiche e ricreative) anche per la sua collocazione strategica in prossimità di un importante asse viario (Autostrada A3).
- *Cuponi*: la foresta contiene soprassuoli transitori di cerro che per le buone condizioni di fertilità e la cessazione da lungo tempo dei fattori di disturbo (ceduazione, pascolo) rendono i soprassuoli in conversione idonei per finalità produttive. Inoltre sono presenti cedui misti che hanno oltrepassato il turno consuetudinario con funzioni protettive, rimboschimenti di conifere esotiche e piantagioni di latifoglie autoctone.
- *Foresta Mezzana*: presenta cedui meso-xerofili di querce caducifoglie in conversione naturale a fustaia che svolgono funzioni di protezione dei versanti, inoltre rivestono interesse naturalistico le penetrazioni termofile della vegetazione mediterranea insediata sulle rupi. Altre formazioni sono costituite dal bosco ripariale a salici e pioppi, dai rimboschimenti di conifere esotiche.
- *Mandria*: è caratterizzata da diverse formazioni: soprassuoli transitori di cerro e di cerro-faggio, ceduo misto che ha oltrepassato il turno consuetudinario e degradato, a tratti coniferato, ceduo matricinato di faggio in conversione naturale a fustaia, ceduo castanile da frutto, rimboschimenti di conifere esotiche. I soprassuoli mesofili e meso-igrofili in conversione a fustaia ubicati nelle stazioni più fertili e ben serviti da viabilità sono idonei per finalità produttive. Quelli meso-xerofili di versanti acclivi svolgono un'eminente funzione di protezione idrogeologica.
- *Fasce boscate di Persano*: sono costituite da boschi planiziari di latifoglie extrazonali, boschi ripariali a salici e pioppi, cedui composti a prevalenza di querce mesoxerofile, rimboschimenti di latifoglie esotiche (Eucalyptus spp.). Tra le funzioni prevalenti si sottolineano la protezione dei versanti e delle sponde dei corsi d'acqua, la funzione naturalistica e di conservazione di habitat e di specie tipiche del bosco planiziario.
- *Roccarainola*: è composta da fustaia a dominanza di faggio (anche con soggetti stramaturi), fustaie miste di latifoglie (anche alto fusto di cerro), cedui misti di latifoglie mesofile, fustaia sperimentale di castagno, rimboschimenti, bo-

schi degradati, cespuglieti e pascoli, e da un vivaio forestale

- *Taburno*: al suo interno si rinvengono fustaie di abete bianco, soprassuoli transitori di faggio, fustaie miste di faggio e abete bianco, cedui di faggio che hanno oltrepassato il turno consuetudinario, cedui misti che hanno oltrepassato il turno consuetudinario a tratti degradati, rimboschimenti di conifere esotiche e piantagioni di latifoglie autoctone, arbusti ed alberi in aree rocciose ad elevata pendenza. Tutte queste formazioni svolgono come funzione prevalente quella di protezione dei versanti.
- *Vesolo*: le tipologie forestali presenti comprendono fustaie miste a prevalenza di faggio, cedui di cerro in conversione a fustaia, cedui misti degradati, ceduo misti a tratti coniferati, cedui di castagno, castagneto da frutto, nuclei di latifoglie pioniere a Betula pendula e Populus tremula, rimboschimenti di conifere esotiche. Esse svolgono funzioni di protezione dei versanti e di conservazione di cenosi e specie a diffusione localizzata (betulla). Gli aspetti produttivi dovrebbero essere limitati alla coltivazione del castagneto da frutto nelle aree più idonee, nonché ai lembi di faggeta più facilmente accessibili, vegetanti su suoli con caratteristiche meso-eutrofiche. Inoltre, si possono prevedere attività dimostrative di zootecnia da intraprendere in connessione con la foresta demaniale Cerreta Cognòle situata a pochi chilometri, oltre che attività turistico ricreative.

Per ulteriori dettagli (cartografie, rilievi fotografici e aspetti gestionali) relativi alle foreste demaniali della Campania si fa riferimento a Mazzoleni et al. (2009).

fonte: http://burc.regione.campania.it

14. Gli strumenti finanziari

Gli strumenti di finanziamento delle politiche forestali in Campania fanno sostanzialmente capo a tre tipologie di risorse:

- I fondi strutturali europei (Fondo Europeo di Sviluppo Regionale, FESR), e fondi di finanziamento nazionali (Fondo di sviluppo e coesione, FSC);
- Il Fondo europeo agricolo di sviluppo rurale (FEASR);
- Il Fondo per lo sviluppo delle montagne italiane (FOSMIT).

Fondo europeo di Sviluppo Regionale (FESR)

Il Fondo europeo di Sviluppo Regionale e i fondi di finanziamento nazionali – in anni recenti l'FSC, in precedenza anche i Programmi Operativi Complementari (POC) – sono impiegati per il finanziamento dei progetti forestali e di difesa del territorio montano attuati dagli Enti delegati ai sensi della L.R. 11/96 (Comunità Montane, Province, Città metropolitana), con l'impiego degli operai forestali.
La programmazione di questi interventi è fatta con cadenza triennale dalla Giunta regionale con la redazione del *Documento esecutivo di programmazione forestale (DEPF)*, secondo quanto stabilito dall'art. 5 bis della legge regionale 7 maggio 1996, n. 11 ("Modifiche ed integrazioni alla Legge Regionale 28 febbraio 1987, n. 13, concernente la delega in materia di economia, bonifica montana e difesa del suolo") e degli artt. 4 e 6 del Regolamento 3/2017 di tutela e gestione sostenibile del patrimonio forestale regionale", approvato con Delibera di Giunta Regionale della Campania n.585 del 26/09/2017.
Il DEPF 2024-2026 ha previsto che il finanziamento dei progetti forestali predisposti dagli Enti delegati facesse capo all'Obiettivo specifico RSO2.4. del PO FESR Campania 2021-2027 "Promuovere l'adattamento ai cambiamenti climatici, la prevenzione dei rischi di catastrofe e la resilienza, prendendo in considerazione approcci ecosistemici", e più specificatamente all'Azione 2.4.3. "Promuovere un'impostazione sistemica e precauzionale migliorando la resilienza attraverso interventi mirati a ridurre il livello di esposizione ai rischi connessi al clima".
Obiettivo dell'Azione 2.4.3. è quello di ridurre il livello di esposizione al rischio idrogeologico connesso al clima e alla geomorfologia dei luoghi, migliorandone la resilienza e privilegiando, laddove possibile, soluzioni *nature-based*, mediante interventi di:

- mitigazione del rischio idrogeologico (stabilizzazione dei versanti, sistemazione fluviale, salvaguardia delle coste alte e basse);
- ripristino e recupero delle dinamiche idro-morfologiche;
- Ripristino e realizzazione della difesa fluviale su reticoli idrografici, al fine di ridurre il livello di esposizione ai rischi connessi al clima;
- contrasto all'instabilità dei versanti
- riduzione del rischio di incendi, anche mediante prevenzione e gestione attiva del territorio;
- realizzazione, gestione e potenziamento delle infrastrutture verdi e dei servizi ecosistemici offerti dalla Rete Natura 2000 funzionali alla riduzione dei rischi connessi ai cambiamenti climatici.

Per il finanziamento dei progetti predisposti dagli Enti delegati per interventi afferenti alle tipologie avanti descritte, il Documento esecutivo di programmazione forestale 2024-2026 ha previsto per il triennio 2024-2026 una spesa annua di 70 milioni di euro.

Tab. 14.1

Le misure forestali del CSR Campania 2023-2027 con le relative dotazioni finanziarie

Fondo europeo agricolo per lo sviluppo rurale (FEASR)

La seconda fonte di finanziamento pubblico degli interventi forestali è costituita dalle misure della Politica Agricola Comunitaria facenti parte del Complemento di sviluppo rurale della Campania (CSR Campania) per il periodo di programmazione 2023-2027.
Nel CSR Campania 2023-2027 è stato attivato un primo gruppo di misure espressamente dedicate ad interventi forestali, che sono:

- **SRA27** – Pagamento per impegni silvoambientali e impegni in materia di clima;
- **SRA28** – Sostegno per mantenimento della forestazione/imboschimento e sistemi agroforestali;
- **SRD05** – Impianti forestazione/imboschimento e sistemi agroforestali su terreni agricoli;
- **SRD15** – Investimenti produttivi forestali .

Il Complemento di sviluppo rurale della Campania ha previsto per le misure forestali, per l'intero periodo di programmazione 2023-2027, le dotazioni complessive (euro) esposte in Tabella 14.1.
Alcuni degli interventi previsti nel presente Piano, possono essere di volta in volta finanziati da altre misure del CSR, non specificatamente dedicate ad interventi forestali:

- **SRA25** - **ACA25** - Tutela delle colture arboree a valenza ambientale e paesaggistica (castagneti da frutto);
- **SRD03** - Investimenti nelle aziende agricole per la diversificazione in attività non agricole;
- **SRD04** - Investimenti non produttivi agricoli con finalità ambientale;
- **SRD07** - Investimenti in infrastrutture per l'agricoltura e per lo sviluppo socio-economico delle aree rurali;
- **SRG06** - **LEADER** - attuazione strategie di sviluppo locale;
- **SRG07** - Cooperazione per lo sviluppo rurale, locale e smart villages;
- **SRG09** - Cooperazione per azioni di supporto all'innovazione e servizi rivolti ai settori agricolo, forestale e agroalimentare;
- **SRH01** - Erogazione servizi di consulenza;
- **SRH02** - Formazione dei consulenti;
- **SRH03** - Formazione degli imprenditori agricoli, degli addetti alle imprese operanti nei settori agricoltura, zootecnia, industrie alimentari, e degli altri soggetti privati e pubblici funzionali allo sviluppo delle aree rurali;
- **SRH04** - Azioni di informazione;
- **SRH06** - Servizi di back office per l'AKIS.

In Tab. 14.2 è riportata per ciascuna di queste misure, la dotazione finanziaria complessiva per l'intero periodo di programmazione 2023-2027 (euro).

Fondo per lo sviluppo delle montagne italiane (FOSMIT)

La terza fonte di finanziamento è rappresentata dalle quote di competenza regionale del Fondo per lo sviluppo delle montagne italiane (FOSMIT). Così come stabilito all'articolo 1, comma 593, della legge 30 dicembre 2021, n. 234, il Fondo per lo sviluppo delle montagne italiane è utilizzato per finanziare:

a. interventi per la tutela e la promozione delle risorse ambientali dei territori montani;

b. interventi che diffondano e valorizzino, anche attraverso opportune sinergie, le migliori iniziative in materia di tutela e valorizzazione delle qualità ambientali e delle potenzialità endogene proprie dell'habitat montano;

c. attività di informazione e di comunicazione sui temi della montagna;

d. interventi di carattere socio- economico a favore delle popolazioni residenti nelle aree montane;

e. progetti finalizzati alla salvaguardia dell'ambiente e allo sviluppo delle attività agro-silvo-pastorali;

f. iniziative volte a ridurre i fenomeni di spopolamento.

In sede di riparto nazionale, la quota destinata alla Regione Campania, comprensiva del cofinanziamento regionale, è stata di 10 milioni nel 2022, di 13,4 milioni nel 2023.

Disponibilità annua per le azioni del Piano forestale generale

A partire dai dati in precedenza riportati relativi alla disponibilità delle diverse fonti finanziarie, la disponibilità annua di risorse per il finanziamento pubblico degli interventi di cura e gestione del patrimonio forestale e di difesa dei territori montani può essere prudenzialmente stimata in circa 89,5 milioni, provenienti:

- per 70 ml dal FESR,
- per 9,5 milioni dal FEASR (ipotizzando il pieno utilizzo delle misure forestali del CSR, e l'impiego per interventi previsti dal presente piano di un 10% della disponibilità delle misure non specificatamente forestali),
- per 10 milioni dal FOSMIT.

Una strategia integrata di impiego delle risorse

L'obiettivo prioritario è evidentemente quello dell'uso integrato e coordinato delle diverse risorse disponibili, in funzione delle priorità di scala regionale fissate dal presente piano. Di particolare importanza è soprattutto la capacità di potenziare in tempi rapidi la funzione di programmazione coordinata da parte della Direzione Generale per le Politiche agricole alimentari e forestali, degli interventi a titolarità regionale realizzati dagli Enti delegati con l'impiego degli operai forestali, allo scopo di evitare il più possibile aspetti di frammentarietà e scarsa efficacia nel perseguimento delle priorità individuate a scala regionale. Una simile attività di programmazione coordinata è resa ora possibile dall'apparato di cartografie, analisi e valutazioni contenute nel Piano forestale generale, che costituiscono il nucleo di un vero e proprio SIT forestale regionale di supporto per la localizzazione e la definizione dei progetti di tutela attiva e difesa dei territori montani.

fonte: http://burc.regione.campania.it

15. Le azioni del Piano forestale generale

In accordo con il Testo unico in materia di foreste e filiere forestali, il Piano forestale generale della Campania è chiamato a definire gli obiettivi e le relative linee d'azione, coerenti con la Strategia Forestale Nazionale, in relazione alle specifiche esigenze socio-economiche, ambientali e paesaggistiche, nonché alle necessità di prevenzione del rischio idrogeologico, di mitigazione e di adattamento al cambiamento climatico.

Alla luce delle indagini e delle elaborazioni svolte, il Piano forestale generale della Campania individua 7 differenti obiettivi prioritari articolati in 26 differenti azioni, descritte nei seguenti paragrafi. Lo schema degli obiettivi e delle azioni di piano è riportato nella tabella 15.1.

Le azioni individuate dal Piano forestale generale trovano preciso riferimento in quelle indicate nella Strategia Forestale Nazionale, oltre che nella legislazione nazionale e regionale vigente (vedi cap. 10 e 13).

In particolare, il Piano forestale generale della Campania persegue il rafforzamento della capacità di mitigazione e adattamento dei sistemi forestali della Campania ai cambiamenti climatici in maniera trasversale, attraverso l'implementazione combinata delle diverse azioni di piano finalizzate:

- all'incremento della superficie boschiva regionale pubblica e privata interessata da pianificazione forestale alle diverse scale (aziendale, territoriale) e da gestione attiva, in grado di assicurarne l'integrità fisica e funzionale, nel rispetto delle dinamiche ecologico-evolutive, degli aspetti di biodiversità, della capacità di fornire in maniera sostenibile il pool di servizi ecosistemici di supporto e regolazione;
- alla diffusione di Disciplinari di gestione forestale sostenibile, per le diverse categorie forestali e tipi colturali, in accordo con le disposizioni del Regolamento forestale regionale 3/2017, finalizzati all'aumento della resistenza/resilienza del bosco nei confronti del rischio climatico e ambientale;
- Alla capacità di "governare l'abbandono", promuovendo e incentivando la cura e la gestione attiva dei boschi abbandonati e/o silenti, dei boschi di neoformazione, degli arbusteti mediterranei e temperati di ricolonizzazione dei coltivi eroici abbandonati.

Da tutto quanto detto si evince come il Piano forestale generale redatto dalla Regione non preveda interventi diretti: la sua funzione è quella strategica, di definizione degli " obiettivi e delle relative linee d'azione" cui i piani sotto-ordinati (Piani territoriali di indirizzo forestale, Piani di gestione forestale) sono chiamati a conformarsi per l'approvazione, con le modalità più appropriate, in funzione delle specifiche condizioni ecologiche e gestionali locali.

Compito del Piano forestale generale è quello di favorire la formazione di Piani territoriali di indirizzo territoriale per l'area vasta, e di Piani di gestione forestale delle singole proprietà, coerenti la strategia, gli obiettivi e le linee di azione descritte nel PFG, in attuazione della Strategia Forestale Nazionale.

fonte: http://burc.regione.campania.it

Tab. 15.1

Il Piano Forestale Generale della Campania identifica 7 obiettivi e 27 azioni operative

A. Una nuova governance per le foreste in Campania

A1. Promuovere una governance forestale in Campania basata sulla cooperazione istituzionale, l'integrazione di strumenti e politiche, la partecipazione e condivisione degli obiettivi di Gestione Forestale Sostenibile (GFS)

A2. Estendere la superficie dei beni silvo-pastorali di proprietà pubblica, privata e collettiva della Campania dotati di piani di gestione forestale

A3. Promuovere la pianificazione forestale di area vasta (Piani Forestali di Indirizzo Territoriale)

B. Rafforzare il capitale naturale, assicurare i servizi ecologici essenziali, prevenire i rischi

B1. Conservazione e miglioramento della biodiversità forestale nella rete regionale di aree protette

B2. Gestione attiva dei boschi di protezione.

B3. Incrementare la capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica del territorio e tutela delle acque

B4. Prevenzione attiva dei rischi naturali o antropici, incendi, calamità naturali ed eventi catastrofici

C. Curare e gestire le risorse forestali della Campania

C1. Curare i rimboschimenti storici della Campania

C2. Valorizzare in chiave multifunzionale le foreste urbane e periurbane

C3. Curare e proteggere i boschi planiziali della Campania

C4. Tutela e valorizzazione dei castagneti da frutto della Campania

C5. Tutelare i boschi vetusti e gli alberi monumentali

C6. Promuovere la gestione sostenibile dei prati e pascoli permanenti

C7. Promuovere e valorizzare i sistemi agroforestali

D.Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare

D1. Rafforzare la capacità operativa delle imprese boschive. Promuovere la qualificazione degli operatori forestali

D2. Promuovere la certificazione delle foreste del territorio regionale e la tracciabilità lungo tutta la filiera

D3. Riconoscere e remunerare i servizi di interesse pubblico, ambientale e sociale forniti dalle aree forestali (foreste e pascoli) e mantenuti ed accresciuti dalla GFS

D4. Promozione delle produzioni forestali non legnose in una prospettiva di filiera

D5. Adesione al Cluster legno-foresta italiano e costituzione del Cluster legno foresta della Campania

E. Vivere le foreste della Campania

E1. Valorizzare le 10 foreste regionali come "laboratori verdi multifunzionali" e centri di diffusione permanente della GFS in Campania

E2. Valorizzazione multifunzionale della viabilità forestale e silvo-pastorale e della sentieristica in Campania

F. Conoscere le foreste della Campania

F1. Promuovere un programma integrato di monitoraggio e cartografia delle risorse forestali della Campania

F2. Implementazione dello Sportello unico regionale per le attività forestali (SUAF)

F3. Promozione di iniziative e programmi divulgativi per rafforzare la consapevolezza pubblica dell'importanza e il ruolo ecologico del patrimonio forestale della Campania

G. Le nuove foreste della Campania

G1. Valorizzare e potenziare i vivai forestali; estendere la superficie dei boschi da seme; valorizzare le risorse genetiche; potenziare la produzione di materiale di propagazione forestale

G2. Promozione di tecniche forestali per il recupero dei siti degradati in Campania

fonte: http://burc.regione.campania.it

A. Una nuova governance per le foreste in Campania

Un primo gruppo di azioni si pone l'obiettivo di rafforzare e rendere più efficace ed efficiente la governance del patrimonio forestale della Campania, integrando e coordinando l'attività delle diverse Istituzioni ed Enti che esercitano competenze specifiche in campo forestale.

A1. Promuovere una governance forestale in Campania basata sulla cooperazione istituzionale, l'integrazione di strumenti e politiche, la partecipazione e condivisione degli obiettivi di Gestione Forestale Sostenibile (GFS)

L'applicazione concreta, la più ampia e diffusa possibile, al patrimonio forestale della Campania, dei criteri e degli approcci della Gestione Forestale Sostenibile (GFS), in accordo con la Strategia Forestale Nazionale, richiede innanzitutto la costruzione di una nuova governance in grado di armonizzare l'azione delle molteplici competenze in gioco.
L'esigenza di una governance forestale per la Campania coerente e condivisa dalle differenti competenze giuridiche e istituzionali è anche indispensabile per il conseguimento degli obiettivi di adattamento al cambiamento climatico, di incremento della resilienza a lungo termine degli ecosistemi forestali regionale, di accompagnamento dei processi di migrazione assistita, di diffusione di pratiche rafforzate di gestione forestale attiva, idonee al conseguimento di tutti questi obiettivi.
La necessità di coordinamento discende dalla natura particolare delle aree ricoperte da boschi, che sono considerate nel nostro ordinamento:

- un bene e una risorsa di interesse pubblico, al di là dei regimi proprietari, in quanto componente fondamentale degli ecosistemi e dei paesaggi della nazione, e per questo oggetto di tutele che rientrano nella competenza diretta dello Stato;
- una risorsa in grado di produrre un flusso di servizi ecosistemici di supporto, regolazione, approvvigionamento e culturali a beneficio dell'intera collettività;
- una risorsa produttiva di beni e servizi di mercato che alimentano e sostengono molteplici filiere di interesse economico e sociale, in particolare nelle aree montane e interne del Paese.

A partire da tali assunti, il Testo Unico in materia di foreste e filiere forestali, all'art. 3 com. 2, lettera b), definisce la gestione forestale sostenibile o gestione attiva, come l'insieme delle azioni selvicolturali volte a rispettare e valorizzare queste diverse funzioni del bosco, consentendo il mantenimento dei diversi aspetti di biodiversità, produttività, rinnovazione, vitalità e potenzialità, e adempiendo in tal modo "... ora e in futuro, a rilevanti funzioni ecologiche, economiche e sociali a livello locale, nazionale e globale, senza comportare danni ad altri ecosistemi".
Per la sua natura di risorsa di fondamentale interesse pubblico il bosco è dunque oggetto di tutele molteplici, afferenti a competenze diversificate tra le quali:

- la tutela paesaggistica ai sensi del Codice dei beni culturali e del paesaggio;
- la tutela degli aspetti naturalistici, ecologici e di biodiversità ai sensi della Legge quadro sulle aree protette e della Direttiva comunitaria "Habitat";
- la tutela della funzione idrogeologica ai sensi della legislazione sulla difesa del suolo contenuta nel Testo unico ambientale;
- la tutela dell'integrità strutturale, funzionale ed evolutiva e della capacità produttiva del bosco, così come regolata dalla legislazione forestale regionale in vigore, in coerenza con il testo unico in materia di foreste e filiere forestali.

L'attuazione delle azioni e degli interventi selvicolturali ricompresi nel concetto di gestione forestale sostenibile è quindi sottoposta a procedure amministrative di autorizzazione e controllo di volta in volta facenti capo a enti e amministrazioni diverse (soprintendenze, autorità di bacino, enti parco, enti di gestione delle aree protette, regione ed enti delegati in materia forestale).
È proprio a partire dal concetto operativo di gestione forestale sostenibile, così come definito dalla Strategia forestale nazionale, che l'amministrazione regionale della Campania promuove la costruzione, attraverso la più ampia cooperazione istituzionale, di una governance condivisa per il sistema forestale, in grado di portare il più possibile a sintesi i diversi procedimenti autorizzativi e di controllo, garantendone il coordinamento, la coerenza, l'efficacia e la tempestività in relazione ai molteplici obiettivi posti dalla complessa e articolata legislazione vigente.

fonte: http://burc.regione.campania.it

Copianificazione, integrazione delle politiche

L'azione di costruzione di una governance forestale condivisa è già stata avviata dall'amministrazione regionale "in corso d'opera", per quanto riguarda la materia paesaggistica, profittando del fatto che la redazione del nuovo Piano paesaggistico regionale si è svolta, nella sua fase conclusiva, in un arco temporale concomitante con quello per l'aggiornamento del Piano Forestale Generale.

La collaborazione tra i tecnici delle due Direzioni generali per le politiche agricole e per il governo del territorio della Regione Campania, ha consentito di inserire pienamente, all'interno della nuova disciplina paesaggistica, i criteri di gestione forestale sostenibile che sono alla base del Piano Forestale Generale.

Come è noto, il Piano paesaggistico identifica, tutela e disciplina le aree coperte da boschi presenti nel territorio regionale:

- nella loro intera estensione, come aree tutelate per legge ai sensi dell'art. 142 del Codice dei beni culturali e del paesaggio;
- localmente, per le porzioni ricadenti in beni ed aree di rilevante interesse pubblico, che sono oggetto di specifici decreti e provvedimenti di tutela si sensi dell'art. 136 del Codice.

Le attività di individuazione, tutela e disciplina paesaggistica delle aree coperte da boschi ricadenti nelle due fattispecie avanti menzionate, sono state condotte in copianificazione dalla Regione Campania –Direzione generale governo del territorio, e dal Ministero della Cultura – Direzione Archeologia belle Arti e Paesaggio.

Come detto in precedenza, le due direzioni generali della Regione Campania – Politiche agricole e Governo del territorio – hanno collaborato:

- nella vestizione dei vincoli per le componenti forestali delle aree tutelate ai sensi dell'art. 136 del Codice, che per inteso si estendono sulla metà circa del territorio regionale, e
- nella redazione degli articoli riguardanti le aree coperte da boschi facenti parte delle Norme tecniche di attuazione del Piano paesaggistico.

Una parte di questo lavoro ha già completato il suo l'iter istituzionale, con la sigla dell'intesa tra Regione Campania e Ministero della Cultura relativamente all'ambito di tutela comprendente l'intera Isola d'Ischia. Tale intesa parziale, non prevista dal Codice dei beni culturali e del paesaggio (il piano paesaggistico regionale è oggetto di un accordo unitario, nella sua interezza), si è resa necessaria per fare in modo che il piano straordinario di ricostruzione dei tre comuni dell'isola interessati dal terremoto del 2017 e dalle frane del 2022 (Casamicciola, Forio, Lacco Ameno) redatto dalla Regione Campania ai sensi della Legge n. 130 del 16/11/2018, potesse conformarsi alla nuova disciplina paesaggistica in corso di definizione.

Come detto in precedenza, la collaborazione tra le due direzioni generali della regione Campania (Politiche agricole e Governo del territorio) nella definizione della disciplina paesaggistica per le aree coperte da boschi, ha consentito di integrare e coordinare indirizzi, direttive e prescrizioni del piano paesaggistico con i contenuti del Piano forestale generale, facendo in modo che i due piani parlino la stessa lingua, operando in piena sinergia, proprio a partire dalla condivisione dei principi di gestione forestale sostenibile.

L'esperienza di cooperazione condotta per la formazione del nuovo piano paesaggistico della Campania rappresenta allo stesso tempo la prima attuazione concreta di una delle azioni di maggior impegno e portata del Piano forestale generale, e una buona pratica di riferimento per future collaborazioni istituzionali funzionali alla costruzione della governance unitaria del patrimonio forestale che è oggetto della presente azione di piano.

Le potenzialità di integrazione intersettoriale offerte dalla programmazione dello sviluppo rurale

L'integrazione delle diverse competenze in materia forestale è anche perseguita da regione Campania attraverso l'uso innovativo e mirato delle risorse della politica agricola comunitaria.

Un esempio rilevante è il finanziamento con il quale la Direzione Politiche agricole, nella qualità di Autorità di gestione del PSR Campania 2014-2022, ha finanziato con 5,8 milioni di euro la redazione dei piani di gestione dei 124 siti della Natura 2000 della Campania, impiegando la Tipologia di intervento 7.1.1 "Sostegno per la stesura e l'aggiornamento dei Piani di tutela e di gestione dei siti Natura 2000",.

Beneficiari diretti del finanziamento sono:

- i Parchi Nazionali del Vesuvio e del Cilento Vallo di Diano;
- la Direzione generale per l'Ambiente, la Difesa del Suolo e l'Ecosistema della Regione Campania per i siti non ricadenti nei due parchi nazionali, comprese le due Riserve Naturali di Castel Volturno e Valle delle Ferriere

Le attività in parola avevano l'obiettivo:

- di integrare i principi di gestione forestale sostenibile nei piani di gestione dei siti Natura 2000;

fonte: http://burc.regione.campania.it

- di indirizzare le attività di progettazione degli interventi e le richieste autorizzative verso soluzioni pienamente coerenti con gli obiettivi e le misure di conservazione contenute nei piani di gestione, favorendo in tal modo anche una più celere conduzione dell'iter approvativo.

Ancora, Regione Campania è attiva nello sviluppare tutte le possibili sinergie positive tra la nuova programmazione dello sviluppo rurale 2023-2027 e le altre politiche settoriali. Come è noto, uno degli aspetti che caratterizza la nuova programmazione agricola comunitaria, pienamente recepito nel Piano strategico Nazionale e nel Complemento di sviluppo rurale regionale, è la rafforzata attenzione verso gli obiettivi paesaggistici e di difesa del suolo che gli interventi finanziati dal programma sono chiamati a perseguire.
In un'ottica di integrazione inter-settoriale, molte delle misure della nuova programmazione agricola 2023-2027 che finanziano interventi selvicolturali, di tutela e miglioramento dei pascoli, di creazione e miglioramento di sistemi agroforestali, di realizzazione e ripristino di sistemazioni tradizionali e, in generale, di rafforzamento degli elementi di biodiversità degli ecosistemi e dei paesaggi rurali, rappresentano importanti strumenti di sostegno, non solo degli obiettivi di politica agricola, ma anche delle altre politiche pubbliche dell'amministrazione regionale nei settori della tutela della difesa del suolo, della tutela del paesaggio, della valorizzazione turistica dei paesaggi rurali.
In particolare, nel quadro delle politiche di coesione, e della Strategia nazionale per le aree interne (SNAI), la strategia forestale regionale concorre allo sviluppo equilibrato e sostenibile dei diversi sistemi territoriali della Campania riconosce le foreste della Campania come risorsa chiave per lo sviluppo rurale nei territori montani, attraverso la promozione delle attività e delle filiere legate alla loro utilizzazione, cura, protezione e gestione multifunzionale, contribuendo all'occupazione e al rafforzamento della vitalità sociale ed economica di queste aree.
Le politiche forestali sono quindi parte rilevante delle strategie di sviluppo rurale per contrastare lo spopolamento delle aree montane, attraverso il trasferimento di competenze, la valorizzazione dei territori interni, la progettualità locale e il rafforzamento delle reti socio-economiche locali.

A2. Estendere la superficie dei beni silvo-pastorali di proprietà pubblica, privata e collettiva della Campania dotati di piani di gestione forestale

È stata evidenziata nei capitoli precedenti la struttura duale del patrimonio forestale regionale. Da un lato, infatti, il patrimonio forestale pubblico della Campania, comprendente il 45% dei boschi della regione, è caratterizzato da un rapporto paritario tra fustaie e cedui, e dal fatto di essere per una quota rilevante, dell'80% circa, dotato di piani di gestione forestale vigenti.
I piani di gestione forestale approvati per i boschi pubblici della Campania, unitamente al corredo cartografico in formato cartaceo e/o digitale, costituiscono una base informativa di grande importanza ai fini dell'aggiornamento del quadro conoscitivo e delle cartografie forestali a scala regionale, in un'ottica di sistema informativo forestale.
In considerazione di tali aspetti rilevanti, le azioni prioritarie per il patrimonio forestale pubblico che l'Amministrazione si propone saranno finalizzate al conseguimento dei seguenti obiettivi:

- l'estensione in tempi brevi della pianificazione forestale all'intera superficie dei boschi pubblici della Campania, proseguendo il lavoro positivo compiuto dall'amministrazione nello scorso periodo di programmazione, che ha già condotto al conseguimento di risultati notevoli, con il decisivo sostegno degli aiuti previsti per i soggetti pubblici dal PSR Campania 2014-2020, con due tipologie di intervento, la 8.5.1 ("Sostegno agli investimenti destinati ad accrescere la resilienza ed il pregio ambientale degli ecosistemi forestali") e la 16.8.1 ("Sostegno alla stesura di piani di gestione forestale o strumenti equivalenti"). Nel periodo di programmazione in corso, questa azione potrà fare ricorso agli aiuti previsti da due misure del CSR Campania 2023-2027: la SRD15 ("Investimenti produttivi forestali"), che finanzia tra l'altro l'elaborazione di Piani di gestione forestale o strumenti equivalenti per superfici singole e/o associate, nonché la revisione dei Piani di gestione e strumenti equivalenti in scadenza o scaduti, secondo quanto disposto dalla normativa regionale vigente; e la SRG07 ("Cooperazione per lo sviluppo rurale, locale e smart villages").
- il proseguimento e l'estensione ad altri ambiti forestali del territorio regionale delle esperienze innovative di gestione e programmazione

fonte: http://burc.regione.campania.it

associata del patrimonio forestale pubblico. Tra queste, la stipula dell'accordo di partenariato tra i 13 comuni della Comunità del Parco Nazionale del Vesuvio e dall'Ente Parco per la redazione in forma associata dei piani di gestione forestale, nonchè l'associazione dei comuni ricadenti nell'ambito della C.M. Monti Lattari e quelli della C.M. Alento Monte Stella; o ancora il progetto di costituzione di un'Agenzia forestale per il coordinamento permanente del partenariato di comuni dell'Area Pilota "Alta Irpinia" nell'ambito della Strategia Nazionale per le Aree Interne (SNAI);

- il rafforzamento della cooperazione istituzionale e del coordinamento tra comuni, comunità montane ed enti di gestione delle aree protette per l'integrazione delle diverse procedure autorizzative e di programmazione forestale, ai fini di un migliore conseguimento degli obiettivi condivisi di tutela e gestione sostenibile delle risorse forestali.

L'obiettivo posto dal presente Piano è quello di estendere entro il 2026 la pianificazione forestale all'intero patrimonio pubblico, proseguendo in modo rafforzato il sostegno finanziario e tecnico alle amministrazioni comunali.
Diversa la situazione per i boschi di proprietà privata della Campania, che coprono una superficie di 218.082 ettari, pari al 55% della superficie boschiva regionale. Come ricordato in precedenza, al momento della redazione del presente Piano i piani di gestione forestale approvati di boschi di proprietà privata sono 239, per una superficie di circa 7.500 ettari, pari al 3,4% della superficie complessiva dei boschi di proprietà privata in Campania.
La ridotta incidenza della pianificazione dei boschi privati in Campania è evidentemente conseguenza dell'elevata frammentazione proprietaria e della ridotta dimensione aziendale, che spiega anche la scarsa propensione all'adeguamento gestionale, strutturale e produttivo delle proprietà forestali, e lo scarso interesse per forme aggregate di gestione.
In tale situazione l'utilizzo del patrimonio forestale privato è dunque attuato, in larga misura, sulla base di comunicazioni/autorizzazioni relative a superfici di taglio inferiori alla soglia dimensionale di 10 ettari complessivi di beni silvo-pastorali, oltre la quale scatta, ai sensi del Regolamento regionale 3/2017, l'obbligo di redazione di un piano di gestione.
D'altro canto, l'estensione significativa della superficie dei boschi privati interessati da piani di gestione forestale, redatti in forma singola o associata, rappresenta la precondizione per ogni percorso di promozione e valorizzazione sostenibile del patrimonio forestale privato e di rafforzamento produttivo delle filiere forestali. Per conseguire tale obiettivo, le azioni da mettere in campo per per il patrimonio forestale privato comprendono quindi:

- l'incentivazione, mediante azioni promozionali mirate alla platea di proprietari privati, del ricorso agli aiuti previsti dalla Misura del CSR Campania 2023-2027 SRD15 (" Investimenti produttivi forestali"), che finanzia tra l'altro l'elaborazione di Piani di gestione forestale o strumenti equivalenti per superfici singole e/o associate, nonché la revisione dei Piani di gestione e strumenti equivalenti in scadenza o scaduti, secondo quanto disposto dalla normativa regionale vigente; e dalla Misura e la SRG07 ("Cooperazione per lo sviluppo rurale, locale e smart villages"), che finanzia azioni di cooperazione per la sostenibilità ambientale finalizzate a predisporre/aggiornare i Piani di gestione delle superfici forestali pubbliche/private e la loro integrazione con altri strumenti di pianificazione territoriale.
- la promozione di modelli di pianificazione e gestione in forma associata dei boschi privati anche con il ricorso alle incentivazioni previste dalla misure del CSR Campania per la nuova programmazione agricola 2023-2027. Non mancano nel territorio regionale esempi e buone pratiche di associazionismo forestale privato, come ad esempio l'Associazione Fondiaria Oasi Vesuvio, costituita nel 2018 e che associa all'attualità 75 proprietari di pinete a Pino domestico del Parco del Vesuvio, per una superficie forestale di circa 250 ettari.

In progresso di tempo, la redazione dei Piani forestali di indirizzo territoriale introdotti dal Testo unico, che l'Amministrazione si impegna fortemente a incentivare e sostenere con un'azione specifica del presente Piano, potrà creare negli ambiti forestali omogenei da esso individuati, un contesto più favorevole alla pianificazione dei boschi di proprietà privata, fornendo ai proprietari e possessori una solida e dettagliata piattaforma di conoscenze condivise relative al patrimonio forestale, della quale la redazione dei piani di gestione forestale dei boschi privati potrà grandemente avvantaggiarsi.
L'obiettivo che l'amministrazione si propone di dotare di piani di gestione forestale in forma singola o associata, entro il periodo di programmazione 2023-2027, almeno il 10% dei boschi di proprietà privata
Risulta altresì evidente la sinergia della presente azione con le altre azioni di piano finalizzate alla promozione delle filiere forestali finalizzate alla

fonte: http://burc.regione.campania.it

promozione della certificazione della gestione forestale e della tracciabilità dei prodotti, per il rafforzamento di filiere ad elevato valore aggiunto sia di prodotti legnosi che non legnosi e di iniziative ed esperienze di trasferimento tecnologico, innovazione di processo e divulgazione. Tale sinergia è promossa in Campania dal Tavolo regionale per la tutela, la gestione e la valorizzazione del patrimonio forestale regionale e per lo sviluppo delle diverse componenti della filiera foresta – legno e foresta – energia in Campania, istituito con D.D.R. n. 101 del 03/03/2023 della D.G. 50.07.00, in attuazione dell' art. 14, comma 3 del T.U.F.F e potrà essere ulteriormente sviluppata, in accordo con la Strategia Forestale Nazionale, mediante l'adesione al Cluster legno nazionale, e l'istituzione entro il 2026 del Cluster legno Campania (vedi azione D5).

A3. Promuovere la pianificazione forestale di area vasta (Piani Forestali di Indirizzo Territoriale)

Come ricordato nel capitolo 9, una delle innovazioni rilevanti introdotte dal Testo unico è la definizione giuridica e formale all'interno del sistema di programmazione forestale italiano di un livello di pianificazione di area vasta - i Piani forestali di indirizzo territoriale (PFIT) - che si collocano ad una scala intermedia tra quella generale del Piano forestale generale, funzionale alla definizione di strategie e politiche complessive per l'intero patrimonio forestale regionale, e quella aziendale dei Piani di gestione forestale.
I Piani forestali di indirizzo territoriale qualora redatti sono elaborati, secondo le disposizioni del Testo unico e del successivo Decreto interministeriale attuativo sui criteri minimi per la loro elaborazione, con riferimento a ambiti o comprensori territoriali omogenei per caratteristiche ambientali, paesaggistiche, economico-produttive e/o amministrative. All'interno di tali ambiti, i PFIT individuano le risorse silvo-pastorali presenti, definendo le attività necessarie alla loro tutela e uso sostenibile, e favorendo il coordinamento dei piani di gestione forestale e degli strumenti ad essi equivalenti.
Sempre in accordo con l'art. 6 comma 8 del Testo unico e con il Decreto attuativo, è compito della Regione l'individuazione degli ambiti geografici cui riferire la redazione dei Piani forestali di indirizzo territoriale (PFIT), compito che è stato assolto dal presente Piano.
L'individuazione degli ambiti di riferimento per la redazione dei PFIT in Campania è stata condotta, in accordo con il Decreto interministeriale, attraverso l'identificazione dei diversi sistemi forestali omogenei presenti nel territorio regionale, su base ecologica e fisiografica, nella loro interezza e continuità, rispettando i limiti amministrativi comunali, e non considerando invece quelli sovracomunali di provincia, città metropolitana o comunità montana.
L'obiettivo è quello di favorire, per i diversi complessi silvo-pastorali della regione, una pianificazione e gestione quanto più coordinata, unitaria e coerente, evitando controproducenti frammentazioni, e incentivando invece la cooperazione istituzionale e la condivisione di obiettivi comuni di promozione del patrimonio forestale in chiave multifunzionale.
A partire dall'identificazione degli ambiti territoriali di riferimento, il Piano forestale generale assegna un importanza prioritaria alla redazione dei PFIT in Campania, come strumento cardine per l'applicazione la più ampia, diffusa e generalizzata, dei criteri di Gestione Forestale Sostenibile al patrimonio forestale regionale.
In tale ottica, i Piani forestali di indirizzo territoriale, potranno costituire in progresso di tempo un riferimento essenziale in Campania per:

- il coordinamento a scala territoriale della pianificazione dei boschi pubblici;
- la definizione dei progetti di valorizzazione e messa in sicurezza dell'infrastruttura forestale regionale attuati dagli enti delegati con l'impiego degli operai forestali;
- estendere e promuovere la pianificazione dei boschi privati, attraverso la messa a disposizione di una base di dati e di un quadro di conoscenze di valore ufficiale esauriente, robusto, rigoroso, in grado di rendere la stesura dei piani di gestione forestale da parte dei proprietari e possessori privati più rapida, coordinata, agevole, meno onerosa;
- favorire, attraverso una rappresentazione comprensiva del patrimonio, esperienze di pianificazione e gestione aggregata delle proprietà forestali private, superando in tal modo le limitazioni causate dall'elevata frammentazione e polverizzazione proprietaria;
- individuare ad una scala di maggior dettaglio i boschi di protezione diretta, i boschi abbandonati e silenti, i boschi di ricolonizzazione per i quali si renda necessario il ricorso a forme di sostituzione della gestione e di conferimento delle superfici forestali in accordo con gli articoli 10 e 12 del TUFF.

fonte: http://burc.regione.campania.it

In conclusione, la redazione dei PFIT è sinergica con gran parte delle azioni previste dal presente Piano. Così come sono pensati nel Testo unico e nel Decreto attuativo, i Piani Forestali di indirizzo territoriale rappresentano in prospettiva strumenti potenti a supporto delle attività istituzionali di pianificazione del paesaggio, della tutela della biodiversità, della difesa del suolo, della prevenzione e adattamento ai rischi ambientali.
Per favorirne e avviarne in tempi celeri la redazione, la Regione finanzierà la loro redazione con risorse del Fondo per lo sviluppo delle montagne italiane (FOSMIT), secondo un programma operativo della Direzione generale politiche agricole e forestali.

fonte: http://burc.regione.campania.it

B. Rafforzare il capitale naturale, assicurare i servizi ecologici essenziali, prevenire i rischi

Un secondo gruppo di azioni del Piano forestale generale si propone l'obiettivo di rafforzare il capitale naturale costituito dai boschi e dai pascoli della Campania, assicurando la fornitura dei servizi ecologici essenziali che tali risorse forniscono alla collettività, e orientandone la gestione in chiave di prevenzione dei rischi locali e globali.
Queste azioni saranno attuate in stretto coordinamento con gli Enti Parco, gli Enti di gestione dei siti della Rete Natura 2000 della Campania, il Distretto idrografico dell'Appennino meridionale.

B1. Conservazione e miglioramento della biodiversità forestale nella rete regionale di aree protette

Uno degli aspetti centrali per il governo dei boschi della Campania riguarda le superfici forestali (boschi, altre terre boscate) ricadenti nel sistema regionale delle aree a tutela naturalistica (parchi nazionali e regionali, riserve statali e regionali, siti della rete Natura 2000). Queste aree forestali coprono una superficie di 321.904 ettari, pari al 64,8% del patrimonio forestale regionale.
Il sistema delle aree protette della Campania (parchi nazionali e regionali, riserve statali e regionali) interessa una superficie di 350.204 ettari, pari 25,6% del territorio regionale, contro una media nazionale del 10,5%.
La Rete Natura 2000 della Campania comprende invece 123 siti terrestri per una superficie complessiva di 373.031 ettari, pari al 27,3% del territorio regionale (media nazionale 19,4%).
Considerando la sola categoria "Boschi", la superficie ricadente nelle diverse tipologie di aree protette parchi nazionali e regionali, riserve statali e regionali, siti della Rete Natura 2000, è di 262.068 ettari, pari come detto in precedenza al 64,8% della superficie regionale dei boschi.
La superficie dei boschi ricadenti nei parchi nazionali e regionali e nelle riserve statali e regionali è di 194.369 ettari, corrispondente al 48,5% della superficie regionale complessiva dei boschi.
Di questi, 34.248 ettari ricadono in zona "A" di riserva integrale, i restanti 159.957 ettari in zone di parco o riserva diverse dalla zona A.
Dei 194.369 ettari di bosco che ricadono nel sistema delle aree protette regionali (parchi nazionali e regionali, riserve statali e regionali), 164.963 ettari (40,8% dei boschi regionali) ricadono anche in siti della Rete Natura 2000.
La superficie dei boschi che ricadono esclusivamente in siti della Rete Natura 2000 è invece di 67.713 ettari, pari al 16,8% della superficie regionale dei boschi.
La superficie complessiva di boschi che ricadono in Rete natura 2000 è di 232.676 ettari, pari al 57,6% della superficie regionale dei boschi.
Prescindendo per ora dagli altri tipi di vincoli e tutele che interessano le aree forestali della Campania ai sensi della legislazione vigente (vincolo paesaggistico, vincolo idrogeologico, vincoli derivanti dalla pianificazione di distretto idrografico, vincoli derivanti dai piani di gestione dei rischi ambientali) risulta evidente dai dati sinteticamente esposti come la definizione di una strategia di gestione forestale sostenibile a scala regionale non possa prescindere dal suo necessario coordinamento e integrazione con la disciplina prevista dai piani di gestione delle aree protette e dei siti facenti parte della Rete 2000.
In tale ottica di coordinamento e integrazione, la strategia di gestione forestale sostenibile che il piano forestale generale è chiamato a definire deve:

- Contribuire efficacemente al conseguimento degli obiettivi di tutela dell'ecosistema e del patrimonio naturalistico indicati dai piani e regolamenti di gestione delle aree protette e dei siti della Rete Natura 2000;
- Definire per le diverse partizioni forestali omogenee identificate alle diverse scale (generale, di coordinamento, aziendale), funzioni prevalenti (naturalistica, ricreativa, protettiva indiretta, protettiva diretta, produzione legnosa, produzione non legnosa) coerenti con il tipo e il livello di tutela di volta in volta previsto dagli strumenti di gestione delle aree protette e dei siti della Rete Natura 2000;
- Definire per le diverse partizioni forestali omogenee identificate alle diverse scale pratiche colturali compatibili con il tipo e il livello di tutela di volta in volta previsto dagli strumenti di gestione delle aree protette e dei siti della Rete Natura 2000.

Un punto fermo è costituito dai 34.248 ettari di boschi che ricadono in zona "A" di riserva integrale dei parchi e riserve nazionali e regionali.
Risulta evidente come questa porzione del patrimonio forestale regionale debba necessariamente essere destinata alla funzione prioritaria di prote-

fonte: http://burc.regione.campania.it

zione ecologica e naturalistica. Essa è costituita in prevalenza da fustaie di faggio, subordinatamente di cerro, e da boschi misti di latifoglie, di proprietà pubblica.
Ci sono poi i 159.957 ettari di bosco situati in zone di parco o riserva diverse dalla zona A; di questi, 130.715 ettari ricadono anche in siti della Rete Natura 2000. A questi si aggiungono i boschi ricadenti esclusivamente in Rete Natura 2000, che coprono una ulteriore superficie di 67.713 ettari.
I boschi che ricadono in zona parco diversa dalla A, e in Rete Natura 2000 coprono una superficie di 227.670 ettari, che rappresentano il 56% della superficie regionale coperta da boschi. In queste aree, l'attuazione di pratiche colturali anche finalizzate alla produzione legnosa e non legnosa, costituisce in accordo con la Strategia Forestale Nazionale un aspetto rilevante della gestione attiva del bosco, necessaria al mantenimento in chiave multifunzionale degli equilibri ecologici, paesaggistici, socio-economici, culturali e alla prevenzione e mitigazione dei rischi ambientali.
Il punto centrale è il coordinamento del sistema di gestione forestale sostenibile con le diverse discipline di tutela vigenti. Nella situazione attuale. la conduzione in questi boschi delle ordinarie pratiche colturali è sottoposta, in ossequio alle disposizioni di legge vigenti, all'ottenimento dei necessari nulla osta e "sentito" da parte degli enti di gestione delle aree protette e dei siti Natura 2000.
La strada indicata dal Piano forestale generale della Campania per contribuire congiuntamente a una più elevata efficacia ed efficienza del sistema complessivo di tutele, e alla riduzione dei costi amministrativi e dei tempi delle procedure autorizzative, è quello della definizione preliminare, a partire da criteri di gestione definiti dal Regolamento forestale 3/2017, di Disciplinari di gestione forestale sostenibile, per le diverse categorie forestali e tipi colturali, il cui recepimento da parte dei gestori forestali pubblici e privati sia in grado di assicurare la tutela e il rafforzamento della diversità biologica degli ecosistemi forestali della Campania, in coerenza con i Piani dei parchi, i Piani di gestione dei siti della Rete natura 2000 della Campania e il PAF (Prioritized Action Framework).
In un'ottica di necessaria cooperazione istituzionale, i Disciplinari di gestione forestale sostenibile, coerenti con la disciplina delle aree protette, con le misure di conservazione e le condizioni d'obbligo dei siti Natura 2000, potranno essere sottoposti a valutazione preliminare di compatibilità e di incidenza ambientale, anche ai sensi delle vigenti "Linee Guida Nazionali per la Valutazione di Incidenza", sempre assicurando le indispensabili valutazioni tecniche preliminari sito-specifiche. La formazione dei Disciplinari potrà anche recare contributi utili in fase di formulazione delle osservazioni ai Piani di Gestione della Rete Natura 2000 della Regione Campania con l'obiettivo di integrare in modo sempre più efficace gli obiettivi di tutela con quelli di gestione attiva e sostenibile degli ecosistemi forestali e pascolativi.
L'adesione volontaria ai Disciplinari di gestione forestale sostenibile in tal modo concepiti potrà contribuire in progresso di tempo:

- Alla valorizzazione delle attività forestali multifunzionali all'interno del sistema regionale di aree protette per il conseguimento degli obiettivi di tutela attraverso un approccio basato sulla gestione attiva delle risorse forestali;
- Alla certificazione ambientale delle produzioni legnose e non legnose provenienti dai boschi della Campania;
- A rendere più celeri gli iter autorizzativi.

La definizione dei Disciplinari di gestione forestale sostenibile sarà condotta da Regione Campania entro in collaborazione con gli Enti di ricerca, gli Enti di gestione delle aree protette, gli Ordini professionali, le associazioni professionali e d'impresa, garantendo la più ampia partecipazione pubblica.

fonte: http://burc.regione.campania.it

B2. Gestione attiva dei boschi di protezione diretta

Come descritto nel capitolo 9, il Piano Forestale Generale ha provveduto, in accordo con l'art. 8 comma 7 del Testo unico all'individuazione e riconoscimento, con un'apposita cartografia in scala 1:25.000, dei boschi di protezione diretta presenti nel territorio regionale.
Questi boschi rientrano nei "Boschi in situazione speciale" disciplinati dal Regolamento forestale regionale 2/2017 all'Art. 26 comma 1, lettera b).
Sia il Testo unico che il Regolamento forestale regionale prevedono che i boschi di protezione diretta siano in primo luogo individuati in sede di pianificazione regionale.
Il Piano forestale generale definisce al capitolo 9 le linee guida di gestione dei boschi di protezione diretta. Si tratta di pratiche da porre in essere che sono in molti casi a "macchiatico negativo" (non economicamente convenienti) ma necessarie per la sicurezza pubblica. In queste situazioni il sostegno pubblico dovrà essere assicurato predisponendo una specifica azione mirata alla gestione dei boschi di protezione diretta all'interno della tipologia di intervento del Complemento di Programmazione per lo Sviluppo Rurale (CSR) della Regione Campania 2023-2027 per la gestione agroambientale dei boschi SRA27 "Pagamento per impegni silvo-ambientali e impegni in materia di clima".
Obiettivo dell'intervento SRA 27 è quello di riconoscere un pagamento annuale per ettaro ai titolari della gestione di superfici forestali che assumono volontariamente impegni silvo-climatico-ambientali che vanno oltre le ordinarie pratiche di gestione forestale, al fine di:

- Enfatizzare il ruolo multifunzionale delle foreste.
- Promuovere la Gestione Forestale Sostenibile (GFS).
- Contribuire alla tutela ambientale, alla conservazione della biodiversità, degli habitat e dei paesaggi tradizionali forestali.

Nelle situazioni nelle quali sussistano livelli particolarmente elevati di rischio per la pubblica incolumità più direttamente connessi alle condizioni di abbandono dei boschi di protezione diretta il riferimento è costituito dall'art. 12 commi 1, 2 e 3 del Testo unico, che prevede la possibilità di intervento pubblico per l'attuazione degli interventi di gestione previsti di ripristino delle condizioni di sicurezza in caso di rischi per l'incolumità pubblica e di instabilità ecologica dei boschi, nei casi in cui i proprietari o gli aventi titolo di possesso non provvedano a ciò, conformemente alla disciplina vigente in materia di contratti pubblici, con forme di sostituzione diretta o affidamento della gestione dei terreni interessati e delle strutture ivi presenti a imprese, consorzi, cooperative o ad altri soggetti pubblici o privati ovvero mediante affidamento ad enti delegati dalle stesse per la gestione forestale, privilegiando l'imprenditoria giovanile.

B3. Incrementare la capacità delle aree forestali (boschi e pascoli) di protezione idrogeologica del territorio e tutela delle acque

In base all'Art. 12 della L.R. 11/1996, la Regione è responsabile degli interventi di rimboschimento a scopo protettivo o ad altro scopo di pubblico interesse, che rientrano nel quadro degli interventi di sistemazione idraulico- forestale e di difesa del suolo. Detti interventi riguardano, in particolare, i rimboschimenti di terreni nudi o cespugliati e la ricostituzione boschiva occorrente sia ai fini della difesa idrogeologica sia per la valorizzazione delle bellezze naturali e paesaggistiche. Fanno parte degli interventi di forestazione, oltre alle opere direttamente occorrenti per l'impianto di nuovi boschi e per la ricostituzione di quelli esistenti, tutte le altre opere ad esse strettamente connesse e consistenti nella costruzione e risanamento di strade forestali e di chiudende, nell'attuazione di impianti e misure antincendio ed ogni altra opera ritenuta necessaria per assicurare la riuscita degli interventi medesimi.
Tra gli interventi estensivi rientra anche il recupero delle aree soggette a intensi fenomeni di erosione di tipo calanchivo. In situazioni di abbandono colturale la sistemazione estensiva "in verde" dei calanchi, basata essenzialmente su indirizzi naturalistici, dovrebbe essere privilegiata rispetto alla capillare sistemazione idraulico-agraria un tempo operata direttamente dagli agricoltori. Tale sistemazione "in verde" si basa essenzialmente sulla realizzazione di briglie in terra, con la ricolonizzazione naturale aiutata dall'uomo delle risultanti colmate, corredata da semine e piantagioni di specie erbacee e arbustive nei compluvi minori e da affossature nelle aree precalanchive.
Gli interventi a carattere intensivo sono interventi per la correzione dei torrenti, interventi di drenaggio delle acque superficiali e subsuperficiali ed interventi di consolidamento dei versanti attraverso opere dotate di una propria autonomia strutturale.

fonte: http://burc.regione.campania.it

Rientrano in tale categoria anche le opere di consolidamento con tecniche di ingegneria naturalistica in legno, quali grate vive e palificate vive, i cui elementi strutturali inerti sono dimensionati al fine di garantire una funzione statica in un orizzonte temporale lungo (> 10 anni), prima della completa affermazione della vegetazione messa a dimora. Nell'ambito della presente azione è prevista la realizzazione e la manutenzione di opere sia carattere estensivo sia a carattere intensivo.
Per le opere a carattere estensivo, ad integrazione degli imboschimenti, si privilegeranno:

- gli interventi antierosivi lungo i versanti;
- gli interventi stabilizzanti, mediante messa a dimora di talee, piantagione di arbusti o di alberi, trapianto di zolle erbose, cespi e rizomi, viminate, gradonate, fascinate, cordonate.

Le aree che maggiormente richiedono interventi estensivi antierosivi e stabilizzanti sono i versanti carbonatici con suoli di origine piroclastica particolarmente vulnerabili all'erosione. Priorità deve essere assegnata anche a quelle aree, generalmente di limitata estensione in Campania, soggette a fenomeni di erosione di tipo calanchivo. Gli interventi antierosivi devono essere anche realizzati prioritariamente nelle aree colpite da incendio, entro un periodo di tempo breve dal momento dell'incendio, possibilmente prima della successiva stagione piovosa.
Per quanto attiene agli interventi di carattere intensivo, devono essere privilegiate le opere di correzione dei torrenti e di drenaggio delle acque superficali e sub superficiali, nonché le opere di consolidamento necessarie per il sostegno delle scarpate lungo sentieri e strade forestali e per il sostegno delle sponde degli alvei, nei casi in cui il movimento franoso può interferire con il libero deflusso delle acque di piena o determinare un eccesso di deposito di materiale solido in alveo, con conseguente incremento delle condizioni pericolosità idraulica a valle.
La registrazione delle opere di sistemazione idraulico-forestale a carattere intensivo è opportuna per tutti quegli interventi per i quali sia richiesta l'autorizzazione o la dichiarazione.
La registrazione di queste opere si attua attraverso:

- l'indicazione del soggetto attuatore;
- l'adozione di un piano di monitoraggio dello stato di funzionalità dell'opera e di un piano di manutenzione;
- l'indicazione dei dati tipologici e dimensionali principali;
- l'indicazione dei dati essenziali per la loro collocazione geografica;
- l'archiviazione di questi dati nel Sistema Informativo delle Opere di Sistemazione Idraulico-forestale.

Il Sistema Informativo delle Opere di Sistemazione Idraulico-forestale è parte integrante delle Sistema Informativo Generale delle Infrastrutture Forestali della Regione Campania.
L'obiettivo del Sistema Informativo è quello di raccogliere e condividere fra tutti i soggetti interessati (sia pubblici sia privati), i dati sulle opere di sistemazione idraulico-forestale a carattere intensivo, utili alla programmazione e progettazione degli interventi, nonché all'attività di monitoraggio sullo stato di funzionalità delle stesse.
Il Sistema Informativo rappresenta in formato vettoriale georeferenziato secondo sistema di proiezione cartografica Gauss-Boaga Roma 40 in coordinate piane o altro sistema di proiezione cartografica condiviso nelle pubbliche amministrazioni, l'ubicazione e l'estensione dell'opera, con associati i seguenti dati essenziali per l'attività di monitoraggio e manutenzione:

- finalità dell'opera;
- tipologia di materiali adottati;
- dimensioni dell'opera in elevazione ed in fondazione;
- soggetto attuatore e soggetto responsabile della manutenzione dell'opera;
- stato di conservazione e di efficienza;
- anno di costruzione;
- anno degli ultimi interventi di manutenzione (soggetti a dichiarazione).

In sintesi, le misure previste per l'attuazione di questa azione sono:

- creazione del sistema informativo delle opere pubbliche di sistemazione idraulico-forestale a carattere intensivo;
- realizzazione e manutenzione di sistemazioni idraulico-forestali di ingegneria naturalistica, per il contenimento dell'erosione superficiale, la stabilizzazione di frane superficiali e la correzione dei torrenti;
- gestione della vegetazione lungo le sponde dei corsi d'acqua minori;
- recupero delle aree calanchive;
- realizzazione di opere pubbliche di salvaguardia idrogeologica nelle aree gravemente colpite da

fonte: http://burc.regione.campania.it

incendi boschivi conformemente all'Art.10 legge 353/2000.

Per gli altri rimboschimenti storici presenti nel territorio regionale, il Piano forestale generale promuove interventi programmati di cura e messa in sicurezza, mediante la definizione di progetti da attuarsi in collaborazione con gli Enti delegati nel quadro delle politiche pubbliche di forestazione di cui al Documento esecutivo di programmazione forestale redatto a cadenza triennale in attuazione della dall'art. 5 bis della legge regionale 7 maggio 1996, n. 1.

Tali progetti sono finanziati dal FESR Campania 2021-2027, Azione 2.4.3 ("Promuovere un'impostazione sistemica e precauzionale migliorando la resilienza attraverso interventi mirati a ridurre il livello di esposizione ai rischi connessi al clima"), avente l'obiettivo di ridurre il livello di esposizione al rischio idrogeologico connesso al clima e alla geomorfologia dei luoghi, migliorandone la resilienza e privilegiando, laddove possibile, soluzioni nature-based. L'azione 2.4.3 finanzia tra l'altro interventi di:

- mitigazione del rischio idrogeologico (stabilizzazione dei versanti, sistemazione fluviale, salvaguardia delle coste alte e basse);
- monitoraggio e controllo del territorio e delle risorse naturali;
- ripristino e recupero delle dinamiche idro-morfologiche;
- manutenzione e programmazione di difesa fluviale su reticoli idrografici, al fine di ridurre il livello di esposizione ai rischi connessi al clima;
- contrasto all'instabilità dei versanti e all'erosione costiera; di riduzione del rischio di incendi, anche mediante prevenzione e gestione attiva del territorio;
- realizzazione, gestione e potenziamento delle infrastrutture verdi e dei servizi ecosistemici offerti dalla Rete Natura 2000 funzionali alla riduzione dei rischi connessi ai cambiamenti climatici.

B4. Prevenzione attiva dei rischi naturali o antropici, incendi, calamità naturali ed eventi catastrofici

Nel ventennio 2003-2023 si sono registrati in Campania 58.140 incendi di aree forestali che hanno interessato una superficie di circa 115.383 ettari, dei quali 63.938 ettari di aree boscate, 51.446 di aree non boscate. Alcune annate (2007, 2017) hanno fatto registrare picchi anomali della superficie forestale percorsa da incendi, ma il verificarsi di periodi critici, di tipo emergenziale, caratterizzati da una particolare recrudescenza del fenomeno, rappresenta purtroppo periodicamente un'emergenza che riguarda l'intero bacino del Mediterraneo, strettamente collegata con il cambiamento climatico globale.

In tale mutato contesto le azioni del Piano forestale generale intendono contribuire al rafforzamento della necessaria integrazione e cooperazione fra le diverse competenze in materia di prevenzione e lotta attiva agli incendi.

Il Piano forestale generale con le sue diverse azioni promuove in modo trasversale interventi gestionali finalizzati ad accrescere la resistenza e la resilienza delle coperture forestali nei confronti degli incendi boschivi, nell'ottica di una prevenzione attiva del fenomeno. L'idea di base è che la gestione attiva e capillare del patrimonio boschivo regionale rappresenti la necessaria precondizione per una effettiva messa in sicurezza dei territori.

In chiave preventiva, nel quadro degli approcci e tecniche utilizzabili, il Piano forestale generale della Campania promuove l'uso del "fuoco prescritto", come strumento strategico di prevenzione attiva contro gli incendi boschivi, nel rispetto delle "Prescrizioni tecniche e procedure operative inerenti alle applicazioni di fuoco prescritto in Regione Campania", approvate con DDR n.341 del 22/12/2020 in attuazione della Legge regionale 13 giugno 2016, n.20. Il fuoco prescritto è "la tecnica di applicazione esperta, consapevole e autorizzata del fuoco su superfici pianificate, adottando precise prescrizioni e procedure operative, per conseguire specifici obiettivi integrati nella pianificazione territoriale" (FAO 2006).

L'impiego della tecnica preventiva del fuoco prescritto prevede la definizione e l'approvazione di un progetto sito-specifico che valuti gli aspetti strutturali, funzionali ed ecologici della copertura forestale, arbustiva ed erbacea, definisca il comportamento del fronte di fiamma e gli effetti desiderati, le prescrizioni e le procedure operative per

fonte: http://burc.regione.campania.it

conseguire obiettivi gestionali stabiliti dagli strumenti pianificatori.
Il ricorso al fuoco prescritto è comunque vietato nei siti della Rete Natura 2000 della Campania i cui piani di gestione prevedano misure di conservazione specifiche al riguardo.
Le politiche forestali pubbliche finanziate dal FESR e attuate dagli Enti a ciò delegati dalla legge regionale 11/96 (comunità montane, province, città metropolitana di Napoli) con l'impiego degli operai forestali prevendono specificatamente interventi di messa in sicurezza e prevenzione attiva attraverso il miglioramento strutturale del bosco, il decespugliamento selettivo del sottobosco con l'asportazione della vegetazione instabile, deperiente o secca, la cura delle fasce forestali di contatto e interfaccia con la rete infrastrutturale e gli insediamenti antropici.
Tali attività sono programmate a cadenza triennale dal Documento esecutivo di programmazione forestale (DEPF), secondo quanto previsto dall'art. 5 bis della legge regionale 7 maggio 1996, n. 11 ("Modifiche ed integrazioni alla Legge Regionale 28 febbraio 1987, n. 13, concernente la delega in materia di economia, bonifica montana e difesa del suolo").
La programmazione degli interventi di lotta attiva sono programmati e attuati secondo quanto stabilito dall'Assessorato ai Lavori Pubblici e Protezione Civile Regione Campania *nel Piano regionale per la programmazione delle attività di previsione, prevenzione e lotta attiva contro gli incendi boschivi*. È importante a questo riguardo sottolineare le importanti sinergie che si verificano tra le azioni forestali coordinate dalla Direzione generale politiche agricole, e il piano AIB regionale predisposto e attuato dalla Protezione Civile, tenuto conto che gli interventi di lotta attiva si basano in larga misura sull'impiego della macchina operativa stabilmente messa in campo dagli Enti delegati per la realizzazione degli interventi di gestione preventiva dei boschi: una macchina operativa che ha fornito nel 2023 al servizio AIB 875 unità di personale, organizzate in 85 squadre di intervento.
In particolare, alla luce anche della valutazione dei risultati conseguiti nel biennio 2022 -2023, allo scopo di assicurare il perseguimento degli obiettivi di messa in sicurezza dell'infrastruttura forestale regionale definiti nel presente documento, il DEPF per il triennio 2024-2026 ha definito l'obiettivo di attuare gli interventi colturali di prevenzione e messa in sicurezza su una superficie forestale stimata in 3.370 ettari annui, puntando su un ulteriore rafforzamento della capacità progettuale e operativa degli Enti delegati, realisticamente perseguibile anche grazie agli investimenti effettuati per l'adeguamento tecnologico (acquisto di macchine operatrici).
Queste politiche e interventi potranno anche essere finanziati con risorse a valere sulla programmazione 2021-2027 del POR FESR Campania, Obiettivo specifico RSO2.4. "Promuovere l'adattamento ai cambiamenti climatici, la prevenzione dei rischi di catastrofe e la resilienza, prendendo in considerazione approcci ecosistemici", e più specificatamente l'Azione 2.4.3. "Promuovere un'impostazione sistemica e precauzionale migliorando la resilienza attraverso interventi mirati a ridurre il livello di esposizione ai rischi connessi al clima".

C. Curare e gestire le risorse forestali della Campania

Un terzo gruppo di azioni del Piano forestale generale risponde all'obiettivo di gestire e valorizzare con strategie di intervento specifiche e appropriate, alcune tipologie forestali di particolare significato e valore ambientale, paesaggistico e storico-culturale, conservativo, protettivo. In particolare, a partire dalla Carta delle risorse forestali, il Piano forestale generale pone l'attenzione sulle seguenti tipologie forestali.

C1. Curare i rimboschimenti storici della Campania

I rimboschimenti storici che lo Stato unitario ha impiantato in Campania grazie alle politiche pubbliche e agli interventi a finalità ambientale e sociale, attuate a più riprese nel corso del XX secolo ai sensi e per gli effeti del R.D. 3267/1923, interessano a scala regionale, in accordo con le analisi cartografiche condotte per la formazione del presente piano, una superficie di circa 15.000 ettari. Si tratta di boschi per la maggior parte a conifere, che rappresentano una componente identitaria di importanti paesaggi costieri, vulcanici, collinari e montani della regione, e che necessitano dopo decenni di sostanziale abbandono di un programma specifico di cura, gestione, valorizzazione.

Le condizioni ecologico-strutturali di questo importante patrimonio riflettono la sostanziale carenza di una cura e manutenzione attiva pluridecennale: eccessiva densità, sfilatura, rinnovazione stentata, accumulo abonorme di lettiera e necromassa, tutti aspetti che comportano una elevata vulnerabilità di questi boschi nei confronti delle avversità, attacchi parassitari, incendi. Si pensi a tale riguardo ai rilevanti danni provocati dalla cocciniglia tartaruga Toumeyella parvicornis e al ruolo negativo che le ingenti quantità di melata prodotti dal parassita hanno avuto nell'alimentare gli incendi del 2017 delle pinete del Vesuvio.

La definizione di un programma regionale di cura e manutenzione straordinaria del patrimonio storico, ambientale e paesaggistico costituito dai rimboschimenti novecenteschi rappresenta una priorità nell'ambito delle politiche forestali pubbliche che il presente piano è chiamato a definire.

Gli interventi di diradamento, di asportazione della vegetazione instabile, deperiente o secca, la rimozione della necromassa in eccesso, la cura delle fasce forestali di contatto e interfaccia con la rete infrastrutturale e gli insediamenti antropici rivestono carattere di urgenza, anche allo scopo di favorire, in una prospettiva necessariamente evolutiva e non cristallizzata dei rimboschimenti storici, le dinamiche di rinnovazione delle conifere e delle specie autoctone.

Una importante esperienza pilota attuativa di questa strategia di azione è quella programmata dalla Giunta regionale con la realizzazione dell'intervento di "Reimpianto totale, riqualificazione e messa in sicurezza della foresta demaniale di Castel Volturno e la messa in sicurezza e tutela di tutta le aree dunali contermini, migliorando la resilienza attraverso interventi mirati a ridurre il livello di esposizione ai rischi connessi al clima". L'intervento è stato attuato per stralci successivi, a partire dal 2020, sulla base di un piano di gestione forestale, con finanziamenti a valere sui fondi POC e FSC 2014-2020 e sul FESR 2021-2027, per un importo complessivo di circa 10 milioni.

La pineta di Castel Volturno interessata dall'intervento è uno dei rimboschimenti a conifere realizzato negli anni 40' furono lungo i litorali sabbiosi dell'Italia meridionale, con l'obiettivo di costituire fasce arboree a protezione delle ampie aree agricole bonificate e oggetto della "riforma agraria" negli anni 50. Come tutte le pinete impiantate in quegli anni, anche la pineta di Castel Volturno non è stata mai "governata" ossia gestita attraverso forme di selvicoltura idonee. All'avvio dello studio del programma (anno 2018) la pineta si presentava come un bosco fitto con densità eccessiva e non regolare, priva di qualsiasi manutenzione con disseccamenti stimati intorno al 25-30%. Lo stato fitosanitario si è aggravato nel giro di due/tre anni a seguito dell'attacco parassitario della cocciniglia tartaruga (Toumeyella parvicornis), con la la morte delle essenze che è passata dal 30% al 99%.

Obiettivo del progetto è stato pertanto quello di ricostituire l'intero ecosistema, in accordo con le misure di conservazione dei SIC vigenti (IT8010020 "Pineta di Castelvolturno"), con l'abbattimento degli esemplari morti, il reimpianto con specie coerenti con le potenzialità ecologiche del sito, la pulizia e la messa in sicurezza delle porzioni ancora vitali della pineta.

Per gli altri rimboschimenti storici presenti nel territorio regionale, il Piano forestale generale promuove interventi programmati di cura e messa in sicurezza, mediante la definizione di progetti da attuarsi in collaborazione con gli Enti delegati nel quadro delle politiche pubbliche di forestazione di cui al Documento esecutivo di programmazione forestale redatto a cadenza triennale in attuazione della dall'art. 5 della legge regionale 7 maggio

fonte: http://burc.regione.campania.it

1996, n. 1, come modificato dall'articolo 35, comma 1, lettera c) della legge regionale 27gennaio 2012.
Tali progetti sono finanziati dal FESR Campania 2021-2027, Azione 2.4.3 ("Promuovere un'impostazione sistemica e precauzionale migliorando la resilienza attraverso interventi mirati a ridurre il livello di esposizione ai rischi connessi al clima"), avente l'obiettivo di ridurre il livello di esposizione al rischio idrogeologico connesso al clima e alla geomorfologia dei luoghi, migliorandone la resilienza e privilegiando, laddove possibile, soluzioni nature-based. L'azione 2.4.3 finanzia tra l'altro interventi di:

- mitigazione del rischio idrogeologico (stabilizzazione dei versanti, sistemazione fluviale, salvaguardia delle coste alte e basse);
- monitoraggio e controllo del territorio e delle risorse naturali;
- ripristino e recupero delle dinamiche idro-morfologiche;
- manutenzione e programmazione di difesa fluviale su reticoli idrografici, al fine di ridurre il livello di esposizione ai rischi connessi al clima;
- contrasto all'instabilità dei versanti e all'erosione costiera; di riduzione del rischio di incendi, anche mediante prevenzione e gestione attiva del territorio;
- realizzazione, gestione e potenziamento delle infrastrutture verdi e dei servizi ecosistemici offerti dalla Rete Natura 2000 funzionali alla riduzione dei rischi connessi ai cambiamenti climatici.

Tali interventi potranno essere sviluppati anche in complementarità con il FEASR. Saranno valorizzate, inoltre, le iniziative progettuali di tutela ambientale fondate su strumenti partecipativi (i.a. Contratti di Fiume).

C2. Valorizzare in chiave multi-funzionale le foreste urbane e periurbane

Il Regolamento forestale 3/2017 prevede all'Art. 15 ("Boschi urbani") la possibilità, per i proprietari pubblici e privati, di richiedere per i parchi urbani e i giardini storici caratterizzati dalla prevalente presenza di vegetazione forestale, l'attribuzione della qualifica di "bosco urbano", al fine di assicurare l'effettuazione delle cure gestionali necessarie alla loro conservazione.
In considerazione della loro destinazione ad aree multifunzionali per il paesaggio, il mantenimento della biodiversità in ambiente urbano, la mitigazione climatica, la ricreazione pubblica e la vita all'aria aperta, i boschi urbani sono gestiti con il ricorso ai sistemi di governo e ai modelli gestionali definiti nei diversi documenti di pianificazione e programmazione forestale regionale, con la possibilità di accedere ai finanziamenti ed aiuti previsti dal presente Regolamento e di mettere in atto forme di collaborazione operativa con la Struttura Regionale Centrale e con gli Enti delegati territorialmente competenti.
Le analisi cartografiche condotte per la formazione del Piano forestale generale evidenziano come siano presenti in Campania circa 32.000 ettari di foreste urbane e boschi di prossimità, localizzate cioè a contatto diretto con le aree urbanizzate, o addirittura al loro interno, o comunque entro una fascia di 500 m dal confine urbano.
Una porzione significativa delle foreste urbane della Campania, 4.200 ettari circa, ricade nel sistema nei parchi urbani di interesse regionale istituiti in attuazione della Legge regionale n. 17 del 7-10-2003. Uno dei maggiori esempi riguarda proprio il capoluogo partenopeo, con le selve castanili del Parco Metropolitano delle Colline di Napoli
La foresta urbana di prossimità è una infrastruttura ecologica che abbiamo imparato ad apprezzare negli anni di pandemia. Le foreste urbane contribuiscono a rendere più sostenibili e abitabili le nostre città, migliorano la qualità della vita e la salute delle persone. La loro cura e gestione appropriata risponde agli obiettivi di massimizzare i benefici legati ai molteplici servizi ecosistemici che esse producono, a beneficio della qualità urbana complessiva, in termini di mitigazione dell'effetto "isola di calore", di protezione del suolo, di biodiversità, di disponibilità per i cittadini di spazi verdi di prossimità, ad elevata naturalità, per la ricreazione, la salute, la vita all'aria aperta.

fonte: http://burc.regione.campania.it

La gestione forestale sostenibile o gestione attiva dei boschi urbani è un'esigenza inderogabile anche per garantire una adeguata prevenzione dei rischi ambientali che connotano le aree di contatto tra sistemi urbani e forestali, con specifico riferimento agli incendi di interfaccia, e alle dinamiche di rischio idrogeologico.

Si tratta di criticità che hanno assunto in alcuni momenti, in special modo nell'area metropolitana regionale Caserta-Napoli-Salerno, carattere di emergenza ambientale vera e propria, si pensi alle frane di Quindici e Sarno del 1998, a quelle di Casamicciola del 2022, ai vasti incendi che nel 2017 hanno interessato le pinete del Vesuvio. In tutti questi casi, la crisi di importanti sistemi forestali al contatto con la città genera dinamiche di rischio che finiscono con l'interessare porzioni non limitate del tessuto urbano e della popolazione che lo abita.

Nell'ambito delle analisi cartografiche per la redazione del Piano forestale generale si è proceduto all'identificazione cartografica di dettaglio delle foreste urbane e periurbane, propedeutica alla definizione di linee guida di gestione appropriate, finalizzate a massimizzarne il ruolo ecologico e a controllare il rischio ambientale.

Le linee guida di gestione delle foreste urbane si basano sull'assunto che esse necessitino di una adeguata pianificazione gestionale, comprensiva anche degli aspetti legati alle funzioni e attività molteplici che in esse si svolgono, di natura culturale, sociale, ricreativa, salutistica e di fitness; come anche di una efficiente, efficace e continua opera di cura attiva, in misura e con un'attenzione non inferiore a quelle delle foreste localizzate in territori a bassa urbanizzazione, o non urbanizzati.

Garantire l'integrità degli ecosistemi forestali integrati nel sistema urbano non è semplice: in molti casi è possibile osservare come i boschi urbani siano diffusamente interessati da fenomeni di abbandono gestionale, incuria, scarsa manutenzione, a causa di un intreccio di concause che attengono alla difficoltà attuale per le amministrazioni di farsi pienamente carico della loro gestione attiva, come anche di controllare, prevenire e reprimere i comportamenti individuali e collettivi impropri, dannosi, pericolosi, per la scarsità di risorse finanziarie ma anche tecnico-professionali e gestionali.

Alla luce delle considerazioni svolte, appare evidente come la valorizzazione delle foreste urbane della Campania richieda tra l'altro la capacità delle pubbliche amministrazioni di beneficiare in maniera integrata delle risorse di volta in volta disponibili, tra le quali si ricorda a titolo di esempio l'intervento SRG07 del CSR Campania 2023-2027, che finanzia azioni di cooperazione per lo sviluppo rurale, locale e smart villages e per la sostenibilità ambientale finalizzate a:

- favorire l'aggregazione fra aziende agricole e/o forestali, enti e attori locali impegnati nella gestione delle risorse ambientali a livello locale, aggregazioni tra i proprietari e conduttori di terreni forestali, anche promuovendo il contributo delle aziende agricole alla gestione degli spazi verdi urbani in accordo con l'art. 15 delDecreto Legislativo 18 maggio 2001, n. 228 "Orientamento e modernizzazione del settore agricolo";
- realizzare progetti collettivi a finalità ambientale (ad esempio, volti a mitigare gli effetti dei cambiamenti climatici, utilizzare in maniera efficiente le risorse idriche, preservare la biodiversità agraria e naturalistica);
- predisporre/aggiornare i Piani di gestione delle superfici forestali pubbliche/private e la loro integrazione con altri strumenti di pianificazione territoriale.

La strategia del Piano di gestione forestale della Campania ricomprende anche le azioni di tutela e gestione sostenibile delle alberature urbane, finalizzate a garantire la pubblica sicurezza e la produzione dei servizi ecosistemici essenziali per il miglioramento dell'ambiente urbano e la mitigazione dei cambiamenti climatici.

Le foreste urbane e di prossimità della Campania sono anche ambiti elettivi per la realizzazione di interventi programmati di cura e gestione attiva da attuarsi in collaborazione con gli Enti delegati nel quadro delle politiche pubbliche di forestazione di cui al Documento esecutivo di programmazione forestale redatto a cadenza triennale in attuazione della dall'art. 5 della legge regionale 7 maggio 1996, n. 11, finanziati dal FESR Campania 2021-2027, Azione 2.4.3 ("Promuovere un'impostazione sistemica e precauzionale migliorando la resilienza attraverso interventi mirati a ridurre il livello di esposizione ai rischi connessi al clima"), avente come obiettivo, tra gli altri, la realizzazione, gestione e potenziamento delle infrastrutture verdi e dei servizi ecosistemici offerti dalla Rete Natura 2000 funzionali alla riduzione dei rischi connessi ai cambiamenti climatici.

fonte: http://burc.regione.campania.it

C3. Curare e proteggere i boschi planiziali della Campania

Le pianure della Campania sono le aree più popolate e urbanizzate del territorio regionale: pur rappresentando solo il 25% circa del territorio complessivo, esse ospitano i tre quarti delle aree edificate e il 60% della popolazione regionale.
Come detto in precedenza, le aree forestali della Campania si estendono su una superficie di 491.259 ettari, pari al 35,9 del territorio regionale. Nei sistemi di pianura, le aree forestali hanno un'estensione complessiva di 22.381 ettari, pari al 6,43% della superficie complessiva delle pianure. Per tutti questi motivi, la cura e la conservazione dei boschi planiziali è un obiettivo prioritario del Piano forestale generale.
Nel mosaico di usi urbani e agricoli prevalenti, ad elevata pressione antropica, che contraddistingue le aree di pianura del territorio regionale, le aree forestali planiziali ancora presenti rappresentano, oltre che importanti aree di compensazione ecologica, persistenze di rilevantissimo valore testimoniale della copertura di boschi planiziali che 2.500 anni fa copriva a perdita d'occhio la pianura.
In accordo con la carta forestale elaborata nell'ambito della formazione del presente piano, i boschi di pianura della Campania sono costituiti da:

- 13.952 ettari di boschi planiziali, costituiti in prevalenza da boschi di querce caducifoglie;
- 6.903 ettari di boschi igrofili ripariali a Salice e Pioppo, nelle aree spondali e di pertinenza fluviale dei corsi d'acqua che solcano la pianura;
- 1.526 di boschi delle pianure costiere, in corrispondenza delle aree dunari e interdunari dei litorali bassi delle pianure del Garigliano, Volturno, Sele. Queste aree forestali sono costituite da boschi a Pino domestico, foreste di leccio, formazioni alte a macchia mediterranea.

La riduzione nell'ultimo decennio della superficie dei boschi igrofili e ripariali della Campania (-6,2%) è uno dei dati in controtendenza dell'Inventario forestale 2015. La contrazione di questi habitat di particolare significato ecologico e paesaggistico è evidentemente legata alla pressione d'uso che interessa le aree ripariali, ma anche localmente a interventi pubblici giustificati da esigenze di governo e sicurezza idraulica.
Ai fini della cura e tutela boschi planiziali ripariali presenti nel territorio regionale, così come identificati nella cartografia di piano, il Piano forestale generale promuove azioni specifiche di concertazione istituzionale tra le diverse competenze in materia forestale, di gestione e tutela della risorsa idrica, di prevenzione del rischio idraulico, ai fini della definizione disciplinari di gestione sostenibile dei boschi ripariali in grado di assicurarne le funzioni ecologiche e di sicurezza idraulica.
Un'azione specifica riguarda anche le diverse tipologie di ecosistemi forestali costieri, di costa bassa (es. Foresta di Cuma), con l'obiettivo di assicurarne la cura attiva e la tutela in contesti interessati da una forte pressione turistico-ricreativa. Per i boschi costieri a Pino domestico si rimanda alle indicazioni di piano di cui all'azione C1 "Curare i rimboschimenti storici della Campania" (vedi anche il Piano di gestione forestale della foresta demaniale di Cuma).
Per i boschi planiziali di proprietà pubblica, il Piano forestale generale promuove interventi programmati di cura e gestione attiva anche mediante la definizione di progetti da attuarsi in collaborazione con gli Enti delegati nel quadro delle politiche pubbliche di forestazione di cui al Documento esecutivo di programmazione forestale redatto a cadenza triennale in attuazione della dall'art. 5 della legge regionale 7 maggio 1996, n. 11.
In considerazione del valore specifico assegnato ai boschi planiziali dal presente Piano, oltre che dal Piano paesaggistico regionale, nella redazione dei propri strumenti urbanistici i Comuni individuano specificatamente i boschi planiziali presenti nel territorio comunale, definendo idonee prescrizioni di cura e tutela e prevedendo idonee aree rurali e agricole di interposizione con il tessuto urbano e infrastrutturale, con valore di cuscinetto ecologico.
Il Complemento di sviluppo rurale della Campania 2023-2027 finanzia alcune tipologie di interventi in grado di concorrere efficacemente agli obiettivi di cura e tutale dei boschi planiziali presenti nel territorio regionale:

- Conservazione e mantenimento di aree di margine (ecotoni) (Intervento SRA.27.1.)
- Mantenimento impianti di imboschimento naturaliformi su superfici agricole (Intervento SRA28.1.);
- Mantenimento impianti imboschimenti naturaliformi su superfici non agricole (Intervento SRA28.4.);
- Impianto di imboschimento naturaliforme su superfici agricole. (Intervento SRD05.1);
- Elaborazione di Piani di gestione forestale o strumenti equivalenti per superfici singole e/o associate, nonché la revisione dei Piani di gestione e strumenti equivalenti in scadenza o scaduti, secondo quanto disposto dalla normativa regionale vigente) (Intervento SRD15);

fonte: http://burc.regione.campania.it

- Investimenti nelle aziende agricole per la diversificazione in attività non agricole (attività turistico-ricreative e attività legate alle tradizioni rurali e alla valorizzazione delle risorse naturali e paesaggistiche) (Intervento SRD03);
- Investimenti non produttivi finalizzati ad arrestare e invertire la perdita di biodiversità e a preservare il paesaggio rurale (realizzazione di formazioni arbustive e arboree a tutela della biodiversità: realizzazione di infrastrutture ecologiche (boschetti, sistemi macchia radura); realizzazione e/o ripristino della funzionalità di infrastrutture ecologiche connesse all'acqua (laghetti, stagni, aree umide, prati umidi, fontanili, lanche, maceri, canali di adduzione per aree umide, pozze e altre strutture di abbeverata, anche per la funzione di fitodepurazione); (Intervento SRD04.1);
- ripristino o impianto della vegetazione in alveo (macrofite) e sulle sponde (fasce riparie) nel reticolo idrico minore quali il ripristino e/o l'impianto della vegetazione acquatica e ripariale o altri interventi di riqualificazione ecologica (Intervento SRD04.2);
- realizzazione fasce tampone, siepi e filari arborei e/o arbustivi: con funzione di riduzione dell'inquinamento nelle acque superficiali naturali ed artificiali. (Intervento SRD04.2);
- Cooperazione per lo sviluppo rurale, locale e smart villages - Cooperazione per la sostenibilità ambientale - Finalizzata a:
    - favorire l'aggregazione fra aziende agricole e/o forestali, enti e attori locali impegnati nella gestione delle risorse ambientali a livello locale, aggregazioni tra i proprietari e conduttori di terreni forestali;
    - realizzare progetti collettivi a finalità ambientale (ad esempio, volti a mitigare gli effetti dei cambiamenti climatici, utilizzare in maniera efficiente le risorse idriche, preservare la biodiversità agraria e naturalistica);
    - predisporre/aggiornare i Piani di gestione delle superfici forestali pubbliche/private e la loro integrazione con altri strumenti di pianificazione territoriale. (Intervento SRG07).

C4. Tutela e valorizzazione dei castagneti da frutto della Campania

L'azione C4 sulla base di quanto specificatamente previsto nella Strategia Forestale Nazionale (SFN) di cui all'art. 6 del TUFF, in considerazione della particolare rilevanza che la castanicoltura da frutto storicamente riveste nel territorio e nei paesaggi della Campania. La SFN, preso atto della richiamata esclusione dei castagneti da frutto dalla definizione giuridica di bosco ai sensi dell'art. 5 del TUFF, nell'ambito della Sotto-Azione A.4.3 promuove al punto A.4.3 d) il "mantenimento e il recupero dei castagneti da frutto e la castanicoltura tradizionale quale componente storica del paesaggio rurale, collinare e montano".

I dati del VII Censimento generale dell'agricoltura ISTAT relativi all'anno 2020 confermano il ruolo leader della Campania nel comparto della castanicoltura da frutto, con 3.591 aziende che gestiscono una superficie produttiva in attualità di coltura di 11.952 ettari.

L'Inventario forestale nazionale 2014 ha rilevato la presenza in Campania di complessivi 55.986 ettari di boschi di castagno, di cui 20.372 costituiti da castagneti da frutto, 29.717 ettari da cedui castanili, 5.896 ettari da tipi colturali non specificati.

La Campania produce il 50% delle castagne italiane in termini quantitativi, questa quota scende intorno al 40% se si considera il valore della produzione. Dopo la crisi del cinipide (ma l'emergenza ora è il "marciume gessoso" o "marciume bruno" causata dal fungo Gnomoniopsis castaneae), la diffusione dei metodi di produzione biologica, con particolare riferimento agli aspetti di difesa fitosanitaria e fertilizzazione, è stata individuata dai produttori campani come la principale strategia di qualificazione e valorizzazione del prodotto.

La Regione Campania, ha escluso con L.R. 10/2017 art. 39 i castagneti da frutto in attualità di coltura dalla definizione di "bosco", in accordo con l'art. 5 comma 1 lett. b) del Testo unico in materia di foreste e filiere forestali, demandando a un apposito regolamento la definizione della disciplina per la gestione sostenibile dei castagneti da frutto in attualità di coltura.

In attuazione della L.R. 10/2017 la Giunta regionale ha approvato il Regolamento regionale n. 11 del 12 novembre 2018, n. 11 di tutela e gestione sostenibile dei castagneti da frutto in attualità di coltura, con l'obiettivo di conciliare la funzione produttiva con la molteplicità dei servizi ecosistemici che questo particolare tipo di coltivazione legnosa permanente è in grado di assicurare.

fonte: http://burc.regione.campania.it

Oltre alle disposizioni del Regolamento 11/2018 finalizzate alla preservazione degli aspetti di multifunzionalità dei castagneti da frutto, la gestione di questi ultimi deve anche tener conto delle norme paesaggistiche vigenti, che riconoscono il valore paesaggistico rilevante dei castagneti da frutto in Campania, come componente identitaria di importanti paesaggi regionali (Complesso vulcanico di Roccamonfina, Monti Lattari, Monti Picentini, Monti Vesole e Soprano), tutelandone la struttura, l'estensione, le sistemazioni tradizionali.
Gli interventi di cura, gestione sostenibile e tutela dei castagneti localizzati nelle aree di pregio paesaggistico del territorio regionale sono oggetto di uno specifico regime di aiuto previsto dalla Misura SRA 25 del CSR Campania 2023-2027 ("Tutela delle colture arboree a valenza ambientale e paesaggistica").
Per i castagneti da frutto non soggetti a regolare pulizia ed abbandonati, l'intervento di ripristino è regolato dal Testo unico in materia di risorse forestali art. 5 comma 2 lett. a), nonché dall'art. 154 bis del Regolamento forestale regionale 3/2017.
Per una stima dei castagneti da frutto in stato di abbandono può essere utile il confronto tra il dato relativo alla superficie produttiva censita da ISTAT, che ragionevolmente meglio approssima quello dei castagneti da frutto in attualità di coltura, e quello dell'Inventario forestale nazionale 2015. In questo modo è possibile dunque stimare la superficie dei castagneti da frutto in stato di abbandono in circa 8.500 ettari.
Il Piano forestale generale prevede la definizione di opportune linee guida per la gestione dei castagneti da frutto in stato di abbandono allo scopo di guidarne l'evoluzione verso assetti ecologico-strutturali a maggiore stabilità, biodiversità, resistenza/resilienza ai diversi tipi di avversità e rischi ambientali.

C5. Tutelare i boschi vetusti e gli alberi monumentali

La Legge 14 gennaio 2013, n. 10 "Norme per lo sviluppo degli spazi verdi urbani" pubblicata sulla Gazzetta Ufficiale n.27 del 1-2-2013, prevede all'articolo 7 ("Disposizioni per la tutela e la salvaguardia degli alberi monumentali, dei filari e delle alberate di particolare pregio paesaggistico, naturalistico, monumentale, storico e culturale") la definizione di "albero monumentale" con riferimento a tre tipologie:

- L'albero ad alto fusto isolato o facente parte di formazioni boschive naturali o artificiali ovunque ubicate ovvero l'albero secolare tipico, che possono essere considerati come rari esempi di maestosità e longevità, per età o dimensioni, o di particolare pregio naturalistico, per rarità botanica e peculiarità della specie, ovvero che recano un preciso riferimento ad eventi o memorie rilevanti dal punto di vista storico, culturale, documentario o delle tradizioni locali;
- I filari e le alberate di particolare pregio paesaggistico, monumentale, storico e culturale, ivi compresi quelli inseriti nei centri urbani;
- gli alberi ad alto fusto inseriti in particolari complessi architettonici di importanza storica e culturale, quali ad esempio ville, monasteri, chiese, orti botanici e residenze storiche private.

Con il Decreto interministeriale del 23 ottobre 2014 sono stati stabiliti i principi, i criteri, e le modalità operative per censire gli alberi monumentali d'Italia.
L'obiettivo primario è stato garantire un regime di tutela e dettare forme di gestione che siano rispettose degli alberi e dei sistemi omogenei di alberi (gruppo, filare), i quali, per tali peculiarità e pregevolezza, essenzialmente devono essere considerati alla stessa stregua dei monumenti.
La legge stabilisce che siano i Comuni ad effettuare il censimento degli esemplari monumentali ricadenti sul proprio territorio, trasmettendolo quindi alla Regione compente per territorio, alla quale spetta il compito di redigere l'Elenco Regionale e, a sua volta, di trasmettere tale elenco e i suoi aggiornamenti al Ministero per le Politiche Agricole, Alimentari e Forestali (MIPAAF), attuale Ministero Agricoltura, Sovranità Alimentare e Forestale (MASAF).
La Regione Campania – Direzione Generale per le Politiche Agricole, Alimentari e Forestali, al fine di avvalersi di un criterio generale univoco per la gestione delle segnalazioni da parte dei Comuni, ha istituito, con i decreti direttoriali n.523 del

fonte: http://burc.regione.campania.it

24/11/2015 e successivo n.21 del 06/06/2016, una Commissione tecnica regionale sugli alberi monumentali, deputata alla istruttoria degli elenchi comunali trasmessi dai diversi Comuni, riportanti le proposte di attribuzione del carattere di monumentalità. Il lavoro svolto dalla Commissione, dal 2015 al 2025, ha permesso l'iscrizione nell'Elenco Regionale di circa 400 esemplari di alberi e sistemi omogenei di alberi.
Nel corso degli ultimi anni, utilizzando fondi ministeriali, si è quindi proceduto:

- a dotare gli uffici regionali competenti *ratione materiae* strumenti informatici e attrezzature utili al censimento degli esemplari arborei;
- alla pubblicazione di due volumi sugli alberi monumentali della Regione Campania;
- alla elaborazione e stampa delle targhe informative per ciascun albero o filare di alberi e del materiale divulgativo (stampati roller-up e manifesti di dimensioni diverse) da utilizzare in convegni e manifestazioni sugli alberi monumentali.

Le azioni messe in campo dalla Direzione Generale per le Politiche Agricole, Alimentari e Forestali, da attuare nel triennio 2024/2026, riguardano l'attuazione delle valutazioni della stabilità, nonché, la realizzazione di targhe informative di ciascun albero monumentale censito sul territorio regionale, con il ricorso a risorse per il triennio 2024/2026, ammontanti a circa 300.000,00 €, provenienti dal "Fondo per le Foreste italiane" MASAF – DIFOR 04.
I criteri di identificazione dei boschi vetusti definiti dal TUFF sono i seguenti:

- la presenza di specie autoctone spontanee coerenti con il contesto biogeografico;
- una biodiversità caratteristica conseguente all'assenza di disturbi da almeno 60 anni;
- la presenza di stadi seriali legati alla rigenerazione e alla senescenza spontanee.

I criteri operativi per la loro identificazione sono stati ulteriormente specificati dalle "Linee guida per l'identificazione delle aree definibili come boschi vetusti", approvate dal MASAF di concerto con il Ministero per la Transizione Ecologica con decreto n. 608943 del 18 novembre 2021
Il Piano forestale regionale si pone l'obiettivo di promuovere i boschi vetusti della regione Campania, anche attraverso la realizzazione di una Rete regionale dei boschi vetusti, facente parte della Rete nazionale dei boschi vetusti, di cui all'articolo 7, comma 13 bis) del Testo unico in materia di foreste e filiere forestali, e del relativo decreto attuativo del MASAF n. 193945 del 5 aprile 2023 "Istituzione della Rete nazionale dei boschi vetusti".

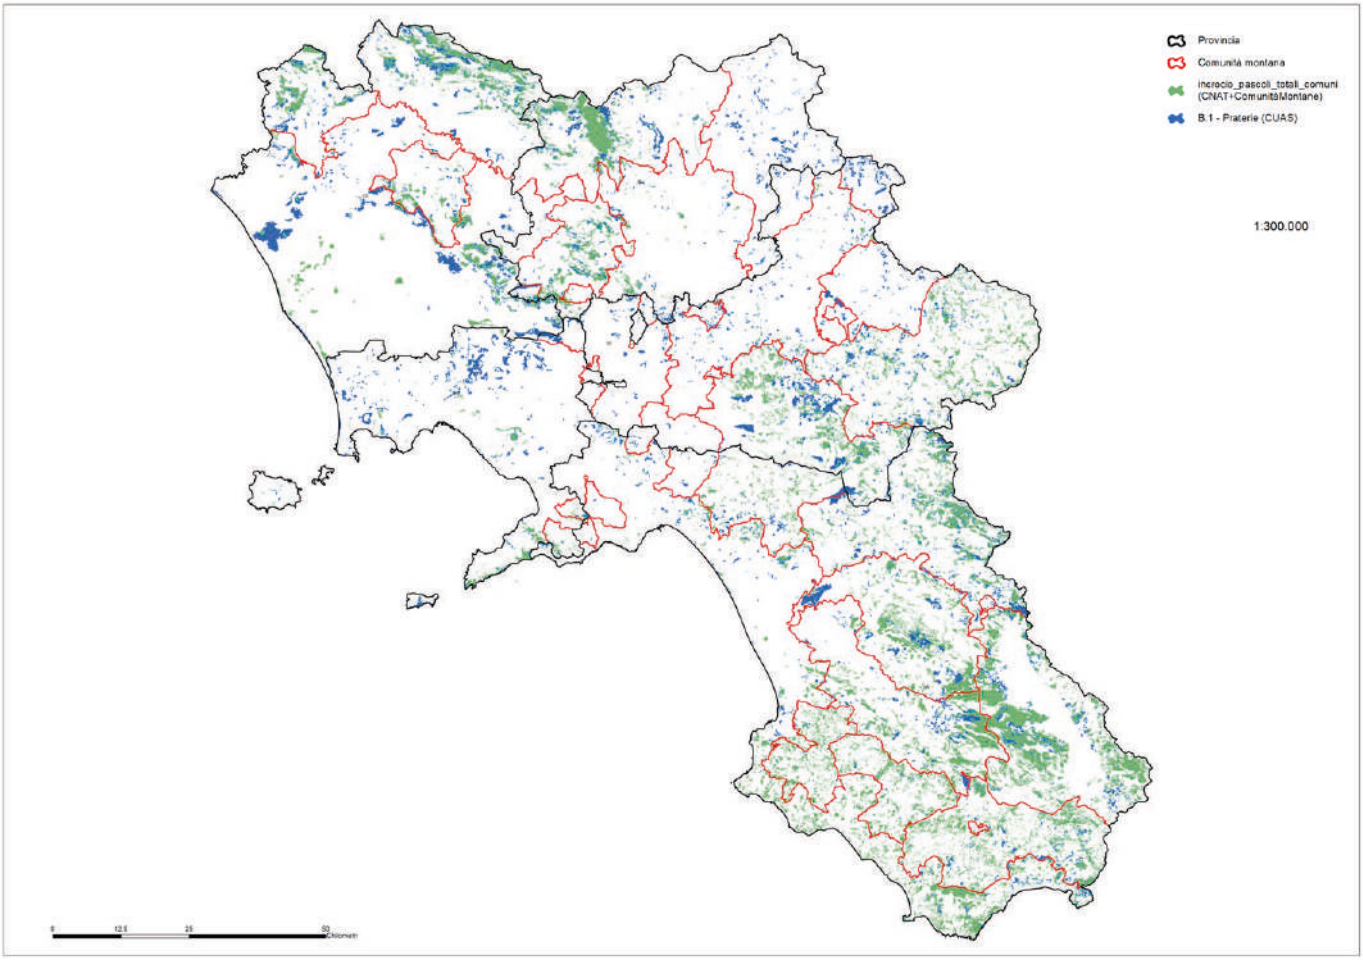
C6. Promuovere la gestione sostenibile dei prati e pascoli permanenti

La legge forestale regionale 11/96 e il Regolamento forestale regionale n. 3/2017 definiscono gli obiettivi e le norme di tutela e gestione delle risorse pascolative presenti nel territorio regionale in relazione al ruolo ambientale, ecologico e socio-economico fondamentale svolto dagli ecosistemi a prateria come elemento cardine di biodiversità nei paesaggi montani e collinari della Campania.
La superficie a praterie identificata nella Carta regionale delle risorse forestali è di circa 108.000 ettari. Per inciso, la superficie delle aree a prateria è diminuita del 70% rispetto al 1960, a causa dei processi contrastanti di abbandono e forestazione spontanea da un lato, di dissodamento e messa a coltura dall'altro. Il Piano forestale generale, in attuazione della legislazione regionale vigente, prevede un'azione specifica di censimento dettagliato degli ecosistemi di prateria in regime sodivo (prati permanenti e pascoli) unitamente alla definizione di linee guida di gestione sostenibile e miglioramento dei pascoli della Campania. Il punto di partenza per la progettazione dell'azione specifica è costituito dai risultati dello studio sull'utilizzo dei pascoli demaniali delle Comunità Montane della Campania commissionato dalla Direzione generale agricoltura, riassunti nella tabella seguente. Tale studio evidenzia come una porzione significativa del patrimonio pascolivo regionale sia interessato da una condizione gestione di "non-equilibrio", dovuta localmente a una pressione d'uso eccessiva rispetto al carico ottimale, con problemi di degradazione del cotico e di erosione dei suoli; ovvero, all'opposto, da condizioni di sotto-utilizzo che favoriscono invece la ricolonizzazione arbustiva e arborea. È interessante notare come le due condizione di sovra-utilizzo e sotto-utilizzo, possano convivere all'interno di un medesimo territorio, evidenziando una carenza di pianificazione della risorsa a scala locale che il Piano forestale intende superare attraverso la definizione, come detto in precedenza, di linee guida di corretta gestione delle diverse risorse pascolative, e la promozione di sistemi locali di uso sostenibile della risorsa, che tengano conto della produttività e della capacità di carico delle diverse risorse pascolative, come anche delle misure di conservazione e delle condizioni d'obbligo definite per i siti facenti parte della rete Natura 2000 della Campania.
Il punto cruciale è rappresentato dalla redazione, dall'applicazione e dal rispetto, territorio per territorio, di piani di gestione sostenibile della risorsa

fonte: http://burc.regione.campania.it

pascolo, nell'ambito della pianificazione forestale prevista dalla legge.
La redazione e aggiornamento di piani di gestione del pascolo facenti parte dei Piani di gestione forestale è incentivata da due interventi del CSR Campania 2023-2027:

- intervento SRD15 ("Investimenti produttivi forestali"), che finanzia l'elaborazione di Piani di gestione forestale o strumenti equivalenti per superfici singole e/o associate, nonché la revisione dei Piani di gestione e strumenti equivalenti in scadenza o scaduti, secondo quanto disposto dalla normativa regionale vigente.
- Intervento SRG07 ("Cooperazione per lo sviluppo rurale, locale e smart villages") che finanzia azioni di Cooperazione per la sostenibilità ambientale anche finalizzate ad predisporre/aggiornare i Piani di gestione delle superfici forestali pubbliche/private e la loro integrazione con altri strumenti di pianificazione territoriale.



La gestione sostenibile dei pascoli è incentivata dal CSR Campania con due diverse tipologie di intervento:

- L'intervento SRB01 (" Sostegno zone con svantaggi naturali montagna") che ha come obiettivo il mantenimento dell'attività agricola e/o zootecnica in zona montana, contribuendo al presidio di queste aree fragili attraverso l'erogazione di una indennità annuale per ettaro che compensi gli svantaggi che gli agricoltori devono affrontare per lo svolgimento delle attività agricole e di allevamento, rispetto alle zone non soggette a svantaggi naturali. L'intervento, attraverso un'indennità annuale per ettaro di Superficie Agricola Utilizzata (SAU), compensa il mancato guadagno e i costi aggiuntivi sostenuti dalle aziende agricole nelle zone montane.
- L'intervento SRA29 ("Pagamento al fine di adottare e mantenere pratiche e metodi di produzione biologica", che finanzia le azioni di conversione e mantenimento alla coltivazione biologica di pascoli destinati all'alimentazione di capi allevati in aziende che praticano la zootecnia biologica.

Interventi di recupero e sistemazione dei pascoli montani di proprietà pubblica a fini di protezione

Fig. 15.1

Distribuzione geografica delle praterie (pascoli, prati-pascoli, prati permanenti) in Campania. In rosso, i limiti amministrativi delle Comunità montane

fonte: http://burc.regione.campania.it

idrogeologica possono essere realizzati nell'ambito progetti da attuarsi in collaborazione con gli Enti delegati nel quadro delle politiche pubbliche di forestazione di cui al Documento esecutivo di programmazione forestale redatto a cadenza triennale in attuazione della dall'art. 5 della legge regionale 7 maggio 1996, n. 11.

La programmazione e gestione sostenibile delle risorse pascolative in Campania riguarda necessariamente, oltre che gli ecosistemi di prateria, le aree storicamente interessate da "Pratiche tradizionali di pascolamento (PLT)".

Si tratta, come descritto nel CSR Campania 2023-2027, di superfici forestali, con copertura erbosa non prevalente o in alcuni periodi dell'anno del tutto assente, in cui la produzione foraggera è assicurata da arbusti o da alberi. In queste aree boschive il pascolo è storicamente ed effettivamente praticato da specie e razze di bestiame adatte al pascolamento tradizionale in bosco: in tali condizioni, le specie arbustive e/o arboree costituiscono un'importante risorsa per l'alimentazione del bestiame e, in alcune stagioni, rappresentano l'unica risorsa foraggera disponibile. È evidente come le PLT si differenzino profondamente dai normali prati-pascoli (anche da quelli arborati e cespugliati ovvero le formazioni agropastorali, in cui l'erba e le altre piante erbacee da foraggio restano predominanti), poiché si tratta, principalmente, di formazioni forestali, vegetali naturali o semi-naturali che, per determinate situazioni territoriali e/o locali, rappresentano, storicamente e tradizionalmente, la principale risorsa dell'alimentazione di una tipologia di bestiame adatto a particolari sistemi di allevamento estensivi semibradi o bradi. Le PLT, oltre a costituire luogo di ricovero e fonte di elevato valore alimentare per tali allevamenti estensivi, semibradi o bradi, hanno un valore ecologico primario per la loro capacità di proteggere il suolo e sequestrare il carbonio, riducendo l'erosione e la desertificazione da un lato e l'effetto serra dall'altro; hanno altresì un valore ecologico- naturalistico, ospitando spesso specie vegetali e animali a rischio estinzione, nonché un valore paesaggistico, in quanto connotano in modo sostanziale il territorio che occupano, influenzando la percezione che del territorio ha la società. Su tali superfici non può essere esercitata nessuna altra attività agricola, sia di produzione che di mantenimento, diversa dal pascolamento, nel rispetto del carico pascolativo previsto dal Piano di gestione di forestale o dal Regolamento del pascolo, con l'obiettivo di mantenere queste superfici in buone condizioni agronomiche e ambientali, accessibili agli animali, idonee al pascolamento e atte a prevenire gli incendi, evitando che il fuoco si propaghi dal suolo alle chiome degli alberi e assicurando così la tutela idrogeologica degli stessi territori. Nessun vincolo di produzione in termini di incrementi ponderali del bestiame al pascolo, di latte, o altro è posto a carico degli agricoltori che intendono utilizzare queste superfici. Il CSR Campania 2023-2027 ricomprende le aree riconosciute a PLT tra quelle ammissibili al sostegno dell'intervento SRB01 ("Sostegno zone con svantaggi naturali montagna") che ha come obiettivo il mantenimento dell'attività agricola e/o zootecnica in zona montana.

C7. Promuovere e valorizzare i sistemi agroforestali

In accordo con la definizione data dalla FAO, "agroforestazione" è il termine collettivo comprendente i sistemi e le tecnologie di uso del territorio caratterizzati dalla compresenza nella medesima unità colturale, con forme di disposizione spaziale e temporale caratteristiche dei diversi paesaggi, di piante legnose perenni di interesse forestale - alberi, arbusti - e di colture agricole.

L'agroforestazione può anche essere definita come un sistema dinamico di gestione delle risorse naturali basato sull'ecologia che, attraverso l'integrazione di alberi nelle aziende agricole e nei paesaggi agricoli o attraverso la produzione di prodotti agricoli nelle foreste, diversifica e sostiene la produzione di maggiori benefici economici, sociali e ambientali per gli utilizzatori del territorio. L'agroforestazione è praticata tradizionalmente a scala mondiale, in una vasta gamma di paesaggi, con forme che variano notevolmente da paesaggio a paesaggio, a seconda dei bisogni e delle capacità umane e delle condizioni ambientali, culturali e ambientali prevalenti. Lo schema spaziale dei sistemi agroforestali può essere differenziato, in funzione della distribuzione delle componenti forestali (alberi, arbusti) all'interno della matrice erbacea, agricola o pastorale:

- in maniera diffusa, come esemplari distinti a disposizione cadenzata;
- in forma di chiazze o patches (boschetti aziendali);
- come elementi lineari (siepi, filari, fasce boscate).

Il dato rilevante è che molti dei paesaggi agrari tradizionali della Campania ad elevato valore ecologico, paesaggistico e conservativo, hanno una struttura che soddisfa i requisiti della definizione della FAO data in precedenza. A questo proposito,

fonte: http://burc.regione.campania.it

la Carta delle risorse forestali individua, oltre che le diverse tipologie di boschi e praterie, anche le aree interessate dalla presenza di mosaici agroforestali i cui elementi agricoli, pascolativi e arborei non sono distintamente cartografabili alla scala di semidettaglio 1:25.000. La superficie dei mosaici agrofoerstali è di circa 22.000 ettari. Si tratta di mosaici di alto valore ecologico e paesaggistico, che rappresentano inoltre habitat faunistici di rilevante interesse. La tutela e la gestione sostenibile dei mosaici agroforestali è una delle azioni del Piano forestale generale, con il ricorso alle misure della PAC 2023-2027 finalizzate all'incremento, alla cura e tutela attiva degli elementi diffusi di biodiversità dei paesaggi agricoli regionali (nuclei boschivi, siepi, filari, alberi isolati). In particolare, l'intervento SRD04 ("Investimenti non produttivi agricoli con finalità ambientale"), con l'Azione 1 "Investimenti non produttivi finalizzati ad arrestare e invertire la perdita di biodiversità e a preservare il paesaggio rurale" prevede un sostegno ad investimenti che perseguono le finalità specifiche di contribuire a rendere il sistema agricolo più resiliente ai cambiamenti climatici, incrementando la complessità specifica ed ecosistemica delle aree coltivate attraverso:

- la realizzazione di formazioni arbustive e arboree a tutela della biodiversità: realizzazione di infrastrutture ecologiche quali, a titolo esemplificativo, boschetti, sistemi macchia radura;
- interventi per la connettività ecologica della fauna selvatica mediante creazione o ripristino di corridoi ecologici e creazione di "pietre di guado" (stepping stones) mediante realizzazione di fasce arborate, di filari arborati, di boschetti, di siepi arborate e la piantagione di singoli soggetti arborei per favorire la biopermeabilità delle aree critiche;
- ripristino o impianto della vegetazione in alveo (macrofite) e sulle sponde (fasce riparie) nel reticolo idrico minore quali il ripristino e/o l'impianto della vegetazione acquatica e ripariale o altri interventi di riqualificazione ecologica;
- realizzazione fasce tampone, siepi e filari arborei e/o arbustivi: con funzione di riduzione dell'inquinamento nelle acque superficiali naturali ed artificiali.

L'intervento SRD05 ("Impianti forestazione/imboschimento e sistemi agroforestali su terreni agricoli", con l'Azione 1) ("Impianto di imboschimento naturaliforme su superfici agricole") finanzia l'impianto naturaliforme con finalità multiple (ambientali, paesaggistiche, socio-ricreative nonché produttive- legno, legname e tartufi), realizzato utilizzando specie forestali arboree e arbustive autoctone di origine certificata, anche micorizzate, adatte alle condizioni ambientali locali, al fine di creare nuove superfici forestali permanenti. Pertanto, le superfici agricole su cui viene realizzato l'imboschimento non sono reversibili al termine del periodo di permanenza, rientrano nella definizione di bosco di cui alle norme regionali di settore e su queste superfici si applicano le disposizioni regolamentari regionali del settore forestale previste per i boschi.

fonte: http://burc.regione.campania.it

D. Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare

Il quarto gruppo di azioni del Piano forestale generale risponde all'obiettivo di promuovere e rafforzare in un'ottica di bioeconomia le filiere forestali in Campania in accordo con gli indirizzi della Strategia forestale nazionale. In particolare, Piano forestale generale della Campania:

- recepisce gli indirizzi nazionali ed europei e la Strategia Forestale Nazionale (SFN), che pone la bioeconomia circolare al centro dello sviluppo del settore forestale.
- Riconosce il ruolo multifunzionale: La strategia si basa sul riconoscimento del ruolo multifunzionale della foresta, dove la produzione di beni e servizi (inclusi quelli legnosi) è indirizzata verso la sostenibilità e la valorizzazione delle filiere produttive in ottica di bioeconomia.
- Identifica linee molteplici e integrate di intervento finalizzate allo sviluppo della filiera bosco-legno per sostenere la bioeconomia, con riferimento tra l'altro ai seguenti aspetti:
  - **Qualificazione delle Imprese:** Sostegno alle imprese forestali (es. modernizzazione, sicurezza, formazione) per garantire una maggiore efficienza operativa.
  - Promozione dell'innovazione: Supporto alla ricerca e allo sviluppo di prodotti legnosi innovativi nonché di soluzioni per migliorare la **durabilità e la stabilità dimensionale del legno**.
  - Valorizzazione dei sottoprodotti anche mediante il disassemblaggio e il riuso dei materiali, fondamentali in ottica di economia circolare e di riduzione delle emissioni di CO_2. Utilizzo efficiente di tutti i sottoprodotti e residui della lavorazione del legno, inclusa la valorizzazione energetica (biomasse), in linea con i principi dell'economia circolare ("uso a cascata").
  - l'adozione di strumenti di valutazione della sostenibilità, come l'Analisi del Ciclo di Vita (LCA), per monitorare gli impatti ambientali delle filiere forestali e bioeconomiche.
  - Impiego in settori strategici: Promozione dell'uso del legno in settori come la bioedilizia e l'arredo.
  - **Apertura di Nuovi Mercati:** Sviluppo e apertura di nuovi mercati per i prodotti legnosi.
  - **Miglioramento della Logistica:** Sono previste azioni per migliorare la logistica di raccolta e trasporto, che spesso rappresentano un collo di bottega per la competitività della filiera calabrese.

Una precondizione perché tutto questo possa avvenire è la promozione della certificazione forestale (vedi azione D2) come precondizione per il conseguimento degli obiettivi rilevanti di garanzia di sostenibilità della gestione delle foreste, tracciabilità della filiera, accesso ai mercati.
La filiera foresta-legno include la valorizzazione energetica come uno degli impieghi possibili per le risorse forestali della Campania in un'ottica rigorosa di bioeconomia, sostenibilità e multifunzionalità attraverso:

1. **l'uso "a cascata":** La strategia regionale, in linea con gli indirizzi nazionali e con il principio di utilizzo multifunzionale delle foreste, stabilisce una priorità per l'uso del legno per prodotti a lungo termine (legno da opera), destinando i residui e il legname di minor valore alla produzione di energia. Questo approccio mira a massimizzare il sequestro di carbonio e l'efficienza economica del settore.
2. **La valorizzazione della filiera energetica** mediante l'impiego delle biomasse legnose in piccoli impianti termici e reti di teleriscaldamento locali nei Comuni, soprattutto nelle aree montane con problemi di povertà energetica, ed in impianti su piccola scala per il soddisfacimento del fabbisogno energetico di imprese artigianali e locali.

Come evidenziato in precedenza la strategia forestale della Campania persegue l'obiettivo di valorizzazione della filiera bosco-promovendo l'impiego del legno nel settore delle costruzioni, con particolare riferimento alla bioedilizia. In particolare la strategia si prefigge di:

- Promuovere l'applicazione del legno, anche puntando alla combinazione del legno con altri materiali per applicazioni nei settori trasporti, edilizia e arredo;
- Migliorare l'efficienza e l'apertura di nuovi mercati per i prodotti in legno, di cui l'edilizia in legno rappresenta una delle opportunità più rilevanti in termini di bioeconomia e sostenibilità.

fonte: http://burc.regione.campania.it

- Migliorare la qualità: l'obiettivo è lo Sviluppo di soluzioni per migliorare la durabilità e la stabilità dimensionale del legno destinate a usi in contesti ad alta performance, come le strutture costruttive.

La strategia del Piano forestale generale della Campania promuove le misure di sostegno agli attori della filiera foresta-legno attraverso:

- **Il Supporto Tecnico-Finanziario:** Sono previsti interventi per supportare i costi necessari all'adeguamento tecnologico, alla preparazione (formazione, audit) e al mantenimento della certificazione, sia a livello di proprietà forestale (Gestione Forestale) che a livello di imprese di trasformazione (Catena di Custodia).
- **L'Aggregazione:** Vengono incoraggiate le forme associative tra proprietari e gestori forestali (consorzi) per ottimizzare i costi della certificazione di gruppo e superare l'eccessiva frammentazione della proprietà.

Uno strumento innovativo di fondamentale importanza per l'attuazione della strategia avanti delineata è rappresentato dalla Legge Nazionale sulla Montagna di recente approvazione (Legge 12 settembre 2025, n. 131)
La Legge 12 settembre 2025, n. 131, recante "Disposizioni per il riconoscimento e la promozione delle zone montane", è finalizzata ad adottare misure per il riconoscimento e la promozione delle zone montane e delle loro popolazioni. La legge riconosce la crescita economica e sociale delle zone montane come un obiettivo di interesse nazionale per la loro importanza strategica nella tutela dell'ambiente, della biodiversità, delle risorse idriche e forestali, del paesaggio e nel contrasto alla crisi climatica e demografica. Per tali motivazioni la legge promuove lo sviluppo socio-economico, la tutela e la valorizzazione delle specificità montane, limitando gli squilibri economici e sociali rispetto ai territori non montani, favorendo il ripopolamento e garantendo l'accesso ai servizi pubblici essenziali (sanità, istruzione, connettività, mobilità).
La legge introduce la Strategia per la Montagna Italiana (SMI), definita con periodicità triennale e individua le priorità e le direttive delle politiche per le zone montane, con l'obiettivo di promuovere la crescita autonoma, l'accesso alle infrastrutture digitali e ai servizi essenziali (socio-sanitari e istruzione) e il ripopolamento. La SMI opera in coordinamento con la Strategia forestale nazionale.
Per il conseguimento di questi obiettivi, la legge disciplina conseguentemente il funzionamento del Fondo per lo Sviluppo delle Montagne Italiane istituito con la legge 234/2021.

La legge riconosce le attività agricolo-forestali come presidio ambientale, economico e sociale, stabilendo la predisposizione di Linee guida per l'individuazione e la valorizzazione dei sistemi agro-silvo-pastorali, la promozione della certificazione forestale e delle produzioni sostenibili.
La legge istituisce il Registro nazionale dei terreni silenti (terreni abbandonati) per favorire il recupero produttivo, salvaguardare l'assetto idrogeologico e prevenire il rischio di incendi, e introduce la definizione di "boschi monumentali", istituendo l'elenco dei boschi monumentali d'Italia.
La legge prevede tra l'altro il riordino delle agevolazioni già previste in favore dei comuni montani, introducendo:

- un Credito d'Imposta per Imprese Agricole/Forestali per gli investimenti effettuati dal 1° gennaio 2025 al 31 dicembre 2027 da imprenditori agricoli/forestali, volti all'ottenimento di servizi ecosistemici e ambientali.
- Misure Fiscali per Imprese Giovani: Alle piccole e microimprese che avviano una nuova attività nei comuni montani destinatari di sostegno e il cui titolare o i cui soci (per oltre il 50%) non abbiano compiuto il quarantunesimo anno di età, è concesso un credito d'imposta pari alla differenza tra l'imposta ordinaria e quella calcolata con aliquota del 15% (fino a un reddito di 100.000 €) per il periodo d'imposta di avvio e i due successivi.
- Incentivi Lavoro Agile: Per gli anni 2026 e 2027, è riconosciuto l'esonero totale dai contributi previdenziali a carico del datore di lavoro (max 8.000 €/anno) per i lavoratori a tempo indeterminato (under 41) che svolgono stabilmente lavoro agile in un comune montano con popolazione inferiore a 5.000 abitanti e che vi trasferiscono la propria residenza.
- Agevolazioni per l'abitazione principale e incentivi per la Natalità.

fonte: http://burc.regione.campania.it

D1. Rafforzare la capacità operativa delle imprese boschive. Promuovere la qualificazione degli operatori forestali.

Rafforzare la capacità operativa delle imprese boschive.

Obiettivo prioritario del Piano forestale generale è il rafforzamento della rete di aziende boschive che opera nel territorio regionale.

L'Albo regionale delle imprese forestali della Campania è disciplinato dal Regolamento regionale forestale n. 3/ 2017. Al momento della redazione del presente documento risultano iscritte all'Albo 325 imprese forestali, 126 con sede nella provincia di Salerno, 38 in quella di Napoli, 40 in quella di Benevento, 61 in quella di Avellino, 50 in quella di Caserta.

L'iscrizione all'Albo è volontaria e gratuita ed è condizione necessaria per i soggetti che intendono concorrere alle procedure di evidenza pubblica per l'acquisto del materiale legnoso ritraibile dai boschi e dai lotti boschivi posti in vendita dai Comuni e dagli Enti proprietari nell'ambito del territorio campano nonché per la partecipazione alle procedure ad evidenza pubbliche per l'affidamento di lavori e servizi relativi alla gestione del patrimonio silvo-pastorale pubblico, siano essi imprese, consorzi o associazioni forestali, aventi sede legale anche in altri territori italiani o in altri Stati membri dell'Unione Europea.

L'iscrizione all'Albo avviene su base volontaria, e viene fatta in prevalenza da imprese che intendono avere rapporti con la Pubblica Amministrazione. Le informazioni desumibili dall'Albo non hanno pertanto una rappresentatività esaustiva dell'universo imprenditoriale regionale, ma costituiscono comunque una prima importante fonte informativa sulle imprese boschive più dinamiche, professionali e qualificate a operare in bosco, oltre a consentire efficaci azioni di controllo e vigilanza anche in relazione agli adempimenti comunitari in materia di commercializzazione dei prodotti legnosi (Timber regulation).

La strategia di rafforzamento della rete di imprese boschive della Campania si basa su tre capisaldi:

1. Promuovere gli investimenti aziendali per l'innovazione, l'efficienza, la sostenibilità ambientale e il controllo dei costi di produzione;
2. Promuovere l'aggregazione e la cooperazione, anche mediante gli accordi di foresta;
3. Promuovere la formazione degli addetti, rafforzare il sistema della conoscenza.

Nel quadro della PAC 2023-2027 il principale strumento di sostegno agli investimenti aziendali è l'intervento SRD15 "Investimenti produttivi forestali" facente parte del Complemento di Sviluppo Rurale della Campania, in particolare l'Azione 2) che finanzia gli investimenti per gli ammodernamenti e i miglioramenti volti a favorire la crescita del settore forestale regionale, promuovendo l'innovazione tecnica e di processo nonché la valorizzazione del capitale aziendale, attraverso la copertura delle spese necessarie per la realizzare:

a. opere di ammodernamento, riconversione acquisizione e realizzazione di immobili e infrastrutture aziendali funzionali ai processi produttivi;

b. l'ammodernamento del parco macchine e attrezzature per le attività di coltivazione, taglio allestimento ed esbosco, nonché per la trasformazione, mobilitazione e commercializzazione dei prodotti della selvicoltura, nonché per la produzione vivaistica forestale;

c. l'introduzione di innovazione tecnica e gestionale per ottimizzare i processi di utilizzazione e trasformazione dei prodotti forestali legnosi e non legnosi, nonché i processi di produzione dei materiali forestali di moltiplicazione

d. interventi volti alla costituzione, realizzazione e gestione di piattaforme logistiche web di mercato per la commercializzazione dei prodotti legnosi e non legnosi, compresi i materiali forestali di moltiplicazione;

e. interventi volti alla costituzione, realizzazione, ripristino e manutenzione straordinaria delle infrastrutture logistiche e della viabilità forestale e silvo-pastorale aziendale di ogni ordine e grado (strade e piste) a servizio della gestione forestale;

f. l'elaborazione di Piani di gestione forestale o strumenti equivalenti per superfici singole e/o associate, nonché la revisione dei Piani di gestione e strumenti equivalenti in scadenza o scaduti, secondo quanto disposto dalla normativa regionale vigente;

g. interventi volti al miglioramento qualitativo dei prodotti legnosi e non legnosi, alla differenziazione e promozione della produzione sulla base delle esigenze di mercato, nonché alla valorizzazione anche energetica dei residui di lavorazione e produzione;

fonte: http://burc.regione.campania.it

h. interventi volti a ottimizzare e/o ridurre le emissioni e i consumi energetici aziendali, anche attraverso l'acquisto di impianti e realizzazione di attività per la produzione di energia da biomassa forestale finalizzate anche alla vendita;

i. interventi necessari all'adeguamento ai sistemi di tracciabilità dei prodotti della selvicoltura, compresi i materiali forestali di moltiplicazione e di certificazione della qualità dei combustibili legnosi basata sulla norma ISO 17225 (solo in abbinamento all'acquisto di nuovi macchinari ed attrezzature).

Per quanto concerne l'aggregazione aziendale e la cooperazione, l'intervento di riferimento all'interno del CSR Campania è l'SRG07 "Cooperazione per lo sviluppo rurale, locale e smart villages", che sostiene la preparazione e l'attuazione di progetti integrati di cooperazione articolati in una o più operazioni, condivisi da parte di gruppi di beneficiari pubblici e/o privati, relativi a specifici settori/ambiti per favorire in tutte le aree rurali l'uso di soluzioni innovative, mettendo in atto anche eventuali soluzioni possibili offerte dalle tecnologie digitali e dalla multifunzionalità agricola e forestale, capaci di:

- generare ricadute positive economiche, sociali e ambientali;
- contrastare fenomeni di spopolamento e abbandono;
- rafforzare le relazioni e scambi fra le zone rurali e/o con quelle urbane.

In particolare, nelle aree più bisognose, di dimensione limitata (comuni/aggregazioni di comuni), l'intervento assume rilevanza per sostenere l'attivazione di comunità di attori al fine di favorire:

- approcci innovativi (organizzativi, di processo, prodotto, sociale);
- la creazione di economie di scala; sviluppare l'economia circolare e inclusiva in vari settori (produttivi, turistici, ambientali, socio-culturali);
- migliorare la qualità della vita a livello locale e potenziare i servizi alla popolazione.

Questo intervento può trarre vantaggio e nel contempo rafforzare, completare, consolidare l'azione promossa a livello territoriale attraverso altri interventi della PAC (es. Leader) e altri programmi sostenuti dai fondi UE, altri strumenti legislativi nazionali/regionali (es. Comunità e Distretti del cibo, turistici e produttivi nelle loro diverse declinazioni). Perciò, le strategie/progetti di cooperazione dovrebbero considerare anche le altre politiche attive sul territorio di competenza per favorire le complementarità e sinergie con esse, al fine di massimizzare l'impatto degli interventi proposti. Per questa eventualità, l'Autorità di gestione definirà, se del caso, procedure atte a garantire demarcazione e complementarità tra le operazioni da sostenere.
In particolare, l'intervento SRG07 sostiene la preparazione e l'attuazione di strategie/progetti di cooperazione afferenti ad uno o più ambiti di seguito descritti:

► Cooperazione per le filiere e i mercati locali - Finalizzata a:

- valorizzare le filiere forestali locali;
- organizzare processi di lavoro in comune e condividere impianti e risorse;
- incrementare processi di economia circolare e di riduzione degli sprechi;
- promuovere accordi di foresta e di filiere locali bosco-legno che possono comprendere proprietari e gestori forestali e imprese di utilizzazione e trasformazione del legno, al fine di rafforzare i mercati locali;
- incentivare la costituzione di filiere locali per gestire le biomasse forestali, nonché l'eventuale trattamento e il loro utilizzo a fini energetici e per lo sviluppo della bioeconomia.

► Cooperazione per la sostenibilità ambientale - Finalizzata a:

- favorire l'aggregazione fra aziende agricole e/o forestali, enti e attori locali impegnati nella gestione delle risorse ambientali a livello locale, aggregazioni tra i proprietari e conduttori di terreni forestali;
- realizzare progetti collettivi a finalità ambientale (ad esempio, volti a mitigare gli effetti dei cambiamenti climatici, utilizzare in maniera efficiente le risorse idriche, preservare la biodiversità agraria e naturalistica);
- predisporre/aggiornare i Piani di gestione delle superfici forestali pubbliche/private e la loro integrazione con altri strumenti di pianificazione territoriale.

► Cooperazione per il turismo rurale - Finalizzata a:

- creare e/o organizzare le funzioni turistiche delle zone rurali (itinerari/vie ciclopedonali;
- riqualificazione degli spazi, tutela del paesaggio, nuovi sistemi di mobilità, ecc.);
- migliorare il posizionamento sul mercato (certificazioni, piani di promozione, sistemi

fonte: http://burc.regione.campania.it

- integrati, ecc.);
- incrementare le connessioni con le risorse agricole e forestali (reti di imprese agricole e forestali multifunzionali, valorizzazione di beni pubblici e/o privati forestali, ecc.);
- sensibilizzare gli utenti (campagne e informazione sulla fruizione sostenibile, ecc.).

► Cooperazione per l'inclusione sociale ed economica - Finalizzata a:

- creare/migliorare servizi e attività per la popolazione locale e target con esigenze
- specifiche (culturali, didattiche e ricreative, sociali, assistenziali anche attraverso
- l'agricoltura sociale a favore di soggetti svantaggiati, ecc.) e per l'inserimento
- occupazionale (servizi per le imprese, attività di mediazione, orientamento e
- informazione;
- percorsi di avvicinamento a contesti occupazionali in aziende o attività imprenditoriali,
- agricoltura sociale, attività educative e azioni di sensibilizzazione;
- recupero di spazi per il coworking, laboratori collettivi, mobilità, ecc.).

La cooperazione finalizzata a progetti di innovazione è finanziata dall'intervento SRG09 del CSR Campania 2023-2027, avente per oggetto la "Cooperazione per azioni di supporto all'innovazione e servizi rivolti ai settori agricolo, forestale e agroalimentare". L'intervento sostiene la creazione di partenariati per la realizzazione di azioni di supporto all'innovazione ed erogazione di servizi rivolti ai settori agricolo, forestale e agroalimentare, che dovranno offrire risposte sistemiche alle esigenze/problemi delle imprese e dei territori rurali. I partenariati hanno i seguenti obiettivi:

- far emergere le idee innovative in risposta ai fabbisogni delle imprese;
- migliorare i processi di formazione, informazione e la diffusione delle conoscenze;
- favorire i processi di condivisione e adozione delle innovazioni;
- collegare gli attori dell'AKIS.

L'istituzione dei partenariati consentirà inoltre di rafforzare i collegamenti tra gli imprenditori e gli altri attori dell'AKIS, con particolare riferimento agli enti di ricerca e fra questi e i consulenti.

L'intervento prevede la realizzazione di almeno una delle seguenti attività:

1. realizzazione e gestione di punti di ascolto, accoglienza e incubatori di idee per le imprese, allo scopo di far emergere e individuare le idee innovative;

2. organizzazione di interventi formativi, informativi, dimostrativi e di consulenza integrati tra loro e diretti alle imprese;

3. accompagnamento alla nascita o potenziamento di aziende dimostrative e realizzazione su piccola scala di prove sperimentali e di collaudo dell'innovazione, e scambi di conoscenze "peer to peer" anche a supporto dell'attività di cui ai punti precedenti.

Al fine di introdurre misure di semplificazione e di promozione dell'economia circolare nella filiera foresta-legno, attese la specificità e la multifunzionalità della filiera nonché l'opportunità di un suo rilancio, il Piano forestale generale promuove l'aggregazione degli operatori delle filiere forestali attraverso la stipulazione di accordi di foresta, così regolamentati dal Decreto-legge n.5 del 10 febbraio 2009, come modificato dal Decreto-legge 31 maggio 2021, n. 77, quali strumenti per lo sviluppo di reti di imprese nel settore forestale, al fine di valorizzare le superfici pubbliche e private a vocazione agro-silvo-pastorale nonché per la conservazione e per l'erogazione dei servizi ecosistemici forniti dai boschi.
Scopo degli accordi di foresta, equiparati dalla legge alle reti di impresa agricole - è quello di valorizzare le superfici private e pubbliche a vocazione agro-silvo-pastorale nonché di assicurare la conservazione e l'erogazione dei servizi ecosistemici, nel rispetto della biodiversità e dei paesaggi forestali, attraverso:

- l'individuazione e la messa in atto delle migliori soluzioni tecniche ed economiche in funzione degli obiettivi condivisi e sottoscritti dai contraenti con gli accordi medesimi;
- la promozione della gestione associata e sostenibile delle proprietà agro-silvo-pastorali per il recupero funzionale e produttivo delle proprietà fondiarie pubbliche e private, singole e associate, nonché dei terreni abbandonati o silenti di cui alle lettere g) e h) del comma 2 del Testo unico in materia di foreste e filiere forestali, di cui al decreto legislativo 3 aprile 2018, n. 34;
- la realizzazione di interventi volti alla riduzione dei rischi naturali, del rischio idrogeologico e di incendio boschivo;

fonte: http://burc.regione.campania.it

- la realizzazione di interventi e di progetti volti allo sviluppo di filiere forestali e alla valorizzazione ambientale e socio-culturale dei contesti in cui operano;
- la promozione di sinergie tra coloro che operano nelle aree interne sia in qualità di proprietari o di titolari di altri diritti reali o personali sulle superfici agro-silvo-pastorali sia in qualità di esercenti attività di gestione forestale e di carattere ambientale, educativo, sportivo, ricreativo, turistico o culturale.

Gli accordi di foresta sono stipulati tra due o piu' soggetti, singoli o associati, di cui almeno la metà deve essere titolare del diritto di proprietà o di un altro diritto reale o personale di godimento su beni agro-silvo-pastorali o almeno un contraente deve rappresentare, in forma consortile o associativa o ad altro titolo, soggetti titolari dei diritti di proprietà o di un altro diritto reale o personale di godimento su beni agro-silvo-pastorali.
La terza azione di rafforzamento del sistema delle imprese forestali della Campania riguarda la formazione.

La formazione degli operatori
Con Decreto n. 307 del 21/05/2021 la Direzione generale per l'istruzione, la formazione, il lavoro e le politiche giovanili della regione Campania ha approvato le Schede aggiornate descrittive di Standard Professionali e Formativi di dettaglio relativi ai due profili "Operatore Forestale" e di "Istruttore forestale di abbattimento e allestimento".
Il Decreto recepisce gli indirizzi specifici contenuti nel Decreto del Ministro delle Politiche Agricole, Alimentari e Forestali n. 4472 del 29/04/2020 recante l'individuazione dei criteri minimi nazionali per la formazione professionale degli operatori forestali e per l'esecuzione degli interventi di gestione forestale.
I due profili sono così descritti:

- **L'Operatore Forestale** svolge attività pratiche per la gestione del bosco, utilizzando in sicurezza e nel rispetto della salvaguardia ambientale la motosega e le altre attrezzature forestali di sua competenza nei lavori di abbattimento, allestimento ed esbosco di latifoglie e conifere. Conosce la funzione e l'impiego delle principali macchine ed attrezzature forestali compresa la loro manutenzione, i principi della gestione del bosco comprendendo le finalità degli interventi selvicolturali. L'operatore forestale svolge la sua attività in ambiti diversi (parchi, boschi, comunità montane, vivai forestali, ecc.) ed è in grado di collaborare in un gruppo di lavoro nell'ambito di un cantiere facendo riferimento al caposquadra o a un responsabile.
- **L'Istruttore forestale** è un operatore specializzato del settore forestale con competenze nelle lavorazioni forestali e nelle metodologie didattiche per il trasferimento del proprio "sapere professionale". Sa organizzare e gestire un cantiere forestale didattico, utilizzando un linguaggio adeguato ai contenuti delle istruzioni ed alle tipologie degli utenti. Conosce le procedure e le tecniche operative di abbattimento, allestimento, concentramento ed esbosco a strascico riferite a diversi contesti operativi, anche difficili. Conosce caratteristiche, modalità d'impiego ed esigenze di manutenzione delle macchine e attrezzature più frequentemente impiegate nelle operazioni di abbattimento ed allestimento di alberi e di esbosco a strascico di assortimenti legnosi. Collabora con l'équipe didattica alle attività di progettazione formativa.

Il Piano forestale generale promuove le azioni di consulenza e di formazione dei consulenti, degli imprenditori e degli operatori forestali, in forma singola o aggregata. Lo strumento principale è costituito dagli interventi della nuova PAC 2023-2027 dedicati al sistema della conoscenza, l'AKIS, con le tipologie di intervento SRH01 ("Erogazione di Servizi di Consulenza", SRH02 ("Formazione dei consulenti"), e SRH03 ("Formazione degli imprenditori agricoli").
L'intervento SRH01 del CSR Campania 2023-2027 finanzia i servizi di consulenza aziendale volti a soddisfare tra l'altro le esigenze di supporto espresse dalle imprese forestali su aspetti tecnici, gestionali, economici, ambientali e sociali e a diffondere le innovazioni sviluppate tramite progetti di ricerca e sviluppo, tenendo conto delle pratiche ricomprese nella Gestione Forestale Sostenibile, anche per quanto riguarda la fornitura di servizi ecosistemici e beni pubblici. Attraverso tali servizi, è offerta un'assistenza adeguata lungo il ciclo di sviluppo dell'impresa, anche per la sua costituzione, la conversione dei modelli di produzione verso la domanda e gli standard di marcato, le pratiche innovative, le tecniche forestali per la resilienza ai cambiamenti climatici, comprese l'agro-forestazione e l'agroecologia, le norme di sicurezza. I servizi di consulenza agricola sono integrati nei servizi correlati dei consulenti aziendali, dei ricercatori, delle organizzazioni di agricoltori e di altri portatori di interessi pertinenti che formano gli AKIS (Reg. (UE) 2021/2115, art. 15, paragrafo 2). Tali servizi consistono nell'insieme di interventi e di prestazioni tecnico-professionali fornite dai consulenti alle imprese, anche in forma aggregata. I servizi di

fonte: http://burc.regione.campania.it

consulenza sono rivolti a tutte le imprese forestali e possono prevedere anche attività strumentali funzionali ad una efficace erogazione del servizio (ad esempio analisi chimico-fisiche del suolo, degli alimenti, biologiche, dei mercati, delle condizioni climatiche, piattaforme digitali di servizio, ecc.).
L'intervento SRH02 del CSR Campania 2023-2027 è finalizzato tra l'altro al miglioramento dei servizi di consulenza alle aziende forestali attraverso la crescita e la condivisione delle conoscenze e delle competenze professionali e al miglioramento delle relazioni tra attori dell'AKIS, anche quelli che operano all'interno della Pubblica amministrazione, promuovendo attività di informazione, formazione e scambi di esperienze professionali. L'intervento si realizza attraverso attività ricadenti nelle seguenti tipologie:

- iniziative informative (ad es. giornate dimostrative, predisposizione e invio di newsletter e realizzazione di pubblicazioni, video, materiale divulgativo),
- formazione in presenza e in remoto (corsi, seminari, visite aziendali, sessioni pratiche, viaggi studio, comunità di pratica e professionali).

Per accedere al finanziamento, le attività dovranno essere organizzate in progetti che verranno selezionati tramite avvisi pubblici, procedure a evidenza pubblica o altre forme di affidamento.
L'intervento SRH03 del CSR Campania 2023-2027 finanzia tra l'altro le azioni di formazione degli addetti alle imprese forestali. L'intervento è finalizzato alla crescita delle competenze e capacità professionali degli addetti operanti a vario titolo nel settore forestale. L'intervento sostiene la formazione e l'aggiornamento professionale dei soggetti destinatari, anche in sinergia tra di loro, attraverso attività di gruppo e individuali quali corsi, visite aziendali, sessioni pratiche, scambi di esperienze professionali, coaching, tutoraggio, stage, ecc. Per accedere al finanziamento, le attività dovranno essere organizzate in progetti che verranno selezionati tramite avvisi pubblici, procedure a evidenza pubblica o altre forme di affidamento. L'intervento può essere attivato anche all'interno di progetti integrati o di cooperazione. Sono beneficiari le seguenti categorie di soggetti, ove accreditati all'attività di formazione:

- Enti di Formazione accreditati;
- Soggetti prestatori di consulenza;
- Enti di ricerca, Università e Scuole di studi superiori universitari pubblici e privati.
- Istituti tecnici superiori;
- Istituti di istruzione tecnici e professionali;
- Altri soggetti pubblici e privati attivi nell'ambito dell'AKIS;
- Regioni e Province autonome anche attraverso i loro Enti strumentali, Agenzie e Società in house.

D2. Promuovere la certificazione delle foreste del territorio regionale e la tracciabilità lungo tutta la filiera, dal tronco al mobile finito

Il Piano forestale generale promuove la diffusione di sistemi di tracciabilità lungo tutta la filiera, dal tronco al mobile finito e la certificazione delle foreste del territorio regionale gestite secondo criteri di sostenibilità ambientale, sociale ed economica sulla base di un set definito di standard di buona gestione forestale.
Gli obiettivi sono quelli di allineare le produzioni regionali agli standard largamente adottati a scala internazionale in modo da accrescerne la riconoscibilità e competitività; affermare uno strumento di valorizzazione delle foreste della Campania e dei suoi prodotti; fornire un riferimento chiaro e sintetico per proprietari boschivi e per le imprese forestali nella gestione del bosco con tecniche in grado di garantire l'efficienza economica e il rispetto degli ecosistemi e dei paesaggi regionali; fornire al consumatore e alla collettività la garanzia che il prodotto o il servizio offerto proviene da foreste gestite secondo principi di sostenibilità riconosciuti a livello internazionale.
La certificazione forestale è una certificazione ambientale di tipo volontario, consistente nell'attestazione, da parte di un organismo terzo indipendente, del rispetto di standard predefiniti di gestione forestale sostenibile (GFS), nell'utilizzo di una determinata area forestale, con riferimento ai diversi aspetti ambientali, sociali ed economici.
Essa coinvolge in maniera diretta l'intera filiera legno, dai proprietari forestali, alle diverse aziende che producono o che lavorano prodotti commerciali di origine forestale (legname da costruzione, pannelli, pellet, paste da cellulosa, prodotti secondari del bosco come il miele, i funghi, la cera, le essenze, le resine, i frutti di bosco, il sughero).
La certificazione forestale è un processo che rafforza la reputazione del prodotto, della foresta che lo ha generato, del territorio nel quale quella foresta è situata, e può essere considerata da questo punto di vista sia una componente del valore di

fonte: http://burc.regione.campania.it

mercato del bene, sia un aspetto di multifunzionalità, legato alla produzione associata di bene e servizi ambientali con natura di bene pubblico.
La certificazione forestale è un importante fattore di competitività e riconoscibilità, nonché di creazione di nuovo valore, e costituisce quindi un prerequisito essenziale per accrescere e rafforzare la presenza sui mercati locali, nazionali, internazionali delle produzioni forestali della Campania.
La certificazione forestale consente una valorizzazione delle produzioni, legata al rispetto dei principi di sostenibilità ecologica, dei criteri etici e degli impegni di responsabilità sociale preliminarmente definiti e giuridicamente riconosciuti. Essa rappresenta quindi un'opportunità per i proprietari boschivi pubblici e privati e per le imprese forestali della Campania che il Piano forestale generale intendere promuovere, favorire, diffondere.
La certificazione forestale si basa su due distinti processi, connessi tra loro:

- la certificazione di gestione forestale sostenibile
- la certificazione di catena di custodia.

La certificazione di gestione sostenibile delle foreste è la procedura che assicura che le foreste siano gestite nel rispetto degli standard ambientali, sociali ed economici definiti in sede regionale, nazionale, europea, globale.
La certificazione di catena di custodia è invece il sistema procedurale per il tracciamento dei prodotti forestali dalle foreste gestite in maniera sostenibile, sino al prodotto finale, mediante il monitoraggio della catena di approvvigionamento da parte di audit indipendenti.
Se per quanto riguarda l'utilizzo del bosco sono presi in considerazione i principi di Gestione Forestale Sostenibile, per le fasi di lavorazione dei prodotti forestali, fino al prodotto finito, la certificazione forestale prende in considerazione la Catena di Custodia (Chain of Custody, CoC), con l'obiettivo di attestare che l'azienda sia effettivamente dotata di un sistema di tracciamento dei prodotti di origine forestale lungo tutti i passaggi del processo produttivo: dalla foresta certificata fino alla segheria o alla fabbrica, e da lì, fino ai consumatori. L'esito positivo dell'analisi della GFS e della CoC, conduce infine alla possibilità per il produttore di apporre un marchio per rendere visibile l'impegno delle imprese agli occhi del consumatore.
Gli schemi di certificazione forestale affermati a livello internazionale come Forest Stewardship Council (FSC) e il Programme for the Endorsement of Forest Certification (PEFC) hanno la funzione di attestare la conformità della gestione forestale ai principi e criteri di GFS. Questi schemi seguono il ciclo di vita dei prodotti garantendo che questi ultimi provengano da foreste gestite in modo ecologica- mente appropriato.
Forest Stewardship Council (FSC) è stato fondato nel 1994 come organismo di certificazione volontaria per la silvicoltura sostenibile, con l'obiettivo di promuovere una gestione delle foreste rispettosa dell'ambiente, socialmente vantaggiosa ed economicamente sostenibile. Oggi, FSC dispone a scala mondiale della più ampia rete di filiere certificate, con oltre 150 milioni di ettari di foreste gestite secondo gli standard FSC.
FSC Italia nasce nel 2001 come associazione no-profit, in armonia con gli obiettivi di FSC Internazionale. Anche in Italia il marchio FSC ha assunto un ruolo di primo piano nel mercato dei prodotti forestali quali legno, carta e prodotti non legnosi (come ad esempio il sughero), collocando il nostro paese al quinto posto nella classifica internazionale di certificazioni FSC della Catena di Custodia.
Il PEFC è un'organizzazione non governativa, no-profit indipendente, acronimo di Programme for the Endorsement of Forest Certification (Programma per il Riconoscimento di Schemi di Certificazione Forestale). Esso è il principale schema di gestione forestale in Europa, nato nel 1999 sulla scia delle Conferenze Ministeriali per la Protezione delle Foreste in Europa (Helsinki 1993, Lisbona 1998). È stato fondato da un gruppo di stakeholders, tra cui associazioni ambientaliste, industrie del legno e della carta e proprietari forestali, con l'intento di definire un processo di valutazione e di mantenimento della certificazione che fosse alla portata delle grandi come delle piccole realtà produttive, pertanto idoneo ad essere applicato a contesti forestali con strutture proprietarie, gestionali e sociali differenziate.
Attualmente in Campania la superficie dei boschi certificati è di 6.063 ettari, nel territorio della Comunità Montana Bussento Lambro e Mingardo, grazie a un progetto finanziato dal Bando PNRR "Green Communities".
In particolare, hanno ottenuto il Certificato di Gestione Forestale Sostenibile PEFC complessi forestali di 9 diversi comuni della Comunità montana, per scopi conservativi-naturalistici, di protezione idrogeologica, turistici-ricreativi e di vendita di lotti in piedi. Si tratta di una certificazione "di gruppo" che coinvolge i comuni di Cuccaro Vetere, Celle di Bulgheria, Caselle in Pittari, Montano Antilia, Torre Orsaia, San Mauro la Bruca, Rofrano, Torraca, Tortorella;
La Comunità montana ha anche ottenuto il Certificato Servizi ecosistemici PEFC per le Funzioni Turistico Ricreative di Valorizzazione della Rete Sentieristica, e il Certificato PEFC per i Servizi eco-

fonte: http://burc.regione.campania.it

sistemici di sequestro del carbonio forestale mediante attività addizionali di gestione forestale (allungamento del turno di ceduazione, attività di antincendio boschivo).
Obiettivo dell'azione D2 del Piano forestale generale è quello di promuovere la certificazione forestale dei boschi regionali come precondizione per il conseguimento degli obiettivi rilevanti di:

- Garanzia di Sostenibilità, assicurando la Gestione Forestale Sostenibile (GFS) del bosco e la produzione dei servizi ecosistemici essenziali;
- tracciabilità della Filiera, promovendo l'istituzione in Campania di Catene di custodia dei prodotti legnosi – in assenza delle quali la certificazione di gestione forestale sostenibile non è in grado di generare pienamente i benefici attesi - consentendo di tracciare il legno "dal tronco al prodotto finito", garantendo al consumatore l'origine sostenibile del materiale;
- Accesso ai Mercati, promovendo la certificazione come requisito essenziale per l'accesso a mercati più esigenti e per la partecipazione a bandi di fornitura pubblica (Green Public Procurement - GPP), aumentando la competitività delle aziende campane.

Per il perseguimento di tali obiettivi il Piano forestale generale punta sulle seguenti azioni:

- Sostegno e promozione dell'adesione volontaria di proprietari forestali pubblici e privati, ditte boschive e imprese di trasformazione, a schemi di certificazione forestale riconosciuti, mediante gli aiuti previsti dal CSR Campania 2023-2027 mediante l'intervento SRD15 "Investimenti produttivi forestali", che finanzia le spese per l'adeguamento ai sistemi di tracciabilità dei prodotti della selvicoltura, compresi i materiali forestali di moltiplicazione, e la certificazione della qualità dei combustibili legnosi basata sulla norma ISO 17225.
- Azioni di formazione, conoscenza, innovazione connesse alla strategia AKIS (Agricultural Knowledge and Innovation System) finalizzata agli obiettivi trasversali di modernizzazione, innovazione, digitalizzazione dei sistemi forestali, favorendo gli scambi delle conoscenze e il rafforzamento delle capacità innovative degli attori forestali, con il ricorso alle diverse misure di:
  - Erogazione servizi di consulenza (SRH01);
  - Formazione dei consulenti (SRH02);
  - Formazione degli imprenditori e operatori forestali (SRH03);
  - Azioni di informazione (SRH04);
  - Servizi di back office per l'AKIS (SRH06) finalizzati alla fornitura di informazioni e supporti specialistici per i consulenti e gli altri attori dell'AKIS in materia di certificazione e tracciabilità dei processi produttivi e dei prodotti forestali.

Un'esperienza pilota di formazione si è tenuta nel luglio 2025 con lo svolgimento del primo corso sulla Certificazione di Gestione Forestale Sostenibile, organizzato dall' l'Osservatorio dell'Appennino Meridionale in collaborazione con PEFC, che ha condotto alla formazione dei primi 27 certificatori forestali della Campania.

D3. Riconoscere e remunerare i servizi di interesse pubblico, ambientale e sociale forniti dalle aree forestali (foreste e pascoli) e mantenuti ed accresciuti dalla GFS

Le foreste e i suoli forestali sono il più importante "pozzo di assorbimento" di anidride carbonica a scala regionale. Secondo l'Inventario forestale nazionale 2015 i boschi della Campania hanno una capacità di fissazione valutata in 792.168 tonnellate/anno di carbonio organico, grazie all'accrescimento della biomassa epigea. Il rafforzamento di questa funzione strategica, attraverso una gestione accorta e lungimirante, può contribuire in misura determinante al conseguimento, da parte del sistema economico-ambientale regionale nel suo complesso, degli impegni e degli obiettivi definiti dalle convenzioni internazionali e dalle direttive comunitarie in materia di cambiamento climatico globale.
Il percorso che il Piano forestale generale intende promuovere è quello definito dalla Strategia Forestale Nazionale, basato sulla capacità di portare a sintesi una pluralità di azioni e interventi già trattati in altre parti del Piano:

- definizione di schemi volontari di pagamento per l'offerta addizionale di Servizi ecosistemici che permettano lo sviluppo di mercati volontari locali dei servizi generati dalla GFS quali la fissazione di carbonio, il miglioramento della qualità del suolo, delle risorse idriche, l'aumento del valore ambientale e socioculturale dei boschi.
- Promozione e organizzazione di nuovi mercati, accordi, soluzioni contrattuali e altri strumenti

fonte: http://burc.regione.campania.it

volontari per il riconoscimento di forme di remunerazione diretta o indiretta dei prodotti e dei servizi generati dalla GFS.

- Promozione della certificazione forestale e tracciabilità dei prodotti legnosi e non legnosi e dei Servizi ecosistemici.
- Promozione di forme innovative di gestione associata dei boschi in relazione alle esigenze di erogazione di prodotti e servizi per lo sviluppo di filiere forestali sostenibili.
- Introduzione di azioni economiche e fiscali a supporto dei gestori e degli operatori del settore che forniscono Servizi ecosistemici senza mercato (compensazioni monetarie, agevolazioni fiscali e defiscalizzazioni delle pratiche selvicolturali per il miglioramento dell'ecosistema forestale, per interventi di manutenzione idraulico-forestale, di prevenzione dei danni alle foreste, di recupero dei boschi danneggiati da eventi estremi ecc.).
- Promozione dell'utilizzo di strumenti di responsabilità ambientale e sociale da parte dei proprietari e delle imprese nella gestione delle risorse forestali, anche per attirare verso le attività di GFS investimenti etici di operatori esterni al settore.
- Riconoscimento dei Servizi ecosistemici nella conservazione e tutela della biodiversità, degli habitat e degli ecotoni generati dalla GFS attraverso sistemi di monitoraggio e valutazione univoci e integrati, per ottenere valori concreti e utili a migliorare la pianificazione e gestione forestale.
- Riconoscimento e promozione dei servizi di interesse pubblico di investimenti forestali nell'ambito delle Nature-sased solutions quali il fitorisanamento dei suoli contaminati, la depurazione delle acque, la protezione delle opere civili, la messa in sicurezza delle discariche, ecc.
- Promozione del ruolo delle aree protette e in particolare dei Parchi Nazionali e Regionali, anche per lo sviluppo di strumenti innovativi di gestione quali i mercati volontari dei Servizi ecosistemici e la loro certificazione, con le connesse attività di comunicazione e di marketing territoriale.

Questo percorso si colloca all'interno della nuova regolamentazione per l'uso del suolo (LULUCF) che l'UE ha implementato, con l'obiettivo di potenziare il serbatoio di carbonio delle foreste europee di circa 42 milioni di tonnellate di CO2 equivalenti entro il 2030 rispetto al periodo 2016-2018. Per conseguire tale obiettivo LULUCF ha indicato obiettivi e definito requisiti di monitoraggio avanzati per tutti gli Stati membri dell'UE.

In particolare, il Piano forestale generale intende promuovere e incrementare la possibilità per le foreste della Campania di accedere al mercato dei crediti di carbonio secondo la procedura definita nelle Linee Guida per i Crediti di Carbonio Volontari nel Settore Agricolo e Forestale approvate dal MASAF, in attuazione dell'articolo 45, commi dal 2-quater al 2-octies del D.L. 13/2023.

Le Linee guida definiscono i criteri per la generazione, contabilizzazione, certificazione, riconoscimento e commercializzazione dei crediti di carbonio prodotti su base volontaria dal Settore agricolo e forestale nazionale. L'obiettivo è valorizzare pratiche di gestione sostenibile in grado di migliorare l'assorbimento del carbonio atmosferico e promuovere un mercato volontario basato su standard rigorosi e verificabili.

Il Registro nazionale dei crediti di carbonio volontario (VCC), istituito presso il CREA (Centro di Ricerca per la Selvicoltura), ha due sezioni ("Agricola" e "Forestale") ed è una piattaforma *on line* ad accesso e consultazione pubblica.

Il CREA è responsabile della gestione e aggiornamento del Registro, della verifica e controllo dei Documenti di Progetto (DDP), del rilascio della conformità dei crediti generati e della verifica degli audit di certificazione effettuati dagli organismi esterni (OCE).

Affinché i crediti siano iscrivibili nel Registro e utilizzabili nel mercato volontario, devono rispettare precisi requisiti:

- **Generazione tramite Progetto:** Devono essere generati attraverso la realizzazione di un Progetto sul territorio nazionale, con l'assunzione di pratiche e impegni addizionali rispetto alla normativa vigente.
- **Quantificazione e Criteri:** Devono essere quantificati con metodologie credibili e trasparenti, in linea con le *Guidelines for national greenhouse gas inventories* (IPCC, 2006) e i criteri QU.A.L.ITY (Quantification, Additionality, Long-term storage and sustenability).
- **Certificazione:** Devono essere certificati da un Organismo indipendente di certificazione esterno (OCE) accreditato da ACCREDIA.
- **Non Rivendibilità:** Esauriscono il proprio valore al momento dell'acquisto e non sono più rivendibili a terzi.
- **Mercato:** Non possono essere venduti ad acquirenti esteri e ad altri Stati.

fonte: http://burc.regione.campania.it

- **Sostenibilità:** Devono avere un impatto neutro o positivo sulla sostenibilità ambientale ed economica (risorsa idrica, biodiversità, ecosistemi, inquinanti).

I Progetti forestali ammissibili (con durata non inferiore a 20 anni, o 35 anni per i prodotti legnosi) che generano crediti sono:

- **Miglioramenti della Gestione Forestale:** Assunzione di impegni silvo-ambientali addizionali (es. conversione del ceduo in alto fusto, interventi di utilizzazione che non superino il 100% dell'incremento annuo).
- **Imboschimento e Rimboschimento:** Realizzazione con specie autoctone o naturalizzate su superfici non forestali o forestali temporaneamente prive di copertura, a condizione che non siano già opere compensative obbligatorie.
- **Arboricoltura da Legno:** Impianti su superfici agricole o non agricole con specie idonee, purché non sia opera compensativa obbligatoria.
- **Agroforestazione:** Impianto di specie arboree (50-150 piante/ha) su superfici agricole per sistemi silvoarabili o silvopastorali, non già previsti come opera compensativa obbligatoria.
- **Prodotti e Materiali Legnosi di Lunga Durata:** Impiego di prodotti di origine nazionale con tempo di vita non inferiore a 35 anni (es. legno strutturale).

L'iter di registrazione e vendita dei crediti si articola in queste fasi:

1. Sviluppo del **Documento di Progetto (DDP)** da parte del "proponente.
2. Presentazione del DDP all'**OCE** e avvio della certificazione.
3. Trasmissione della richiesta di conformità dei crediti certificati al **CREA**.
4. **Verifica di conformità** da parte del CREA.
5. **Iscrizione** dei crediti nel Registro nazionale.
6. Comunicazione da parte del proponente della disponibilità alla **vendita** e del prezzo.
7. Comunicazione dell'avvenuta transazione per l'acquisto da parte di un "acquirente".
8. **Cancellazione** dei crediti venduti e inserimento dei dati della transazione nel Registro.

L'acquirente, prima della transazione, deve dimostrare di possedere un coerente sistema di gestione e riduzione delle emissioni certificato, secondo l'approccio MERC (Misurare, Evitare, Ridurre, Compensare).

Il Piano forestale Generale intende promuovere l'accesso delle foreste della Campania al mercato dei crediti di carbonio in accordo con Linee guida del MASAF con le sguenti azioni prioritarie:

- avviamento delle procedure per la generazione, contabilizzazione, certificazione, riconoscimento dei crediti di carbonio dalle 10 foreste demaniali regionali, aventi una superficie complessiva di circa 5.000 ettari.
- Sostegno e promozione dell'adesione volontaria di proprietari forestali pubblici e privati, ditte boschive e imprese di trasformazione, a schemi di certificazione forestale riconosciuti, mediante gli aiuti previsti dal CSR Campania 2023-2027 mediante l'intervento SRD15 "Investimenti produttivi forestali".

D4. Promozione delle produzioni forestali non legnose in una prospettiva di filiera

Le produzioni forestali non legnose riguardano, per la Campania: castagne, nocciole, ghiande, funghi, pinoli con guscio, oltre a tartufi e frutti di bosco in misura nettamente inferiore.
L'analisi complessiva della filiera castanicola campana evidenzia una situazione di non completo sfruttamento delle potenzialità di questo sistema produttivo in termini di creazione e distribuzione di valore. A soffrire di questa situazione è soprattutto la fase agricola che non appare in grado di valorizzare pienamente le risorse impiegate nella produzione.
La scarsità di forme associative (organizzazioni di produttori, cooperative di raccolta e lavorazione, centrali ortofrutticole, ecc.), in presenza di una notevole scarsità di manodopera e di proprietà castanicole – in buona parte di piccole dimensioni – condotte da operatori non pienamente impegnati nell'attività agricola, spesso non consente di raccogliere i frutti tempestivamente e viene avviato al mercato un prodotto che non presenta un valore merceologico ottimale; questo risulta meno attraente per i consumatori finali e quindi il prezzo che possono spuntare i produttori risulta basso. Inoltre, per quanto riguarda i produttori che non sono in grado di curare il prodotto, incombe l'esigenza di cedere al più presto l'intera produzione che, una volta raccolta e non trattata, può, nel giro di pochi giorni, deteriorarsi e non trovare più una remunerativa collocazione sul mercato impedendo quindi la ricerca delle migliori condizioni di vendita.

fonte: http://burc.regione.campania.it

Rispetto allo scarso interesse per la differenziazione si osserva che i quantitativi di castagne commercializzate come IGP, dove questo è possibile, sono assai inferiori a quelli che sarebbero possibili data la base produttiva. Le indagini di campo mostrerebbero che questo non dipende tanto da una difficoltà che il prodotto differenziato avrebbe a penetrare il mercato, quanto da uno scarso interesse degli operatori commerciali di maggiore peso per la valorizzazione del prodotto a denominazione.
Il peso economico della castanicoltura è rilevante nelle aree interessate e ancora di più potrebbe diventarlo, grazie ad una maggiore valorizzazione delle
castagne già nella fase agricola e grazie alle possibilità di manipolazione e trasformazione anche nelle singole aziende agricole, per la produzione di specialità la cui vendita, in una prospettiva di crescita del turismo rurale, può consentire un significativo incremento dei redditi aziendali. Oltre a ciò la qualificazione dell'offerta delle castagne potrà contribuire ad arricchire il paniere delle produzioni tipiche regionali aumentandone quindi la forza e la capacità competitiva.
In sintesi, le misure previste per l'attuazione di questa azione sono:

- interventi di miglioramento dei castagneti da frutto;
- incentivazione delle forme di gestione associata delle imprese forestali;
- servizi di assistenza tecnica alla proprietà privata;
- incentivazione alla diffusione dei marchi D.O.P. e I.G.P.
- gestione sostenibile dei noccioleti in zone sottoposte a vincolo idrogeologico.

D5. Adesione al Cluster legno-foresta italiano e costituzione del Cluster legno foresta della Campania

L'azione intende potenziare e sviluppare, con il ricorso agli strumenti forniti dalla Strategia Forestale Nazionale, l'attività di confronto e ascolto dei diversi operatori della filiera forestale svolta dal Tavolo regionale per la tutela, la gestione e la valorizzazione del patrimonio forestale regionale e per lo sviluppo delle diverse componenti della filiera foresta – legno e foresta – energia in Campania, istituito con D.D.R. n. 101 del 03/03/2023 della D.G. 50.07.00, in attuazione dell' art. 14, comma 3 del T.U.F.F, che rappresenta uno strumento fondamentale per sviluppare l'Azione D. del PFG "Promuovere e rafforzare le filiere forestali in Campania per lo sviluppo locale e l'economia circolare".
L'attività del tavolo potrà essere ulteriormente sviluppata e integrata mediante l'adesione al Cluster legno-foresta italiano e la costituzione del Cluster legno foresta della Campania, in attuazione dell' Azione Strumentale 5 "Cluster Legno" della Strategia Forestale Nazionale, rafforzando forme di coordinamento strutturato tra il mondo forestale e quello della prima e seconda trasformazione, con l'obiettivo di:

- superare la frammentazione della filiera produttiva foresta-legno,
- sostenere iniziative di networking e di cooperazione,
- promuovere politiche di filiera, incentivare politiche di comunicazione per la promozione del settore,
- aumentare la trasparenza del mercato e, in definitiva,
- incrementare la produttività del patrimonio boschivo regionale nelle aree interne e supportare i processi di innovazione tecnologica e di internazionalizzazione.

Il punto di partenza è l'analisi del contesto attuale quale risulta tra l'altro dalle riflessioni svolte dal Tavolo regionale per la tutela, la gestione e la valorizzazione del patrimonio forestale regionale, caratterizzata anche in Campania dalla estrema frammentazione delle filiere produttive legate al settore foresta-legno.

fonte: http://burc.regione.campania.it

Per superare tale situazione, la Strategia Forestale Nazionale indica un percorso preciso, attraverso la creazione di legami strutturati tra imprese, istituzioni territoriali ed enti di ricerca, per sostenere e promuovere le reti di impresa già presenti in ambito locale, regionale e sovra-regionale con l'obiettivo:

- di valorizzare i prodotti legnosi e l'uso multifunzionale degli ecosistemi forestali,
- di creare sinergie nei processi di innovazione tecnologica, nelle attività di marketing, nell'acquisizione di finanziamenti esterni, nelle attività di normazione e certificazione nelle funzioni di rappresentanza, in particolare in sede europea e internazionale,
- di sviluppare nuovi modelli formativi in grado di rispondere ai mutati scenari legati alla gestione delle foreste e del legno.

Il Cluster Nazionale Foresta-Legno Italiano è stato costituito per iniziativa del Ministero delle politiche agricole con l'obiettivo di operare nei seguenti specifici campi di intervento:

- sostegno allo sviluppo di filiere e dei cluster territoriali in grado di valorizzare le risorse forestali locali, rafforzando il dialogo ed i legami tra le diverse imprese del settore, strutturando in modo stabile i rapporti tra i soggetti della produzione e gli utilizzatori, anche attraverso osservatori di mercato, piattaforme di interscambio e contratti di fornitura;
- definizione ed incentivazione di modelli innovativi di aggregazione, coordinamento e cooperazione tra i proprietari forestali, gli operatori del settore dell'industria del legno lungo la filiera; tale intervento può essere realizzato attraverso l'avvio di progetti pilota dimostrativi e di strumenti informativi mirati alla formazione e sensibilizzazione dei diversi operatori di settore;
- attivazione di sinergie e progettualità, in un'ottica condivisa di distretti forestali, tra più enti locali, proprietari pubblici e privati, amministrazioni pubbliche e operatori della filiera, stimolando la realizzazione e l'adozione di Piani forestali territoriali di area vasta;
- valorizzazione del prodotto legno nazionale, sia per usi industriali sia per fini energetici, nel rispetto del principio dell'uso a cascata, attraverso la definizione di un Sistema di qualità nazionale (verificando la fattibilità di un marchio "100% legno italiano"), basato sui principi della certificazione forestale e della tracciabilità dei prodotti, volto ad aumentare il valore aggiunto del prodotto nazionale, differenziandolo e rendendolo riconoscibile rispetto al prodotto estero e promuovendo catene di valore responsabili;
- valorizzazione dei prodotti nazionali collocati nei mercati dell'edilizia attraverso la promozione di iniziative volte alla diffusione di standard costruttivi ad alto risparmio energetico e di nuovi materiali compositi;
- ottimizzazione della produzione e dell'utilizzo sostenibile delle biomasse forestali, anche "fuori foresta" sostenendo l'arboricoltura da legno e gli impianti a rotazione rapida nel contesto più complessivo dell'approccio "a cascata";
- definizione di linee guida nazionali di pianificazione dei sistemi energetici alimentati da biomasse lignocellulosiche su basi di approvvigionamento locale, valorizzando la creazione di reti di distribuzione e il riciclo del legno, quando non impiegabile per usi industriali;
- sviluppo di iniziative pilota di collaborazione pubblico-privato finalizzate alla realizzazione di infrastrutture, impianti-pilota, laboratori sui nuovi materiali a base di legno e sulle trasformazioni innovative del legname e delle biomasse lignocellulosiche in un modello di sviluppo vocato all'innovazione del settore;
- rafforzamento della presenza italiana nella Piattaforma Tecnologica Forestale europea e altre iniziative correlate, creando un collegamento stabile con il Tavolo di Filiera Legno del Masaf, al fine di raccordare le iniziative sul sistema della conoscenza e della ricerca forestale con le istituzioni interessate, fra le quali Masaf e altri Ministeri con competenze nel settore, la Rete Interregionale di Ricerca Agro-Forestale, le Piattaforme Tecnologiche nazionali e i cluster tecnologici nazionali pertinenti, anche attraverso l'avvio di progetti pilota per il trasferimento dell'innovazione e delle conoscenze scientifiche e tecnologiche alle imprese.

Gli obiettivi operativi della costituzione dei cluster sono molteplici:

- incentivare il dialogo tra gli attori strategici settore;
- integrazione delle competenze del sistema pubblico e di quello privato nel campo della ricerca e della sperimentazione con il sistema delle attività in foresta e della filiera foresta-legno-energia;
- valorizzazione dei risultati della ricerca e promuovendo il loro trasferimento tecnologico;

fonte: http://burc.regione.campania.it

- mobilitazione del sistema della gestione responsabile e attiva delle foreste, nel quadro della loro protezione, dei servizi, della ricerca e della formazione, per attivare un dialogo estensivo ed inclusivo centrato su priorità condivise, nell'ambito del mandato ricevuto dalla Strategia Forestale Nazionale;
- promozione di modelli formativi e di dialogo con le comunità locali, al fine di diffondere una gestione attiva e responsabile delle foreste nonché ad una valorizzazione della materia prima legnosa all'interno delle diverse filiere di settore.

Alla luce delle considerazioni svolte in precedenza, il Piano forestale generale prevede:

- l'adesione di Regione Campania al Cluster legno foresta italiano
- il prosieguo e il potenziamento delle attività del *Tavolo regionale per la tutela, la gestione e la valorizzazione del patrimonio forestale regionale e per lo sviluppo delle diverse componenti della filiera foresta – legno e foresta – energia in Campania*, sotto la nuova denominazione di "Cluster legno foresta della regione Campania", sottolineando ulteriormente in questo modo il collegamento con la Strategia forestale nazionale, e con la comunità nazionale di attori della filiera foresta-legno operante all'interno del Cluster legno foresta italiano.

fonte: http://burc.regione.campania.it

E. Vivere le foreste della Campania

Il quinto gruppo di azioni del Piano forestale generale risponde all'obiettivo di promuovere e valorizzare i servizi socioculturali delle foreste in Campania, in sinergia con il turismo sostenibile, con riferimento sia ai grandi paesaggi storici dei vulcani, della costa e delle isole del Golfo, sia in quelli da scoprire a promuovere della collina e della montagna interna, in particolare puntando su tre azioni chiave.

E1. Valorizzare le foreste regionali come "laboratori verdi multifunzionali" e centri di diffusione permanente della GFS in Campania

Le foreste demaniali della Campania: un patrimonio forestale pubblico di eccezionale valore che si estende su 5.400 ettari, e che grazie alla sua articolazione e distribuzione geografica comprende campioni eccellenti dell'intero spettro di biodiversità forestale regionale, dalle foreste mediterraneee costiere a quelle temperate della fascia alto-montana.
Il Piano forestale generale della Campania considera le 10 foreste demaniali alla stregua di 10 distinti laboratori territoriali nei quali:

- I cittadini della Campania possono scoprire, approfondire, apprendere, vivere tutta la gamma di opportunità, valori, esperienze che il bosco produce per il benessere integrale della persona, delle comunità e e delle economie locali;
- Si definiscono e mettono a punto i modelli di gestione sostenibile delle foreste della Campania, in accordo con la Strategia forestale nazionale e con il Piano forestale generale, da diffondere e promuovere a scala regionale.

Le foreste demaniali sono le aree forestali dove si dimostra che gli approcci innovativi, integrati, multifunzionali di gestione forestale che il presente Piano propone e promuove sono concretamente realizzabili. Sono i laboratori di ricerca, sperimentazione e divulgazione; luoghi elettivi di apprendimento e produzione di valori sociali e culturali e di benessere psicofisico; ma anche nuclei di attivazione delle economie locali.
Il modello multifunzionale di gestione forestale sostenibile delle foreste regionali rientra nel concetto di "foresta modello": modelli di comunità forestali che si fondano su un partenariato più ampio possibile per diffondere la gestione forestale sostenibile e la cura dei paesaggi forestali. L'adesione alle foreste modello è volontaria, e si pone l'obiettivo di conciliare i possibili conflitti tra i diversi interessi legati alluso delle foreste, attraverso il confronto paritario, all'interno di processi trasparenti, con scelte condivise e rappresentative di tutti gli interessi in gioco, per un territorio forestale definito. La Rete Internazionale delle Foreste Modello vede in questo momento 60 Foreste Modello costituite in 30 Paesi di tutto il mondo. L'Italia, con la Regione Toscana, si è candidata a mantenere la gestione del Segretariato Mediterraneo delle Foreste Modello. IN Italia le Foreste Modello sono 2: la foresta della Valle dell'Aterno, in Abruzzo, e la foresta delle Montagne Fiorentine, in Toscana.
Come previsto dall'azione D4 del presente piano, le foreste demaniali nel loro complesso sono anche i laboratori verdi che Regione Campania intende certificare per i servizi ecosistemici di assorbimento e stoccaggio di carbonio: un'azienda forestale regionale formalmente deputata alla produzione di crediti di carbonio certificati che costituiscono una posta attiva nel bilancio ambientale regionale.
Il Piano forestale generale prevede pertanto:

- che entro il 2025 tutte e le foreste demaniali della Campania siano dotate di un Piano di gestione forestale ai sensi della legislazione regionale vigente;
- che entro il 2026 sia avviata per le foreste demaniali la procedura di certificazione forestale, contestualmente a quella per il riconoscimento dei servizi ecosistemici da esse prodotti con specifico riferimento all'assorbimento e stoccaggio del carbonio;
- che entro il 2025 sia avviata la procedura di iscrizione delle foreste demaniali alla Rete internazionale delle Foreste Modello.

fonte: http://burc.regione.campania.it

E2. Valorizzazione multifunzionale della viabilità forestale e silvo-pastorale e della sentieristica in Campania

All'attualità non si dispone di una cartografia adeguata della viabilità forestale della Campania. L'azione propedeutica promossa dal Piano forestale generale è quindi quella di promuovere la realizzazione di una Banca dati georeferenziata della viabilità forestale e silvo-pastorale principale e secondaria da aggiornare periodicamente, in accordo con la classificazione e le specifiche tecniche indicate nel Decrero inteministeriale 28/10/2021 n. 563734 /2021 e della relativa Tabella A allegata, anche allo scopo di contribuire alla realizzazione dell'archivio informatico a scala nazionale delle informazioni inerenti la rete della viabilità forestale e silvo-pastorale principale e secondaria.
Ai fini della Gestione Forestale Sostenibile e della prevenzione dei rischi naturali e antropici, il Piano forestale generale promuove inoltre interventi programmati di cura e messa in sicurezza della viabilità forestale e silvo-pastorale, unitamente alle opere ad essa associate, nel rispetto dei criteri descritti nel capitolo 11, anche mediante la definizione di progetti da attuarsi in collaborazione con gli Enti delegati nel quadro delle politiche pubbliche di forestazione di cui al Documento esecutivo di programmazione forestale redatto a cadenza triennale in attuazione della dall'art. 5 della legge regionale 7 maggio 1996, n. 1.
Particolare attenzione sarà rivolta alla manutenzione della viabilità forestale nelle aree forestali identificate dal presente piano come "boschi di protezione diretta". In queste aree i tagli stradali rappresentano importanti discontinuità della copertura pedologica, in corrispondenza delle quali si localizzano tipicamente le nicchie di distacco delle colate piroclastiche. D'altro canto, la manutenzione accurata e il mantenimento in efficienza della viabilità in queste aree critiche riveste valore strategico per le funzioni molteplici legate:

- all'attuazione delle pratiche colturali;
- al monitoraggio delle aree;
- alla realizzazione degli interventi ingegneristici di protezione attiva e passiva;
- alla manutenzione delle opere di cui al punto precedente;
- alle attività escursionistiche e ricreative.

In chiave di promozione multifunzionale del patrimonio forestale regionale, il Piano forestale generale si propone inoltre di dare piena attuazione alla legge regionale n. 14/2020 "Norme per la valorizzazione della sentieristica e della viabilità minore" che interessa una rete che innerva il territorio forestale, montano e rurale della regione, per una lunghezza complessiva di circa 5.000 km. In particolare, il Piano forestale generale promuove le attività previste nel Regolamento attuativo della legge, finalizzate tra l'altro:

- alla definizione della Rete Escursionistica Campana (REC), ovvero la rete primaria dei sentieri così come individuati e classificati dalla Consulta Regionale prevista all'articolo 9 della medesima legge, facente parte della Rete escursionistica italiana (REI) del CAI, e della Rete europea della European Ramblers Association;
- alla realizzazione del Catasto regionale del patrimonio escursionistico;
- alla pianificazione degli interventi di manutenzione, gestione e valorizzazione della rete sentieristica regionale.

F. Conoscere le foreste della Campania

Il sesto gruppo di azioni del Piano forestale generale risponde all'obiettivo di favorire la conoscenza ai diversi livelli del patrimonio forestale regionale attraverso tre azioni chiave finalizzate alla realizzazione della nuova carta forestale regionale; all'implementazione dello Sportello per le attività forestali; allo sviluppo di azioni di informazione per il rafforzamento di una cultura forestale diffusa.

F1. Promuovere un programma integrato di monitoraggio e cartografia delle risorse forestali della Campania

L'azione di promozione di un programma regionale integrato di monitoraggio, cartografia e inventariazione delle risorse forestali della Campania sarà condotto in stretto coordinamento con il progetto SINFOR, promosso dal Ministero delle politiche alimentari in collaborazione con il CREA. Il progetto SINFOR è attuativo della Strategia Forestale Nazionale, si compone di due filoni operativi finalizzati alla redazione della Carta forestale nazionale, alla quale sarà associato Database foreste. I due strumenti integrati permetteranno attraverso la raccolta e consultazione di dati e informazioni puntuali e specifiche in materia forestale di poter disporre di informazioni e conoscenze aggiornate e affidabili sulle foreste sul settore forestale e sulle filiere produttive, ambientali e socio-culturali italiane.
La Regione Campania intende contribuire alla costruzione di SINFOR mediante la redazione della Carta forestale Regionale e del Data Base regionale attraverso un programma integrato di attività con la collaborazione di Enti di ricerca pubblici e privati comprendente:

- Attività di rilevamento campionario di campo delle tipologie forestali e dei tipi colturali;
- Attività di interpretazione diacronica di immagini ad alta risoluzione da satellite e da sensore aviotrasportato attraverso lo sviluppo di appositi algoritmi di machine learning;
- Valorizzazione dei dati derivati dai Piani di gestione forestale approvati e da altre basi informative già in possesso dell'Amministrazione.
- Lo sviluppo di un modello digitale delle foreste campane in grado di consentire la definizione di un bilancio quantitativo dinamico dei servizi ecosistemici prodotti dall'infrastruttura forestale regionale.

L'attività di programmazione forestale che l'Amministrazione regionale è chiamata a svolgere deve basarsi su conoscenze cartografiche aggiornate e dettagliate del patrimonio forestale regionale. La presente azione del Piano forestale generale prevede pertanto la realizzazione della Carta Forestale della Campania costituisce un documento conoscitivo di carattere generale con finalità di:

- supportare indagini, studi e ricerche sul patrimonio forestale regionale;
- supportare l'esercizio delle funzioni di indirizzo politico nel settore forestale e ambientale;
- costituire la base conoscitiva per la pianificazione e programmazione forestale regionale;
- rappresentare uno strumento di supporto allo svolgimento delle funzioni tecniche e di vigilanza per le materie forestali e ambientali (in particolare il vincolo paesaggistico, il vincolo idrogeologico, il monitoraggio dei boschi ai fini fitosanitari, l'applicazione della normativa in materia di incendi boschivi, ecc.);
- costituire uno strumento dinamico da aggiornare sulla base di modifiche di origine antropica e naturale;
- acquisire informazione sull'utilizzo dei dati iperspettrali nel settore forestale in considerazione della presenza di un sensore iperspettrale sui satelliti della costellazione italiana IRIDE in orbita partire dal 2025, anche per il miglioramento dei servizi geospaziali offerti dalla piattaforma IRIDE.

La realizzazione della Carta prevederà l'attuazione delle seguenti fasi operative:

1. Integrazione della cartografia forestale della regione Campania prototipale "bosco/non bosco" realizzata dal CREA nell'ambito del progetto SINFOR per la realizzazione della Carta Forestale d'Italia (CFI2020), mediante attività di fotointerpretazione preliminare, rilevamento di campo e analisi in ambiente GIS degli strati informativi e dei dati georeferenziati già in possesso dell'Amministrazione;
2. Realizzazione della versione definitiva della cartografia delle risorse forestali su base tipologica della regione Campania, mediante l'impiego di algoritmi di classificazione assistita e dati satellitari;

fonte: http://burc.regione.campania.it

3. Realizzazione di approfondimenti tematici relativi alla struttura delle foreste regionali mediante analisi dei dati da sensoristica LiDAR aviotrasportata.
4. compilazione del metadato secondo il contenuto delle schede metadato fornite dall'Amministrazione;
5. predisposizione dei report tecnici relativi alle diverse fasi di progetto.

La presente azione del Piano forestale generale della Campania prevede che la realizzazione della Carta Forestale della Campania, finanziata con risorse del Fondo per lo sviluppo delle montagne italiane (FOSMIT), sia completata entro 30 mesi dall'entrata in vigore del Piano.

F2. Implementazione dello Sportello unico regionale per le attività forestali (SUAF)

Secondo quanto previsto dal comma 9 del Regolamento regionale n. 3/2017, lo Sportello Unico delle Attività Forestali (S.U.A.F.) costituisce il punto unificato di accesso ai servizi informativi forestali, fornisce chiarimenti tecnico-amministrativi in materia forestale, distribuisce la modulistica, riceve la documentazione riferita ai procedimenti normati dal presente regolamento, fornisce indicazioni in merito allo stato ed all'esito delle istanze presentate.
In attuazione delle disposizioni del Regolamento, presso gli uffici di ciascun Ente delegato e presso le Strutture Regionali, Centrale e Territoriali, competenti in materia di politiche forestali, è già stato costituito uno Sportello Unico delle Attività Forestali (S.U.A.F.), al fine della gestione digitalizzata delle procedure amministrative di competenza di ciascun ufficio.
In tale quadro, obiettivo dell'azione F2 è quello di implementare la piattaforma informatica che consenta di mettere a sistema i diversi sportelli forestali, rendendo possibile quindi l'accesso a dati aggiornati di scala regionale indispensabili per le attività di programmazione.
In particolare, le strutture regionali competenti hanno il compito di occuparsi delle attività di:

- pianificazione della gestione e della manutenzione del patrimonio forestale, che viene attuata tramite i P.F.I.T. e i P.G.F., che costituiscono i principali strumenti conoscitivi e di pianificazione;
- controllo e monitoraggio di tutte le fasi relative alle utilizzazioni boschive (autorizzazioni e trasformazioni boschive;
- autorizzazione, controllo e monitoraggio di tutte le fasi relative all'Albo delle imprese forestali e degli operatori EUTR;
- ricerca forestale, cartografia e inventario forestale, che riguardano lo studio e l'applicazione di metodologie avanzate per il controllo delle aree boscate e del territorio montano. A tal fine, ad integrazione delle attività di controllo di campo, può essere utile il monitoraggio continuo del territorio regionale attraverso immagini telerilevate che permettono il controllo delle aree boscate e del loro stato fitosanitario e di utilizzo e la stima di alcuni parametri dei soprassuoli boschivi;
- autorizzazione, controllo e monitoraggio di tutte le fasi relative ai P.F.I.T. e dei P.G.F. la cui operatività richiede la possibilità di consultare e modificare il geodatabase regionale.

Gli Enti Delegati territorialmente competenti hanno invece il compito di occuparsi delle attività di:

- istruttoria, autorizzazione, controllo e monitoraggio di tutte le fasi relative alle utilizzazioni boschive (autorizzazioni e comunicazioni di taglio, progetti e relazioni di taglio), al vincolo idrogeologico e alle trasformazioni boschive;
- istruttoria, controllo e monitoraggio di tutte le fasi relative all'Albo delle imprese forestali.

Alla fase di implementazione a scala locale del SUAF deve ora seguire quella di unificazione e omogeneizzazione procedimentale nonché l'unificazione degli sportelli S.U.A.F., attraverso la realizzazione di una piattaforma informatica unitaria di livello regionale, con l'obiettivo di costruire di una base conoscitiva generale di supporto alla programmazione forestale regionale.
La piattaforma unificata del SUAF regionale dovrà gestire la base informativa, documentale e cartografica, relativa tra l'altro:

- ai Piani Forestali di Indirizzo Territoriale di prossima realizzazione
- ai Piani di Gestione Forestale;
- ai tagli boschivi
- alle autorizzazione di uso e raccolta dei prodotti secondari del bosco
- alla viabilità forestale e opere connesse.

fonte: http://burc.regione.campania.it

L'implementazione della base dati unificata del SUAF richiederà lo svolgimento delle seguenti attività:

- progettazione e realizzazione della piattaforma unificata, a partire da quella già realizzata dall'Amministrazione regionale per la gestione di patentini e autorizzazioni per la raccolta di Funghi e Tartufi;
- integrazione degli sportelli locali all'interno della piattaforma unificata;
- digitalizzazione della documentazione pregressa, a partire da quella relativa a PFG e tagli boschivi, in formato pdf editabile per la documentazione amministrativa, e in formato shp per le cartografie;
- acquisizione sistematica della documentazione in formato digitale relativa ai nuovi procedimenti autorizzativi e di controllo.

La presente azione del Piano forestale generale sarà finanziata con risorse FOSMIT e dovrà condurre entro 18 mesi dall'approvazione del Piano all'entrata in funzione della implementazione della piattaforma unitaria del SUAF Campania.

F3. Promozione di iniziative e programmi divulgativi per rafforzare la consapevolezza pubblica dell'importanza e il ruolo ecologico del patrimonio forestale della Campania;

Il Piano forestale generale promuove a tutti i livelli la formazione di una conoscenza multidisciplinare e di una responsabilità globale nella tutela delle foreste, anche attraverso la ricerca scientifica multidisciplinare, l'assistenza tecnica, la formazione professionale e la promozione dei prodotti forestali e di pratiche, produzioni e consumi sostenibili.
Il patrimonio forestale della regione Campania per le sue dimensioni territoriali, ambientali, produttive e socioculturali ha un ruolo strategico e trasversale per il benessere degli abitanti, ora e in futuro. Tutelare e garantire il ruolo delle foreste come bene di interesse collettivo è una responsabilità non solo politica ma anche un impegno da promuovere sul piano culturale, a partire dalle istituzioni scolastiche. Vi è la necessità di riportare la cultura del bosco nelle scelte di programmazione e nella vita civile del paese mediante azioni di informazione e sensibilizzazione che coinvolgano enti pubblici, imprese, associazioni non profit e privati cittadini.
Il Piano forestale generale promuove la corretta informazione, realizzando azioni specifiche di comunicazione, divulgazione e sensibilizzazione pubblica che consentano di far apprezzare la ricchezza e valore del patrimonio forestale regionale, al fine di accrescere la consapevolezza e responsabilità della società sul ruolo della foresta come fonte di Servizi ecosistemici essenziali per la qualità della vita, sulle pratiche e obiettivi della Gestione forestale sostenibile e della selvicoltura come strumento di mitigazione dei cambiamenti climatici e dei pericoli naturali.
Il Piano forestale generale della Campania sostiene pertanto iniziative di informazione e sensibilizzazione pubblica, sulla responsabilità della società nei confronti delle foreste come bene di interesse collettivo e strumento di tutela e sviluppo, facilitando azioni promosse anche da attori della società civile e da parte delle comunità locali. Il piano promuove, attraverso il finanziamento di progetti specifici di comunicazione e campagne di divulgazione per le diverse tipologie di utenti, l'informazione su:

- ricchezza e valore economico, sociale, ambientale e paesaggistico del patrimonio forestale della regione Campania;
- responsabilizzazione collettiva per la tutela attiva delle foreste e della biodiversità;
- ruolo svolto dalla Gestione Forestale Sostenibile e della selvicoltura;
- importanza e dignità del lavoro degli addetti alle operazioni di taglio, allestimento ed esbosco del legname;
- necessità del mantenimento della stabilità delle foreste, vulnerabilità degli ecosistemi forestali e ruolo delle foreste rispetto ai cambiamenti climatici;
- valore e ruolo del legno quale materia prima rinnovabile nei diversi possibili impieghi, necessità del riciclo e riutilizzo delle biomasse forestali;
- rischi connessi ai consumi di legname e altri prodotti la cui origine possa essere associata a deforestazione e degrado delle foreste.

In particolare, con la presente azione il Piano forestale della Campania:

- promuove l'educazione ambientale e la sensibilizzazione degli studenti alla cura e rispetto degli ecosistemi forestali e del verde pubblico proponendo materiale informativo adeguato ai diversi livelli di scolarizzazione;

fonte: http://burc.regione.campania.it

- favorisce lo scambio di esperienze e la condivisione del materiale informativo sulla Gestione Forestale Sotenibile, sui boschi e sull'uso del legno sviluppato da amministrazioni, riviste e new media, Università ed Enti di ricerca, imprese e società civile;
- coordina e promuove azioni pubbliche per la celebrazione della Giornata Nazionale degli Alberi, istituita dalla legge 14 gennaio 2013, n. 10 il 21 novembre di ogni anno, al fine di poter far conoscere il patrimonio forestale nazionale, il suo ruolo e le sue funzioni, i suoi prodotti e le tipologie di lavoro legate al bosco;
- con il coinvolgimento delle Società scientifiche che si interessano di risorse forestali, promuove un servizio di fact-checking e di debunking a servizio degli operatori dei media e dei cittadini finalizzato a dare una corretta rappresentazione del patrimonio forestale nazionale, del suo ruolo e funzioni, dei rischi e delle dinamiche di degrado e di miglioramento, tenendo in dovuta considerazione gli aspetti ambientali, socioculturali e economici della foresta.

Gli interventi promossi dal Piano saranno anche finanziati dall'intervento SRH04 del CSR Campania 2023-2027 "Azioni di informazione".
L'intervento risponde all'obiettivo trasversale della PAC finalizzato a favorire, diffondere e condividere la conoscenza, le esperienze e le opportunità, l'innovazione e i risultati della ricerca e la digitalizzazione nel settore agroforestale e nelle zone rurali. I destinatari delle attività di informazione sono gli addetti dei settori agricolo, forestale, gli altri soggetti pubblici e privati e i gestori del territorio operanti nelle zone rurali, e più in generale i cittadini e i consumatori. L'attività di informazione rafforza il potenziale umano delle persone per promuovere la crescita economica, lo sviluppo sociale e per migliorare la sostenibilità ambientale delle imprese agricole e forestali. L'intervento si realizza attraverso attività ricadenti in una o più delle seguenti tipologie: iniziative di confronto (sportelli informativi, incontri tecnici, convegni, seminari ecc.); prodotti informativi (bollettini, newsletter, opuscoli, pubblicazioni, schede, ecc.) su supporto multimediale o tramite strumenti social/web; altre iniziative idonee alla diffusione delle informazioni. I progetti informativi sono collegati alle tematiche indicate nell'art. 15, paragrafo 4) del Reg. (UE) 2021/2115. In particolare, assumono un ruolo strategico le attività di informazione tese ad accrescere tra gli attori dell'AKIS il ruolo strategico delle foreste nella transizione verso la sostenibilità ambientale e nel contrasto al cambiamento climatico, l'importanza della gestione Forestale Sotenibile nella conservazione attiva delle risorse ambientali di base (acqua, aria, suolo, ecosistemi, paesaggi, biodiversità).
Per accedere al finanziamento, le attività dovranno essere organizzate in progetti di informazione che saranno selezionati dalla Regione tramite avvisi pubblici, procedure ad evidenza pubblica o altre forme di affidamento. L'intervento può essere attivato anche all'interno di progetti integrati o di cooperazione. Sono beneficiari le seguenti categorie di soggetti, ove accreditati all'attività di formazione:

- Enti di Formazione accreditati;
- Soggetti prestatori di consulenza;
- Enti di ricerca, Università e Scuole di studi superiori universitari pubblici e privati.
- Istituti tecnici superiori;
- Istituti di istruzione tecnici e professionali;
- Altri soggetti pubblici e privati attivi nell'ambito dell'AKIS;
- Regioni e Province autonome anche attraverso i loro Enti strumentali, Agenzie e Società in house.
- Società attive nel campo della comunicazione (multimedialità, editoria, ICT, organizzazione di eventi, etc) per usufruire anche di soggetti specializzati al di fuori di AKIS.

I soggetti di cui sopra beneficiano dell'aiuto presentando la richiesta in forma singola o associata.

fonte: http://burc.regione.campania.it

G. Le nuove foreste della Campania

G1. Valorizzare e potenziare i vivai forestali; estendere la superficie dei boschi da seme; valorizzare le risorse genetiche; potenziare la produzione di materiale di propagazione forestale

Il settimo gruppo di azioni del Piano forestale generale risponde all'obiettivo di supportare i nuovi interventi di forestazione in accordo con il New Green Deal Europeo e con il PNRR; di valorizzare e potenziare i vivai forestali; estendere la superficie dei boschi da seme; valorizzare le risorse genetiche; potenziare la produzione di materiale di propagazione forestale; la promozione di tecniche forestali per il recupero dei siti degradati in Campania.

Per soddisfare le diverse finalità di impiego nel settore forestale, sul territorio campano sono presenti 12 vivai forestali demaniali regionali, dislocati in pedo ambienti diversi del territorio regionale. In tali cantieri si effettua la produzione di piante necessarie ai rimboschimenti, rinsaldamenti, ricostituzioni, rinfoltimenti dei boschi, arredo verde e paesaggistico, nonché all'attuazione di interventi di ingegneria naturalistica.

A seguito del ruolo fondamentale che il settore forestale è chiamato a svolgere per la sostenibilità e la circolarità dei processi di produzione e consumo, in coerenza con i documenti del New Green Deal europeo e i regolamenti della nuova PAC, basati su un concetto di condizionalità rafforzata, con maggiori impegni per garantire la gestione sostenibile e la tutela delle risorse di base: il suolo, l'acqua, l'aria, la biodiversità, il paesaggio, vi è una forte richiesta di materiale forestale certificato.

Per far fronte a tale richiesta, la Regione Campania con D.G.R. n. 505 del 23/11/2021 ha:

a. dato mandato di elaborare ed attuare un progetto volto a incrementare lo sviluppo delle foreste urbane e peri-urbane per il miglioramento della qualità ambientale (qualità dell'aria, clima locale, funzioni ricreative) e del benessere degli abitanti, che si inserisca pienamente nella strategia del Piano per la Transizione Ecologica e che costituisca, allo stesso tempo, la base conoscitiva e programmatica, ma anche il motore operativo, di molte delle azioni declinate nel PNRR;

b. previsto che per l'attuazione operativa di detto progetto di forestazione vengano utilizzati gli operai dei cantieri forestali regionali e gli operai idraulico forestali degli Enti delegati, da adibire preminentemente alla piantumazione e, all'occorrenza, alla cura ed alla manutenzione delle foreste urbane e dei boschi di prossimità dei centri urbani, nonché, in conformità alla disciplina vigente, il personale della società del polo ambientale regionale, i lavoratori dei Consorzi di Bacino, il volontariato regionale e la platea di disoccupati di lunga durata, già formalmente censita sulla base di provvedimenti dei competenti Uffici regionali;

c. previsto, altresì, la razionalizzazione e ottimizzazione delle strutture vivaistiche regionali presenti sul territorio, allo scopo di incrementare e migliorare la qualità delle piante di specie autoctone e certificate, per consentire la produzione di circa tre milioni di piante entro l'anno 2030, accentrando le produzioni in strutture attrezzate e di maggiori dimensioni, avvalendosi di maestranze adeguate e più qualificate;

d. demandato la D.G. per le Politiche Agricole, Alimentari e Forestali, a predisporre un nuovo modello organizzativo dei vivai forestali demaniali, comprensivo delle risorse finanziarie necessarie per gli adeguamenti e il potenziamento della forza lavoro, da sottoporre alle competenti determinazioni della Giunta Regionale.

A questo scopo, con Decreto regionale n. 401 del 14/07/2023, predisposto dalla Direzione Generale per le Politiche Agricole, Alimentari e Forestali, è stato approvato il documento: "Riorganizzazione vivai forestali demaniali regionali", nel quale viene formulato un nuovo modello organizzativo per la razionalizzazione e ottimizzazione dei vivai forestali demaniali regionali, comprensivo delle risorse finanziarie occorrenti. In sintesi, il nuovo modello produttivo e organizzativo prevede di ridurre il numero dei siti produttivi, potenziando il "Centro regionale sperimentale di moltiplicazione e certificazione dei materiali vegetali" presso l'Azienda sperimentale regionale Improsta (di seguito Vivaio Improsta), che diventerà, difatti, il principale Vivaio di produzione e distribuzione delle piantine e dei semi.

Gli altri undici vivai, diventeranno in parte "Vivai di produzione e accrescimento" anche delle piantine prodotte e distribuite dal Vivaio Improsta, ed in parte "Aree di accrescimento e conservazione della biodiversità".

In ogni Provincia, ci sarà un solo "Vivaio di produzione e accrescimento", mentre gli altri diventeran-

fonte: http://burc.regione.campania.it

no “Aree di accrescimento e conservazione della biodiversità”.
La forza lavoro presente sarà concentrata in massima parte nel “Vivaio di produzione e accrescimento”, dove saranno programmate le produzioni principali. In base alle esigenze, e a discrezione del direttore dei lavori, gli operai potranno essere utilizzati nelle “Aree di accrescimento e conservazione della biodiversità” dove verranno prodotte poche specie, individuate in base ai fattori pedo-climatici ove insiste l’area di accrescimento, nonché alle esigenze dell’amministrazione regionale.
Pertanto, nel triennio 2024/2026, la programmazione prevede la produzione di circa 3 milioni di piante e l’utilizzo di manodopera già presente nei vivai demaniali, nonché altra manodopera specializzata proveniente da ditte e/o cooperative, opportunamente individuate secondo la procedura prevista dal D.Lgs 36/2023.
Le diverse attività previste nel triennio 2024/2026 verranno effettuate con fondi provenienti da risorse proprie del bilancio regionale per l’implementazione delle politiche agro-forestali.

La produzione di materiali di base e i boschi da seme

L’Assessorato regionale all’Agricoltura per soddisfare la crescente richiesta di materiale di propagazione forestale autoctono “certificato”, dovuta ai nuovi indirizzi della Politica Agricola Comunitaria, in particolare sul sostegno allo sviluppo rurale da parte del Fondo Europeo Agricolo per lo Sviluppo Rurale (FEASR) che ha portato alla emanazione del Programma di Sviluppo Rurale in Campania, ha elaborato ed attuato un progetto mirante ad individuare e iscrivere nel Libro Regionale dei Materiali di Base (LRMB), in conformità al dettato del D.Lvo 386/2003 “Attuazione della direttiva 1999/105/CE” relativa alla commercializzazione dei materiali forestali di moltiplicazione”, Materiali di Base (MB) idonei alla raccolta di Materiali di propagazione delle più importanti specie forestali autoctone campane, nonché, arrivare alla realizzazione di una rete di Arboreti da seme.
Con la realizzazione del progetto “Produzioni vivaistiche forestali nelle strutture regionali – Individuazione di Materiali di Base” approvato con Delibera di Giunta regionale n. 3113 del 28 giugno 2002, sono state poste le basi per la Ricerca e Sperimentazione nel settore delle risorse genetiche forestali in Campania. L’individuazione e caratterizzazione dei diversi boschi candidati, attività ancora in itinere, ha portato alla iscrizione nel Libro Regionale dei Materiali di Base (LRMB) di diversi Materiali di Base.
L’individuazione di altri boschi, da inserire nel Libro Regionale dei Materiali di Base (LRMB), è diventata un’azione prioritaria per la Direzione Generale, ciò a seguito del ruolo fondamentale che il settore forestale è chiamato a svolgere per la sostenibilità e la circolarità dei processi di produzione e consumo, in coerenza con i documenti del New Green Deal europeo e i regolamenti della nuova PAC, basati su un concetto di condizionalità rafforzata, con maggiori impegni per garantire la gestione sostenibile e la tutela delle risorse di base: il suolo, l’acqua, l’aria, la biodiversità, il paesaggio, vi è una forte richiesta di materiale forestale certificato.
Pertanto, nel triennio 2024/2026, obiettivi primari dell’Assessorato all’Agricoltura e foreste sono *in primis* quelli di verificare se i materiali di base già censiti nel LRMB hanno ancora i requisiti per rimanere iscritti, e poi individuare e censire altri Materiali di Base/Boschi da seme da iscrivere nel citato Libro.
Per l’attuazione delle attività su descritte la Direzione generale politiche agricole e forestali ha approvato con DRD 172 del 26/09/2024 un Accordo di collaborazione tra Regione Campania e
Dipartimento di Agraria - Università degli Studi di Napoli Federico II per la realizzazione del progetto “Studi e indagini per l’individuazione di nuovi Materiali Forestali di base e la Revisione di quelli già iscritti nel Libro Regionale dei Materiali di base della Campania – Implementazione di un database relazionale” che prevede lo svolgimento delle seguenti attività:

a. implementazione di un database relazionale sui Materiali di base della Campania, nel quale verranno catalogati i Materiali di base già individuati e inseriti nel Libro Regionale dei Materiali di Base e quelli da individuare nell’ambito del “Progetto”. Tale database servirà a supportare la corretta gestione dei boschi da seme e aree di raccolta della Campania e garantire l’integrazione con i sistemi applicativi nella disponibilità della Regione Campania;

b. Individuazione di popolamenti forestali di specie scelte tra conifere e latifoglie (decidue e sempreverdi) a comportamento sociale, a distribuzione più o meno rarefatta in ambito regionale e potenzialmente idonee per: a) produzione legnosa, b) restauro forestale e rinaturalizzazione, c) forestazione urbana e periurbana; da individuare nelle diverse fasce bioclimatiche della Regione Campania. Di seguito si riportano le specie da individuare: Pino d’Aleppo; Pino domestico (da individuare preferibilmente e, eventualmente, tra piante resistenti a *Toumeyella parvicornis*); Abete bianco; Frassino maggiore;

fonte: http://burc.regione.campania.it

Frassino meridionale; Bagolaro; Rovere meridionale; Leccio; Betulla; Sughera; Roverella; Tiglio nostrano; Farnetto; Acero di monte; Acero campestre; Acero napoletano; Acero di Lobelius e Acero di Montpellier. Tali specie, se necessario, in corso d'opera possono essere integrate e/o sostituite con altre;

c. Revisione dei Materiali di base già inseriti nel Libro Regionale dei Materiali di Base (LRMB) della Campania, allo scopo di verificare il possesso dei requisiti previsti dalla normativa in vigore. Si tratta di n. 17 Materiali di base (n. 16 selezionati e n. 1 Controllato) e n. 30 identificati alla fonte *ex* D.lgs 386/2003;

d. La divulgazione dei risultati del progetto, che avverrà attraverso i canali istituzionali della Regione e del DiA dell'Università di Napoli Federico II in qualità di "Soggetto Attuatore" - SA -, nonché attraverso convegni e la pubblicazione di volumi.

G2. Promozione di tecniche forestali per il recupero dei siti degradati in Campania

I risultati degli importanti progetti di ricerca condotti in Campania nel quadro dell'emergenza "Terra dei fuochi" evidenziano il ruolo preminente delle tecniche sostenibili di recupero dei suoli potenzialmente contaminati basate sul fitorisanamento con l'impiego di essenze forestali.

Queste tecniche consentono a seconda dei casi la bonifica e/o la messa in sicurezza dei suoli potenzialmente contaminati con costi e in tempi contenuti, consentendo la conservazione della risorsa ecosistemica essenziale: il suolo.

I progetti di recupero attuati negli ultimi anni con simili approcci in Campania (Podere di S. Giuseppiello, Giugliano; Area Ecobat, Marcianise) hanno ne hanno pienamente dimostrato la validità sotto il profilo giuridico-procedimentale, tecnico-scientifico, economico, sociale e culturale.

Per tali motivi il Piano forestale generale promuove gli interventi di recupero dei siti degradati in Campania mediante bonifica ecosostenibile e/o messa in sicurezza permanente con il ricorso alle tecniche di fitorisanamento con l'impiego di essenze forestali, secondo il protocollo operativo messo a punto dal progetto LIFE11 ENV/IT/000275 ECOREMED, in accordo con il decreto ministeriale 1 marzo 2019, n. 46 relativo agli interventi di bonifica, di ripristino ambientale e di messa in sicurezza, d'emergenza, operativa e permanente, delle aree destinate alla produzione agricola e all'allevamento, ai sensi dell'articolo 241 del decreto legislativo 3 aprile 2006, n. 152. (19G00052) (GU Serie Generale n.132 del 07-06-2019).

16. Le misure del CSR Campania 2023-2027 di interesse forestale

Misure forestali

Nel CSR Campania 2023-2027 è stato attivato un gruppo di misure espressamente dedicate ad interventi forestali, che sono:

- **SRA27** - Pagamento per impegni silvoambientali e impegni in materia di clima;
- **SRA28** - Sostegno per mantenimento della forestazione/imboschimento e sistemi agroforestali;
- **SRD05** - Impianti forestazione/imboschimento e sistemi agroforestali su terreni agricoli;
- **SRD15** - Investimenti produttivi forestali.

Di queste quattro misure viene di seguito viene fornita una descrizione sintetica.

SRA27 - Pagamento per impegni silvoambientali e impegni in materia di clima

La finalità dell'intervento è promuovere il ruolo multifunzionale svolto dalle foreste e dalla Gestione Forestale Sostenibile (GFS) in materia di tutela ambientale e conservazione della biodiversità, degli habitat e dei paesaggi tradizionali forestali.
Il sostegno contribuisce al perseguimento degli Obiettivi specifici 5 (Promuovere lo sviluppo sostenibile e un'efficiente gestione delle risorse naturali, come l'acqua, il suolo e l'aria) e 6 (Contribuire alla tutela della biodiversità, migliorare i servizi ecosistemici e preservare gli habitat e i paesaggi) ed è volto a favorire il perseguimento degli impegni europei e internazionali sottoscritti dal Governo italiano in materia di conservazione della biodiversità e mitigazione e adattamento al cambiamento climatico, e degli obiettivi dell'Unione fissati nel Green Deal e dalle Strategie Forestale (COM/2021/572 final) e per la Biodiversità (COM(2020) 380 final), recepiti dagli strumenti strategici adottati a livello nazionale e regionale (Strategia nazionale per la biodiversità, Strategia Forestale Nazionale, Programmi forestali regionali, ecc).
L'intervento prevede il riconoscimento di un pagamento annuale ad ettaro, compresi i costi di transazione, finalizzato a compensare i titolari della gestione di superfici forestali dei costi aggiuntivi derivanti dalla regolamentazione delle superfici sottoposte a vincoli ambientali (Parchi e Riserve), finalizzate al mantenimento di habitat o habitat di specie di interesse comunitario:

TIPOLOGIE DI IMPEGNO:

SRA.27.1. Conservazione e mantenimento di radure in bosco, aree di margine (ecotoni)

Questa tipologia prevede impegni per la realizzazione di interventi di ripulitura, anche ripetuta nel corso del periodo di impegno, finalizzati a rallentare il processo di ricolonizzazione spontanea da parte del bosco degli spazi aperti e di ecotono, al controllo della vegetazione erbacea e arbustiva, all'eliminazione delle specie arboree e arbustive alloctone e invasive indicate dalla normativa forestale regionale.
L'impegno aggiuntivo riguarderà quindi il mantenimento delle radure di dimensioni significative (minimo di 500 mq e max di 5.000 mq interne al bosco) mediante il controllo della vegetazione erbacea (sfalcio), l'eliminazione delle specie alloctone e degli alberi di piccola statura e degli arbusti più

fonte: http://burc.regione.campania.it

invadenti. Il rapporto tra superficie delle radure e superficie boscata deve essere almeno dell'1%.

SRA.27.3. Mantenimento della continuità di copertura dei soprassuoli forestali;

Nell'ambito della presente Tipologia possono essere previsti impegni aggiuntivi in relazione alle caratteristiche della stazione, quali fertilità, usi anche tradizionali o locali per forma di governo, tipologie di specie, popolamento forestale, volti a favorire la conservazione, difesa e miglioramento sostenuti e del mancato guadagno derivante dall'assunzione volontaria di uno o più impegni silvoclimatico-ambientali che vanno al di là delle ordinarie pratiche di gestione del bosco, definite:

- dai pertinenti requisiti obbligatori stabiliti dalla normativa forestale nazionale (Testo unico in materia di foreste e filiere forestali) e regionale di settore (Regolamento forestale regionale 3/2017),
- per le Aree della Rete Natura 2000, dalle limitazioni previste dai Quadri di azioni prioritarie per Natura 2000 (Prioritised action framework for N2000 PAF), dai Piani di gestione Natura 2000, dalle Misure di conservazione sito specifiche o da altri strumenti di pianificazione e miglioramento del suolo, e consentire di ridurre, la superficie delle singole tagliate, garantendo positive conseguenze sulla qualità visiva del paesaggio.

L'impegno aggiuntivo, rispetto a quanto previsto dalle Base line di riferimento riguarderà il turno del ceduo, la cui lunghezza minima del turno è definita dalla normativa, dai regolamenti e/o dalla PMPF regionale.
L'impegno aggiuntivo può concretizzarsi nell'allungamento del turno di utilizzazione del ceduo, ferma restando la forma di governo; l'allungamento del turno dovrà essere coerente con la specie e la fertilità della stazione per mantenere la vitalità e la capacità di ricaccio delle ceppaie su cui si basa la perpetuazione della forma di governo. L'intervento prevede un periodo di impegno di 5 anni.
L'AdG Regionale definisce gli impegni cumulabili, sulla stessa superficie, a quelli del presente intervento provvedendo a che non vi sia un doppio finanziamento.

SRA28 - Sostegno per mantenimento della forestazione/imboschimento e sistemi agroforestali

L'intervento è finalizzato a garantire lo sviluppo e la permanenza, attraverso una adeguata e continua gestione, degli impianti di imboschimento e di sistemi agroforestali realizzati su superfici agricole e non agricole per il perseguimento delle seguenti finalità di interesse nazionale:

- garantire il mantenimento e la vitalità degli impianti di imboschimento e dei sistemi agroforestali eseguiti con il cofinanziamento FEASR, al fine di garantire lo svolgimento delle funzioni per le quali sono stati realizzati;
- incrementare l'assorbimento e lo stoccaggio del carbonio atmosferico, nei soprassuoli, nel suolo e nella biomassa legnosa utilizzabile anche a fini duraturi;
- migliorare la conservazione della biodiversità e degli habitat forestali, garantendo la presenza di aree forestali di elevato valore naturalistico;
- migliorare la funzione protettiva dei soprassuoli forestali per la conservazione del suolo, dell'equilibrio idrogeologico e della regolazione del deflusso idrico;
- migliorare l'efficienza e stabilità ecologica degli ecosistemi forestali e l'adattamento ai cambiamenti climatici;
- fornire prodotti legnosi e non legnosi;
- fornire servizi ecosistemici e migliorare le funzioni pubbliche delle foreste;
- diversificare il reddito aziendale agricolo e forestale

L'intervento prevede il pagamento di un premio ad ettaro per:

- il mantenimento di impianti di imboschimento naturaliformi su superfici agricole e non agricole;
- il mantenimento impianti di arboricoltura a ciclo breve o medio-lungo su superfici agricole e non agricole.

Tali finalità saranno perseguite, nel rispetto della normativa nazionale e regionale di riferimento, attraverso l'erogazione di un premio annuale a ettaro per un periodo non inferiore ai 5 anni e con le modalità specificate nei paragrafi successivi, per la copertura del mancato reddito agricolo e/o dei

fonte: http://burc.regione.campania.it

costi di manutenzione (cure colturali) necessari a mantenere l'impianto, comprese le spese di transazione, ai titolari di superfici agricole, non agricole e/o di superfici forestali che si impegnano a realizzare una o più delle seguenti Azioni di interesse nazionale:

- SRA28.1. Mantenimento impianti di imboschimento naturaliformi su superfici agricole; Per gli impianti realizzati con la scheda di investimento SRD05.1 - Impianto di imboschimento naturaliforme su superfici agricole, viene riconosciuto un premio annuale a ettaro per la copertura del mancato reddito agricolo e dei costi di manutenzione (cure colturali), comprese le spese di transazione.
- SRA28.2. Mantenimento impianto di arboricoltura a ciclo breve o medio-lungo su superfici agricole; Per gli impianti realizzati con la scheda di investimento SRD05.2 – Impianto di arboricoltura a ciclo breve o medio-lungo su superfici agricole, viene riconosciuto un premio annuale a ettaro, che, oltre alle spese di transazione, comprende:
  - impianti a ciclo breve, copertura dei costi di manutenzione (cure colturali);
  - impianti a ciclo medio-lungo, copertura dei costi di manutenzione (cure colturali) e il mancato reddito agricolo.
- SRA28.4. Mantenimento impianti imboschimento naturaliforme su superfici non agricole; Per gli impianti realizzati con la scheda di investimento SRD10.1 - Impianto di imboschimento naturaliforme su superfici non agricole, viene riconosciuto un premio annuale a ettaro per la copertura costi di manutenzione (cure colturali), comprese le spese di transazione;
- SRA28.5. Mantenimento impianto arboricoltura a ciclo breve o medio-lungo su superfici non agricole; Per gli impianti realizzati con la scheda di investimento SRD10.2 – Impianto di arboricoltura a ciclo breve o medio-lungo su superfici non agricole, viene riconosciuto un premio annuale a ettaro che oltre alle spese di transazione, comprende:
  - impianti a ciclo breve, copertura dei costi di manutenzione (cure colturali);
  - impianti a ciclo medio-lungo, copertura dei costi di manutenzione (cure colturali).

SRD05 - Impianti forestazione/ imboschimento e sistemi agroforestali su terreni agricoli

L'intervento è volto a realizzare su superfici agricole, nuovi soprassuoli forestali naturaliformi e di arboricoltura, e sistemi agroforestali, al fine, principalmente, di incrementare la capacità di assorbimento e di stoccaggio del carbonio atmosferico nel suolo e nella biomassa legnosa utilizzabile anche a fini duraturi.
La Misura SRD05 comprende le seguenti azioni:

Azione 1) - Impianto di imboschimento naturaliforme su superfici agricole.
Impianto naturaliforme con finalità multiple (ambientali, paesaggistiche, socio-ricreative nonché produttive- legno, legname e tartufi), realizzato utilizzando specie forestali arboree e arbustive autoctone di origine certificata, anche micorizzate, adatte alle condizioni ambientali locali, al fine di creare nuove superfici forestali permanenti. Pertanto, le superfici agricole su cui viene realizzato l'imboschimento non sono reversibili al termine del periodo di permanenza, rientrano nella definizione di bosco di cui alle norme regionali di settore e su queste superfici si applicano le disposizioni regolamentari regionali del settore forestale previste per i boschi.

Azione 2) Impianto di arboricoltura a ciclo breve o medio-lungo su superfici agricole
Impianto con finalità multiple (ambientali, paesaggistiche, socio-ricreative nonché produttive - legno, legname e tartufi), realizzato utilizzando specie forestali arboree e arbustive autoctone di origine certificata, di antico indigenato o altre specie forestali adatte alle condizioni ambientali locali, compresi i cloni di pioppo e le piante micorizzate.

SRD15 - Investimenti produttivi forestali

L'intervento è volto a rafforzare il ruolo multifunzionale svolto dalle foreste e dalla Gestione Forestale Sostenibile (GFS) nella fornitura di servizi ecosistemici in materia di approvvigionamento, regolazione e di funzioni culturali e socio-ricreative delle foreste, promuovendo una crescita sostenibile del settore forestale nazionale in grado di consolidare e/o offrire nuove opportunità di lavoro per la popolazione rurale.

fonte: http://burc.regione.campania.it

L'intervento persegue quindi, le seguenti finalità di interesse nazionale:

- promuovere una gestione e utilizzazione sostenibile delle foreste italiane in attuazione dei criteri di Gestione Forestale Sostenibile, adottati alla seconda conferenza ministeriale sulla protezione delle foreste in Europa tenutasi a Helsinki il 16-17 giugno 1993;
- migliorare il valore economico dei popolamenti forestali e la qualità dei prodotti forestali (legnosi e non legnosi) ritraibili dal bosco, garantendo una copertura continua dei soprassuoli forestali;
- promuovere l'ammodernamento tecnico e di processo nella gestione, nelle utilizzazioni in bosco e nei processi di trasformazione e commercializzazione dei prodotti forestali (legnosi e non legnosi), promuovendo anche lo sviluppo e/o il consolidamento di filiere forestali sostenibili locali in ambito produttivo, ambientale e socioculturale;
- migliorare e incrementare la diversificazione produttiva e la competitività delle imprese e delle aziende forestali nell'erogazione e riconoscimento dei servizi ecosistemici (PES);
- migliorare la resilienza al cambiamento climatico dei popolamenti forestali, e ai potenziali danni da eventi naturali, parassiti e malattie;
- migliorare la conservazione della biodiversità e degli habitat forestali, garantendo la presenza di aree forestali di elevato valore naturalistico;
- valorizzare la funzione protettiva dei soprassuoli forestali nella conservazione del suolo, nell'equilibrio idrogeologico e nella regolazione del deflusso idrico;
- incrementare l'assorbimento e lo stoccaggio del carbonio atmosferico, nei soprassuoli, nel suolo e nella biomassa legnosa utilizzabile anche a fini duraturi.

L'intervento comprende la tipologia di azione 2 (Ammodernamenti e miglioramenti aziendali), che finanzia gli investimenti volti a favorire la crescita del settore forestale nazionale, promuovendo l'innovazione tecnica e di processo nonché la valorizzazione del capitale aziendale. L'investimento prevede l'erogazione di un sostegno agli investimenti materiali e immateriali a copertura delle spese necessarie per poter realizzare:

- opere di ammodernamento, riconversione acquisizione e realizzazione di immobili e infrastrutture aziendali funzionali ai processi produttivi;
- l'ammodernamento del parco macchine e attrezzature per le attività di coltivazione, taglio allestimento ed esbosco,nonché per la trasformazione, mobilitazione e commercializzazione dei prodotti della selvicoltura, nonché per la produzione vivaistica forestale;
- l'introduzione di innovazione tecnica e gestionale per ottimizzare i processi di utilizzazione e trasformazione dei prodotti forestali legnosi e non legnosi, nonché i processi di produzione dei materiali forestali di moltiplicazione;
- interventi volti alla costituzione, realizzazione e gestione di piattaforme logistiche web di mercato per la commercializzazione dei prodotti legnosi e non legnosi, compresi i materiali forestali di moltiplicazione;
- interventi volti alla costituzione, realizzazione, ripristino e manutenzione straordinaria delle infrastrutture logistiche e della viabilità forestale e silvo-pastorale aziendale di ogni ordine e grado (strade e piste) a servizio della gestione forestale;
- l'elaborazione di Piani di gestione forestale o strumenti equivalenti per superfici singole e/o associate, nonché la revisione dei Piani di gestione e strumenti equivalenti in scadenza o scaduti, secondo quanto disposto dalla normativa regionale vigente;
- interventi volti al miglioramento qualitativo dei prodotti legnosi e non legnosi, alla differenziazione e promozione della produzione sulla base delle esigenze di mercato, nonché alla valorizzazione anche energetica dei residui di lavorazione e produzione;
- interventi volti a ottimizzare e/o ridurre le emissioni e i consumi energetici aziendali, anche attraverso l'acquisto di impianti e realizzazione di attività per la produzione di energia da biomassa forestale finalizzate anche alla vendita;
- interventi necessari all'adeguamento ai sistemi di tracciabilità dei prodotti della selvicoltura, compresi i materiali forestali di moltiplicazione e di certificazione della qualità dei combustibili legnosi basata sulla norma ISO 17225 (solo in abbinamento all'acquisto di nuovi macchinari ed attrezzature).

fonte: http://burc.regione.campania.it

Altre misure del CSR Campania di interesse del Piano forestale generale

Alcuni degli interventi previsti nel presente Piano, possono essere di volta in volta finanziati da altre misure del CSR, non specificatamente dedicate ad interventi forestali:

- SRA25 - ACA25 - Tutela delle colture arboree a valenza ambientale e paesaggistica (castagneti da frutto);
- SRD03 - Investimenti nelle aziende agricole per la diversificazione in attività non agricole;
- SRD04 - Investimenti non produttivi agricoli con finalità ambientale;
- SRD07 - Investimenti in infrastrutture per l'agricoltura e per lo sviluppo socio-economico delle aree rurali;
- SRG06 - LEADER - attuazione strategie di sviluppo locale;
- SRG07 - Cooperazione per lo sviluppo rurale, locale e smart villages;
- SRG09 - Cooperazione per azioni di supporto all'innovazione e servizi rivolti ai settori agricolo, forestale e agroalimentare;
- SRH01 - Erogazione servizi di consulenza;
- SRH02 - Formazione dei consulenti;
- SRH03 - Formazione degli imprenditori agricoli, degli addetti alle imprese operanti nei settori agricoltura, zootecnia, industrie alimentari, e degli altri soggetti privati e pubblici funzionali allo sviluppo delle aree rurali;
- SRH04 - Azioni di informazione;
- SRH06 - Servizi di back office per l'AKIS.

Di queste dodici misure viene di seguito viene fornita una descrizione sintetica.

SRA25 - Tutela delle colture arboree a valenza ambientale e paesaggistica

L'intervento prevede un pagamento ad ettaro a favore dei beneficiari che si impegnano a mantenere e recuperare colture arboree in aree a valenza ambientale e paesaggistica, tra le quali i castagneti da frutto.
La valenza ambientale e paesaggistica è riconosciuta in base ai seguenti criteri:

- vincolo paesaggistico ex art. 136 D. Lgs. n. 42/2004;
- paesaggi inseriti nel Registro Nazionale dei Paesaggi Rurali Storici di cui al Decreto
- Mi.P.A.A.F. n. 17070 del 19 novembre 2012, art.4);
- ulteriori contesti individuati ai sensi dell'art. 143, comma 1, lettera e) del D.Lgs. n. 42/2004 e/o territori che hanno ottenuto dall'UNESCO il riconoscimento di eccezionale valore universale;
- paesaggi rurali di rilevante valore storico, paesaggistico e ambientale, come identificati da Piani regionali vigenti coerenti con i principi dettati dalla Convenzione europea del paesaggio, dal Codice dei beni culturali e del paesaggio e/o da leggi regionali in materia;
- Globally Important Agricultural Heritage Systems (GIAHS);
- piccole isole (come definite all'art. 1, lettera e) del DM n. 6899 del 30 giugno 2020).

L'intervento comprende l'Azione 3 che finanzia il mantenimento dei castagneti da frutto. Nelle aree di valenza ambientale e paesaggistica della Campania il castagno da frutto è un elemento caratterizzante di paesaggi, con valenza storica e ambientale straordinaria. In questi contesti i castagneti, che per condizioni ambientali e/o di conduzione esprimono bassi livelli di produttività e di remunerazione dei fattori produttivi, si sono dimostrati particolarmente suscettibili alle avversità dei parassiti, in primo luogo il cinipide e il cancro del legno, con pericolo di abbandono della coltura.
Al fine di evitare ancor più preoccupanti fenomeni di degrado dei castagneti e per recuperare le piante nella loro funzione produttiva e vegetativa, si intende promuovere un'azione specifica per la cura e la gestione attiva dei castagneti da frutto, caratterizzanti i paesaggi, a favore dei beneficiari che assumono gli impegni gestionali previsti dall'intervento in questione.

fonte: http://burc.regione.campania.it

SRD03 - Investimenti nelle aziende agricole per la diversificazione in attività non agricole

L'Intervento è finalizzato ad incentivare gli investimenti per le attività di diversificazione aziendale che favoriscono la crescita economica e lo sviluppo sostenibile nelle zone rurali, contribuendo anche a migliorare l'equilibrio territoriale, sia in termini economici che sociali.

L'intervento, sostenendo gli investimenti delle aziende agricole in attività extra-agricole, persegue l'obiettivo di concorrere all'incremento del reddito delle famiglie agricole nonché a migliorare l'attrattività delle aree rurali e, allo stesso tempo, contribuisce a contrastare la tendenza allo spopolamento delle stesse.

In tale contesto è prevista, in Campania, la concessione del sostegno agli investimenti per la creazione, la valorizzazione e lo sviluppo delle seguenti tipologie di attività agricole connesse ai sensi dell'articolo 2135 del codice civile:

- agriturismo;
- agricoltura sociale;
- attività educative/didattiche;
- trasformazione di prodotti agricoli prevalentemente in prodotti non compresi nell'Allegato I del TFUE e loro lavorazione e commercializzazione in punti vendita aziendali;
- attività turistico-ricreative e attività legate alle tradizioni rurali e alla valorizzazione delle risorse naturali e paesaggistiche.

Sono esclusi dall'intervento gli imprenditori che esercitano esclusivamente attività di selvicoltura.

SRD04 - Investimenti non produttivi agricoli con finalità ambientale

► **Azione 1 – Investimenti non produttivi finalizzati ad arrestare e invertire la perdita di biodiversità e a preservare il paesaggio rurale**

Viene fornito un sostegno ad investimenti che perseguono le finalità specifiche di:

• contribuire a rendere il sistema agricolo più resiliente ai cambiamenti climatici, incrementando la complessità specifica ed ecosistemica delle aree coltivate;

• salvaguardare la biodiversità animale e vegetale favorendo la riproduzione di specie floristiche e faunistiche autoctone e contenendo al contempo la diffusione di specie alloctone;

• consentire la convivenza pacifica tra agricoltori/allevatori e fauna selvatica;

• preservare gli habitat e i paesaggi rurali, storici e tradizionali, salvaguardandone gli elementi tipici.

► **Azione 2 - Investimenti non produttivi finalizzati al miglioramento della qualità dell'acqua**

L'Azione concorre direttamente al perseguimento degli obiettivi della direttiva quadro sulle acque attraverso un sostegno per la realizzazione di investimenti non produttivi finalizzati ad una migliore gestione/miglioramento qualitativo dell'acqua quali, a titolo esemplificativo:

• realizzazione di fasce tampone arboree/arbustive e/o messa a dimora di vegetazione nel reticolo idrico minore ed artificiale, al fine di ridurre l'inquinamento nelle acque superficiali;

• Ripristino o impianto della vegetazione in alveo (macrofite) e sulle sponde (fasce riparie) nel reticolo idrico minore quali il ripristino e/o l'impianto

Azione 1 – Investimenti non produttivi finalizzati ad arrestare e invertire la perdita di biodiversità e a preservare il paesaggio rurale

1.1. realizzazione di formazioni arbustive e arboree a tutela della biodiversità: realizzazione di infrastrutture ecologiche quali, a titolo esemplificativo, boschetti, sistemi macchia radura;

1.2. realizzazione e/o ripristino della funzionalità di infrastrutture ecologiche connesse all'acqua quali a titolo esemplificativo laghetti, stagni, aree umide, prati umidi, fontanili, lanche, maceri, canali di adduzione per aree umide, pozze e altre strutture di abbeverata, anche per la funzione di fitodepurazione;

1.3. realizzazione e/o recupero di muretti a secco, terrazzamenti e/o ciglionamenti e delle sistemazioni idrauliche agrarie funzionali alla regimazione dei deflussi superficiali ad essi collegate, e/o recinzioni tradizionali;

1.4. realizzazione e/o recupero di elementi tipici del paesaggio quali, a titolo esemplificativo, abbeveratoi, fontane, sentieri, tabernacoli;

1.5. recupero di prati, pascoli e/o habitat in stato di abbandono: recupero di superfici prative o pascolive o habitat in stato di abbandono, al fine di incrementare la biodiversità degli agroecosistemi e valorizzare e ripristinare i paesaggi rurali storici e tradizionali;

1.6. interventi finalizzati al contenimento delle specie vegetali e animali esotiche invasive di rilevanza unionale:

- l'Autorità di Gestione regionale sulla base di quanto previsto dai piani di gestione naziona-

fonte: http://burc.regione.campania.it

li inerenti le specie esotiche vegetali, dai PAF o da altri documenti di indirizzo approvati (es. progetti LIFE), definisce gli areali ove attuare gli interventi di contenimento della vegetazione esotica invasiva, finalizzati al recupero delle cenosi originarie, quali a titolo esemplificativo eradicazione/controllo meccanico, sfalci ripetuti nell'arco delle tempistiche di progetto, eradicazioni manuali dell'apparato ipogeo;

- acquisto di attrezzatura e di strumenti finalizzati al contenimento delle specie animali esotiche invasive di rilevanza unionale, e/o altre specie alloctone, quali a titolo esemplificativo trappole o altri strumenti di cattura, sistemi per la soppressione eutanasica, sistemi di contenimento per la detenzione in sicurezza delle IAS;

1.7. investimenti per migliorare la coesistenza tra agricoltura, allevamenti e la fauna selvatica, inclusi gli ungulati (Cinghiali e Cervidi) e le specie di interesse comunitario tutelate dalla Dir. 92/43/CEE (Lupo, Lince, Orso bruno e Sciacallo dorato). A titolo esemplificativo, è prevista la realizzazione dei seguenti investimenti:

- recinzioni fisse o mobili, elettrificate o senza protezione elettrica, per la tutela delle colture agricole, per la protezione degli animali dalla fauna selvatica durante il pascolamento e per il ricovero notturno, inclusi i punti di abbeverata;
- casette per la protezione delle arnie;
- sistemi di virtual fencing;
- strutture per il ricovero notturno del bestiame e di alloggi (micro-unità abitative) per il personale di custodia degli animali al pascolo;
- acquisto di cani da guardiania;
- sistemi di dissuasione acustici/luminosi o di altro tipo per ungulati o per impedire l'accesso dei carnivori ai rifiuti e agli scarti;
- reti anti-uccello;
- altri sistemi di dissuasione acustici/luminosi antintrusione da fauna non già ricompresi ai punti precedenti.

1.8. investimenti per la messa in sicurezza di linee elettriche ed altre infrastrutture aeree, finalizzati a prevenire le collisioni dell'avifauna e a limitare il fenomeno dell'elettrocuzione sulle linee ad alta e medio-bassa tensione, incluso l'interramento di cavi aerei.

1.9. interventi per la connettività ecologica della fauna selvatica: realizzazione di infrastrutture ecologiche (es. tunnel, sovrappassi, sottopassi, recinzioni) che favoriscono il movimento della fauna selvatica sul territorio, anche prevenendone la collisione con gli autoveicoli, e la creazione o ripristino di corridoi ecologici e creazione di "pietre di guado" (stepping stones) mediante realizzazione di fasce arborate, di filari arborati, di boschetti, di siepi arborate e la piantagione di singoli soggetti arborei per favorire la biopermeabilità delle aree critiche.

1.10. altri investimenti a favore della fauna selvatica: installazione di strutture atte a favorire la riproduzione, il rifugio, il riposo e l'alimentazione di specie di interesse conservazionistico, quali a titolo di esempio cassette-nido, posatoi, mangiatoie.

1.11. strutture per l'osservazione della fauna selvatica: realizzazione di strutture finalizzate alla fruizione ecocompatibile degli ambienti naturali, quali a titolo di esempio capanni di osservazione e pannelli informativi e didattici, in aree di interesse naturalistico definite dalla Autorità di gestione regionale.

1.12. altri investimenti non produttivi previsti dai PAF regionali/provinciali non già ricompresi nell'elenco di cui sopra, tra cui l'acquisto di recinzioni mobili per la gestione degli habitat pascolivi, acquisto e installazione di barre di involo, vasche di abbeverata.

Nell'ambito dell'Azione 2 - Investimenti non produttivi finalizzati al miglioramento della qualità dell'acqua - gli investimenti ammissibili rientrano in una o più delle seguenti categorie:

2.1. ripristino o impianto della vegetazione in alveo (macrofite) e sulle sponde (fasce riparie) nel reticolo idrico minore quali il ripristino e/o l'impianto della vegetazione acquatica e ripariale o altri interventi di riqualificazione ecologica;

2.2. realizzazione fasce tampone, siepi e filari arborei e/o arbustivi: con funzione di riduzione dell'inquinamento nelle acque superficiali naturali ed artificiali.

SRG07 - Cooperazione per lo sviluppo rurale, locale e smart villages

L'intervento sostiene la preparazione e l'attuazione di progetti integrati e strategie *smart villages* intesi come progetti di cooperazione articolati in una o più operazioni, condivisi da parte di gruppi di beneficiari pubblici e/o privati, relativi a specifici settori/ambiti per favorire in tutte le aree rurali l'uso di soluzioni innovative, mettendo in atto anche eventuali soluzioni possibili offerte dalle tecnologie digitali e dalla multifunzionalità agricola e forestale, capaci di:

- generare ricadute positive economiche, sociali e ambientali;
- contrastare fenomeni di spopolamento e abbandono;
- rafforzare le relazioni e scambi fra le zone rurali e/o con quelle urbane.

In particolare, nelle aree più bisognose, di dimensione limitata (comuni/aggregazioni di comuni), l'intervento assume rilevanza per sostenere l'attivazione di comunità di attori al fine di favorire:

- approcci innovativi (organizzativi, di processo, prodotto, sociale);
- la creazione di economie di scala; sviluppare l'economia circolare e inclusiva in vari settori (produttivi, turistici, ambientali, socio-culturali);
- migliorare la qualità della vita a livello locale e potenziare i servizi alla popolazione.

Questo intervento può trarre vantaggio e nel contempo rafforzare, completare, consolidare l'azione promossa a livello territoriale attraverso altri interventi della PAC (es. Leader) e altri programmi sostenuti dai fondi UE, altri strumenti legislativi nazionali/regionali (es. Comunità e Distretti del cibo, turistici e produttivi nelle loro diverse declinazioni). Perciò, le strategie/progetti di cooperazione dovrebbero considerare anche le altre politiche attive sul territorio di competenza per favorire le complementarità e sinergie con esse, al fine di massimizzare l'impatto degli interventi proposti. Per questa eventualità, l'Autorità di gestione definirà, se del caso, procedure atte a garantire demarcazione e complementarità tra le operazioni da sostenere. In particolare, l'intervento sostiene la preparazione e l'attuazione di strategie/progetti di cooperazione afferenti ad uno o più ambiti di seguito descritti.

► **Cooperazione per i sistemi del cibo, filiere e mercati locali - Finalizzata a:**

- valorizzare le filiere produttive locali (agricole, forestali, ecc.);
- organizzare processi di lavoro in comune e condividere impianti e risorse;
- rafforzare i mercati locali (agricoltura sostenuta dalla comunità, reti roduttori-consumatori, forme associative e accordi con catene distributive/ristorazione/farmer's market ecc.);
- incrementare processi di economia circolare e di riduzione degli sprechi;
- promuovere il consumo consapevole e la sicurezza alimentare;
- favorire la vendita diretta; promuovere accordi di foresta e di filiere locali bosco-legno che possono comprendere proprietari e gestori forestali e imprese di utilizzazione e trasformazione del legno, al fine di rafforzare i mercati locali;
- incentivare la costituzione di filiere locali per gestire le biomasse aziendali/agricole/forestali, nonché l'eventuale trattamento e il loro utilizzo a fini energetici e per lo sviluppo della bioeconomia.

► **Cooperazione per il turismo rurale - Finalizzata a:**

- creare e/o organizzare le funzioni turistiche delle zone rurali (itinerari/vie ciclopedonali;
- riqualificazione degli spazi, tutela del paesaggio, nuovi sistemi di mobilità, ecc.);
- incrementare la sostenibilità ambientale dell'offerta turistica (gestione dei rifiuti, riduzione sprechi, adozione tecnologie di eco-building, valorizzazione delle risorse naturali e del paesaggio; mobilità sostenibile ecc.);
- rafforzare l'accessibilità (strutture e servizi per persone con bisogni speciali ecc.);
- migliorare il posizionamento sul mercato (certificazioni, piani di promozione, sistemi integrati, ecc.);
- incrementare le connessioni con le risorse agricole e forestali (reti di imprese agricole e forestali multifunzionali, valorizzazione di beni pubblici e/o privati forestali, ecc.);
- sensibilizzare gli utenti (campagne e informazione sulla fruizione sostenibile, ecc.).

► **Cooperazione per l'inclusione sociale ed economica - Finalizzata a:**

- creare/migliorare servizi e attività per la popolazione locale e target con esigenze specifiche (culturali, didattiche e ricreative, sociali, assistenziali anche attraverso

fonte: http://burc.regione.campania.it

- l'agricoltura sociale a favore di soggetti svantaggiati, ecc.) e per l'inserimento occupazionale (servizi per le imprese, attività di mediazione, orientamento e informazione;
- percorsi di avvicinamento a contesti occupazionali in aziende o attività imprenditoriali,
- agricoltura sociale, attività educative e azioni di sensibilizzazione;
- recupero di spazi per il coworking, laboratori collettivi, mobilità, ecc.).

► **Cooperazione per la sostenibilità ambientale - Finalizzata a:**

- favorire l'aggregazione fra aziende agricole e/o forestali, enti e attori locali impegnati nella gestione delle risorse ambientali a livello locale, aggregazioni tra i proprietari e conduttori di terreni forestali;
- realizzare progetti collettivi a finalità ambientale (ad esempio, volti a mitigare gli effetti dei cambiamenti climatici, utilizzare in maniera efficiente le risorse idriche, preservare la biodiversità agraria e naturalistica);
- predisporre e aggiornare i Piani di tutela e gestione dei siti Natura 2000/zone ad alto valore naturalistico, delle aree protette nazionali/regionali;
- predisporre/aggiornare i Piani di gestione delle superfici forestali pubbliche/private e la loro integrazione con altri strumenti di pianificazione territoriale.

SRG09 - Cooperazione per azioni di supporto all'innovazione e servizi rivolti ai settori agricolo, forestale e agroalimentare

L'intervento sostiene la creazione di partenariati per la realizzazione di azioni di supporto all'innovazione ed erogazione di servizi rivolti ai settori agricolo, forestale e agroalimentare, che dovranno offrire risposte sistemiche alle esigenze/problemi delle imprese e dei territori rurali. I partenariati hanno i seguenti obiettivi:
(i) far emergere le idee innovative in risposta ai fabbisogni delle imprese;
(ii) migliorare i processi di formazione, informazione e la diffusione delle conoscenze;
(iii) favorire i processi di condivisione e adozione delle innovazioni;
(iv) collegare gli attori dell'AKIS.
L'istituzione dei partenariati consentirà inoltre di rafforzare i collegamenti tra gli imprenditori e gli altri attori dell'AKIS, con particolare riferimento agli enti di ricerca e fra questi e i consulenti.
L'intervento prevede la realizzazione di almeno una delle seguenti attività:

1. realizzazione e gestione di punti di ascolto, accoglienza e incubatori di idee per le imprese, allo scopo di far emergere e individuare le idee innovative;
2. organizzazione di interventi formativi, informativi, dimostrativi e di consulenza integrati tra loro e diretti alle imprese;
3. accompagnamento alla nascita o potenziamento di aziende dimostrative e realizzazione su piccola scala di prove sperimentali e di collaudo dell'innovazione, e scambi di conoscenze "peer to peer" anche a supporto dell'attività di cui ai punti precedenti.

Misure connesse alla strategia **AKIS** (Agricultural Knowledge and Innovation System)

Nel periodo di programmazione 2021-2027, la promozione e il rafforzamento dei sistemi della conoscenza e dell'innovazione (AKIS, secondo la definizione in inglese) costituisce una vera strategia di sviluppo finalizzata alla modernizzazione, all'innovazione e alla digitalizzazione dei sistemi agricoli e forestali europei, favorendo gli scambi delle conoscenze e il rafforzamento delle capacità innovative degli attori nelle aree rurali (obiettivo trasversale della PAC).
Il sistema della conoscenza e dell'innovazione in agricoltura (AKIS) può essere definito come l'insieme degli attori, quali imprese agricole e forestali, ricercatori, educatori, servizi di supporto, industria e altro, e delle infrastrutture la cui interazione favorisce i flussi della conoscenza e i processi d'innovazione nel settore agroalimentare.
La strategia dell'AKIS implica l'introduzione dell'approccio sistemico nella programmazione delle diverse tipologie d'intervento tipicamente tese al rafforzamento del capitale umano e sociale in agricoltura (formazione, consulenza, cooperazione per l'innovazione), generalmente gestite in maniera frammentata. Le misure del CSR Campania 2023-2027 che concorrono alla strategia AKIS sono le seguenti:

SRH01 - Erogazione servizi di consulenza

I servizi di consulenza aziendale sono volti a soddisfare le esigenze di supporto espresse dalle imprese agricole, forestali e operanti in aree rurali su aspetti tecnici, gestionali, economici, ambientali e sociali e a diffondere le innovazioni sviluppate tra-

fonte: http://burc.regione.campania.it

mite progetti di ricerca e sviluppo, tenendo conto delle pratiche agronomiche e zootecniche esistenti, anche per quanto riguarda la fornitura di beni pubblici. Attraverso tali servizi, è offerta un'assistenza adeguata lungo il ciclo di sviluppo dell'impresa, anche per la sua costituzione, la conversione dei modelli di produzione verso la domanda dei consumatori, le pratiche innovative, le tecniche agricole per la resilienza ai cambiamenti climatici, comprese l'agro-forestazione e l'agroecologia, il miglioramento del benessere degli animali e, ove necessario, le norme di sicurezza, il sostegno sociale e il contrasto allo sfruttamento della manodopera. I servizi di consulenza agricola sono integrati nei servizi correlati dei consulenti aziendali, dei ricercatori, delle organizzazioni di agricoltori e di altri portatori di interessi pertinenti che formano gli AKIS (Reg. (UE) 2021/2115, art. 15, paragrafo 2). Tali servizi consistono nell'insieme di interventi e di prestazioni tecnico-professionali fornite dai consulenti alle imprese, anche in forma aggregata. I servizi di consulenza sono rivolti a tutte le imprese agricole, forestali e operanti in aree rurali e possono prevedere anche attività strumentali funzionali ad una efficace erogazione del servizio (ad esempio analisi chimico-fisiche del suolo, degli alimenti, biologiche, dei mercati, delle condizioni climatiche, piattaforme digitali di servizio, ecc.).

SRH02 - Formazione dei consulenti

L'intervento è finalizzato al miglioramento dei servizi di consulenza aziendale attraverso la crescita e la condivisione delle conoscenze e delle competenze professionali e al miglioramento delle relazioni tra attori dell'AKIS, anche quelli che operano all'interno della Pubblica amministrazione, promuovendo attività di informazione, formazione e scambi di esperienze professionali. L'intervento si realizza attraverso attività ricadenti nelle seguenti tipologie: iniziative informative (ad es. giornate dimostrative, predisposizione e invio di newsletter e realizzazione di pubblicazioni, video, materiale divulgativo), formazione in presenza e in remoto (corsi, seminari, visite aziendali, sessioni pratiche, viaggi studio, comunità di pratica e professionali). Le attività suddette verteranno sulle tematiche connesse con gli obiettivi generali e specifici della PAC 2023-2027 avendo particolare attenzione ai più recenti risultati della ricerca e alle innovazioni.
Per accedere al finanziamento, le attività dovranno essere organizzate in progetti che verranno selezionati tramite avvisi pubblici, procedure a evidenza pubblica o altre forme di affidamento.

Beneficiari:

- Fermo restando quanto disposto dall' art. 79 del Regolamento UE 2021/2115, Adg nazionali, Regioni e Provincie autonome, loro Agenzie, Enti strumentali e Società in house.
- Enti di ricerca, Università e Scuole di studi superiori universitari pubblici e privati.
- Istituti Tecnici Superiori.
- Istituti di istruzione tecnici e professionali.
- I soggetti prestatori della consulenza.
- Altri soggetti pubblici e privati attivi nell'ambito dell'AKIS.

SRH03 - Formazione degli imprenditori agricoli, degli addetti alle imprese operanti nei settori agricoltura, zootecnia, industrie alimentari, e degli altri soggetti privati e pubblici funzionali allo sviluppo delle aree rurali

L'intervento è finalizzato alla crescita delle competenze e capacità professionali degli addetti operanti a vario titolo nel settore agricolo, forestale e nei territori rurali. L'intervento sostiene la formazione e l'aggiornamento professionale dei soggetti destinatari, anche in sinergia tra di loro, attraverso attività di gruppo e individuali quali corsi, visite aziendali, sessioni pratiche, scambi di esperienze professionali, coaching, tutoraggio, stage, ecc. Le attività suddette verteranno sulle tematiche connesse con gli obiettivi generali e specifici della PAC 2023-2027 avendo particolare attenzione ai più recenti risultati della ricerca e alle innovazioni.
Per accedere al finanziamento, le attività dovranno essere organizzate in progetti che verranno selezionati tramite avvisi pubblici, procedure a evidenza pubblica o altre forme di affidamento.
L'intervento può essere attivato anche all'interno di progetti integrati o di cooperazione.
Beneficiari
Sono beneficiari le seguenti categorie di soggetti, ove accreditati all'attività di formazione:

- Enti di Formazione accreditati;
- Soggetti prestatori di consulenza;
- Enti di ricerca, Università e Scuole di studi superiori universitari pubblici e privati.
- Istituti tecnici superiori;
- Istituti di istruzione tecnici e professionali;
- Altri soggetti pubblici e privati attivi nell'ambito dell'AKIS;
- Regioni e Province autonome anche attraverso i loro Enti strumentali, Agenzie e Società in house.

fonte: http://burc.regione.campania.it

SRH04 - Azioni di informazione

L'intervento risponde all'obiettivo trasversale della PAC finalizzato a favorire, diffondere e condividere la conoscenza, le esperienze e le opportunità, l'innovazione e i risultati della ricerca e la digitalizzazione nel settore agroforestale e nelle zone rurali. I destinatari delle attività di informazione sono gli addetti dei settori agricolo, forestale, gli altri soggetti pubblici e privati e i gestori del territorio operanti nelle zone rurali, e più in generale i cittadini e i consumatori. L'attività di informazione rafforza il potenziale umano delle persone per promuovere la crescita economica, lo sviluppo sociale e per migliorare la sostenibilità ambientale delle imprese agricole e forestali. L'intervento si realizza attraverso attività ricadenti in una o più delle seguenti tipologie: iniziative di confronto (sportelli informativi, incontri tecnici, convegni, seminari ecc.), prodotti informativi (bollettini, newsletter, opuscoli, pubblicazioni, schede, ecc.) su supporto multimediale o tramite strumenti social/web e altre iniziative idonee alla diffusione delle informazioni. I progetti informativi sono collegati alle tematiche indicate nell'art. 15, paragrafo 4) del Reg. (UE) 2021/2115. In particolare, assumono un ruolo strategico le attività di informazione tese ad accrescere tra gli attori dell'AKIS e gli utenti finali la cultura della prevenzione e gestione del rischio, a sensibilizzare gli operatori di settore alla lotta al caporalato e allo sfruttamento del lavoro nel settore agricolo, a favorire la transizione verso la sostenibilità ambientale, a contrastare le fitopatie, le malattie degli allevamenti e le epizoozie nel rispetto degli obiettivi sanitari e fitosanitari nazionali ed europei. Tra le attività previste dall'intervento sono incluse la diffusione dei progetti GO, delle loro sintesi e dei risultati realizzati.

Per accedere al finanziamento, le attività dovranno essere organizzate in progetti di informazione che saranno selezionati dalla Regione tramite avvisi pubblici, procedure ad evidenza pubblica o altre forme di affidamento.

L'intervento può essere attivato anche all'interno di progetti integrati o di cooperazione.

SRH06 - Servizi di back office per l'AKIS

L'intervento sostiene i servizi di back office al fine di fornire informazioni e supporti specialistici per i consulenti e gli altri attori dell'AKIS in materia, ad esempio, di: uso delle risorse naturali (acqua, suolo, aria); eventi atmosferici e cambiamenti climatici; problemi connessi ai settori zootecnico, forestale e alle produzioni vegetali (inclusa la loro difesa); condizioni dei mercati; gestione dell'impresa. I suddetti servizi saranno forniti da soggetti esperti, in relazione a necessità e temi di interesse degli attori AKIS che lavorano nelle aree rurali e con le imprese. L'intervento si propone di:

1. realizzare, potenziare e integrare reti di monitoraggio per la raccolta dati, analisi (comprese quelle di laboratorio) e informazioni, incluse quelle provenienti da azioni/progetti di sperimentazione;
2. realizzare e rendere disponibili ai consulenti e all'AKIS banche dati regionali/nazionali/internazionali;
3. sviluppare e rendere disponibili strumenti digitali anche per realizzare elaborazioni complesse (DSS, IA, ecc.);
4. realizzare attività di networking e comunità virtuali tra gli attori dell'AKIS ed in particolare fra consulenti, ricercatori e Rete PAC, a livello regionale, nazionale e internazionale.
5. Per accedere al finanziamento, le attività dovranno essere organizzate in progetti che verranno selezionati tramite avvisi pubblici, procedure a evidenza pubblica o altre forme di affidamento.

Alla stregua dell'istruttoria compiuta dalla Direzione Generale e delle risultanze e degli atti tutti richiamati nelle premesse che seguono, costituenti istruttoria a tutti gli effetti di legge, nonché dell'espressa dichiarazione di regolarità della stessa resa dal Direttore a mezzo di sottoscrizione della presente

PREMESSO che

a) la Regione Campania considera la promozione e lo sviluppo del turismo quale obiettivo prioritario per lo sviluppo del territorio e per il settore di intervento di riferimento e riconosce che il turismo contribuisce alla crescita civile, culturale, sociale e morale delle comunità ospitanti, degli ospiti e dei visitatori;
b) la Legge Regionale n. 18/2014, recante "Organizzazione del Sistema Turistico in Campania", riconosce il ruolo fondante e primario che il turismo ha storicamente avuto nella maturazione e nell'evoluzione del fenomeno a livello nazionale, europeo e mondiale;
c) la menzionata Legge Regionale assume che, tra le finalità attribuite alla Regione, vi è quella di promuovere e consolidare l'immagine unitaria e complessiva del sistema turistico regionale, valorizzando le risorse turistiche dei patrimoni diffusi del territorio regionale anche delle aree interne e di promuovere l'immagine turistica della Campania in ambito nazionale ed internazionale;

PREMESSO, altresì, che

a) con Legge 30 dicembre 2021, n. 234, recante il "Bilancio di previsione dello Stato per l'anno finanziario 2022 e bilancio pluriennale per il triennio 2022-2024", e, in particolare, con l'articolo 1, commi 366 e 368, è stato istituito nello stato di previsione della spesa del Ministero del Turismo, rispettivamente, il Fondo unico nazionale per il turismo parte corrente e il Fondo unico nazionale per il turismo di conto capitale;
b) l'Atto di Programmazione n. 8912/23 per il triennio 2023-2025, relativo al Fondo unico nazionale per il turismo di conto capitale, adottato dal Ministro del Turismo con decreto prot. 8912/23 del 5 maggio 2023, definisce gli indirizzi politico-amministrativi di natura programmatica da attuare per la individuazione degli interventi e la ripartizione dei fondi stanziati per il triennio 2023 – 2025 dalla Legge di bilancio 29 dicembre 2022, n. 197;
c) con Decreto n. 11278/24 del 17/04/2024, il Ministro del Turismo ha aggiornato gli indirizzi politico-amministrativi individuati nell'Atto di programmazione menzionato, volti alla assegnazione e ripartizione dei fondi stanziati per l'annualità 2024, stabilendo, tra l'altro, che le proposte presentate dai soggetti beneficiari devono essere strutturate, in termini progettuali, almeno a livello di studio di fattibilità e devono prevedere il cofinanziamento, pari ad almeno il 50% dell'importo complessivo occorrente per la realizzazione dell'investimento, a carico di risorse pubbliche o private rese disponibili dalle Regioni e dalle Province autonome di Trento e di Bolzano, anche mediante l'intervento di finanziarie regionali o mediante l'impiego di fondi europei a ciò destinati, ovvero di risorse finanziarie provenienti da operatori economici privati nel caso in cui si intenda realizzare l'intervento attraverso operazioni di partenariato pubblico-privato;
d) con Decreto n. 178996/25 del 05/06/2025, adottato ai sensi dell'articolo 5 - rubricato "*Ripartizione delle risorse del fondo di conto capitale*" del Decreto del Ministro del Turismo di concerto col Ministro dell'Economia e delle Finanze, 4–prot. n. 3462, del 9 marzo 2022, come modificato dal Decreto del Ministro del Turismo, di concerto con il Ministro dell'Economia e delle Finanze, prot. n. 8019/23 del 19 aprile 2023 e tenuto conto delle finalità e degli obiettivi di cui all'art. 3 del medesimo decreto interministeriale, il Ministro del Turismo ha definito gli indirizzi politico-amministrativi di natura programmatica da attuare nelle determinazioni volte alla individuazione degli interventi e alla ripartizione dei fondi stanziati per le annualità 2025, 2026 e 2027 dalla Legge di bilancio 30 dicembre 2024, n. 207;

e) con il suddetto provvedimento, sono stati, altresì, aggiornati gli indirizzi politico-amministrativi individuati nell'Atto di programmazione per il triennio 2023-2025, relativo al Fondo unico nazionale per il turismo di conto capitale, prot. n. 8912/23 del 5 maggio 2023, nonché nel relativo aggiornamento all'annualità 2024, prot. n. 11278/24 del 17 aprile 2024, volti alla assegnazione e ripartizione dei fondi stanziati per l'annualità 2025, 2026 e 2027 dalla Legge di bilancio 30 dicembre 2024, n. 207, alla individuazione dei soggetti beneficiari delle risorse, degli interventi finanziabili e delle spese ammissibili, nonché alla fissazione delle modalità di monitoraggio e rendicontazione;
f) con Decreto n. 265010 del 21/11/2025, è stato aggiornato l'Atto di programmazione per il triennio 2023-2025 di cui al Decreto con Decreto n. 178996/25 del 05/06/2025;
g) con Decreto n. 39068 del 18/03/2026, il Ministro del Turismo ha approvato le disposizioni applicative per l'attuazione, il riparto e il monitoraggio delle risorse del Fondo unico nazionale per il turismo di conto capitale, di cui all'articolo 1, commi 366 e 368, della Legge 30 dicembre 2021, n. 234;
h) con Decreto n. 43832 del 26/03/2026, il Ministro del Turismo ha emanato l'Atto di programmazione triennale - annualità 2026 – 2028 - relativo al "Fondo Unico Nazionale del Turismo di conto capitale", adottato ai sensi dell'articolo 5 - rubricato "*Ripartizione, assegnazione e monitoraggio delle risorse del Fondo di conto capitale*" del Decreto del Ministro del Turismo, sentito il Ministro dell'Economia e delle Finanze, prot. n. 39068 del 18 marzo 2026, tenuto conto delle finalità e degli obiettivi di cui all'art. 3 del medesimo decreto, che definisce gli indirizzi politico-amministrativi di natura programmatica da attuare nelle determinazioni volte alla individuazione degli interventi e alla ripartizione dei fondi stanziati per le annualità 2026, 2027 e 2028 dalla Legge 30 dicembre 2025, n.199;
i) con Decreto n. 82687 del 27/05/2026, il Ministro del Turismo ha disposto la ripartizione alle Regioni e alle Province Autonome della quota dell'80% delle risorse del Fondo Unico Nazionale del Turismo - FUNT di conto capitale, per le annualità 2026, 2027 e 2028, approvate dalla Conferenza delle Regioni e delle Province Autonome, nella seduta del 1° aprile 2026, per l'importo complessivo pari a euro 22.160.000,00, come da prospetto allegato quale parte integrante del provvedimento, dal quale risulta assegnato alla Regione Campania l'importo complessivo di €. 1.061.464,00;

PREMESSO, infine, che

a) in data 17/09/2024, è stato sottoscritto, ai sensi dell'art. 1, comma 178, lett. d) della Legge 30 dicembre 2020 n. 178, l'Accordo per la Coesione della Regione Campania, di cui si è preso atto con Deliberazione di Giunta Regionale n. 504 del 24/09/2024;
b) con Delibera n. 70 del 07/11/2024, il CIPESS, nel prendere atto dell'avvenuta sottoscrizione dell'Accordo, ha disposto, in favore della Regione Campania, l'assegnazione della quota residua di risorse FSC 2021-2027, al netto degli stralci già disposti, pari a € 1.887.666.405,44, e delle risorse complementari del Fondo di Rotazione ex lege 183/87, per un importo di € 1.277.485.160,00;
c) il citato Accordo per la Coesione finanzia un programma di interventi ritenuti strategici e qualificanti per i territori della Regione Campania, in una prospettiva di unitarietà della programmazione delle politiche di coesione e di integrazione tra i fondi della politica di coesione europea, il Fondo per lo Sviluppo e la Coesione e le altre risorse nazionali del Fondo di rotazione di cui all'art. 5 della legge 16 aprile 1987, n. 183, e il PNRR;
d) nel menzionato Programma di interventi finanziato dall'Accordo per la Coesione, è compresa, tra l'altro, la Linea di Azione avente ad oggetto "Piano strategico Cultura e Turismo" per le annualità dal 2024 al 2028, con una dotazione finanziaria complessiva a valere sulle risorse del Fondo di Rotazione ex lege n. 183/1987 (Area tematica "Cultura" – Linea d'intervento "Attività culturali"), pari ad euro 200.850.000,00, per un costo complessivo annuo di euro 40.170.000,00;
e) con Decreto dirigenziale della Direzione Generale "Autorità di Gestione FSE e FSC" n. 345 del 23/10/2024, è stato approvato il Sistema di Gestione e Controllo dell'Accordo, il quale descrive l'assetto di governance e di regole applicabile, indifferentemente e fatte salve le specifiche peculiarità,

nella gestione sia delle operazioni finanziate a valere sulle risorse FSC 2021-2027 sia di quelle finanziate a valere sulle risorse del Fondo di Rotazione di cui alla Legge n. 183/87;

f) con Decreto del Presidente di Giunta Regionale n. 82 del 31/10/2024, sono stati individuati i Dirigenti delle strutture regionali competenti *ratione materiae* per l'attuazione degli interventi ricompresi nell'Accordo e, in particolare, con riferimento alla menzionata Linea di Azione, il Responsabile dell'Attuazione è stato individuato nella Direzione Generale "Politiche Culturali e Turismo";
g) con Decreto dirigenziale della Direzione Generale "Autorità di Gestione FSE e FSC" n. 42 del 03/02/2026 è stato approvato l'aggiornamento del Sistema di Gestione e Controllo dell'Accordo, in uno con la versione vigente del manuale delle procedure di gestione, del manuale delle procedure di controllo e delle linee guida per i beneficiari;

PRESO ATTO, dall'istruttoria dei competenti uffici regionali, che

a) con deliberazione n. 108 del 13/03/2025, la Giunta Regionale ha dato avvio alla programmazione della linea di azione "Piano strategico Cultura e Turismo" per le annualità dal 2024 al 2028, mediante la formulazione di indirizzi per selezione degli interventi da sostenere a valere sulle risorse del Fondo di Rotazione;
b) per effetto degli atti deliberativi sinora assunti dalla Giunta, in attuazione della citata DGR n. 108/2025, residuano sulla linea di azione in parola risorse da programmare pari ad € 23.380.693,65;
c) la Direzione Generale "Politiche Culturali e Turismo" ha predisposto una scheda, allegata al presente provvedimento, redatta in coerenza con le disposizioni di cui al menzionato decreto ministeriale n. 82687//2026, contenente i dati di sintesi dell'intervento "Incentivazione dell'accessibilità e della sostenibilità delle destinazioni turistiche", dal valore complessivo di 2.122.928,00;
d) i competenti Uffici propongono di programmare la somma complessiva di € 2.122.928,00, di cui € 1.061.464,00, a valere sulle risorse del FUNT di conto capitale 2026, 2027 e 2028 assegnate alla Regione Campania con Decreto del Ministro del Turismo n. 82687 del 27/05/2026 ed € 1.061.464,00, a valere sulle risorse del Fondo di Rotazione ex lege 183/87 afferenti alla linea di azione "Piano strategico Cultura e Turismo" di cui all'Accordo per la Coesione, per la realizzazione dell'intervento "Incentivazione dell'accessibilità e della sostenibilità delle destinazioni turistiche", come da scheda allegata al presente provvedimento;

RITENUTO, pertanto~~,~~

a) di dover prendere atto che il Ministro del Turismo, con Decreto n. 82687 del 27/05/2026, ha approvato, ai sensi dell'articolo 4 del D.M. n. 43832 del 26/03/2026, la ripartizione delle risorse del Fondo unico nazionale per il turismo di conto capitale per le annualità 2026, 2027 e 2028, assegnando alla Regione Campania l'importo complessivo di € 1.061.464,00;
b) di dover programmare la somma complessiva di € 2.122.928,00, di cui € 1.061.464,00, a valere sulle risorse del FUNT di conto capitale 2026, 2027 e 2028 ed € 1.061.464,00, a valere sulle risorse del Fondo di Rotazione ex lege 183/87 afferenti alla linea di azione "Piano strategico Cultura e Turismo" di cui all'Accordo per la Coesione, per la realizzazione dell'intervento "Incentivazione dell'accessibilità e della sostenibilità delle destinazioni turistiche", come da scheda allegata quale parte integrante e sostanziale del presente provvedimento;
c) di dover demandare alla Direzione Generale Politiche culturali e Turismo l'adozione degli atti consequenziali;

PROPONGONO e la Giunta, in conformità, a voto unanime

DELIBERA

per i motivi espressi in narrativa, che qui si intendono integralmente riportati e confermati:

1. di prendere atto che il Ministro del Turismo, con Decreto n. 82687 del 27/05/2026, ha approvato, ai sensi dell'articolo 4 del D.M. n. 43832 del 26/03/2026, la ripartizione delle risorse del Fondo unico nazionale per il turismo di conto capitale per le annualità 2026, 2027 e 2028, assegnando alla Regione Campania l'importo complessivo di € 1.061.464,00;
2. di programmare la somma complessiva di € 2.122.928,00, di cui € 1.061.464,00, a valere sulle risorse del FUNT di conto capitale 2026, 2027 e 2028 ed € 1.061.464,00, a valere sulle risorse del Fondo di Rotazione ex lege 183/87 afferenti alla linea di azione "Piano strategico Cultura e Turismo" di cui all'Accordo per la Coesione, per la realizzazione dell'intervento "Incentivazione dell'accessibilità e della sostenibilità delle destinazioni turistiche", come da scheda allegata quale parte integrante e sostanziale del presente provvedimento;
3. di demandare alla Direzione Generale Politiche culturali e Turismo l'adozione degli atti consequenziali;
4. di trasmettere il presente atto all'Assessore al Turismo, Promozione del territorio e Transizione digitale, al Gabinetto del Presidente, alla Direzione Generale Politiche Culturali e Turismo, all'Ufficio Speciale Autorità di Gestione FSE – Autorità Responsabile PSC, all'Ufficio Speciale Autorità di Gestione FESR, al BURC per la pubblicazione e alla Sezione Amministrazione Trasparente - Casa di Vetro del sito istituzionale della Regione Campania.

Alla stregua dell'istruttoria compiuta dalla Direzione Generale e delle risultanze e degli atti tutti richiamati nelle premesse che seguono, costituenti istruttoria a tutti gli effetti di legge, nonché dell'espressa dichiarazione di regolarità della stessa resa dal Direttore a mezzo di sottoscrizione della presente

PREMESSO che

a. con Legge regionale n. 3 del 28 marzo 2002 è stata attuata la riforma del trasporto pubblico locale e sistemi di mobilità regionale, ai sensi del D.lgs. n. 422/1997;
b. ai sensi del combinato disposto degli art. 41 e 45 della predetta L.R. n. 3/2002 e ss.mm.ii., il finanziamento dei servizi minimi di trasporto pubblico locale è garantito dal Fondo regionale trasporti, costituito da risorse annualmente trasferite dallo Stato alla Regione ed alimentato altresì da risorse regionali, il cui ammontare è determinato nella legge di bilancio;
c. la Legge regionale n. 5 del 6 maggio 2013, all'art 1, comma 89, ha individuato la Regione quale Bacino Unico Ottimale per lo svolgimento dei servizi di TPL ed Ente di governo del medesimo; ai sensi di detto articolo, l'affidamento dei servizi avviene mediante procedure ad evidenza pubblica, per l'attuazione delle quali il Bacino unico può essere suddiviso in più lotti individuati dalla Giunta regionale, sentita la Commissione consiliare permanente competente, con il supporto di ACaMIR, nel rispetto dei criteri e dei principi ispiratori della riforma TPL;
d. con delibera di Giunta regionale n 793 del 19.12.2017 è stata, tra l'altro, attivata l'indizione di gara per l'affidamento in concessione, per la durata di anni 10, dei servizi minimi TPL su gomma del Bacino regionale, suddivisi in 4 lotti, avvalendosi di ACaMIR quale stazione appaltante per la gestione della procedura, nel rispetto delle prescrizioni di cui all'art. 27 comma 12 quater del D.L. 24 aprile 2017 n. 50, convertito con Legge 21 giugno 2017 n. 96;
e. ai sensi dell'art. 1, comma 90, della richiamata L.R. n. 5/2013, la partecipazione degli Enti locali al processo di pianificazione, gestione e controllo dei servizi di TPL è garantita attraverso il Comitato di indirizzo e monitoraggio, organo di raccordo istituzionale istituito con DPGRC n. 45/2014;
f. l'art. 16-bis del decreto-legge 6 luglio 2012, n. 95, convertito con modificazioni dalla legge 7 agosto 2012 n. 135, ha istituito il Fondo nazionale per il concorso finanziario dello Stato agli oneri del trasporto pubblico locale, anche ferroviario, nelle regioni a statuto ordinario;
g. con DPCM del 11 marzo 2013, pubblicato in GURI n. 148 del 26 giugno 2013, come modificato con DPCM del 7 dicembre 2015 e del 26 maggio 2017, sono stati definiti i criteri e le modalità con cui ripartire e trasferire alle Regioni a statuto ordinario le risorse del Fondo di cui al comma 1 del predetto articolo 16-bis;
h. l'articolo 27, comma 4, del decreto-legge 24 aprile 2017, n. 50, convertito con modificazioni dalla legge 21 giugno 2017, n. 96, prevede che "*nelle more dell'emanazione del decreto di cui all'alinea del comma 2, con decreto del Ministro delle infrastrutture e dei trasporti, di concerto con il Ministro dell'economia e delle finanze, è ripartito, entro il 15 gennaio di ciascun anno, tra le Regioni, a titolo di anticipazione, l'ottanta per cento dello stanziamento del Fondo. L'anticipazione è effettuata sulla base delle percentuali attribuite a ciascuna regione l'anno precedente*";
i. con decreto del Ministro delle infrastrutture e dei trasporti di concerto con il Ministro dell'economia e delle finanze n. 98 del 7 maggio 2026, registrato alla Corte dei Conti il 9 giugno 2026 n.1840, è concessa alle Regioni a statuto ordinario un'anticipazione dell'80 per cento del Fondo nazionale per il concorso finanziario dello Stato agli oneri del trasporto pubblico locale, anche ferroviario di cui al comma 1 del menzionato articolo 16-bis;

PRESO ATTO, dall'istruttoria dei competenti Uffici regionali, che

a. relativamente ai servizi minimi TPL su gomma:
   a.1. con delibera di Giunta regionale n. 226 del 29.4.2025 è stato formulato indirizzo - in ragione dell'aggiudicazione definitiva dei 4 lotti della gara ad evidenza pubblica per l'affidamento dei servizi TPL del Bacino regionale indetta dalla stazione appaltante ACaMIR, e della tempistica stimata per l'effettivo avvio dei servizi da parte dei nuovi affidatari - alla prosecuzione, sino al 31 dicembre 2025, dei contratti in essere con i gestori uscenti, al fine di assicurare la continuità dei servizi minimi TPL su gomma a tutela degli utenti;
   a.2. con delibera di Giunta regionale n. 705 del 8.10.2025, è stato preso atto della relazione ricognitiva redatta dalla stazione appaltante ACaMIR in merito allo stato di avanzamento delle attività tecnico/amministrative preordinate alla conclusione delle procedure di gara;
   a.3. con la medesima delibera è stato formulato indirizzo a procedere alla finalizzazione degli affidamenti ed alla sottoscrizione dei contratti di servizio in relazione a tutti i lotti di gara per i quali le attività

propedeutiche all'avvio del servizio lo consentano, garantendo al contempo, ed in ogni caso, la prosecuzione dei servizi minimi TPL senza soluzione di continuità per il tempo strettamente necessario all'effettivo avvio dei medesimi da parte degli aggiudicatari e comunque nel limite massimo stabilito nel capitolato di gara;

a.4. con decreto dirigenziale n. 98 del 23.12.2025, nel prendere atto dell'indirizzo di cui alla DGR n. 705/2025, i contratti in scadenza al 31.12.2025 sono stati prorogati agli stessi patti e condizioni fino al 30.6.2026 e comunque non oltre l'effettivo avvio dei servizi da parte dei nuovi affidatari di ciascun lotto di gara;

a.5. è tuttora in corso l'ultima fase dell'iter finalizzato alla stipula dei contratti di servizio in forma pubblico-amministrativa con i soggetti aggiudicatari dei lotti di gara per i quali le attività propedeutiche all'avvio del servizio lo consentano, a cui è stata richiesta la relativa documentazione utile e l'indicazione espressa della data di avvio dei servizi;

b. relativamente ai servizi minimi TPL su ferro:

b.1 per i servizi ferroviari su rete statale è vigente il contratto di servizio per il periodo di anni quindici, dal 2019 al 2033, stipulato con la soc. Trenitalia ai sensi degli artt. 5, par. 6, e 4, par. 4, del Regolamento (CE) 1370/2007, caratterizzato da ingenti investimenti, anche pubblici, in tecnologie, impianti e materiale rotabile;

b.2 per i servizi ferroviari su reti regionali è vigente il contratto di servizio con la società regionale Ente Autonomo Volturno ex art. 5 par. 2 del Regolamento (CE) 1370/2007, di durata esennale, in scadenza al 31.12.2025; in ragione dell'approssimarsi di detta scadenza, con delibera di Giunta regionale n. 707 del 12.12.2024 è stato formulato indirizzo alla Direzione generale Mobilità di dare avvio all'istruttoria finalizzata alla verifica della sussistenza dei presupposti per procedere all'affidamento alla società partecipata EAV srl del contratto di servizio TPL ferroviario regionale della durata di anni cinque, per il periodo dall'1.1.2026 al 31.12.2030, ai sensi dell'art. 5, par. 2, del Regolamento (CE) n. 1370/2007, avvalendosi del supporto tecnico di ACaMIR, e dato mandato alla medesima Direzione di procedere, nelle more, agli adempimenti di cui all'art. 7, par. 2 del Regolamento (CE) n. 1370/2007, assolti con pubblicazione di avviso sulla GUUE/S n. 247/2024 del 19.12.2024;

b.3 con delibera di Giunta regionale n. 154 del 23.4.2026 si è preso atto dell'intervenuta proroga finalizzata ad assicurare la continuità dei servizi essenziali non interrompibili di trasporto ferroviario sulle reti regionali, mediante il ricorso alle previsioni dell'art. 5, par. 5, del Reg. UE n. 1370.2007, sino alla conclusione del procedimento previsto dalla citata DGR n. 707/2024 e comunque non oltre il 31.12.2026;

b.4 con riferimento alla infrastruttura ferroviaria regionale, è vigente il contratto di programma con la concessionaria società Ente Autonomo Volturno per la gestione e manutenzione della rete, sottoscritto in data 27.6.2023 per un periodo di anni otto, nell'ambito del quale è disciplinato, tra l'altro, il riconoscimento degli esiti della contabilità regolatoria per le annualità 2021/2022, riferita al previgente contratto 2017/2022;

c. relativamente ai servizi minimi marittimi

c.1 nell'ambito della procedura per l'assegnazione dei servizi di trasporto marittimo passeggeri da, tra e verso le isole, con delibera di Giunta regionale n. 653 del 29.9.2025 è stato definito, sulla base della ricognizione e della verifica attualizzata delle esigenze essenziali di servizio pubblico per la continuità territoriale dei territori isolani ed a fini di programmazione, il quadro complessivo dei servizi minimi di trasporto pubblico locale marittimo del Golfo di Napoli, come individuati nel documento tecnico redatto da ACaMIR, con operatività dall'affidamento dei servizi;

c.2 con la medesima DGR n. 653/2025 è stato formulato indirizzo all'Agenzia regionale ACaMIR di dare corso alla procedura di verifica del mercato di cui alla Mis. 2 della Delibera dell'Autorità di Regolazione dei Trasporti (ART) n. 22/2019, volta ad accertare la sussistenza di un interesse economico totale o parziale degli operatori alla fornitura dei servizi di cui al punto che precede in assenza di compensazione ed in regime di libero mercato;

c.3 con la menzionata delibera è stato, tra l'altro, preso atto dell'esigenza di garantire la continuità dei servizi minimi di collegamento marittimo eserciti da Caremar mediante l'adozione di provvedimenti ai sensi dell'art. 5, par. 5, del Regolamento (CE) n. 1370/2007, per la durata delle procedure di cui al punto che precede e comunque non oltre il 31.12.2026;

PRESO ATTO, dall'istruttoria dei competenti uffici regionali, altresì, che

a. al fine di programmare, per l'anno 2026, le risorse finanziarie da destinare alle diverse modalità di esercizio del TPL regionale occorre tener conto dell'ammontare complessivo di risorse statali e regionali all'uopo stanziate per l'anno di riferimento;

b. il fabbisogno complessivo di mobilità su gomma, su ferro e via mare per l'anno 2026 è stimato come di seguito:

b.1. **TPL su gomma ed altre modalità**:

Nella seduta del 18 giugno 2026 il Comitato di indirizzo e monitoraggio TPL ha preso atto dell'avanzamento delle attività tecnico/giuridiche preordinate alla sottoscrizione dei contratti e dell'avvio dei servizi prospettato dagli aggiudicatari dei lotti 1 e 2, stimato al 1.1.2027. Pertanto, al fine di non pregiudicare la continuità e regolarità dell'espletamento dei servizi minimi TPL su tutto il territorio regionale e richiamato l'art. 1, comma 90bis, della L.R. n. 5/2013, Città metropolitana di Napoli, Provincia di Salerno, Provincia di Avellino, Comune di Benevento proseguono, ai sensi dell'art. 1 comma 90bis della L.R. n. 3/2013, nella gestione dei contratti di servizio di rispettiva competenza fino al 31.12.2026.

Sul piano delle risorse, il Comitato ha preso atto che per il corrente anno 2026 sono confermati a Province e Comuni capoluogo gli importi assegnati nell'anno 2025, ivi comprese le risorse destinate a finanziare i servizi di potenziamento, precisando che alla Provincia di Salerno per questi ultimi sarà riconosciuto l'importo richiesto con nota prot. n. 65348 del 18.6.2026 e che devono intendersi comprensivi delle esigenze di mobilità di varia natura (collegamenti con hub sanitari/ospedalieri, plessi scolastici/universitari, poli museali e culturali, etc).

Per il Comune di Napoli è stato confermato il finanziamento della Linea 6 e preso atto dell'avvenuta attivazione, presso i competenti organi, delle procedure finalizzate al finanziamento di 10Meuro nell'ambito della programmazione degli interventi a valere sul FSC 2021-2027 (Accordo di Coesione) per la manutenzione straordinaria delle infrastrutture metropolitane e tramviarie.

Per il Comune di Avellino, è stato preso atto che sarà trasmessa la programmazione del servizio promiscuo (metropolitana leggera/bus elettrici), da definire in uno con AIR come indicato dallo stesso Comune, per quantificarne le eventuali necessità.

Per il Comune di Benevento, il Comitato ha stato preso atto della situazione attuale dei servizi TPL eserciti da società rinunciataria e del pericolo di interruzione dei medesimi, cui l'Ente intende far fronte con affidamento emergenziale ad AIR per 6 mesi, nelle more del subentro della medesima nel lotto 2 della gara TPL. In merito agli oneri finanziari, in attesa della relativa quantificazione, tenuto conto che gli Enti territoriali di riferimento hanno dato la disponibilità alla copertura parziale del fabbisogno, la Regione si impegna a garantire la restante quota con le ulteriori risorse necessarie.

Per quanto sopra esposto ed alla luce delle complessive esigenze di trasporto pubblico locale sui territori di competenza, per l'anno 2026 le risorse occorrenti alla copertura del fabbisogno di mobilità su gomma ed altre modalità, sono pari ad € 336.730.470,01 comprensive di IVA, rinnovi contrattuali ed ogni altro onere connesso al servizio, ripartite come da tabella A allegata al presente provvedimento;

b.2. **TPL su ferro:**

Per effetto del vigente contratto con la società Trenitalia, il fabbisogno per l'anno 2026 relativamente ai servizi ferroviari su rete statale, è pari a € 182.380.000 IVA compresa, salva rideterminazione ex art. 27, comma 2 bis, del decreto - legge n. 50/2017, convertito in legge n. 96/2017.Per effetto dei contratti in essere con la società regionale Ente Autonomo Volturno, inerenti alla gestione e manutenzione dell'infrastruttura ferroviaria regionale ed ai relativi servizi di trasporto, inclusivi della linea 7, delle stazioni di nuova apertura (Baia e Monte S. Angelo) e dei servizi di supporto, fatte salve integrazioni per effetto della conclusione del procedimento di cui alla citata DGR n. 707/2024, il fabbisogno complessivo per l'anno 2026 è pari a € 202.575.087,13 comprensivo di IVA.

Pertanto, per l'anno 2026 il fabbisogno complessivo di risorse relativo alla gestione delle reti ferroviarie regionali ed ai servizi minimi di trasporto ferroviario su reti statale e regionale è pari a complessivi € 384.955.087,13, ripartiti come da tabella B allegata al presente provvedimento;

b.3. **TPL via mare:**

Con nota prot. 418899 del 28.8.2025 è stata trasmessa ad ART la documentazione redatta da ACaMIR per l'avvio della consultazione di mercato ai sensi della Misura 2 punto 4 dell'Allegato A Delibera ART n. 22/2019, riscontrata con nota prot. 73791 del 8.9.2025;

Con determinazione n. 468 del 20.11.2025 ACaMIR ha dato avvio alla menzionata consultazione di mercato attraverso la pubblicazione di un avviso sul proprio sito con invito a riscontrare entro il 19.12.2025, al fine di accertare la sussistenza di un eventuale interesse economico, da parte degli operatori di settore, a soddisfare le esigenze di servizio pubblico di continuità territoriale con le isole del Golfo di Napoli in assenza di compensazione finanziaria e nel rispetto delle condizioni di esercizio indicate nell'avviso. Con nota acquisita al prot. reg. n. 126470 del 16.2.2026 la stazione appaltante ACaMIR ha trasmesso una prima nota di sintesi su detta consultazione di mercato, evidenziandone gli esiti negativi, atteso che sono pervenute manifestazioni di interesse da parte di otto operatori economici disponibili ad effettuare i servizi solo in alcuni periodi dell'anno oppure solo in presenza di compensazione.

Pertanto, nelle more del completamento delle ulteriori fasi previste dalla procedura ART per l'assegnazione dei servizi di trasporto marittimo passeggeri da, tra e verso le isole, si rende necessario garantire la continuità territoriale con le isole del Golfo di Napoli proseguendo nei rapporti in essere con gli attuali esercenti sino al 31 dicembre 2026.

In ragione di quanto sopra rappresentato circa le attività in corso secondo gli indirizzi di cui alla menzionata DGR n. 653 del 29.09.2025, con riferimento al contratto Caremar, tenuto conto anche delle interlocuzioni con il MIT sui connessi trasferimenti statali (nota MIT prot. n. 8958 del 22.03.2024, nota DG Mobilità prot. n. 189638 del 15.04.2024 e prot. n. 744185 del 31.12.2025), il fabbisogno di risorse per l'anno 2026 è pari a € 11.856.786,70, IVA compresa.

Per i servizi minimi notturni sulla tratta Ischia-Procida-Pozzuoli e viceversa, il fabbisogno complessivo per l'anno 2026, è pari a € 1.007.433,85 IVA compresa.

Relativamente ai servizi cd. scolastici sulla tratta Procida-Monte di Procida e viceversa, il fabbisogno complessivo per l'anno 2026 è pari a € 188.000,00, IVA compresa.

Pertanto, per il corrente anno 2026 le risorse relative ai servizi minimi di collegamento marittimo sono pari a complessivi € 13.052.220,55, ripartite come da tabella C allegata al presente provvedimento.

c. si propone, pertanto, di programmare per l'anno 2026 le risorse finanziarie da destinare ai servizi TPL - comprensive di IVA, dei rinnovi contrattuali e di qualsiasi altro onere connesso ai servizi - come indicato nelle tabelle A, B, C;
d. nel corso del Comitato di indirizzo e monitoraggio del 18 giugno 2026, altresì, è stato preso atto che sono pervenute, da parte degli operatori del settore in particolare marittimo, nonché da parte di associazioni di categoria e dal Comune di Napoli, richieste di aggiornamento inflattivo tariffario motivate sia dal tempo trascorso dall'ultimo adeguamento (2023) sia dalla necessità di far fronte all'incremento che i costi di esercizio, soprattutto il carburante, hanno subìto negli ultimi anni, anche a causa della particolare situazione creatasi in medio oriente. In corso di seduta, il Comitato ha preso atto della proposta illustrata da ACaMIR, avente ad oggetto l'adeguamento inflattivo dei titoli di viaggio relativi ai servizi terresti e marittimi, che riconosce un incremento ISTAT del 5,8% sui titoli di viaggio di corsa semplice e sui titoli orari, lasciando invariato il costo degli abbonamenti mensili e annuali, al fine di non gravare sugli utenti fidelizzati, e il costo dei biglietti agevolati per i residenti delle isole.

RITENUTO

a. di dover programmare per l'anno 2026, in conformità agli esiti dell'istruttoria degli uffici, le risorse finanziarie da destinare ai servizi TPL - comprensive di IVA, dei rinnovi contrattuali e di qualsiasi altro onere connesso ai servizi - come riportate nelle tabelle A, B, C allegate alla presente delibera, di cui costituiscono parte integrante e sostanziale;
b. di dover dare atto che le risorse indicate nelle tabelle di riparto A, B e C trovano copertura negli stanziamenti iscritti nel bilancio regionale per il triennio 2026-2028, di cui alla L.R. n. 3 del 27 marzo 2026 e per la parte gestionale autorizzato con delibera di Giunta regionale n. 129 del 10 aprile 2026 e ss.mm.ii;
c. di dover confermare a carico degli Enti destinatari delle risorse di cui alla tabella A, la previsione dell'obbligo di rendicontazione per l'annualità 2025, da far tenere alla Direzione Generale per la Mobilità entro e non oltre il termine perentorio del 30 settembre 2026, pena la sospensione della quota di erogazione delle risorse spettanti per l'anno in corso;
d. di dover formulare indirizzo - in ragione della tempistica stimata per l'effettivo avvio dei servizi da parte degli affidatari dei 4 lotti del Bacino regionale - di garantire, a tutela degli utenti, la continuità del servizio TPL su gomma su tutto il territorio campano fino al subentro dei nuovi esercenti, con la prosecuzione dei rapporti in essere con i gestori uscenti sino al 31.12.2026;
e. di dover demandare alla Direzione Generale Mobilità, con il supporto tecnico dell'ACAMIR, l'adozione dei provvedimenti necessari a dare attuazione a quanto stabilito in sede di Comitato di indirizzo e monitoraggio del 18 giugno 2026 in ordine alla proposta di adeguamento inflattivo attualizzato dei titoli ordinari di viaggio di Trasporto Pubblico Locale su ferro, gomma e mare;

VISTI tutti gli atti richiamati in premessa;

PROPONE e la Giunta, in conformità, a voto unanime

DELIBERA

per le motivazioni espresse in narrativa, che si intendono integralmente richiamate

1. di programmare per l'anno 2026, in conformità agli esiti dell'istruttoria degli uffici, le risorse finanziarie da destinare ai servizi TPL - comprensive di IVA, dei rinnovi contrattuali e di qualsiasi altro onere connesso ai servizi - come riportate nelle tabelle A, B, C allegate alla presente delibera, di cui costituiscono parte integrante e sostanziale;
2. di dare atto che le risorse indicate nelle tabelle di riparto A, B e C trovano copertura negli stanziamenti iscritti nel bilancio regionale per il triennio 2026-2028, di cui alla L.R. n. 3 del 27 marzo 2026 e per la parte gestionale autorizzato con delibera di Giunta regionale n. 129 del 10 aprile 2026 e ss.mm.ii;;
3. di confermare a carico degli Enti destinatari delle risorse di cui alla tabella A, la previsione dell'obbligo di rendicontazione per l'annualità 2025, da far tenere alla Direzione Generale Mobilità entro e non oltre il termine perentorio del 30 settembre 2026, pena la sospensione della quota di erogazione delle risorse spettanti per l'anno in corso;
4. di formulare indirizzo - in ragione della tempistica stimata per l'effettivo avvio dei servizi da parte degli affidatari dei 4 lotti del Bacino regionale - di garantire, a tutela degli utenti, la continuità del servizio TPL su gomma su tutto il territorio campano fino al subentro dei nuovi esercenti, con la prosecuzione dei rapporti in essere con i gestori uscenti sino al 31.12.2026;
5. di demandare alla Direzione Generale Mobilità, con il supporto tecnico dell'ACAMIR, l'adozione dei provvedimenti necessari a dare attuazione a quanto stabilito in sede di Comitato di indirizzo e monitoraggio del 18 giugno 2026 in ordine alla proposta di adeguamento inflattivo attualizzato dei titoli ordinari di viaggio di Trasporto Pubblico Locale su ferro, gomma e mare,
6. di trasmettere la presente delibera al Gabinetto del Presidente, alla Direzione Generale Risorse Finanziarie, alla Direzione Generale Mobilità, anche per la notifica alle Province, alla Città Metropolitana di Napoli, ai Comuni capoluogo della Campania e ad ACaMIR, nonché al BURC per la pubblicazione.

Alla stregua dell'istruttoria compiuta dalla Direzione Generale e delle risultanze e degli atti tutti richiamati nelle premesse che seguono, costituenti istruttoria a tutti gli effetti di legge, nonché dell'espressa dichiarazione di regolarità della stessa resa dal Direttore a mezzo di sottoscrizione della presente

PREMESSO CHE

a) la Direttiva 92/43/CEE ("*Habitat*") e la Direttiva 2009/147/CE ("*Uccelli*") costituiscono il quadro normativo fondamentale della politica dell'Unione Europea in materia di conservazione della biodiversità e rappresentano la base giuridica della Rete Natura 2000, articolata in Siti di Importanza Comunitaria (SIC), successivamente designati quali Zone Speciali di Conservazione (ZSC) e Zone di Protezione Speciale (ZPS);
b) la Rete Natura 2000 è finalizzata a garantire il mantenimento o il ripristino, in uno stato di conservazione soddisfacente, degli habitat naturali e delle specie di interesse comunitario, secondo i principi di coerenza ecologica, sufficienza e rappresentatività;
c) con il D.P.R. 8 settembre 1997, n. 357, e ss.mm.ii., è stata data attuazione alle citate Direttive nell'ordinamento nazionale;
d) con D.M. 17 ottobre 2007, sono stati definiti i criteri minimi uniformi per la predisposizione delle misure di conservazione per le ZSC e le ZPS, demandando alle Regioni l'adozione delle relative misure attuative;
e) l'articolo 4, paragrafi 1 e 2, della Direttiva 2009/147/CE impone agli Stati membri di classificare quali Zone di Protezione Speciale (ZPS) i territori più idonei, individuati sulla base di criteri esclusivamente scientifici, per la conservazione delle specie di cui all'Allegato I e delle specie migratrici regolarmente presenti;
f) l'articolo 12 della medesima Direttiva stabilisce l'obbligo di monitoraggio e rendicontazione periodica sullo stato di conservazione delle specie;

PREMESSO, altresì, CHE

a) il IV report ex articolo 12 della Direttiva 2009/147/CE (relativo al periodo 2013–2018), pubblicato dalla Commissione europea mediante il sistema EIONET Central Data Repository, evidenzia la presenza, nel territorio della Regione Campania, di specie ornitiche di interesse comunitario anche in aree non ricomprese nell'attuale perimetrazione della Rete Natura 2000, rilevando criticità nella continuità ecologica della rete;
b) la Comunicazione della Commissione europea COM(2020) 380 "*Strategia dell'UE sulla biodiversità per il 2030*" prevede il rafforzamento e il completamento della Rete Natura 2000, nonché il raggiungimento dell'obiettivo di tutela del 30% del territorio dell'Unione europea;
c) con lettera C(2021)2218 del 9 giugno 2021, la Commissione europea ha trasmesso alla Repubblica Italiana una comunicazione di messa in mora, ai sensi dell'articolo 258 TFUE, avviando la Procedura di infrazione n. 2021/2028, concernente il completamento della designazione dei siti della Rete Natura 2000 in Italia, contestando, tra l'altro, l'insufficiente classificazione di Zone di Protezione Speciale;
d) il Ministero della Transizione Ecologica (ora Ministero dell'Ambiente e della Sicurezza Energetica) ha richiesto alle Regioni di fornire elementi informativi aggiornati e di adottare tempestive misure di adeguamento rispetto alle carenze riscontrate;

PRESO ATTO, sulla base dell'istruttoria dei competenti Uffici regionali, CHE

a) con D.D. n. 28 del 17 dicembre 2020 della Direzione Generale Difesa del Suolo e l'Ecosistema - UOD "*Gestione delle risorse naturali protette - Tutela e salvaguardia dell'habitat marino e costiero – Parchi e riserve naturali*", la Regione Campania ha avviato attività di monitoraggio delle specie ornitiche di cui all'Allegato I della Direttiva 2009/147/CE in aree esterne alla vigente perimetrazione delle ZPS;
b) le attività di monitoraggio previste dal D.D. n. 28/2020 sono state svolte secondo metodologie tecnico-scientifiche riconosciute a livello nazionale ed europeo, conformi agli standard della Rete Natura 2000;
c) gli esiti istruttori, acquisiti ai protocolli regionali n. 2021.0240130 del 04/05/2021 e n. 2021.0616112 del 09/12/2021, documentano la presenza stabile e significativa, su base pluriennale, di specie di interesse comunitario in aree non ricomprese nell'attuale perimetrazione delle Zone di Protezione Speciale (ZPS);

d) sulla base delle risultanze istruttorie sono state individuate quali aree di rilevante interesse ornitologico le seguenti:
    d.1) *"Aree agricole interne Castel Volturno e Cancello Arnone";*
    d.2) *"Monte Origlio e Bosco Cuccari";*
    d.3) *"Monteverde";*
    d.4) *"Mondragone";*
e) il V report ex articolo 12 della Direttiva 2009/147/CE, relativo al periodo 2019–2024, in continuità con quanto riportato nel IV Report, conferma la presenza stabile o regolare, nelle suddette aree, di specie incluse nell'Allegato I della medesima Direttiva, come *Coracias garrulus*, *Ciconia nigra* e *Charadrius alexandrinus*;
f) la presenza stabile e significativa delle predette specie, unitamente alle evidenze istruttorie e ai dati di monitoraggio disponibili, costituisce presupposto tecnico-scientifico ai fini della classificazione delle aree sopra indicate quali Zone di Protezione Speciale (ZPS), ai sensi dell'articolo 4 della Direttiva 2009/147/CE;
g) la classificazione delle suddette aree quali ZPS risulta, pertanto, necessaria per assicurare il completamento e il rafforzamento della coerenza ecologica della Rete Natura 2000 della Regione Campania, nonché per garantire il pieno adempimento degli obblighi derivanti dall'ordinamento dell'Unione europea;
h) pertanto, i competenti Uffici regionali propongono di:
    h.1) classificare, ai sensi dell'articolo 4 della Direttiva 2009/147/CE, sulla base della documentazione tecnico-scientifica e delle relative perimetrazioni cartografiche, parte integrante e sostanziale del presente provvedimento, le seguenti aree quali Zone di Protezione Speciale (ZPS): "Aree agricole interne Castel Volturno e Cancello Arnone"; "Monte Origlio e Bosco Cuccari"; "Monteverde"; "Mondragone";
    h.2) stabilire che, dalla data di pubblicazione del presente provvedimento e nelle more dell'approvazione delle misure di conservazione specifiche, alle aree classificate si applica il regime di tutela previsto dall'articolo 6, paragrafi 2, 3 e 4, della Direttiva 92/43/CEE, come richiamato dall'articolo 7 della Direttiva 2009/147/CE, recepito dal D.P.R. n. 357/1997 e ss.mm.ii., fatti salvi gli interventi i cui procedimenti autorizzativi siano in corso o già conclusi in base alle norme previgenti;

VISTI

- la Direttiva 92/43/CEE ("*Habitat*");
- il D.P.R. 8 settembre 1997, n. 357, e s.m.i.;
- il D.M. 17 ottobre 2007;
- la Direttiva 2009/147/CE ("*Uccelli*");
- il Decreto Dirigenziale n. 28 del 17/12/2020;
- la D.G.R. n. 617/2024;
- la Legge regionale n. 25/2025;
- la D.G.R. n. 201/2026;
- i report di cui all'articolo 12 della Direttiva 2009/147/CE;
- la documentazione tecnico-scientifica e cartografica acquisita agli atti dell'Amministrazione regionale;

RITENUTO, pertanto

a) di dover classificare, ai sensi dell'articolo 4 della Direttiva 2009/147/CE, sulla base della documentazione tecnico-scientifica e delle relative perimetrazioni cartografiche, considerate parte integrante e sostanziale del presente provvedimento, le seguenti aree quali Zone di Protezione Speciale (ZPS):
    a.1) *"Aree agricole interne Castel Volturno e Cancello Arnone";*
    a.2) *"Monte Origlio e Bosco Cuccari";*
    a.3) *"Monteverde";*
    a.4) *"Mondragone";*
b) di dover precisare che la documentazione di cui alla lettera a) è disponibile per la consultazione sia presso il Settore "*Sviluppo Sostenibile, Qualità dell'Aria, Gestione delle Riserve Naturali*

protette, Tutela e salvaguardia dell'habitat marino e costiero", sia sul portale della Regione Campania, alla sezione tematica "*Ambiente*", nella sottosezione "*Rete Natura 2000*";

c) di dover stabilire che, dalla data di pubblicazione del presente provvedimento, , nelle more dell'approvazione delle misure di conservazione specifiche, alle aree classificate si applica il regime di tutela previsto dall'articolo 6, paragrafi 2, 3 e 4, della Direttiva 92/43/CEE, come richiamato dall'articolo 7 della Direttiva 2009/147/CE, recepito dal D.P.R. n. 357/1997 e ss.mm.ii., fatti salvi gli interventi i cui procedimenti autorizzativi siano in corso o già conclusi in base alle norme previgenti;

d) di dover demandare alla Direzione Generale Difesa Suolo, Ecosistema e Sostenibilità:
d.1) la predisposizione delle misure di conservazione specifiche e dei piani di gestione;
d.2) il monitoraggio periodico dello stato di conservazione delle specie interessate e l'eventuale aggiornamento dei Formulari Standard Natura 2000 (Standard Data Forms);

PROPONGONO e la Giunta, in conformità, a voto unanime,

DELIBERA

per i motivi espressi in narrativa, che qui si intendono integralmente riportati e confermati:

1. **di classificare**, ai sensi dell'articolo 4 della Direttiva 2009/147/CE, sulla base della documentazione tecnico-scientifica e delle relative perimetrazioni cartografiche, considerate parte integrante e sostanziale del presente provvedimento, le seguenti aree quali Zone di Protezione Speciale (ZPS):
   1.a *"Aree agricole interne Castel Volturno e Cancello Arnone";*
   1.b *"Monte Origlio e Bosco Cuccari";*
   1.c *"Monteverde";*
   1.d *"Mondragone";*
2. **di precisare** che la documentazione di cui al punto 1) è disponibile per la consultazione sia presso il Settore "*Sviluppo Sostenibile, Qualità dell'Aria, Gestione delle Riserve Naturali protette, Tutela e salvaguardia dell'habitat marino e costiero*", sia sul portale della Regione Campania, alla sezione tematica "*Ambiente*", nella sottosezione "*Rete Natura 2000*";
3. **di stabilire** che, dalla data di pubblicazione del presente provvedimento, nelle more dell'approvazione delle misure di conservazione specifiche, alle aree classificate si applica il regime di tutela previsto dall'articolo 6, paragrafi 2, 3 e 4, della Direttiva 92/43/CEE, come richiamato dall'articolo 7 della Direttiva 2009/147/CE, recepito dal D.P.R. n. 357/1997 e ss.mm.ii., fatti salvi gli interventi i cui procedimenti autorizzativi siano in corso o già conclusi in base alle norme previgenti;
4. **di demandare** alla Direzione Generale Difesa Suolo, Ecosistema e Sostenibilità:
   4.a la predisposizione delle misure di conservazione specifiche e dei piani di gestione;
   4.b il monitoraggio periodico dello stato di conservazione delle specie interessate e l'eventuale aggiornamento dei Formulari Standard Natura 2000 (Standard Data Forms);
5. **di trasmettere** il presente provvedimento alla Direzione Generale Difesa Suolo, Ecosistema e Sostenibilità, anche per la notifica al Ministero dell'Ambiente e della Sicurezza Energetica, per gli adempimenti successivi di competenza, all'Ufficio Speciale Valutazioni Ambientali, ai Comuni e alle Province interessati, alla Sezione Amministrazione Trasparente – Casa di Vetro del sito istituzionale della Regione Campania ai fini della massima trasparenza e conoscibilità ed al BURC per la pubblicazione.

Alla stregua dell'istruttoria compiuta dalla Direzione Generale e delle risultanze e degli atti tutti richiamati nelle premesse che seguono, costituenti istruttoria a tutti gli effetti di legge, nonché dell'espressa dichiarazione di regolarità della stessa resa dal Direttore a mezzo di sottoscrizione della presente

PREMESSO CHE

a. con DGR n. 426 del 04/08/2011, pubblicata sul BURC n. 54 del 16 agosto 2011, è stato approvato il disciplinare tecnico della produzione, della qualità e degli utilizzi del rifiuto ottenuto dalla stabilizzazione delle matrici organiche dei rifiuti denominato "biostabilizzato";
b. l'Allegato A della stessa delibera ha disciplinato il processo di biostabilizzazione aerobica della frazione umida tritovagliata prodotta dagli impianti STIR regionali, definendo caratteristiche, parametri e modalità di utilizzo del "biostabilizzato" esclusivamente per attività di recupero connesse alla copertura giornaliera e finale delle discariche in Campania, nelle quantità consentite e nel rispetto della normativa nazionale, prevedendo inoltre successivi aggiornamenti sulla base degli esiti delle sperimentazioni finalizzate a verificarne l'idoneità e promuoverne l'impiego in alternativa allo smaltimento.
c. con DGR n. 693 del 30/10/2018, pubblicata sul BURC n. 88 del 27 novembre 2018, è stata approvata la regolamentazione transitoria sull'utilizzo del biostabilizzato ottenuto dal processo di stabilizzazione delle matrici organiche dei rifiuti, con allegato tecnico recante le condizioni di processo, le caratteristiche del materiale e i controlli da effettuare ai fini del suo utilizzo come materiale di copertura giornaliera e superficiale finale delle discariche;
d. successivamente all'adozione della DGR n. 693/2018, il quadro normativo di riferimento è stato aggiornato dal D.Lgs. 3 settembre 2020, n. 121, recante attuazione della direttiva (UE) 2018/850, che ha modificato e integrato il D.Lgs. 13 gennaio 2003, n. 36, introducendo nuovi criteri di ammissibilità dei rifiuti in discarica, nuove disposizioni in materia di caratterizzazione di base e verifica di conformità, nonché specifici riferimenti tecnici per i rifiuti derivanti dal trattamento biologico dei rifiuti urbani;

PREMESSO ALTRESÌ CHE

a. l'art. 7 del D.Lgs. n. 121/2020, dispone che i rifiuti possono essere collocati in discarica solo dopo trattamento e solo se conformi ai criteri di ammissibilità previsti dal medesimo decreto;
b. l'art. 7-bis del D.Lgs. n. 121/2020 pone a carico del produttore la caratterizzazione di base del rifiuto ai fini dell'ammissibilità nella specifica categoria di discarica;
c. l'art. 7-ter del D.Lgs. n. 121/2020 disciplina la verifica di conformità e stabilisce che essa debba comprendere almeno un test di cessione, secondo i metodi di campionamento e analisi di cui all'allegato 6 al medesimo decreto;
d. l'allegato 4 al D.Lgs. n. 121/2020, per le discariche di rifiuti non pericolosi, reca alle tabelle 5 e 5-bis i criteri di accettabilità e, con specifico riferimento ai rifiuti derivanti dal trattamento biologico dei rifiuti urbani identificati dai codici EER 19 05 01, 19 05 03, 19 06 04 e 19 06 06, disciplina le modalità di valutazione della conformità dell'Indice di Respirazione Dinamico Potenziale (IRDP) ai criteri di ammissibilità dei rifiuti in discarica, prevedendo che l'IRDP sia determinato secondo la norma UNI/TS 11184:2025 – Metodo A, mediante campionamento semestrale con valore limite, inferiore a 1.000 mg O_2 × kgSV × h^{-1}, oppure mediante quattro campionamenti annuali; in quest'ultimo caso il valore limite, inferiore a 1.000 mg O_2 × kgSV × h^{-1}, è calcolato come media dei quattro campioni, fermo restando che il valore rilevato sul singolo campione non può eccedere tale limite oltre il 20%
e. l'allegato 6 al D.Lgs. n. 121/2020 disciplina i metodi di campionamento e analisi dei rifiuti, richiamando, tra l'altro, la norma UNI 10802 per il campionamento rappresentativo;

f. la Tabella 1 dell'Allegato 5 alla Parte IV, Titolo V, del D.Lgs. 3 aprile 2006, n. 152, reca le concentrazioni soglia di contaminazione del suolo e del sottosuolo in relazione alla specifica destinazione d'uso dei siti;

PRESO ATTO dall'istruttoria dei competenti uffici regionali che

a. con nota prot n. 0116435/2026 del 12/02/2026, la direzione generale Ciclo Integrato dei Rifiuti, Autorizzazioni Ambientali, Osservatorio e Documentazione ha stabilito la necessità di aggiornare la DGR Campania n. 693 del 30/10/2018 relativa al biostabilizzato, dato il mutato quadro normativo dopo l'entrata in vigore del D.Lgs. 121/2020, che ha modificato il D.Lgs. 36/2003 sulle discariche chiedendo, pertanto, all'ARPAC, quale Ente strumentale della Regione Campania di supporto tecnico-scientifico di voler formulare una proposta che recepisca gli ultimi aggiornamenti intervenuti in materia;
b. con nota acquisita al protocollo regionale n. 0406704/2026 del 30/04/2026, l'ARPAC, ha trasmesso una proposta di aggiornamento della DGR n. 693 del 30/10/2018, condivisa dagli Uffici regionali, rappresentando la necessità di adeguare il disciplinare al mutato quadro normativo e tecnico;
c. la proposta trasmessa dall'ARPAC evidenzia, in particolare, l'esigenza di aggiornare i riferimenti normativi, ridurre la dimensione del vaglio finale da 50 mm a 20 mm, precisare il ricorso all'Indice di Respirazione Dinamico Potenziale determinato secondo la norma UNI/TS 11184 vigente, aggiornare i limiti merceologici e i controlli e introdurre una clausola di salvaguardia ambientale in relazione alle concentrazioni soglia di contaminazione;
d. la DGR n. 693 del 30 ottobre 2018 ha disciplinato, in via transitoria, l'utilizzo del biostabilizzato ottenuto dal processo di stabilizzazione delle matrici organiche dei rifiuti e che, alla luce dell'evoluzione del quadro normativo e tecnico di riferimento, nonché della necessità di assicurare coerenza con la normativa statale vigente e con le più recenti norme tecniche di settore, si rende necessario procedere all'adozione di una disciplina ordinaria della materia, idonea a garantire un più elevato livello di tutela ambientale;
e. le modifiche richieste incidono su più parti coordinate dell'allegato tecnico del 2018 e risultano, pertanto, più correttamente recepibili mediante la sostituzione integrale dell'allegato medesimo con l'aggiornamento trasmesso dall'ARPAC;
f. risulta, inoltre, opportuno:
   f.1 che l'allegato tecnico approvato con la DGR n. 693 del 30/10/2018 continui ad applicarsi esclusivamente per le attività in corso e sino al loro completamento;
   f.2 che restino ferme le valutazioni e le prescrizioni sito-specifiche contenute nei singoli provvedimenti autorizzativi, che possono imporre limiti e condizioni più restrittivi rispetto a quelli minimi previsti nel presente aggiornamento;

RITENUTO DI

a. dover approvare l'allegato A alla presente deliberazione, recante "Norme tecniche aggiornate per l'utilizzo del biostabilizzato ottenuto dal processo di stabilizzazione delle matrici organiche dei rifiuti", in sostituzione integrale dell'allegato tecnico alla DGR n. 693 del 30/10/2018;
b. dover precisare che l'allegato tecnico approvato con la DGR n. 693 del 30/10/2018 continua ad applicarsi esclusivamente per le attività in corso e sino al loro completamento;
c. dover demandare all'ARPAC, nell'ambito delle proprie competenze, il monitoraggio del corretto utilizzo del biostabilizzato nelle operazioni autorizzate di copertura giornaliera e superficiale finale delle discariche;
d. dover demandare alla Direzione Generale competente l'adozione degli atti consequenziali al presente provvedimento;

VISTI

- il DM 5 febbraio 1998;
- la DGR n. 426 del 04/08/2011;

PROPONE e la Giunta in conformità, a voti unanimi

DELIBERA

per i motivi espressi in narrativa che qui si intendono integralmente riportati e confermati

1. di approvare l'allegato A alla presente deliberazione, recante "Norme tecniche aggiornate per l'utilizzo del biostabilizzato ottenuto dal processo di stabilizzazione delle matrici organiche dei rifiuti", che forma parte integrante e sostanziale del presente provvedimento, in sostituzione integrale dell'allegato tecnico alla DGR n. 693 del 30/10/2018;
2. di precisare che l'allegato tecnico approvato con la DGR n. 693 del 30/10/2018 continua ad applicarsi esclusivamente per le attività in corso e sino al loro completamento;
3. di demandare all'ARPAC il monitoraggio riguardo al corretto utilizzo del biostabilizzato nelle operazioni autorizzate di recupero quale materiale di copertura giornaliera e superficiale finale delle discariche;
4. di demandare alla Direzione Generale competente la predisposizione degli atti consequenziali al presente provvedimento;
5. di trasmettere copia della presente deliberazione al Gabinetto del Presidente della Giunta Regionale, alla Direzione Generale competente, anche per la notifica all'ARPAC, alle Province, alla Città Metropolitana di Napoli, ai gestori degli impianti interessati e all'Ufficio competente per la pubblicazione nella sezione trasparenza del sito istituzionale della Regione Campania e nel BURC;

Allegato A

REVISIONE DELLE NORME TECNICHE PER L'UTILIZZO DEL BIOSTABILIZZATO OTTENUTO DAL PROCESSO DI STABILIZZAZIONE DELLE MATRICI ORGANICHE DEI RIFIUTI

Il presente disciplinare definisce le condizioni tecniche di processo, composizione, controllo e utilizzo del rifiuto identificato con codice EER 19 05 03 ottenuto dal processo di tritovagliatura del rifiuto urbano indifferenziato e successiva stabilizzazione aerobica della frazione prevalentemente umida. Il materiale, nel prosieguo denominato "biostabilizzato", può trovare utilizzo quale materiale di copertura giornaliera o superficiale finale delle discariche esclusivamente nel rispetto della normativa statale vigente, dei provvedimenti autorizzativi applicabili e delle specifiche tecniche di seguito riportate.

Ai fini del presente disciplinare, l'utilizzo del biostabilizzato è subordinato nel rispetto del D.Lgs. n. 36/2003 e s.m.i., come modificato dal D.Lgs. n. 121/2020:

- alla caratterizzazione di base ai sensi dell'art. 7-bis;
- alla verifica di conformità ai sensi dell'art. 7-ter;
- al rispetto dei criteri di ammissibilità per le discariche per rifiuti non pericolosi di cui alle tabelle 5 e 5-bis dell'allegato 4;
- al rispetto degli ulteriori requisiti tecnici minimi regionali di cui al presente allegato.

1) Il processo di biostabilizzazione

L'obiettivo del processo è la stabilizzazione biologica della matrice organica dei rifiuti trattati e l'igienizzazione della biomassa. Il processo deve pertanto essere condotto in modo da assicurare:

- il controllo delle caratteristiche chimico-fisiche delle matrici organiche di partenza;
- il controllo della temperatura di processo;
- un apporto di ossigeno sufficiente a mantenere le condizioni aerobiche della massa in tutte le fasi.

Le condizioni minime che deve rispettare il processo di produzione affinché il biostabilizzato possa essere utilizzato sono contenute nei successivi punti A), B), C):

A. la temperatura dei rifiuti nella fase accelerata deve essere mantenuta per almeno tre giorni oltre i 55 °C;
B. la durata della stabilizzazione, costituita da bio-ossidazione e maturazione, intendendo come tale il periodo intercorso fra l'ingresso delle matrici organiche nel processo e l'uscita della biomassa stabilizzata al termine della fase di stabilizzazione, deve essere pari ad almeno 21 giorni. Non deve essere conteggiato, ai fini del rispetto del predetto periodo, il tempo in cui le matrici, prese in carico nell'impianto, restano depositate in attesa di essere avviate a processo. Presso l'impianto di biostabilizzazione deve essere tenuta idonea registrazione dei tempi di avvio delle matrici a processo e delle relative quantità, per la verifica della durata del suddetto periodo;
C. l'impianto di biostabilizzazione deve essere dotato di una sezione di vagliatura finale non superiore a 20 mm.

È inoltre opportuno che in sede di rilascio o di aggiornamento delle autorizzazioni agli impianti di produzione di biostabilizzato si valuti l'esigenza di prescrivere quanto segue:

- ai fini del contenimento di polveri e odori, che le fasi di stoccaggio e di bio-ossidazione avvengano in ambiente confinato, con idonee misure e sistemi di abbattimento;
- ai fini di evitare altre forme di inquinamento, che le fasi di stoccaggio dei rifiuti da trattare, di biostabilizzazione e di stoccaggio del biostabilizzato avvengano su superfici impermeabilizzate, dotate di sistemi di drenaggio e di raccolta delle acque reflue di processo da avviare a depurazione o da riutilizzare nel processo stesso.

2) Utilizzazioni ammesse per il biostabilizzato

Fatto salvo quanto disciplinato dalla legislazione statale, l'utilizzo del biostabilizzato derivante da processi che rispettino le condizioni minime di cui al paragrafo precedente è ammesso unicamente nelle situazioni di seguito descritte, qualora il materiale:

- risulti conforme ai criteri di ammissibilità per le discariche per rifiuti non pericolosi di cui alle tabelle 5 e 5-bis dell'allegato 4 al D. Lgs.121/2020;
- sia stato sottoposto a caratterizzazione di base e verifica di conformità ai sensi degli artt. 7-bis e 7-ter del D.Lgs. 121/2020);
- possieda le ulteriori caratteristiche di cui alle tabelle 1 o 2 che seguono, a seconda dell'uso previsto.

Copertura giornaliera dei rifiuti in discarica

L'uso del biostabilizzato come copertura giornaliera è ammesso unicamente in discariche per rifiuti non pericolosi e secondo le seguenti modalità di utilizzo:

- il biostabilizzato deve possedere tutte le caratteristiche indicate nella tabella 1;
- il suo utilizzo, per la copertura giornaliera dei rifiuti in discarica, deve essere espressamente previsto nel Piano di Gestione Operativa della discarica e nel relativo provvedimento autorizzativo, nel quale tale utilizzo deve essere qualificato come operazione di recupero di rifiuti R11, ai sensi dell'Allegato C alla Parte IV del D.Lgs. n. 152/2006;
- la quantità impiegata, espressa in tonnellate, non deve essere superiore al 20% della massa dei rifiuti smaltiti in discarica su base annua;
- nel Piano di Gestione Operativa della discarica deve essere indicato il tempo massimo di detenzione del biostabilizzato nell'area della discarica prima dell'utilizzo, che, di norma, deve avvenire entro tre giorni dal ricevimento nell'impianto stesso.

Tabella 1 – Caratteristiche del biostabilizzato ai fini dell'utilizzo come copertura giornaliera (il campionamento deve essere effettuato secondo l'allegato 6 al D.Lgs. n. 36/2003 agg. 121/2020 e sulla base della norma UNI 10802:2023)

Indice di Respirazione Dinamico Potenziale (1)	mgO_2x $KgSVxh^{-1}$(2)	≤1.000+20% (3)
Umidità	(%peso)	≤50
Granulometria	(mm)	≤20

(1) applicando la norma UNI/TS11184:2025 Metodo A mediante, in alternativa,

a. un campionamento ogni sei mesi. Il valore limite si intende rispettato nel caso in cui l'IRDP risulti inferiore a 1.000 mg O_2 x kg SV x h^{-1}, con un'analisi di conformità condotta secondo la procedura indicata nel Manuale; oppure

b. quattro campionamenti all'anno. Il valore limite dell'IRDP, che deve risultare inferiore a 1.000 mg O_2 x kg SV x h^1, è calcolato come media dei 4 campioni, con una tolleranza sul singolo campione non superiore al 20% (ad esempio se l'IRD del primo campione dovesse risultare pari a 1.200 $MgO_2xkgSVxh^{-1}$, almeno uno dei restanti 3 campioni deve risultare un IRD pari a 800 $MgO_2xkgSVxh^{-1}$)

Nel caso in cui si scelga l'opzione b, non è possibile applicare l'analisi di conformità condotta secondo la procedura indicata nel Manuale ISPRA 52/2009.

(2) SV: frazione della sostanza secca volatile a 550°C

(3) La tolleranza è riferita esclusivamente alla nota 1 caso b.

Copertura superficiale finale della discarica

È ammesso l'utilizzo del biostabilizzato come copertura superficiale finale della discarica, qualora siano rispettate tutte le seguenti condizioni:

- il biostabilizzato possieda tutte le caratteristiche indicate nella tabella 2;
- l'utilizzo del biostabilizzato per la copertura superficiale finale della discarica deve essere espressamente previsto nel Piano di Ripristino Ambientale e nel provvedimento di autorizzazione alla gestione post-operativa della discarica; tale utilizzo deve essere qualificato come operazione di recupero di rifiuti R10, ai sensi dell'Allegato C alla Parte IV del D.Lgs. n. 152/2006
- i provvedimenti autorizzativi rilasciati dall'Autorità competente devono individuare, caso per caso, le specifiche condizioni di esercizio delle operazioni di recupero R10 e/o R11, ai sensi dell'Allegato C alla Parte IV del D.Lgs. n. 152/2006; a tal fine, gli esiti del test di cessione devono risultare conformi ai valori limite previsti dall'Allegato 3 al D.M. 5 febbraio 1998
- il biostabilizzato, miscelato a terreno nella proporzione del 50%, sia utilizzato per un primo strato non superiore a 50 cm di altezza;
- venga posto su questo primo strato un ulteriore strato di terreno vegetale di spessore non inferiore a 50 cm; tale spessore potrà essere superiore in considerazione della destinazione d'uso finale prevista per l'area;

In ordine ai parametri qualitativi del biostabilizzato, si ritiene che il rispetto dei valori limite di concentrazione dei metalli riportati nella Tabella 2 costituisca condizione minima inderogabile, ferma restando la facoltà dell'Autorità competente di definire, in sede autorizzativa e con valutazione sito-

specifica, limiti più restrittivi in relazione alle caratteristiche ambientali del sito e alle modalità di utilizzo del materiale.

Parimenti, con riferimento alla composizione merceologica del biostabilizzato sottoposto a vagliatura ≤ 20 mm, si ritiene necessario introdurre limiti percentuali più restrittivi per le frazioni estranee, al fine di garantire una maggiore qualità ambientale del materiale utilizzato per le operazioni di recupero in discarica, come di seguito indicato:

Frazione merceologica	Limite vigente	Nuovo limite proposto
Plastica	≤ 10%	≤ 5%
Vetro	≤ 15%	≤ 5%
Inerti	≤ 15%	≤ 10%
Sommatoria totale (plastica + vetro + inerti)	≤ 40%	≤ 20%

Tabella 2 – Caratteristiche del biostabilizzato ai fini della copertura superficiale finale (il campionamento deve essere effettuato secondo l'allegato 6 al D.Lgs. n. 36/2003, agg. 121/2020 e sulla base della norma UNI 10802:2023)

Indice di Respirazione Dinamico Potenziale (1)	**$mgO_2 \times kgSV \times h^{-1}$ (2)**	**≤ 1.000 + 20% (3)**
Arsenico	**mg/kg di sostanza secca**	**10**
Cadmio	**mg/kg di sostanza secca**	**3**
Cromo VI	**mg/kg di sostanza secca**	**3**
Cromo III	**mg/kg di sostanza secca**	**50**
Mercurio	**mg/kg di sostanza secca**	**2**
Nichel	**mg/kg di sostanza secca**	**50**
Piombo	**mg/kg di sostanza secca**	**100**
Rame	**mg/kg di sostanza secca**	**100**
Zinco	**mg/kg di sostanza secca**	**300**
Inerti	**(%peso)**	**≤ 10 (4)**
Plastica	**(%peso)**	**≤ 5 (4)**
Vetro	**(%peso)**	**≤ 5 (4)**
Umidità	**(%peso)**	**≤ 50%**
Granulometria	**(mm)**	**≤ 20**

(1) applicando la norma UNI/TS11184:2025 Metodo A mediante, in alternativa,

a. un campionamento ogni 6 mesi. Il valore limite si intende rispettato nel caso in cui l'IRDP risulti inferiore a 1.000 mg O_2 x kg SV x h^{-1}, con un'analisi di conformità condotta secondo la procedura indicata nel Manuale ISPRA 52/2009;

oppure

b. quattro campionamenti all'anno. Il valore limite dell'IRDP, che deve risultare inferiore a 1.000 mg O_2 x kg SV x h^{-1}, è calcolato come media dei 4 campioni, con una tolleranza sul singolo campione non superiore al 20%. (ad esempio, se l'IRD del primo campione dovesse risultare pari a 1.200 $MgO_2xkgSVxh^{-1}$, almeno uno dei restanti 3 campioni deve risultare un IRD pari a 800 $MgO_2xkgSVxh^{-1}$)

Nel caso in cui si scelga l'opzione b, non è possibile applicare l'analisi di conformità condotta secondo la procedura indicata nel Manuale ISPRA 52/2009.

(2) SV: frazione della sostanza secca volatile a 550°C

fonte: http://burc.regione.campania.it

Indice di Respirazione Dinamico Potenziale (1)	$mgO_2 \times kgSV \times h^{-1}$ (2)	≤ 1.000 + 20% (3)
Arsenico	**mg/kg di sostanza secca**	**10**
Cadmio	**mg/kg di sostanza secca**	**3**
Cromo VI	**mg/kg di sostanza secca**	**3**
Cromo III	**mg/kg di sostanza secca**	**50**
Mercurio	**mg/kg di sostanza secca**	**2**
Nichel	**mg/kg di sostanza secca**	**50**
Piombo	**mg/kg di sostanza secca**	**100**
Rame	**mg/kg di sostanza secca**	**100**
Zinco	**mg/kg di sostanza secca**	**300**
Inerti	**(%peso)**	**≤ 10 (4)**
Plastica	**(%peso)**	**≤ 5 (4)**
Vetro	**(%peso)**	**≤ 5 (4)**
Umidità	**(%peso)**	**≤ 50%**
Granulometria	**(mm)**	**≤ 20**

(3) La tolleranza è riferita esclusivamente alla nota 1 caso b.
(4) I singoli limiti sono elevabili fino al 50% del loro valore, ma contemporaneamente si deve verificare la riduzione degli altri componenti in modo che la sommatoria delle % di inerti, plastica e vetro non superi il 20% in totale.

3)Controllo delle caratteristiche del biostabilizzato

Relativamente al controllo delle caratteristiche qualitative del biostabilizzato, in coerenza con le disposizioni del D.Lgs. n. 36/2003, come modificato dal D.Lgs. n. 121/2020, è introdotto un regime di controllo maggiormente strutturato rispetto all'attuale sistema di caratterizzazione annuale e verifiche trimestrali, mediante campionamento su lotti rappresentativi compresi tra 500 t e 1.000 t.

A tal fine è stabilito che:

A) **presso l'impianto di produzione**

1. il produttore del rifiuto biostabilizzato è tenuto ad effettuare la caratterizzazione di base ai sensi dell'art. 7-bis del D.Lgs. n. 36/2003, come modificato dal D.Lgs. n. 121/2020, ai fini della verifica della conformità ai criteri di ammissibilità previsti per le discariche per rifiuti non pericolosi dalle Tabelle 5 e 5-bis dell'Allegato 4 al medesimo decreto;
2. la caratterizzazione di base deve essere effettuata in occasione del primo conferimento del rifiuto ed essere ripetuta con cadenza almeno trimestrale, nonché ogniqualvolta intervengano modifiche sostanziali del processo di trattamento o della natura dei rifiuti in ingresso;
3. la dimensione massima del lotto rappresentativo sottoposto a campionamento e verifica analitica è fissata in 1.000 tonnellate;

Ai fini dell'utilizzazione di cui al presente atto:

1. gli impianti di biostabilizzazione esistenti e in attività alla data di entrata in vigore del presente atto, devono effettuare la prima caratterizzazione di base del biostabilizzato entro 60 giorni dall'entrata in vigore della presente direttiva;
2. gli impianti nuovi devono effettuare la prima caratterizzazione di base entro 30 giorni dall'inizio dell'attività a regime.
3. I referti analitici, i rapporti di prova e la documentazione di tracciabilità dei lotti devono essere conservati presso l'impianto di produzione per almeno cinque anni.

B) **Presso il soggetto conferitore**

I conferitori mettono a disposizione del gestore della discarica:

- la documentazione attestante che il processo di produzione rispetta le condizioni minime di cui al presente allegato;
- gli esiti della caratterizzazione di base vigente;
- gli esiti delle ultime verifiche analitiche di conformità eseguite ai sensi del presente disciplinare; gli esiti del test di cessione, ove richiesti dalla normativa statale applicabile o dal provvedimento autorizzativo.

C) Presso la discarica

Il gestore della discarica è tenuto a definire, nel Piano di Gestione Operativa, nel caso di utilizzo per copertura giornaliera, o nel Piano di Gestione Post-Operativa/Ripristino Ambientale, nel caso di utilizzo per copertura finale, la procedura di verifica del rispetto delle condizioni di cui al presente disciplinare ai fini dell'accettazione del biostabilizzato come materiale di copertura.

La procedura di accettazione deve comprendere, almeno:

- la verifica documentale della caratterizzazione di base e della verifica di conformità;
- la verifica della corrispondenza tra lotto conferito e documentazione analitica;
- controlli visivi e, ove necessario, controlli integrativi;
- il rispetto delle prescrizioni autorizzative sito-specifiche;

4) Clausola di salvaguardia ambientale

L'utilizzo del biostabilizzato non deve in ogni caso comportare un apporto di contaminanti superiore alle Concentrazioni Soglia di Contaminazione (CSC) di cui alla Tabella 1 dell'Allegato 5 alla Parte IV, Titolo V, del D.Lgs. n. 152/2006, in relazione alla specifica destinazione d'uso del sito. Resta ferma la facoltà dell'Autorità competente di imporre, in sede di autorizzazione sito-specifica, limiti più restrittivi rispetto a quelli previsti dalla presente disciplina tecnica.

Alla stregua dell'istruttoria compiuta dalla Direzione Generale e delle risultanze e degli atti tutti richiamati nelle premesse che seguono, costituenti istruttoria a tutti gli effetti di legge, nonché dell'espressa dichiarazione di regolarità della stessa resa dal Direttore a mezzo di sottoscrizione della presente

PREMESSO che

a. il decreto-legge 19 maggio 2020, n. 34 recante *"Misure urgenti in materia di salute, sostegno al lavoro e all'economia, nonché di politiche sociali connesse all'emergenza epidemiologica COVID-19"* all'art. 2 reca disposizioni in materia di "riordino della rete ospedaliera in emergenza COVID-19" e prevede, in particolare:
   a.1. al comma 1, che le Regioni e le Province autonome, al fine di rafforzare strutturalmente il Servizio sanitario nazionale in ambito ospedaliero, mediante apposito piano di riorganizzazione volto a fronteggiare le emergenze pandemiche, garantiscono l'incremento delle attività di ricovero in terapia intensiva e nelle aree di assistenza ad alta intensità di cura, rendendo strutturale la capacità di risposta all'aumento della domanda assistenziale, anche in relazione alle evoluzioni del quadro epidemiologico connesso al virus SARS-CoV-2, ai relativi esiti e a eventuali improvvisi incrementi della curva pandemica…";
   a.2. al comma 8, che "Entro trenta giorni dall'entrata in vigore del presente decreto, le regioni e le province autonome presentano il piano di cui al comma 1, comprensivo di tutte le misure di cui ai commi successivi, al Ministero della salute, che provvede ad approvarlo entro trenta giorni dalla ricezione…";
b. in attuazione delle suddette disposizioni e sulla base delle indicazioni contenute nella Circolare del Ministero della Salute del 29 maggio 2020, n. 11254, con Deliberazione di Giunta Regionale n. 378 del 23/07/2020 è stato adottato il "*Piano di riorganizzazione e potenziamento delle attività di ricovero in terapia intensiva e nelle aree di assistenza ad alta intensità di cura della Regione Campania*", successivamente approvato con Decreto Direttoriale del Ministero della Salute e ammesso alla registrazione della Corte dei Conti con il n. 1733 dell'11/08/2020;
c. con Deliberazione di Giunta Regionale n. 168 del 06/04/2022 è stata adottata, ai fini della trasmissione al Ministero della Salute per la competente approvazione, la rimodulazione del suddetto Piano, prendendo atto che la stessa non modifica, nel suo complesso, il Piano di emergenza ospedaliera COVID-19 già definito con la D.G.R. n. 378 del 23/07/2020;
d. con Deliberazione di Giunta Regionale n. 308 del 31/05/2023, avente ad oggetto: "*PNRR – Missione 6 Salute – Componente 2 – sub-investimento 1.1.1 "Digitalizzazione – Rafforzamento strutturale del SSN (progetti in essere ex art. 2, D.L. n. 34/2020)",* è stata ulteriormente adottata la rimodulazione del *"Piano di riorganizzazione e potenziamento delle attività di ricovero in terapia intensiva e nelle aree di assistenza ad alta intensità di cura della Regione Campania"*, successivamente approvata con Decreto Direttoriale del Ministero della Salute e ammessa alla registrazione della Corte dei Conti con il n. 2402 del 05/09/2023;
e. il Regolamento (UE) 2020/2094 del Consiglio, del 14 dicembre 2020, ha istituito lo strumento dell'Unione europea per la ripresa, finalizzato a sostenere la ripresa economica a seguito della crisi pandemica da COVID-19;
f. con Regolamento (UE) 2021/241 del Parlamento Europeo e del Consiglio, del 12 febbraio 2021, è stato istituito il Dispositivo per la ripresa e la resilienza (RRF), nell'ambito del quale è stato approvato il Piano Nazionale di Ripresa e Resilienza (PNRR);
g. il PNRR è stato valutato positivamente con Decisione del Consiglio ECOFIN del 13 luglio 2021, notificata all'Italia dal Segretariato generale del Consiglio con nota LT161/21, del 14 luglio 2021, ed è stato successivamente rimodulato con Decisione di Esecuzione del Consiglio dell'Unione Europea dell'8 dicembre 2023;
h. il PNRR individua sei Missioni, finalizzate a rafforzare la capacità di ripresa dell'Italia e a organizzare la risposta alla crisi pandemica, relative ai seguenti ambiti: 1. Digitalizzazione, innovazione, competitività e cultura; 2. Rivoluzioneverde e transizione ecologica; 3. Infrastrutture per una mobilità

sostenibile; 4. Istruzione e ricerca; 5.Parità di genere, coesione sociale e territoriale; 6. Salute), a loro volta suddivise in cluster o insieme di progetti omogenei;

i. con Decreto del Ministro dell'Economia e delle Finanze del 6 agosto 2021, come successivamente modificato con decreto del 23 novembre 2021, è stata disposta l'assegnazione delle risorse in favore di ciascuna Amministrazione titolare degli interventi PNRR, unitamente alla definizione dei relativi milestone e Target;
j. con Decreto del Ministro dell'Economia e delle Finanze dell'11 ottobre 2021 sono state stabilite le procedure relative alla gestione finanziaria delle risorse previste nell'ambito del PNRR;
k. con Decreto Direttoriale del Ministero della Salute n. MDS-DGPROGS-84 del 22 ottobre 2021 è stato adottato il "*Piano di riorganizzazione approvato dal Ministero della Salute/Regioni italiane*", che recepisce i piani di riorganizzazione presentati dalle Regioni e dalle Province Autonome in attuazione all'art. 2 del DL 34/2020, volti a rafforzare la capacità delle strutture ospedaliere del SSN ad affrontare le emergenze pandemiche attraverso l'incremento del numero di posti letto di terapia intensiva e semi-intensiva, in attuazione a quanto disposto dalla Decisione di Esecuzione del Consiglio dell'Unione Europea relativa all'approvazione della valutazione del piano per la ripresa e la resilienza (PNRR) dell'Italia per la Linea di Intervento 1.1 "*Ammodernamento del parco tecnologico e digitale ospedaliero"*, inserita nella MISSIONE 6 COMPONENTE 2 - *Innovazione, ricerca e digitalizzazione del Servizio sanitario nazionale*, trasmessa dal Segretariato Generale del Consiglio dell'Unione Europea con data 08/07/2021;
l. con Decreto del 20 gennaio 2022 il Ministro della Salute è stata disposta la ripartizione programmatica delle risorse alle Regioni e alle Province autonome per i progetti del Piano nazionale di ripresa e resilienza e del Piano per gli investimenti complementari, con riferimento alla Missione 6 - Componenti 1 e 2;
m. in attuazione del citato decreto ministeriale, la Regione Campania risulta assegnataria di risorse complessive pari a € 915.772.974,86;
n. l'attuazione dell'intervento è coordinata dal Ministero della Salute e avviene mediante i Contratti Istituzionali di Sviluppo (CIS), da sottoscrivere tra il medesimo Ministero e le Regioni e Province autonome, quali soggetti attuatori;
o. con D.G.R.C. n. 195 del 26 aprile 2022, e successivi aggiornamenti e modificazioni, la Regione Campania ha approvato il Piano Operativo Regionale, contenente, per ciascun investimento, gli Action Plan e le schede dei singoli interventi, ai fini della sottoscrizione del CIS;
p. con D.G.R. n. 249 del 24 maggio 2022, è stato, tra l'altro:
    p.1 approvato il Piano Operativo Regionale definitivo, contenente, per ciascun investimento, gli Action Plan e le schede dei singoli interventi; in particolare, per la linea di investimento M6C2 – Investimento 1.1 "*Ammodernamento del parco tecnologico e digitale ospedaliero" – Sub-investimento 1.1.1 "Digitalizzazione – Rafforzamento strutturale del SSN (progetti in essere ex art. 2 del D.L. n. 34/2020)*", riconducibile alla c.d. spesa tendenziale, relativa a progettualità già avviate e potenzialmente concluse, è stato previsto il Target M6C2-9 "*Posti letto supplementari di terapia intensiva e semi-intensiva*";
    p.2 delegato alle Aziende ed agli Enti del Servizio Sanitario regionale, l'esercizio delle competenze relative all'avvio, alla realizzazione operativa e al funzionamento degli interventi contenuti nel Piano, ferma restando in capo alla Regione Campania, in qualità di soggetto attuatore, la responsabilità delle attività di regia, coordinamento, monitoraggio fisico e finanziario, rendicontazione, nonché di tutti gli ulteriori adempimenti previsti e non delegati;
    p.3 preso atto dello schema del Contratto Istituzionale di Sviluppo (CIS), adottato ai sensi del punto b) del Decreto del Ministro della Salute del 20 gennaio 2022, per l'attuazione del Piano Operativo Regionale, oggetto di intesa tra Ministero della Salute, Regioni e Province Autonome di Trento e Bolzano;

p.4 conferito mandato all'Ufficio Speciale Grandi Opere, di concerto con la Direzione Generale per la Tutela della Salute e l'Ufficio Speciale per la Transizione Digitale, nonché in raccordo con la Programmazione Unitaria, di provvedere all'attuazione dell'investimento e ai conseguenti adempimenti amministrativi;

q. con D.G.R. n.299 del 12 giugno 2024 è stato approvato, a modifica ed integrazione del Piano Operativo Regionale di cui alla D.G.R. n.249 del 24 maggio 2022, il nuovo Piano Operativo Regionale, contenente per ciascun investimento gli Action Plan e le schede dei singoli interventi come recepite dal Tavolo Istituzionale di cui all'articolo 6 del Contratto Istituzionale di Sviluppo;
r. con D.G.R. n. 624 del 14 novembre 2024, a modifica e integrazione del Piano Operativo Regionale di cui alla D.G.R. n. 249 del 24 maggio 2022, come modificata dalla D.G.R. n. 299/2024, il nuovo Piano Operativo Regionale, contenente, per ciascun investimento, gli Action Plan e le schede dei singoli interventi, come recepiti dal Tavolo Istituzionale di cui all'articolo 6 del Contratto Istituzionale di Sviluppo;
s. con D.G.R. n. 34 del 06 febbraio 2026, è stato approvato, a modifica e integrazione del Piano Operativo Regionale di cui alla D.G.R. n. 249/2022, come modificata dalla D.G.R. n. 299/2024 e dalla D.G.R. n. 624/2024, il nuovo Piano Operativo Regionale, contenente, per ciascun investimento, gli Action Plan e le schede dei singoli interventi, come recepiti dal Tavolo Istituzionale di cui all'articolo 6 del Contratto Istituzionale di Sviluppo;
t. con D.G.R. n.121 del 10/04/2026 è stato approvato, a modifica ed integrazione del Piano Operativo Regionale di cui alla DGR n. 249/2022, come modificata dalla DGR n. 299/2024, dalla DGR n. 624/2024 e dalla D.G.R. n. 34/2026, il nuovo Piano Operativo Regionale, contenente, per ciascun investimento, gli Action Plan e le schede dei singoli interventi, come recepiti dal Tavolo Istituzionale di cui all'articolo 6 del Contratto Istituzionale di Sviluppo;
u. successivamente, i Soggetti attuatori esterni hanno manifestato ulteriori esigenze di modifica di alcuni interventi individuati nel Piano Operativo Regionale approvato con D.G.R. n. 121/2026;
v. gli uffici regionali con nota prot. Prot. n. 0461442 del 19/05/2026 e successive integrazioni a mezzo PEC del 12/06/2026 e del 15/06/2026 hanno trasmesso le richieste di rimodulazione all'Unità di Missione per l'attuazione degli interventi del PNRR, con conseguente convocazione del Nucleo Tecnico, ai sensi dell'art. 8 del CIS;
w. con nota acquisita al prot. reg. n.0553789 del 19/06/2026, l'Ufficio di Coordinamento presso l'UMPNRR ha trasmesso gli esiti dell'istruttoria condotta circa la richiesta di modifica degli interventi inseriti nel Piano Operativo Regionale, approvato con D.G.R. n. 121/2026 dichiarando che: "*nulla osta alla modifica della programmazione degli interventi come specificato per ciascun punto, non inficiando sul corretto e puntuale raggiungimento di Milestone e Target, italiani ed europei, intermedi e finali";*
x. con nota acquisita al prot. Reg. n. 0558737/2026 del 22/06/2026 l'Unità di Missione per l'attuazione degli interventi del PNRR ha trasmesso la nota di convocazione del Tavolo Istituzionale, finalizzata all'approvazione delle proposte di aggiornamento e modifica del Piano operativo e dei relativi allegati, avanzate da Regione Campania, con la richiesta ai Componenti designati del Tavolo Istituzionale di trasmettere riscontro di approvazione o eventuali richieste di chiarimenti non oltre il 30 giugno 2026, con l'avvertimento che "*in caso di mancato riscontro si applicherà l'assunto del silenzio assenso".*

PREMESSO, altresì, che

a. con Legge regionale n.6 del 15/05/2024 è stato approvato il nuovo ordinamento degli Uffici della Giunta regionale della Campania;
b. con D.G.R. n. 408 del 31/07/2024, ai sensi dell'articolo 3, comma 5, e dell'articolo 20 della citata legge, sono state definite l'articolazione e le funzioni delle strutture amministrative regionali, individuando, in particolare, le competenze delle strutture di primo livello, dei Settori e delle Unità operative semplici, tra cui l'Ufficio Speciale Opere Pubbliche e Interventi Strategici;

c. con D.G.R. n° 355 del 20/06/2025, al fine di garantire la continuità amministrativa e la gestione omogenea degli interventi di edilizia sanitaria, è stato disposto l'affidamento al Settore Attuazione Opere Pubbliche e Interventi Strategici – 303.01.00 delle attività amministrative e tecniche relative agli interventi afferenti alla Missione 6 "Salute" del PNRR.

CONSIDERATO che

a. l'attivazione dei "progetti in essere" prevede, quale condizione di ammissibilità, la verifica del rispetto delle condizionalità previste dal PNRR per ciascun intervento e per le relative spese; a tal fine:
   a.1. l'Unità di Missione PNRR del Ministero della Salute (UMPNRR), in raccordo con la Direzione Generale della Programmazione Sanitaria (DGPROGS) e con le competenti strutture del Ministero dell'Economia e delle Finanze, ha predisposto e trasmesso appositi format di check-list di autovalutazione finalizzati alla verifica preventiva del rispetto delle suddette condizionalità da parte dei "progetti in essere";
   a.2. la Regione Campania ha trasmesso al Ministero della Salute le check-list di autovalutazione relative ai progetti proposti a valere sul PNRR, sottoscritte dai RUP degli interventi delle Aziende coinvolte, in conformità alle indicazioni fornite con note UMPNRR-MDS-P prot. n. 0001930 del 05/10/2022 e prot. n. 0002018 del 14/10/2022, con riferimento al sub-investimento M6C2 I1.1.1.2 "*Rafforzamento strutturale del SSN (progetti in essere ex art. 2 del D.L. n. 34/2020)*";
   a.3. all'esito dell'attività istruttoria condotta dall'Unità di Missione PNRR, sono stati considerati, ai fini del sub-investimento PNRR, gli interventi riconducibili ai CUP caricati e presenti sulla piattaforma ReGiS, per i quali risultano attive le relative profilazioni di accesso;
   a.4. dalla medesima istruttoria risulta che, alla data odierna, sul sistema informativo ReGiS, sono registrati interventi finalizzati alla realizzazione di n. 439 posti letto di terapia intensiva e n. 385 posti letto di terapia semi-intensiva;
b. con nota UMPNRR-MDS-P prot. n. 0001968 del 21/05/2024, l'Unità di Missione per l'attuazione degli interventi del PNRR del Ministero della Salute ha trasmesso le *"Linee guida per l'adeguamento documentale, il monitoraggio e la rendicontazione dei progetti in essere - Investimento: M6C2 I1.1 Ammodernamento del parco tecnologico e digitale ospedaliero Sub investimento "Rafforzamento strutturale SSN ("progetti in essere" ex art. 2, DL 34/2020), Investimento: M6C2 I1.2 Verso un ospedale sicuro e sostenibile Sub investimento "progetti in essere" ex art.20, L. 67/1988"*;
c. con nota UMPNRR-MDS-P prot. n. 0007481 del 22/10/2025, la medesima Unità di Missione ha trasmesso l'"*ADDENDUM alle Linee guida per l'adeguamento documentale, il monitoraggio e la rendicontazione dei progetti in essere*", recante ulteriori indicazioni operative per il caricamento sulla piattaforma ReGiS del set documentale richiesto per comprovare il raggiungimento del Target PNRR M6C2-9 "*Posti letto supplementari di terapia intensiva e semi-intensiva*", ossia:
   c.1. certificati di completamento (certificato di collaudo / di verifica di conformità / di regolare esecuzione) rilasciati in conformità alla legislazione nazionale riferiti ai posti letto realizzati oggetto di rendicontazione PNRR e alle relative apparecchiature;
   c.2. dichiarazione di riconducibilità degli atti di completamento e collaudo alle procedure PNRR e alle codifiche Posto Letto - ID PL, a firma del RUP o del Soggetto attuatore delegato (Allegati 1 e 1a);
   c.3. atto aziendale (es. delibera direttore generale), a firma del Direttore Generale dell'Azienda soggetto attuatore esterno/delegato, che attesti il completamento dell'intervento comprensivo dell'elenco dei posti letto realizzati e delle relative apparecchiature di ausilio alla ventilazione (Allegati 2 e 2a);
   c.4. delibera/determina di presa d'atto del Soggetto attuatore relativa alla documentazione attestante il conseguimento del Target per tutti i CUP di competenza, con allegata la Lista dettagliata dei posti letto di terapia intensiva e semi-intensiva e delle relative apparecchiature di ausilio alla ventilazione (Allegato 3);
d. con nota UMPNRR prot. n. 0004175 del 21/04/2026 è stato trasmesso, altresì, l'"*Addendum alla Guida pratica al rilascio delle "Attestazioni delle verifiche effettuate sulla procedura di gara/scelta contraente" tramite procedura Regis – Appendice tematica "Progetti in essere' ex art. 2 del DL 34/2020*";
e. in attuazione dell'Addendum alle Linee guida, i Soggetti Attuatori Esterni hanno prodotto la documentazione necessaria ad attestare lo stato di avanzamento del Target, alla data odierna.

PRESO ATTO dall'istruttoria dei competenti uffici regionali che

a. con D.G.R. n° 29 del 06 febbraio 2026 si è preso atto del Decreto Dirigenziale n. 108 del 10/12/2025 e dell'allegata "*Lista dettagliata dei posti letto di terapia intensiva e semi-intensiva e delle relative apparecchiature di ausilio alla ventilazione",* con cui, tra l'altro, si prendeva atto della documentazione attestante il conseguimento del Target M6C2-9 *"Posti letto supplementari di terapia intensiva e semi-intensiva*" relativo alla finestra Target del 30/11/2025, prorogata al 10/12/2025;
b. con D.G.R. n° 242 del 28 maggio 2026, ad aggiornamento della DGR n°29 del 06 febbraio 2026, si è preso atto:
   b.1 della documentazione attestante il conseguimento parziale del Target M6C2-9 "*Posti letto supplementari di terapia intensiva e semi-intensiva"* prodotta, alla data del 28/05/2026, da parte dei Soggetti Attuatori Esterni delegati, i cui estremi erano riportati nella allegata "*Lista dettagliata dei posti letto di terapia intensiva e semi-intensiva e delle relative apparecchiature di ausilio alla ventilazione*";
   b.2 che, come dettagliato nella suddetta *Lista*, risultava il completamento di complessivi posti letto supplementari:
      - n. 208 posti letto di terapia intensiva;
      - n. 298 posti letto di terapia semi-intensiva;
c. sulla base delle verifiche condotte, nel periodo intercorso tra il 28/05/2026 e la data odierna, sono stati inviati a mezzo PEC e/o caricati sul sistema ReGiS, gli atti di aggiornamento, le attestazioni e i relativi documenti prodotti dai Soggetti Attuatori Esterni delegati, in conformità a quanto previsto dall'Addendum alle Linee guida;
d. con riferimento alla documentazione acquisita, il competente Ufficio regionale:
   d.1. ha preso atto dei documenti trasmessi e/o caricati sul sistema ReGiS dalle Aziende sanitarie secondo quanto previsto dall'Addendum alle Linee guida, verificando, la presenza degli atti aziendali e delle dichiarazioni di completamento dei posti letto supplementari di terapia intensiva e semi-intensiva, corredati dall'elenco dei posti letto realizzati e delle relative apparecchiature di ausilio alla ventilazione;
   d.2. ha predisposto l'aggiornamento della "*Lista dettagliata dei posti letto di terapia intensiva e semi-intensiva e delle relative apparecchiature di ausilio alla ventilazione*";
   d.3. ha preso atto della documentazione attestante il conseguimento parziale del Target M6C2-9, a seguito dell'aggiornamento documentale trasmesso dai Soggetti Attuatori Esterni delegati, i cui estremi sono riportati nella suddetta *Lista* allegata al presente provvedimento per formarne parte integrante e sostanziale;
   d.4. ha verificato che, alla data odierna, come dettagliato nella medesima *Lista* allegata, risulta attestato il completamento di complessivi posti letto supplementari:
      - n. 230 posti letto di terapia intensiva;
      - n. 316 posti letto di terapia semi-intensiva.

RITENUTO di

a. dover prendere atto, ad aggiornamento della DGR n° 242/2026, della documentazione attestante il conseguimento parziale del Target M6C2-9 "*Posti letto supplementari di terapia intensiva e semi-intensiva"* prodotta, alla data odierna, da parte dei Soggetti Attuatori Esterni delegati, i cui estremi sono riportati nella "*Lista dettagliata dei posti letto di terapia intensiva e semi-intensiva e delle relative*

apparecchiature di ausilio alla ventilazione", allegata al presente provvedimento per formarne parte integrante e sostanziale*;*

b. dover prendere atto che, alla data odierna, come dettagliato nella suddetta *Lista* allegata, risulta il completamento di complessivi posti letto supplementari:

   - n. 230 posti letto di terapia intensiva;
   - n. 316 posti letto di terapia semi-intensiva.

VISTI

a. il Regolamento (UE) 2021/241 del Parlamento europeo e del Consiglio, del 12 febbraio 2021;
b. il Piano nazionale di ripresa e resilienza "Next Generation Italia" (PNRR) trasmesso alla Commissione europea il 30 aprile 2021;
c. la Decisione di esecuzione del Consiglio europeo del 13 luglio 2021 con cui è stato definitivamente approvato il PNRR;
d. la D.G.R. n.249 del 24 maggio 2022;
e. la D.G.R. n.299 del 12 giugno 2024;
f. la D.G.R. n.612 del 14 novembre 2024;
g. la D.G.R. n.624 del 14 novembre 2024;
h. il D.D. n.108 del 10 dicembre 2025;
i. la D.G.R. n.29 del 06 febbraio 2026;
j. la D.G.R. n. 34 del 06 febbraio 2026;
k. la D.G.R. n.121 del 10 aprile 2026;
l. la D.G.R. n. 242 del 28 maggio 2026

PROPONE e la Giunta, in conformità, a voto unanime

DELIBERA

per i motivi espressi in narrativa che qui si intendono integralmente riportati e confermati:

1. di prendere atto, ad aggiornamento della DGR n° 242/2026, della documentazione attestante il conseguimento parziale del Target M6C2-9 "*Posti letto supplementari di terapia intensiva e semi-intensiva"* prodotta, alla data odierna, da parte dei Soggetti Attuatori Esterni delegati, i cui estremi sono riportati nella "*Lista dettagliata dei posti letto di terapia intensiva e semi-intensiva e delle relative apparecchiature di ausilio alla ventilazione*", allegata al presente provvedimento per formarne parte integrante e sostanziale*;*
2. di prendere atto che, alla data odierna, come dettagliato nella suddetta *Lista* allegata, risulta il completamento di complessivi posti letto supplementari:
   - n. 230 posti letto di terapia intensiva;
   - n. 316 posti letto di terapia semi-intensiva;
3. di trasmettere il presente provvedimento al Gabinetto del Presidente, all'Ufficio Speciale Opere Pubbliche ed Interventi Strategici, anche per la notifica alla Direzione Generale della Programmazione Sanitaria del Ministero della Salute e al Ministero dell'Economia e delle Finanze, alla Direzione Generale Tutela della Salute e Coordinamento del Sistema Sanitario Regionale, al Bollettino Ufficiale della Regione Campania per la pubblicazione e alla Sezione "Amministrazione Trasparente – Casa di vetro", del sito Internet istituzionale della Regione.
